By the use of a rude steaming apparatus, invented on the spur of the occasion, and copied very extensively since, the labor of cooking the taro was materially lessened, but still the reduction of the taro to poi by pounding—a very laborious operation—must needs be performed by men. After a few years it was impossible to procure men to do even this; and I was reduced to the necessity of giving the girls their choice, either to eat the taro without pounding or to pound it themselves. They chose the latter, which they continued as long as the school was

kept in operation.

But carrying on the necessary out-door work of the school became, especially toward the last, an intolerable burden; and though I had such native assistants as could be procured, I had still to do all kinds of work with my own hands. For my assistants a few were faithful, even till their death. Pilipo and his wife Poibe were of these. Some left to get better pay elsewhere, and one proved a wolf in the sheepfold. Outside influences, too, became more and more pernicious, and our hopes of some were thus blasted. Quasi friends of the girls were often a sore hindrance to our work. A little dirty, scruffy girl, without friends or relatives of any sort, would be brought and given to us as an act of humanity. We took her in; she was washed, fed, clothed and taught; the dull eye kindled, the rough head of hair became smooth and shining, the cheeks became fair, and the marks of sordid poverty passed away. Then the scene changed. Friends and relations of all sorts sprung up like magic, all sorts of influences were tried to draw her away from the school—too, often with most villainous success. Our hopes were so often dashed in this manner, that we could only hope with trembling. To insure security at night a high wall was commenced to inclose the buildings, but the school was discontinued before it was finished. But notwithstanding all these discouragements many girls were raised up to be a blessing to the nation, and as has been already stated, to bless other nations. One of the earlier married went with her husband as teacher of Hawaiians at Fort Vancouver, in Oregon. When the Hawaiians had all left, they still regained and settled down to farming—a good Christian family. As has been already stated, two went to the Hawaiian Islands, where they still remain. Many settled in these islands, who made pleasant homes, and reared large families of children. We were often cheered in our years by the reports of travelers who had been entertained by them. Of many we have hope that they died true Christians.

The care of a Hawaiian boarding school is not of arduous toil and watchfulness. Many a one has been prostrated by it who would have borne without difficulty the care and toil of an ordinary life. Day and night anxiety and care enthroned upon such an one. Full of overfearing of earnest work, subject often to unfriendly criticism from leisurely busybodies, limited to the last degree in funds, liable to be called at any hour of the day or night to attend the sick or dying, or to meet some unpleasant exigency, such a thing as healthful relaxation becomes simply an impossibility. When, for the first time, I visited the islands, I found the people were dying all around us, our ordinary school exercises were discontinued, and for a whole month, almost my entire time was spent in administering to the sick outside of the school. But our own little flock was not spared. The child of our assessor died, and eight of our pupils fell victims. Constitutions already enfeebled, as a result of nearly the whole race, proved inadequate to bear up under the after effects of the disease, and a slight want of care often preceded certain death. One-tenth of the Hawaiian race died at this time.

The Hawaiian Board, who had been seriously pondering the question of putting the work here on a self-supporting basis, proposed a plan whereby that result might be brought about. In the case of individuals or families, such an end could be accomplished if the individual could be made to co-operate with the Board. But no plan was proposed whereby the Female Seminary, the only one then in the islands, could secure even a small part of their support. The mission, therefore, voted that the school be discontinued—as has been the universal opinion, it was the greatest mistake they ever made. Possibly this might have been averted had the mission responded, in the few preceding years, to repeated appeals for help in carrying it on. Failure to receive such help had induced a state of despair in the mind of the principal, indisposing him for the vigorous protest which he should have made. From the time when he first took charge of the school in 1841 till its discontinuance in 1849 his work, arduous at first, had much more than doubled; and the cares and anxieties were simply intolerable. No prospect of help appearing, he submitted, as he must, to the action of the mission. To provide him future work they voted that he keep a day school for teaching the English language, for which pay should be made. This was a step in the right direction, amounting to considerable more than his ordinary support, was returned to the general mission fund, till he left the service of the American Board agreeably to their plan first proposed in 1849.

Just at this time occurred the great gold excitement of California, which swept like a mighty tidal wave over our islands, disorganizing old ways and introducing a most anomalous state of things. Money became

plenty, and wages rose in proportion. Every one who could do anything had money. But it was "light-colored light gold," in a few years all the money was gone, the gold bubble had burst, and with it the steady old order of things—all passed away, never again to be resumed. At such times one needs often to take the bearings of his surroundings to find where he stands. Old landmarks disappear and new ones arise in strange places, and presenting a strange aspect.

After leaving the service of the Board I still continued my English School, as long as health permitted. Though my manner of life was now comparatively free, the extra exertion required in beginning life anew, on my own account, without means, and with a growing family on my hands, and with the enervation consequent on the care of the female seminary, soon brought me down to a state from which no ordinary means could recover me.

The Board having generously allowed me to draw on them for the means, about three hundred dollars, for a passage to and from the States, and expenses while there, I visited my fatherland in 1858-9, where I was very much recruited.

About the year 1850 I studied surveying. The Government was then engaged in making over to the people their land in fee simple, and few surveyors were available. I was thus employed in connection with the Board of Land Commissioners in that business, and also in job-surveying. This employment took me into active exercise in the open air, and I recovered my wonted health. But the employment terminated mostly with the completion of the duties of that board; and though occasional jobs of surveying presented themselves, as they still do, it was not a business to be depended on for the support and education of a family.

By 1860 most of those who had left the service of the American Board in order to secure a title to herds, houses and lands, which they offered on condition of a release, were again receiving a salary from them. But I determined not to receive help again from the Board till I had tried to secure a support by my own efforts. At that time \$1,000 a year was little enough to support my family; and I could not give pledges that I would not eke out the five or six hundred dollars they might give me in such ways as offered. Without such pledges virtually given I could receive nothing at that time; though since then the restrictions have been removed, and those who are still receiving a salary of \$300 per annum from the Board are at liberty to seek other means of support as well. So I trusted to support my family independently of their aid.

I tried planting cotton with no success. It would not pay. A flourishing lot of young coffee trees, which I had planted, was summarily destroyed by blight. School-teaching was not to be thought of. I had tried it repeatedly and broken down. My means were exhausted. Sugar planting was the only business which now offered the means of living, and to that I resorted. I and a large family of boys, for whom employment must be sought; so I pioneered into the business; becoming myself in turn planter, sugar boiler, manager and proprietor. I had to induce a high price, and stepped out and led the business to them. But I will now leave speaking in the first person, and give, briefly as possible, the experience of a Sandwich Island missionary sugar planter.

I have frankly stated what led me into the business, but I do not say that in the following narrative I give my own experience alone. What I have to say is what might have occurred; and many old residents of the islands know that like things have occurred many times.

(To be continued.)

## TUSKEGEE.

## A Hamptonian's Visit to the Young Hampton.

About two years ago, Gen. Armstrong was requested by the State Superintendent of schools in Alabama to nominate a fit person for principal of a new colored normal school about to be established at Tuskegee. He recommended Mr. Booker T. Washington, a graduate of Hampton Institute, who was then in charge of our Indian boys, and had shown abilities of a high order for such a position. This young man was appointed, and at once entered upon his work. He found that the State only appropriated money to pay the salaries of the teachers, nothing for School building or outfit of furniture, books, and apparatus, or current expenses. Getting the temporary use of a church and some neighboring shanties, he opened the school with thirty students. Most of them were without means; and, after a

few weeks of schooling, they were compelled to leave, in order to earn money to pay their board bills. To overcome all these disadvantages, Mr. Washington found that something like the Hampton Industrial system was necessary, to enable the students to earn their living while at school. The funds for the purchase of a farm which they could work and for the erection of a school building or buildings must somehow be raised. This was no small undertaking for a young colored man without moneyed resources or acquaintance with wealthy friends of education. But he went manfully to work at it; and, with the valuable aid of his assistant principal, the needed funds were secured, the farm purchased, and the school building erected. This assistant principal, Miss Olivia Davidson, is also a Hampton graduate, who, through the kindness of one of Hampton's well-known benefactors, a Boston lady, had taken a course at the Framingham State Normal School.

A few days' rest from office duties being enjoyed upon me, I determined to pay a visit to this school, in which the faculty and teachers of the Hampton Institute naturally feel a special interest. It was a new sensation to be leaving Hampton by any other than a water conveyance. But the extension of the Chesapeake and Ohio Railway from Richmond to the city of Newport News, and thence by a branch road to Hampton and Old Point Comfort (Fortress Monroe), gives us a choice of routes. For invalids who dread steamboat travel, it is a satisfaction to know that the journey can now be comfortably made from New York via Washington and Richmond all the way by rail. I was started at our first stop, some six miles from Hampton, to hear the conductor call out, "Twenty-eighth Street." Looking up, I could only see a stable in the dead level wilderness, but found that we were in the outskirts of the city of Newport News, which has been laid out on a large scale, in anticipation of rapid growth. It already has two hotels, and is doing a large shipping business; and, as we ran into the depot at the water-side, we could easily imagine ourselves at Jersey City or at one of the New York piers. "An easy ride of three hours brings us to Richmond, 'the seven-hilled city,' which has wholly recovered from the devastations, and is fast growing getting the bitterness of the war and growing in size and importance. Walking up one of the fashionable streets, I passed a handsomely dressed child, in an agony of grief because he had been the staff of a pretty American flag which he was carrying over his shoulders. He was being comforted with the promise of a new one, but the incident was suggestive. It seemed but a few years since the time when even that child's young life would not have been safe under the stars and stripes in that city.

Looking over one of the city papers which upheld the Confederacy, whose "corner-stone was slavery," I saw a notice that a battalion of State colored troops would turn out in full uniform on Tuesday, to escort into the city Hon. Frederick Douglass, who was to deliver a lecture. Virginia's State troops, rank and file, ex-slaves, escorted with honor a runaway slave into the late capital of the Confederacy! In view of such a sign of progress, let us forget the fact which Massachusetts once gave a fugitive back into bondage, though the memory of it still "burns."

Being in Richmond on Sunday, I attended "Preacher Holmes'!" colored church, a large and handsome edifice, seating over one thousand persons, and costing about thirty-five thousand dollars, nearly all paid for. The church membership exceeds three thousand. Mr. Holmes was formerly one of the curators of the Hampton school, appointed by the Governor to look after the Agricultural College fund, of which that school received one-third. The order of exercises was varied on this occasion in a way which, to a retiring man like myself, was somewhat embarrassing. After the hymn, Preacher Holmes remarked, "Among the strangers present this morning, I see Dr. Marshall of Hampton College." And the exercises proceeded. After an admirable sermon by Dr. Corey, of the Baptist Colored Institute, the clerk read a very long list of notices of meetings, lectures by Frederick Douglass, etc.; and I was surprised to hear at this lapse of time since the war some dozen of pathetic inquiries from ex-slaves for wives, children, or other relatives who had been sold South. There seemed small hope, at this late day, of such inquiries being successful.

I reached Atlanta in time to see the immense concourse of Georgians from all parts of the State, who had assembled to pay the last tribute of respect to their beloved leader, Gov. Alex. H. Stephens, who has been a most marked character in our history. Of our first visitors to Hampton and whose report at the meeting in Music Hall in Boston in 1870 awakened an interest in the work that has never flagged, I listened to the admirable eulogies of eminent Georgians

over the frail body that so long held the great soul of this Christian statesman. All were eloquent and appropriate. Robert Toombs, the great uneducated, the classmate and life-long friend of Stephens, though they differed as widely on most of the vital questions of the day as they did in personal appearance, is but the wreck of his former self. Intemperance has ruined him, bodily and mentally. When revivified to speak, he was so overcome that for some minutes he could only stand and wipe away his fast flowing tears; and when he could command himself enough to speak, he was almost unintelligible, though I sat very near him. The funeral in the afternoon was a solemn pageant. The procession was nearly two miles in length, and among the handsomely uniformed troops which, with reversed arms, followed to his grave the late Vice-President of the Confederacy, whose corner-stone he declared to be slavery, were eleven companies of colored troops of the State, whose bearing and appearance compared very favorably with that of the white troops. As a Georgian at my elbow said, "Those nigger troops march better than the white ones, because they are just taking a heap of pride in it." Even "Bob Toombs," as his admiring friends here call him, as he sat in his carriage, following the remains of his friend to the grave, himself followed by the soldier freedmen as part of the same funeral procession, must have realized that the war was over.

Stephens was venerated and beloved by all Georgians of both races, and his kindness and charities were extended to both. At the time of his death, he was educating twenty young men, a large proportion of whom were freedmen.

Tuskegee is one of the very old towns of the State, and is an attractive place of about twenty-five hundred inhabitants. It has not yet felt the spirit of enterprise and progress which is so rapidly changing some of the old cities, but is a quiet, healthful spot, with a dilapidated aspect; and the townspeople seem inclined to dwell upon its beauty and importance "bello the war" rather than upon its improvement. It is an educational center, having several colleges and academies of high repute for the white youth of both sexes. I was glad to find a very strong temperance sentiment here, where there were only two bars in the whole county where liquor is allowed to be sold, and they pay a license of about nine hundred dollars each. Would that the surreptitious rum-shops and other vile dens of infamy as are those of its young scion, for which no better location could have been chosen.

The leading white citizens of the place appreciate the importance of Mr. Washington's work, and speak of him in high terms. He has evidently won the esteem and confidence of all. Mr. Foster, the present speaker of the House of Representatives, lives here, and appropriated the State for Mr. Washington, of whom he spoke to me in high praise. Mr. Washington met me at the depot with a remarkable buggy which looked as if it would fall to pieces if the coating of red mud were washed off, a dilapidated harness, and a nag whose every step was taken under protest, except once when the sudden screech of the locomotive galvanized him into a short but lively run. The team forcibly reminded me of our turn-out in the early days of the Hampton school. Indeed, I am reminded by every thing I see here of our own beginnings and methods.

The school opened July 4, 1881, with thirty students. The present enrollment is one hundred and thirty. The State appropriated \$2,000 for salaries of teachers, nothing, as I have said, for other expenses. All that has been accomplished for these objects has been through the personal efforts of Mr. Washington and his able assistant, Miss Olivia A. Davidson. I found on my arrival at the school, which is about a mile from the village centre, a handsome building of two stories and a mansard roof on which the painters were at work. Though building, and is very conveniently planned and arranged for the purpose, reminding me of the Academic Hall at Hampton. The teachers at present employed, besides Mr. Washington and Miss Davidson, are Mr. Maddox, a graduate of the Worcester Massachusetts Academy, Mr. Parrot of the State Normal at Washington, D. C., Miss Snodgrass and Miss Smith. Hampton graduates, who have charge of the primary school located on the normal school ground, and bearing the same relation to it that the Butler School does to the Hampton Institute. This primary school has some two hundred and fifty children on roll. They are stowed away in what was an old stable and hen house, and are criss-crossed as close as crayons life a Waltham box. The resemblance is not in tint, but in the way they are placed; and we hope that, under Miss Snodgrass's able training, they will all make their mark, and that a white one is a school of practice for the older classes of

the Normal, as is the Butler at Hampton; and Miss Snodgrass, like our Miss Hyde, also gives instruction to them in normal teaching. All these six teachers are colored; and to the Negro race belongs all the credit of the work accomplished here, and of the judicious use of the funds which the friends of the school, through the efforts of Mr. Washington and Miss Davidson, have contributed. Mrs. Washington, also one of our graduates, is the housekeeper; and the teachers all board with her in a small cottage which they have rented. The table, in its appointments, cookery, etc., does not suffer by comparison with that of the teachers' Home at Hampton. The farm contains one hundred and forty acres, and the boys were at work clearing a field for sugar-cane, which grows well here. They also raise cotton, sweet potatoes, peaches, etc.

To enable them to train the students properly, they must have them board at the school. The new building will furnish in its upper story dormitories for the girls; and the basement, when completed, will make ample dining, kitchen, and laundry accommodations. But they have no quarters for the young men, who at present, are boarding round with the different Negro families in the town, at a great disadvantage, both as to training and labor. A building is needed for the accommodation of say one hundred young men, which Mr. Washington says will cost about \$8,000 if their labor can be enlisted in its construction. For this made available in its construction. To do so, he proposes to build of brick made on the farm, which has excellent clay. The young men are impatient to be set to work on their building; and, as soon as money enough can be raised to pay the foreman to start the brick-yard it will be put in operation. The wood lot is close to the clay, and fuel can be got for the making of two hundred dollars. To make all the bricks needed for the building, as bricks are always in demand in the town, which has no kiln, it would be a paying, permanent business. To finish the basement, the necessary funds for a kitchen and dining room, \$250 is needed. I hope the friends of Negro education by self-help will come forward and furnish Mr. Washington with the necessary funds. The complete work he has so well begun. The experiment, thus far so successful, is one of deep interest to all who have the welfare of the race at heart, and should not be allowed to fail for want of means for its completion.

The school building is to be dedicated May 31, by Hon. H. Clay Armstrong, the State Superintendent of Schools. Rev. Morgan Galloway, the associate of Dr. Atticus Haygood, President of Emory College, author of "Our Brother in Black," and recently appointed agent of the Slater Fund, will also take part with other speakers. The prominent citizens of the town, with whom I spoke about the school, including Mr. Foster, the Speaker of the Alabama House of Representatives, were loud in their praise of Mr. Washington and his corps of teachers. The legislature, at its last session, increased the State appropriation for the school from two to three thousand dollars, on the recommendation of the Superintendent of Public Instruction. As some of the members, who were ignorant of the character of the school, raised objections to this increase at a time when, by the exhaustion of the deans, a quarter of a million, the Speaker, Mr. Foster, an ex-Confederate soldier, left the chair, and made a very eloquent speech in praise of Mr. Washington and his work. At its conclusion, the bill passed through all its readings by a nearly unanimous vote. The superintendent has also applied the appropriation of \$500 from the Peabody Fund for the benefit of this school, thus emphatically recognizing its importance and superiority over the other colored normal schools of the State. It is vital to the success of this school that the students should all be brought under the training and supervision of the teachers by being boarded and lodged on the premises. Our experience at Hampton has shown the necessity of this. I know of no more worthy object or one conducive to more important results than this school of no more languish or of no more suffering. They may rest assured that these will be wisely expended and most worthily bestowed.

The property is not deeded to the State, but to a board of nine trustees, four of whom reside in the North. The present State Superintendent of Public Instruction, Hon. H. Clay Armstrong, is one of the board. My three friends' visit at Tuskegee was eminently satisfactory, and has inspired me with new hope for the future of the race.

Agents wanted for "MIXED RACES," by Prof. J. P. Sampson; and "HISTORY OF EMANCIPATION," by Col. Jos. T. Wilson. Address Normal School Press, Hampton, Va.

### Teaching Kindness to Animals.

We would again suggest to our graduate teachers—and all teachers—the elevating influence of training the children in kindness to the "plumpest" creatures about us, and call their attention to the excellent series of lessons for this purpose, by George L. Angell, Esq., President of the Massachusetts Society for the prevention of cruelty to animals, which we are publishing in another column. As we have before stated at length, the whole series is published by the Massachusetts Society, and can be obtained in any quantity at two cents a copy by sending to its office, 96 Tremont street, Boston. It has been republished by many educational Journals, and is universally valued.

### A Good Report of Hampton Graduates.

A Virginia County Superintendent, whose criticisms on some of our graduates' failure to pass examination on primary subjects we accepted as a wholesome lesson in line with our own plan of foundation work, sends us now a report of some other of our young people at work in the county, which it is only fair as well as very pleasant to publish also, and which is all the more valuable as coming from a witness of frankness and discrimination. "I have discovered a number of your old graduates who are teaching tip-top schools. Among them Mr. — and wife. I spent one whole day in their school room, and about eighty or ninety daily average, and I assure you he is doing as good work as can be done anywhere. Before the term closes, I shall have been inside every school room in this county, and shall have graded every teacher according to their real working merits. Some we had thought of weeding out, but have given them a chance to improve, and they really are improving at such a rate that they may turn out good teachers, after all. I urge many of our inexperienced colored teachers to attend your Teachers' Institute in May. I must tell you how much of a success our Institute proved to be; not beyond what we had faithfully worked for, but beyond what we had expected. Prof. Newall proved just the man for us. The teachers went into it timidly but came out triumphantly. They had offers of help, but we have the little sum offered us as a start for a County Teachers' Library. I feel sure that we have made a long stride in the advancement of our county schools."

Special club rates are offered to Normal School teachers, graduates and pupils, by the New England Publishing Company, 16 Hawley St. Boston, for either of their valuable periodicals, the *New England Journal of Education*, and *New England Journal of Education*, (monthly and weekly papers), *Primary Teacher*, and *Good Times* (monthly magazines). All of these periodicals have long been in constant use in the Reading Room of Hampton Institute, which would be sorry to be without them. We can heartily recommend any of them to all teachers.

### Our National Emblems.

The New York Life Insurance Company will please accept our thanks for a beautiful plate entitled "Origin of the Stars and Stripes." Long may they wave, notwithstanding the disenchantment as to their original significance which this plate brings. It contains an interesting collection of facts relating to the genealogy of Washington, from the coat of arms and crest of whose family our national emblems were evolved. Instead of symbolizing the "blue aether vault and stars of heaven," as some of our poets tell us, or the stripes of the slave as others hold, it appears that the stars were the rovels of a spur, emblem of knight-hood, called "the language of heraldry," and the stripes were simply "two bars gules" or (two bloody bars on the shield of the Washingtons, while "The fierce grey bird with a bending beak with an angry eye and a startling shriek" which was supposed to preside over our destinies as the "Spread Eagle," turns out to be but an English raven, or what Brother Jonathan calls a *crow*, "with wings of lead," as some of our poets tell us, or the stripes of the slave as others hold, it appears that the stars were the rovels of a spur, emblem of knight-hood, called "the language of heraldry," and the stripes were simply "two bars gules" or (two bloody bars on the shield of the Washingtons, while "The fierce grey bird with a bending beak with an angry eye and a startling shriek" which was supposed to preside over our destinies as the "Spread Eagle," turns out to be but an English raven, or what Brother Jonathan calls a *crow*, "with wings of lead," as some of our poets tell us, or the stripes of the slave as others hold, it appears that the stars were the rovels of a spur, emblem of knight-hood, called "the language of heraldry," and the stripes were simply "two bars gules" or (two bloody bars on the shield of the Washingtons, while "The fierce grey bird with a bending beak with an angry eye and a startling shriek" which was supposed to preside over our destinies as the "Spread Eagle," turns out to be but an English raven, or what Brother Jonathan calls a *crow*, "with wings of lead," as some of our poets tell us, or the stripes of the slave as others hold, it appears that the stars were the rovels of a spur, emblem of knight-hood, called "the language of heraldry," and the stripes were simply "two bars gules" or (two bloody bars on the shield of the Washingtons, while "The fierce grey bird with a bending beak with an angry eye and a startling shriek" which was supposed to preside over our destinies as the "Spread Eagle," turns out to be but an English raven, or what Brother Jonathan calls a *crow*, "with wings of lead," as some of our poets tell us, or the stripes of the slave as others hold, it appears that the stars were the rovels of a spur, emblem of knight-hood, called "the language of heraldry," and the stripes were simply "two bars gules" or (two bloody bars on the shield of the Washingtons, while "The fierce grey bird with a bending beak with an angry eye and a startling shriek" which was supposed to preside over our destinies as the "Spread Eagle," turns out to be but an English raven, or what Brother Jonathan calls a *crow*, "with wings of lead," as some of our poets tell us, or the stripes of the slave as others hold, it appears that the stars were the rovels of a spur, emblem of knight-hood, called "the language of heraldry," and the stripes were simply "two bars gules" or (two bloody bars on the shield of the Washingtons, while "The fierce grey bird with a bending beak with an angry eye and a startling shriek" which was supposed to preside over our destinies as the "Spread Eagle," turns out to be but an English raven, or what Brother Jonathan calls a *crow*, "with wings of lead," as some of our poets tell us, or the stripes of the slave as others hold, it appears that the stars were the rovels of a spur, emblem of knight-hood, called "the language of heraldry," and the stripes were simply "two bars gules" or (two bloody bars on the shield of the Washingtons, while "The fierce grey bird with a bending beak with an angry eye and a startling shriek" which was supposed to preside over our destinies as the "Spread Eagle," turns out to be but an English raven, or what Brother Jonathan calls a *crow*, "with wings of lead," as some of our poets tell us, or the stripes of the slave as others hold, it appears that the stars were the rovels of a spur, emblem of knight-hood, called "the language of heraldry," and the stripes were simply "two bars gules" or (two bloody bars on the shield of the Washingtons, while "The fierce grey bird with a bending beak with an angry eye and a startling shriek" which was supposed to preside over our destinies as the "Spread Eagle," turns out to be but an English raven, or what Brother Jonathan calls a *crow*, "with wings of lead," as some of our poets tell us, or the stripes of the slave as others hold, it appears that the stars were the rovels of a spur, emblem of knight-hood, called "the language of heraldry," and the stripes were simply "two bars gules" or (two bloody bars on the shield of the Washingtons, while "The fierce grey bird with a bending beak with an angry eye and a startling shriek" which was supposed to preside over our destinies as the "Spread Eagle," turns out to be but an English raven, or what Brother Jonathan calls a *crow*, "with wings of lead," as some of our poets tell us, or the stripes of the slave as others hold, it appears that the stars were the rovels of a spur, emblem of knight-hood, called "the language of heraldry," and the stripes were simply "two bars gules" or (two bloody bars on the shield of the Washingtons, while "The fierce grey bird with a bending beak with an angry eye and a startling shriek" which was supposed to preside over our destinies as the "Spread Eagle," turns out to be but an English raven, or what Brother Jonathan calls a *crow*, "with wings of lead," as some of our poets tell us, or the stripes of the slave as others hold, it appears that the stars were the rovels of a spur, emblem of knight-hood, called "the language of heraldry," and the stripes ## THE HYGEIA HOTEL.

AS ENLARGED AND IMPROVED

OLD POINT COMFORT, VA.

Situated one hundred yards from Fort Monroe, at the confluence of the Chesapeake Bay and Hampton Roads, being the first point of land lying westward between the Capes of Virginia, about fifteen miles north of Norfolk and Portsmouth; all passenger steamers running to and from those cities touch at the pier, going and returning, with the U. S. Mail, landing only twenty rods from the Hotel, which is substantially built and comfortably furnished; line two Otis hydraulic passenger elevators, gas and electric bells or Creighton's Oral Annunciator in all rooms; water; room for bath, including Hot Sea, and closets on every floor, with the most perfect system of drainage of any Hotel or any public building in the country. As a resort for the pleasure-seeker, invalid, or resting place for tourists on their way to Florida or the North, this house, with accommodations for about 1,000 guests presents in its appointments which certainly are not equaled elsewhere as a summer resort or cold weather sanitarium. Here during the cold weather over 15,000 square feet of the spacious verandas (of which there are over 35,000 square feet encircling the house on all sides) enclosed in glass, enabling the most delicate invalid to enjoy the sunshine and fine water view without risking the slightest exposure. The climate of Old Point Comfort is unequalled for salubrity. *Malaria fevers being absolutely unknown.* The record of the Meteorological Observations for the ten years show an average temperature of 60 deg., 71 deg., 76 deg., in summer; 70 deg., 59 deg., 40, in autumn; 45 deg., 41 deg., 42 deg., in winter; and 48 deg., 52 deg., 63 deg., for spring. The invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. For sleeplessness and nervousness, the delicious taste of the pure ocean air and the lullaby of the ocean waves rolling upon the sandy beach, but a few feet from the bedroom windows, are most healthful soporifics of the Hygeia.

ecuted at the Normal School Printing Office.

Estimates made. Samples sent to any address.

## JUST OUT

A BOOK FOR EVERY

Man, Woman and

Child.

**EMANCIPATION**

ITS COURSE AND PROGRESS FROM

1481 B. C. TO A. D. 1875.

BY JOS. T. WILSON.

In addition to the history of Emancipation, it also

contains a review of President Lincoln's Proclama-

tion, the XIII amendment, and the progress of the

freed people since Emancipation. Also a history of

the Emancipation Movement, in Lincoln Park,

Washington.

It is a work that has long been needed, and it con-

tains such valuable information and data that can

only be obtained by long and laborious research

through voluminous histories and cyclopedias. The

arrangement is such that reference can be made in a

moment's time to the date of emancipation in any

country of the globe.

The review of President Lincoln's Proclamations

and the XIII amendment is valuable, showing, as it

does, the opinions of the different leading thinkers and

writers of the day.

The book contains 342 pages; printed in large, clear

type, on heavy white paper, and is handsomely bound

in full cloth. Price \$1.50—post paid.

**JOHN'S ASBESTOS MIXED PAINTS**

**SHEATHING PAPER, ROOFING PAPER &c.**

Also for **JOHNSON'S DRY KALSOMINE**

and **FRESCO COLORS.**

A fine assortment of

**WALL PAPER & SHADES**

of the latest patterns.

**Paints Mixed and Glass cut free of charge.**

All orders promptly attended to.

Thanking the Public for their generous patronage

in the past, I shall still endeavor by strict attention to

business, and low prices, to merit a continuance of the

same. Call on

**J. W. BOYENTON,**

PRACTICAL PAINTER.

At the Depot, opposite F. A. Schmelz's Store,

HAMPTON, VA.

Close connections with Old Point Comfort and Newport

6-83.

## Hampton Normal and Agri-

cultural Institute

AT

## HAMPTON, VIRGINIA.

Incorporated in 1870, by special Act of General

Assembly of Virginia: exempt from taxation.

Devoted to the Education of Negro and Indian youth

in Agriculture and the Mechanic arts, and as

teachers of their respective races.

S. C. ARMSTRONG, J. F. B. MASON, Treasurer.

Principal:

Annual session from October 1st till the mid

dle of June following.

Terms of admission: a knowledge of reading

and writing, and of short and long division.

Tuition free to all (provided by friends).

Board, etc., ten dollars per month, payable

monthly, half in cash and half in labor; six

dollars cash, and four dollars in work required

of those under 19 years of age. The first year

is probationary. None under fourteen or over

twenty-eight years of age need apply.

The institution is aided by the State, but

is supported mainly by voluntary contribu-

tions. Besides State aid and Government help

for Indians, the sum of \$50,000 00 a year, must

be raised by contributions, to meet current ex-

penses.

Annual scholarships of seventy dollars, to

provide free tuition, are solicited.

Donations of any amount are most accepta-

ble, and are invited from all.

The great need of the institution is a perma-

nent endowment fund.

The Hampton Institute is supported by, and

responsible to, no denomination or society, and

has no paid soliciting agent or machinery what-

ever, but depends directly upon the public. It

is earnestly Christian in its teachings and in

fluences.

Present attendance, 400 students, of whom

92 are Indians: average age 18. Negro boys

238; Negro girls 170. Indian boys 60; Indian

girls 32. All but thirty-two board at the in-

stitute: twelve states represented, but chiefly

# Northern Workman.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. XII.

HAMPTON, VA., JUNE, 1883.

No. 6.

## Fourteenth Anniversary of Hampton Institute.

As the years go on, Hampton's Anniversary days, while well maintaining their interest, increase in comfort and ease to those in charge, and seem in some measure to run themselves. This pleasant characteristic was noticeable in the recent one of the 24th of May. As the day before it closed, the silent grounds and clouded skies seemed to ask, "Do the presumptuous morals here really look for a bright and exciting morrow?"

The morning dawned in brilliant perfection of cloudless sky and delicious coolness; the waters of Hampton Roads never more blue and shining; the verdure of fields and trees never more freshly, softly green, on any of the thirteen pleasant anniversary days with which Hampton had before been favored. By half-past eight, the visitors began arriving by boat and carriages from Old Point, where the New York and Baltimore steamers had brought some of them the day before; the student battalion turned out with its band for inspection, and Anniversary Day was under way.

The morning exercises consisted of usual examinations and recitations with exhibitions of the products of the different Industrial Departments and their operation. The Senior class was examined in political economy and civil government, literature, ancient history; and in mathematics—arithmetic and algebra. They did very creditably in these, stimulated by the occasion—as they always are—to do their best. They had undergone not so brilliantly, but on the whole very fairly well, a severe test of written examinations on all these studies during three days previous, and of oral examinations conducted by or before an invited examining committee, consisting of Dr. S. Eliot of Boston, (formerly its Superintendent of Education), and Professor Salisbury, Superintendent of the American Missionary Association's schools. These gentlemen, though more or less new to the field, entered zealously into the work, and their valuable criticisms are mostly in line with the School's fundamental convictions and constant effort. The general class average on the subjects marked by the committee was 70 and a fraction, several standing from 90 to 93.

The under classes had their customary recitations or reviews. The Indian classes proved especially attractive as usual; particularly the lowest division in which some tiny girls and dignified braves emulated each other in telling in unexceptionable English what went into and out of a remarkably omnivorous bag, and what evolutions were gone through by its various contents. The Indians also did well in geography, history, arithmetic, and an elementary botany class. The little Kitchen Gardeners, from the Butler School, were as captivating as usual, in their white pinafores and red turbans, and housekeeping accomplishments.

The centre of the Industrial Exhibition was the Stone Memorial building. Here in the girls' sewing room were gathered in attractive order, specimens of the various industrial products of the school. A handsome part of it was the wood work from the Huntington Industrial Works—turned mouldings, balusters, curtain rods and rings; specimens of matched flooring and weatherboarding doors, sashes, etc. There were shoes from the shoe factory, shining tinware from the Indian Training Shop; sets of single and double harness from the same; wooden desks, settees, tables and cupboards made for the School, and a neatly painted sign—all the work of Indian and colored apprentices, whose names, with the period of their training, from five months to two years, were indicated in cards affixed to their respective productions. The wheelwright and blacksmith shops showed similarly, axe-helves and heads, wheels, etc., and outside the door two gaily painted farm carts proclaimed the skill of an Indian and a Negro mechanic. The tailoring department showed suits of clothes made by colored and Indian hands. The girls of both races were represented by very neat sewing; part of it—some miniature bedding for the Kitchen Garden—done by the sewing class from the Butler School. The cooking class showed some inviting looking cake. The farm products had a table to themselves, where the early vegetables that form a profitable part of the School farming, the grain and feed crops, no less important, and the bone-dust from the grinding-mill—

so necessary to the success of both—were displayed to advantage. Another interesting exhibit was that from the little carpenter shop of the Butler School—a couple of model school-houses, perhaps—neatly made frame buildings, 3x2, clapboarded and painted, with sets of tiny furniture, tables, desks and chairs, all complete.

The Normal School Press office had its own exhibit of printing and book-binding. *Southern Workman's*, pamphlets, magazines, business cards, and bound volumes. The press was running off copies of the Report, and the student compositors, boys and girls, at work at their cases; the veteran United States soldier at his book-binder's table. The various shops were all in operation through part of the morning, and many visitors walked through them to see the African-American, native Indian and Indian apprentices working side by side at their various trades in the airy and convenient quarters in which most of them are at last accommodated. Some of them extended their walk to the barn to see the Durham, Ayshire and Alderney cattle, and the Morgan and Percheron horses and colts.

Some statement of the condition and record of the departments of industry may be found in the annual report which forms the body of our present number.

At twelve, the School marched over to Virginia Hall to dinner, the battalion going through a few evolutions on the green. Forty-seven of the alumni, who are, teaching near enough the School to allow their return to attend its anniversary, sat down to a pleasant little "spread" with the resident graduates. The rest of the invited guests were accommodated more comfortably than ever before in the ample halls of Winona Lodge.

The steamer Luray now arrived from Norfolk, and the steam launch of George W. Brown, Agent of the Boston and Washington Steam Ship Co.; bringing new detachments of visitors from Norfolk for the afternoon exercises.

While lunch is progressing is a good time for reporters to look about them and see who is here. Of the Trustees of the School there were present Mr. Moses Pierce, of Norwich, Ct.; Rev. Henry W. Foote, of Boston; Mr. Samuel James, of Montclair, N. J.; Mr. Anthony M. Kimber, of Philadelphia; Hon. Lewis H. Steiner, of Frederick, Md.; Judge F. N. Watkins, of Farmville, Va.; Mr. Z. S. Ely, and Mr. Charles L. Mead, of New York City. Mr. Robert C. Ogden, of the lowest, well called, attended the trustees' meeting the day previous, but was unable to stay for the Anniversary; and Rev. M. E. Strieby, D. D. of New York, President of the Board, was called away by other duties as Secretary of the American Missionary Association, to look after its new Indian missions in the West.

Of the Board of State Curators, there were present, Mr. F. S. Norton, of Williamsburg, Va.; Mr. R. G. L. Paige, of Norfolk, and Rev. William Thornton, of Hampton.

Among the other visitors were the Hon. Frank B. Fay, of Boston, the well-known philanthropist who was instrumental during the war in organizing the Auxiliary Relief Corps of the U. S. Sanitary Association, by which supplies sent from the North were carried directly to the wounded and suffering soldiers in hospitals or on battle-fields. Mr. Fay is honorable, also, as one of the leading founders of the Massachusetts Societies for the Prevention of Cruelty to Animals and to Children; Rev. Dr. Furber, from Boston; Messrs. Rev. Dr. E. G. Mix, of Fall River; Prof. T. W. Bancroft, of Brown University; Mr. G. D. Gilman, now of Boston, formerly for many years resident of the Sandwich Islands, Mr. Lawrence Abbott, of the *Christian Union*, N. Y. From Baltimore there were present Prof. M. A. Newell, Principal of the Maryland State Normal School; Mr. H. A. Wise, Supt. of Public Schools; Mr. Edwards, Assistant Superintendent; Dr. C. C. Bombaugh, representing the *Baltimore American*; Mr. P. G. Sauerwein, Mr. J. M. Cushing, Mr. J. H. Bond; and Professor Morrison, Superintendent of the Maryland Institution for the Blind. President Gilman, of Johns Hopkins, had expected to be present but was prevented. From Norfolk were present, Rev. Dr. Burrows, Prof. A. N. Webster, who brought a class of his students in Webster Academy to see the Hampton students whom he has been instructing through the winter in Agricultural Chemistry; Mr. Blackwell, Superintendent of

Schools in Norfolk; Gen. V. D. Groner, Rev. Mr. Spiller, Mr. Holt, representing the *Norfolk Virginian*; Rev. J. J. Gravatt, Hampton; Rev. O. J. Herrick, Fortress Monroe, and other citizens of Norfolk and Hampton.

Election day in Virginia, and Brooklyn-bridge opening day, in New York (excitements which might be expected to affect any school anniversary), prevented some of our friends from attending who would otherwise have been with us, and the throng of visitors was not as great as on some previous occasions. But Virginia Hall was very comfortable, and there was no lack of interest or enthusiasm in the afternoon exercises.

The following programme was carried out:

MUSIC.  
SALUTATIONS: "Preparation Day," MARY L. BELL, Sophomore Class; "Mathematics," H. L. L., Graduating Class; "Hampton's Relation to the Next Generation," BENJAMIN F. JONES, Hampton, Va. Class of '83.  
"A Year of Teaching," S. C. Class of '83.  
MUSIC.  
REVELATIONS: "The Bride of Penmark," (J. G. Whitfield), "The Negroes' Song," from *Yankee Doodle*, "The House of Our People," E. H. H. H., Washington, N. C. Class of '83.  
MUSIC.

A Talk in Story.  
PHILIP CONNELLY, Lower Grade, Dakota; "The Negroes' Song," from *Yankee Doodle*, THOMAS CARTON, Hampton, Va. Class of '83.  
"A New Hampton," OLIVIA A. DAVIDSON, Tuskegee, Ala. Class of '83.  
VALUATIONS: "It's a long life to Africa," ARTHUR BOYCE, Hampton, Va. Graduating Class.  
PRESENTATION OF DIPLOMAS TO GRADUATING CLASS.

As has been the practice for two or three years now—a practice, we believe, original with Hampton—the graduating class was represented only by a Salutatorian, as usual a young woman; and a Valetudinarian, a student of whatever grade. Even one year of real life outside the school-room makes a perceptible difference, and one that grows with years. It is but in line with this statement to say for the present Valetudinarian that, being a young man who has already had much experience of honest effort in real life, and having a subject to write upon long of deep practical interest to himself, his valetudinarian essay was one of the best ever delivered at Hampton. Of the older graduates, Mr. Clayton made a good defence of his race from a charge sometimes urged of an innate tendency to pauperism and crime, and spoke feelingly of their life in working for others, have now the burdens of freedom withered out of their lives. Miss Davidson, Assistant Principal at Tuskegee Normal School—the young Hampton whose history we have from time to time given in our columns—came on to give her account of the work, and then hastened back to be present at their own anniversary occasion, and the dedication of "Porter Hall," their first school building and girls' dormitory, completed and already paid for, although not yet fully furnished.

The Indians were represented by a recitation very well made by a young Sioux girl in the Sioux language by one of the young Indian fathers now at school with their wives at Hampton. His wife and baby boy stood among his audience, but the applause of the latter was so very emphatic that his company had to be dispensed with. The Indian talk, which was, we need hardly say, entirely his own, was given with much dignity of manner and interpreted by a boy of the same tribe, who is in the Junior class, as follows:

"My dear friends, I stand before you all to tell you a few words about my own people. I want you all to listen to it. You all know that long ago we were in the darkness, and did not do what God told us to do. You all know if a man walks in the darkness and sees a light somewhere, he will try to go there, because he knows it is light there, and if he gets there, he will see everything clear."

So I want you all to have compassion on us and teach us some more of your knowledge.

My friends, this house was not built for nothing, but it was built to teach us everything in.

I am always thinking about the good news. I came myself to learn how to tell the good news to my people, and show them the right way.

We know that you have helped us, but we need more help. My friends, if any one is not taught to do anything right and good, I don't believe he will know how to do it by himself. I think you must tell him three or four times before he will know what to do. If any body told you to do something you never had done before, would you do it at three or four times before you know how to do it. My friends! that's just the way with us Indians.

That's all I am going to say to you, my friends.

And does it not seem that that should be enough to say to call out a sympathetic response from every heart in the white race?

The programme was pleasantly varied by music by the school band, in good condition now under the instruction of one of the resident graduates; plantation songs, and other pieces, Men of Harlech, a male quartette, and a curious imitation of the call of the Muzzim and Arabic songs in this desert, by Piusini—from the school choir under the leadership of another resident graduate.

The valetudinarian was appropriately closed by the song, "Faint not at Eventide," softly sung by the choir, the words by Rev. Dr. Tanner, a colored minister of Philadelphia, the music by Mr. Hamilton, leader of the school choir.

The diplomas were presented to the graduating class by General J. F. B. Marshall, Treasurer and a Trustee of the Normal School, with a few graceful and kind words:

"In the absence of the President of the Board of Trustees, who, for the first time since he occupied that position, is unable to be present at our Anniversary exercises, the trustees have selected to take his place as this patient audience will be glad to hear, the only one of their number who is not able—I will not say not achieving—to make a speech.

My relations to the class and its teachers make this duty very pleasant to me. These diplomas are the evidence that the school has confidence in you, and that you have fulfilled your course here with credit. Not that you have attained or are already past, but that we believe that you are willing and anxious to go out from here and press toward the mark of your high calling.

This closed the exercises on the programme, but the Principal, remarking that there was still an hour before the boats would allow any one to leave, and that the feast of reason and flow of soul was not over, and there were gentlemen in the audience whom all wished to hear from, called for some words from Prof. Newell, of Baltimore Principal of the Maryland State Normal School—"a man always wise and witty." Prof. Newell, rising in his seat in the audience, responded as follows:

"I have learned one virtue of the soldier. It is obedience. The General's orders must be obeyed without hesitation. That duty forces me to rise and detain you three minutes exactly. The General did not say how many words. We are told that the pious Musselman makes an annual pilgrimage to Mecca. So I make my annual pilgrimage to this interesting place, to renew my life as a teacher, and to consecrate myself anew to the noble work. For I rejoice to see every year on every side the growth of the flowering, the fruiting, of these processes of education—the education of the right kind, education by the right methods—by the right man in the right place. This very hall in which we are gathered to-day symbolizes in a measure the work to which it is dedicated. The massive strength of its foundations, its graceful proportions, its beautiful decorations—above all the sea of intelligent faces before us—are they not symbols of the work that has been done, and that is to be done here. Its strong foundations, symbols of the strength of this foundation work; its beautiful architecture, of the beautiful outcome of all true culture; the truthfulness and honesty of the work on

this building, symbols of the true and honest work upon character that is accomplished here. All these are symbols of what true education effects. Physical cultivation—the gospel of health; true mental development—the gospel of honesty; aesthetic culture—the gospel of beauty; moral training—the gospel of goodness. This is what we see here, and I can wish no better wish for the colored people than that General Armstrong may long live to carry on this work, and that I may long be able to make my annual pilgrimage to this Mecca.

Both these wishes were echoed by the audience with long applause. After which the Principal, remarking that the Old Bay State is the one which has, from the School's foundation, given it most of practical aid and sympathy, the one to whom Hampton looks in need, called on one of its representatives present, Rev. Dr. Furber, of West Newton, to speak. "Massachusetts always has a voice at Hampton."

Dr. Furber said: "This is my first visit to Hampton, or to any institution and occasion like this. The first time I have seen the results of such work. I have said to a friend who came with me, I feel like the Queen of Sheba when she saw the splendor of Solomon—that the half had not been told me. I might almost add with her, that 'there is no spirit in me' when I see the results reached here. And aside from my impression of the good results of this and similar institutions, I feel the natural fascination of this place—of its wonderful beauty of situation—of this military drill which makes us all want to swing into step—this singing, so beautiful, so melodious, from those who are not made singers, but born singers. It is not mere doubt that I feel, but fascination. I have been thinking what a delightful field this must be to these teachers; on account, above all, of the eagerness of these people to learn. I asked a master of Exeter College once, how many of the young men, he supposed, came with a real desire and purpose to work. He said, 'Well, about one-half.' I am sure that would not be the answer here. I believe from what I see that not one-half but every soul here comes here with an eager craving to learn. Then how delightful and easy becomes the work of teaching. And when these two races come asking, as this Sioux Indian, whom we have just heard, for more light and knowledge, what heart here will not respond. 'Yes, I will do my part to give it.' Then the results of this work—appearing on such a day as this—how gratifying to teachers and friends. Then, when they know that these are going forth to scatter the good they have received among their people, how the delight increases. They hardly need to say to themselves, 'In due season ye shall reap if ye faint not.' They reap already, and as they go along, it seems to me, they cast their bread upon the waters, and find it after very few days."

What a symbol this and similar schools are of the spirit of America's free institutions. Our great republic is founded on religion and education. As it broadens, we want to broaden these foundations, on which our great republic shall rise to be the glory of the nations, and of all the generations that shall here abide.

Prof. Samuel Eliot, L.L.D., of Boston, formerly Superintendent of Schools in Boston, one of the examiners who have been inspecting the classes for criticism, on their written examinations and general work, being called on for further words from Massachusetts, responded as follows—though we cannot do justice to his clear cut, chosen English:

"I am sure I speak for everybody here when I say that we are filled this afternoon with the richest emotions of which human nature is capable: Here is not promise, but performance. We are filled with the sense not merely of the present interest and the future hope, but of the past accomplishment; what these young people have already done, to stamp themselves upon this generation."

"I congratulate all here on what we have seen and heard to-day. You can never hear anything more inspiring to trust in God and hope for the future. It impressed me deeply with the thought so nobly expressed by Emerson:

"So high is grandeur to our duty,  
So near is God to man,  
When duty's God to man,  
The youth replies, 'I can!'"

May this class enter deeply and fully into the spirit of this place. May they feel that there is nothing so great and so good as to give themselves to others, especially to the children. To nurture the little ones, and see them growing up under our influence into goodness and wisdom, that is the unspeakably blessed work God has given us to do; the work he has given to the generations before us, and will give to those to come after us, but now our work. Let us take it up, and do it in the spirit of love and thankfulness and fidelity. That is a pathetic story

of the revolution, how, when the minute men were called out by the guns of Lexington to defend their homes and hearts, as if when a red man or a colored man shows himself capable, whether in teaching or in his profession, in the mechanical arts, or any other manly occupation, if he shows himself capable, if he shows himself a man:

"A man's a man, for a' that,  
For a' that, and a' that,  
Your words obscure and a' that—  
The rank is but the guinea's stamp—  
The man's the gowd for a' that."

The Principal, saying that New York State also had done kind deeds to the School, and we hope will do still more, called on Rev. Dr. Mix, formerly of New York, but now of Fall River, Mass.

Dr. Mix said: "After preaching a sermon on foreign missions, in which I tried to set forth how grand are the opportunities they afford of doing good, and what good they accomplish, a great, strong, tall Connecticut deacon of the church came and stood before me—towering far above me—and said, 'I feel as if I had grown two or three inches to-night, in hearing about these things. I feel as I never did before what a great thing it is to be an American citizen, and an American Christian.' I must say that to-day, I feel like the deacon, that I have grown a good deal taller and take a good deal more pride than ever in being an American citizen, and a Christian worker in this generation; pride in having any share in the great work going on here and elsewhere for God and humanity."

I sat, one Sunday evening recently, in Dr. Kirk's old church in Boston, where one hundred Chinese were gathered, and by each group a woman sat teaching them to read English, in order that they might read the Bible and go back, as many do, and teach their people the religion of Christ. I felt that those women were reaching out their hands, their voices, their Christian heart, and influence to the millions of China. It is a rare privilege that those here gathered to teach have to reach the hearts of the millions in the South, the hundreds of thousands in the far West. You are sending these youths forth to the Western wilds, to the shores of the Dark Continent, to the dark places of the Southern land, as torch-bearers, bearing the light of the gospel, spreading Christian civilization, founding Christian homes, which are the foundation of true civilization. It is a grand work, and I wish that every one in this land had a part in it. I congratulate you, sir, and all of your associates on this privilege. It is a rare privilege."

The Principal again acknowledging the solid evidences of Massachusetts' sympathy, said, "It is only proper, and gives me pleasure to state also, that Hampton's work has always been backed by Virginia. In her pinched poverty she has done more for colored children here than Government with its millions has done for the Indians it sends here. I have it to say, that for sixteen years, ever since its foundation, it has shown this School nothing but kindness, courtesy and respect. Virginia's soil is spoken of as the sacred soil—sometimes somewhat lightly. It is sacred soil—made so by blood that has flowed so freely upon it. It is foremost of the Southern States in educational work. Its voice should be heard here, and I will call on the Rev. Dr. Burrows, of Norfolk, to speak as a citizen of Virginia."

Dr. Burrows quickly responded to the call in his usual hearty and humorous vein, saying:

"I verily believe that General Armstrong will make his name as renowned in connection with this school as his honored father's is in connection with the work in the Sandwich Islands."

I have got a big speech in me; it is a long speech, too; but I am not going to indulge myself, and I know there are a great many of you who will be glad that I do. I came here last year, and I mean to come every year as long as the school and I last. One thought has been deeply impressed on my mind to-day and last year. It is young men and women, that if the very best is not made of you here that you are capable of, it will be your own fault. Hereafter facilities and aids to bring out all that is in you. The scientists say that all that can be made of anybody as they put it, evolution cannot be greater than involution. It used to be the fashion for Virginia gentlemen to send their sons to Germany to be educated. I remember an old Prof. Heinsel here who didn't believe in it, and he used to say, 'Well, if you don't carry brains to Sharmany, you won't bring brains back from Sharmany.' We talk a great deal about the 'solution of the Negro problem.' That's the solution of the Negro problem. It depends on themselves. We can't boost them up any further than they are capable of going. We'll help them, and the red men, too, as people some-

times call them. But we can't do anything unless there is something in them. And I believe that there is something in them; and that when a red man or a colored man shows himself capable, whether in teaching or in his profession, in the mechanical arts, or any other manly occupation, if he shows himself capable, if he shows himself a man:

"A man's a man, for a' that,  
For a' that, and a' that,  
Your words obscure and a' that—  
The rank is but the guinea's stamp—  
The man's the gowd for a' that."

This speech was received with great applause. The Principal then saying that all would agree that our colored visitors should be represented on the platform, called on Rev. Mr. Spiller, of Norfolk, to speak for their race, as was due him, that he was the only one of the speakers who had not received a word of mention beforehand of his speaking.

Mr. Spiller justified this reliance upon his race, in speaking by a graceful and fluent address:

He said: "I am truly glad to be here to-day, and I feel that the students who go out from this school go as sons to shine upon their race. I am compelled to feel that our race is advancing, and to these young people I would say: As you are now going out to elevate our people, in some places you won't find the way open; first make them see that you are not careful how you approach them, you will drive them away from you instead of helping them. Don't try to change their customs all at once; first, gain their confidence, first make them see that you are trying to do them good; first get their sympathy and love. Then you will be able to teach them, and make them see that many things they do are wrong, and then desire to change them."

May God bless this school and its teachers, and students, and may its light shine on through those whom it sends forth, shine on through all time and into eternity.

I don't feel able to make a speech, and if I had one in me, I would feel hardly able to express it, speaking after all these Doctors of Divinity, who have spoken. I will only say to the graduating class: May God guide you, and when you return, as others have, to this platform in another year, may all see that you have made progress and done good work. And remember this: you go up, you'll carry me up; if you go down, you'll pull me down. Every colored man has the responsibility of his people upon him; your race is judged by each one of you; you carry it up or pull it down."

"Praise God from whom all blessings flow," was then sung by all standing. The benediction was pronounced by Rev. Mr. Spiller, the throng dispersed to boats and carriages, and another pleasant page in Hampton's history was ended.

#### The Schofield Normal and Industrial School at Aiken, S. C.

This School, established in 1868, by Martha Schofield, of Philadelphia, under the auspices of the Pennsylvania Freedmen's Relief Association, and kept up by her in spite of opposition and obstacles that would have discouraged a less resolute woman, seems now to be in a very prosperous condition. A farm has been purchased, which gives the boys industrial training, as well as an opportunity to earn something towards their support. They have also a printing press which turns out very creditable work, as shown by their circular, printed by a girl compositor and a boy pressman. The small wooden school house in which the writer, some years ago, saw the students uncomfortably crowded, has given way to a handsome building of brick—two stories—60 x 65 feet, which has cost thus far about six thousand dollars, and on which (though a few hundred dollars more are required to complete it), there is no debt. We commend this excellent School and its needs to the attention and aid of the friends of Negro education. What those needs are may be learned from the following extract from their Circular, signed by W. J. Rodenbach, Principal, and Martha Schofield, Business Manager:

"It now becomes necessary for the School to ask of its friends to aid in defraying its current expenses. The total sum asked for is \$5,000. About half of this has been subscribed. Scholarships of \$10 each will send a young man or young woman here through the year. Are there not 150 persons who will give this sum for such a purpose? Some will feel able to send five or ten students at \$10 each."

"One year ago, the duty of asking for help in building a new school-house was laid upon us. We accepted it. You gave the means, and now we render an account of our stewardship. One who put in a thousand dollars has seen the investment, and has said, 'We have the worth of our money.' Every busi-

ness man, who has examined it closely, feels the same. It is not quite finished; the large assembly room, and two others, are not yet plastered, but they can wait. Our pressing need now is for money to pay the teachers. Some have not been paid for months; in fact, the treasury is worse than empty. It holds a debt, which leaves unpaid, hard-worked, conscientious teachers. This is the only debt, and the waiting ones have lived by faith in darker days than these, working steadily on, knowing that 'He who turns the water-courses, can turn the hearts of men.'"

"The building was a necessity. Grand and noble and enduring as it is, the training and instruction of those who hasten with willing feet to its open doors, will be far more lasting, and is a greater necessity. They do not come as idlers, begging bread; they come hungry and thirsting for light; they come asking to be taught; all sizes, from 5 to 30 years of age; young men who never lived near schools—now over 21 years old—are willing to be put into classes with children of six or seven years. Fifty are from distant country places; three girls walk thirteen miles a day; others walk ten. What shall we do? (Close the school, shut their hopes, check such energy, disappoint those who go forth to teach—or, will the needed means come? Will the Divine Wisdom, whose guidance was sought for the best judgment in spending your money for the building, again move you to place in our hands the amount necessary to keep our school open until June 1st? The lack pay due teachers, and sufficient to continue to the end of the term will take about \$1,200."

Several of our Hampton students have come from this School; all of whom have made a good record, and some of whom, after graduating here, have returned as assistants to Mr. Rodenbach, the Principal. We trust the amount needed will be raised. Aid to the Schofield School will be well bestowed.

Frank Leslie's Popular Monthly. The June number has the usual substantial supply of clear, interesting and instructive reading. It is justly called to be among the best, as it is the cheapest, magazine in existence. O. W. Riggs has a fine article, "The Port of New York," N. B. Roberts, son, one descriptive of "St. Paul's Cathedral," A. S. Southworth contributes "Gautreaux," Ned Bullywee, "Ancient and Primitive Kitchens," An article on "Spices" is particularly interesting, and instructive. The above are profusely illustrated. There are also articles on "The Beautiful Country of Canada," "Some admirable poems, paragraphs, anecdotes, etc., are scattered throughout the remarkable publication, together with handsome engravings, and colored frontispieces." "The Unwilling Model." A single copy is twenty-five cents only; \$3 a year, sent postpaid. Address, Mac PEARCE, Publisher, 54, 55 and 57 Park Place, New York.

#### Horsford's Acid Phosphate. Mental and Bodily Exhaustion, etc.

Dr. G. KAISER, Indianapolis, Ind., says: "I have prescribed it for dyspepsia, impotency and mental and bodily exhaustion; and in all cases it has given general satisfaction."

#### A TRIAL OF THE BALTIMORE JOBBER

WILL CLEARLY SUBSTANTIATE SIX ESPECIAL POINTS OF EXCELLENCE.

1st—It is the easiest running press made.  
2nd—It is as Strong as any press made.  
3rd—It is the most Durable press made.

4th—It will do as good work as any press made.  
5th—It will take less to keep it in repair than any press made.  
6th—(Last but not least) It costs less than any first-class press made.

## HAMPTON N. & A. INSTITUTE.

**Fourteenth Annual Report of the Principal,**  
For the School and Fiscal Year ending July 1st, 1883.

To the Trustees of the Hampton Normal  
and Agricultural Institute.

GENTLEMEN:—In April, 1868, fifteen years ago, this School opened with fifteen students and two teachers. There have been this year five hundred and seventy-eight students and thirty-five teachers, besides officers; and the "plant," unincumbered, is valued at \$150,000.00. Until 1878 Negroes only were admitted. In that year it became our unmistakable duty to receive seventeen captive Indians who, under the care of Captain R. H. Pratt, U. S. A., had changed from the worst of savages to well disposed men, eager for education, for whom no place was so suitable as Hampton, because of its industrial teaching. This, and all like schools in the South, had been founded on the principal of admission for all, "without regard for race, color, or previous condition of servitude." This hospitality to a few red men has resulted, not only in an increase to one hundred and nine students, but in the great work of Capt. Pratt, at Carlisle, Pa., to which this was an essential stepping-stone; a new and hopeful public sentiment, a fresh departure in Indian education, and in a new demonstration of the Indians' capacity, with proper opportunities, to become good citizens. Whatever their failures, they are found to be not from innate causes but from surrounding influences. So hopelessly seem the latter against them, that many despair of success; but it is not a little gain to feel that the red race is capable, in self, both mentally, morally, and physically, of the duties of citizenship; and that not do it, but that getting the men and the means of doing it, is the question? The point is, really, what is the nation's will in the matter; that has not yet been decided. The weakness and inefficiency at Washington is that of the people themselves.

Can any friend of the school regret that Indians have been admitted, especially in view of the following facts?—From 1874 to 1878 (the year Indians came) our colored students increased from two hundred and thirty-seven to three hundred and seventeen. From 1878 to 1882 they increased from three hundred and seventeen to four hundred and twenty-two. In the first four years the Negro gain was eighty; in the last four it has been one hundred and five.

The Indian question is one of honor and of justice. The Negro question involves the salvation of the country. The former touches the nation at no vital point, save as its broken pledges are sure in time to work out their revenges. It has a dramatic interest and a present popularity which the other has out-

grown. Will the red race finally have a faithful constituency of friends, like that of the blacks, who will steadily sustain the educational work for them that, to succeed, must be perpetual?

National aid has weakened the work for Indians, as the lack of it has strengthened that for the Negro; which now, however, can, I believe, stand the effect of it. The time for it has come. Well meant legislation has been a curse to the Indian, and in many ways still is. The ignorance and conceit or indifference of Congress, in this matter, are well nigh discouraging. A result of it is the annoying, harassing position of those who attempt practical co-operation with the Government in the matter, which keeps in the back-ground men able and willing to more than double such work as Carlisle and Hampton are doing. The army posts offered for Indian schools are excellent and a most economical plan for work, on a large scale, but are not and will not, as things are, be taken by competent officers. Money appropriated to found Indian schools over a year ago still lies in the treasury, while funds needed to make existing work more efficient cannot be had. A plan should be devised which shall give to competent men the details of the difficult, delicate task of Indian civilization, never to be accomplished while a legislative body attempts executive work.

The most natural and simple way is to make the Commissioner of Indian Affairs an independent, responsible officer, at the head of a Department with ample discretion; and to create an educational bureau, with a strong man at its head. The present Superintendent of Indian education hardly appears as a factor in the problem.

The fact that army experience is so much at the basis of Indian education at the East is significant, for it can do just as well in the West. There is a class of men in the army, now that its fighting days are about over, who can be spared to help settle the Indian question, and are better than any other for the purpose; not because they are soldiers, but because they are, and only so far as they are, educated experienced men, of high character and capacity; they have many advantages of position. Then, the economy as well as the wisdom of it! Civilian agents (excepting a few, too valuable ever to lose to the cause,) are a failure, with which the parsimony of Congress, in giving meagre salaries, has had much to do. At first hopeful, I am now satisfied that nothing but this fatal parsimony may be expected, along with wasteful expenditures in other ways. Whatever can come of thoughtful study of our Indian problem, and of well directed and systematic executive energy in working it out, is not to be looked for as things are; while prompt, wise, and decisive action is imperative. To merely study and be interested in Indians is one thing; to work for their improvement, to learn their condition and meet practical obstacles, is to lose faith in present methods, while faith in the Indian is sure to grow. Success will not be the outcome of a system of laws or regulations, but of practical wisdom and devotion, of which the present Commissioner of Indian Affairs is an illustration.

Missionary work for Indians, during the past forty years, an unobtrusive but vastly underrated effort, has been the most important success of all. There is nothing to compare with their work among the Cherokees, with the Sioux at Santee, at Peoria Bottom, and at points in Minnesota and elsewhere.

Government has constructive power only in material things. It can build custom houses and bridges and railroads, but on the moral side it is critical, and obstructive rather than helpful. Its principle of selecting its men is a vicious one. In civil service reform would it be great honor for the Indian, but will the law amount to anything?

The country is just awakening to the fact that a vast black population threatens, by the force of its numbers, to overwhelm, at certain points, its civilization, especially in those States where there

is a majority of Negroes; but, wherever the blacks are massed in large numbers, they have, particularly in the more southerly States, a tremendous physical advantage. The Negro develops splendidly, multiplies amazingly, while the whites deteriorate; more and more to be outnumbered and out voted. Their standard of morality in places is shocking and almost shameless. Virginia, parts of the Carolinas and Georgia, Tennessee, Kentucky, and other States, present in many ways a different aspect, but this growth of the Negro population and its power for good or evil for themselves and the country create, I believe, the most serious social and political fact of the day.

The hope of the race is in its desire for land and for education. The former holds true of the adults; the latter of the young. Owning an acre is the best cure for indolence and intemperance; it creates a motive for good conduct of every kind. A homestead separates a Negro from the vagrant class, and identifies him with the side of law and order. Whenever he owns the land, the home, as a rule, is respectable, is partitioned off, making the conditions of morality and of civilization. While far from universal, this desire prevails, as is illustrated wherever the South is prosperous, and indicates a way in which Southern people can aid, and often have assisted the Negroes around them to better lives. Virginia farmers have often thus settled the vexed question of their labor. Schools can do little for those who live in squalid homes. While Northern charity and national aid shall help to educate the young, Southern people should save themselves from a vast vagrancy by encouraging the settlement of Negroes on lands of their own, in such a way as to secure for themselves a supply of "the best labor in the world," as enterprising men down South like to call it. But the better class of blacks is steadily getting real estate, and the fear of their ultimately owning a very large share of it has been freely expressed.

The combined resources of Northern charity and of Southern taxation are wholly inadequate to the educational work to be done for the Negro youth; even the increase is not well taught. Ignorance is gaining ground. School houses and outfit, except in the cities, and usually teachers, are makeshifts. Supervision is lacking; teachers do pretty much as they choose. The usual means of stimulating or making them efficient are wanting. National aid is the need of the hour, and may now, perhaps, be hoped for. Ten millions of dollars a year, five years have been proposed; I think five millions a year for ten years would be better; or an annual appropriation of even less at first, increasing as the States, duly encouraged, shall exert themselves to do more in order to get more, until ten million a year may be both needed and better deserved and better expended. Anything that would cause local effort to relax would be a fatal mistake.

A surrounding civilization is, after all, the best educator of our backward races. Our own has given the Negro the English language, a priceless advantage, industrious habits, and many ideas, but no moral strengthening; it was not, however, a growth from within, which is the only real one, but it is gradually working in. Commerce, the law of supply and demand, the necessity of labor, are all educational; railroads, the best of civilizing institutions, are doing a great work for the South. Schools are, however, a paramount need to teach the multitude to read and write, so they can think and act for themselves.

I believe, also, in a simple method of industrial training in the common schools, which we have tried this year in the "Butler" public school in this vicinity. Boys and girls who attend school from nine o'clock A. M. till half past twelve o'clock, are taught from two to four o'clock P. M. the use of carpenter's tools and of the needle, by teachers

who instructed them in the morning. Twenty, say, out of two hundred, receive mechanical instruction four days each week; two sets of twenty each being instructed in one school year. It would hardly pay to teach a larger per cent. This is the suggestive rather than exhaustive method, and will result in creating, perhaps, five mechanics where otherwise there would scarcely be one. The plan is to seek out and encourage those with special aptitude. Not less than ten per cent. of any national appropriation should be devoted to normal instruction, teachers' institutes, etc., and as much more to industrial education. In a higher civilization an equilibrium of education is kept up by outside influence, by public sentiment, and by parental power; the free school for whites needs less practical teaching. For the Negro, however, there is likely to be, from the lack of social influences, some sad results from neglecting everything but book knowledge.

The Hampton School is more vitally efficiently related to the work for Negroes than ever before. The following reports indicate it. The period of curiosity and of popular enthusiasm for this race is passed; the work appeals to principle, to the patriotism of thinking men, as one that must be carried through. The Negro race contains a proportion, perhaps ten per cent., of excellent material for an education beyond the rudiments, and these should be fitted to teach, and lead the rest. This thought seems to have inspired the "Slater Fund." Make the teachers, and you make the people.

The mental capacities of the best class of Negro youth, whatever those of the average may be, are best shown by the high attainments and unchallenged success of colored students scattered in many northern colleges, and by those compassing the higher studies in not a few of the southern institutions. The question is not one of mind but of character.

The following reports upon the work done here, and its results, will, I trust, show that there is a solid foundation of hope for and faith in the future of the black race, and make it clear that its success is only a question of time and of effort.

## OF GRADUATES.

By Miss A. E. Cleveland, Correspondent.

The correspondence with graduates and ex-students begun, and so successfully carried on last year by Mrs. D. W. B. continued during the present term, under some disadvantages, however. My distance from head-quarters has prevented me from getting a good deal of information concerning graduates, which otherwise I might have had. Unavoidable delays also kept me from beginning the work until late in November. At your suggestion, I prepared a circular letter, to which you kindly added a note of introduction and endorsement. Over 460 of these circulars have been sent out, accompanied in many cases by a written letter. The response has not been so general as I hoped it would be. I fear that many of the circulars failed to reach those for whom they were intended, owing to the frequent changes in P. O. addresses. It is very desirable that notice should be promptly given to the correspondent, when such changes occur. Replies have been received from 115; very pleasant letters, many of them.

Of the sixty who graduated last year three soon "entered into rest". Of the whole class, more than nine-tenths have been engaged in teaching, and those who have not taught, have been actively and usefully employed in various ways. I have had letters from forty-four of them and have heard indirectly from most of the others.

This has been decidedly a marvellous year. Ten of Hampton's sons and daughters have taken this step, all but two of whom married inside the family. Of the three Indian graduates one is now teaching an agency school among the Potawatomies in Ind. Territory. Exceedingly interesting letters have been received from him, showing not only a earnest desire to do all he can to help his people, but a practical common sense in his dealings with them, as valuable as it is rare. Mr. Elliott, the missionary, in whose family he was for several months; speaks in high terms of him. One of the others applied for a position as bookkeeper in Ind. Territory, but was told by the Agent that he was too young to teach. He is now a clerk in the employ of white men. The

third is a clerk in the Commissary Department of one of the Agencies. He has had the promise of a position in one of the schools.

It is really delightful to see the enthusiasm and zeal of the young men and women who have gone out from Hampton, and who, amidst great discouragements, are trying to impart to others what they have received.

Here are a few of the obstacles they encounter: miserable school-houses, men sheds some of them, without even a glazed window, sometimes no stove, seldom any black-board; "charts and maps, unknown luxuries in a country school-house," one of the girls writes, "irregular attendance of children, who quit school as soon as there is in the winter time, and often prevented from attending the two or three miles to school, by the lack of proper clothing."

There has been great trouble this winter in the Virginia Schools from a change in text-books used, parents being too poor to furnish their children with the new ones. Still another trial, which many encounter, is great delay in receiving their pay. One young man writes me that he has not received one cent for his winter's work, and does not expect to be paid until next Christmas. At the same time, he sends me five dollars that he has raised by means of a fair, to purchase Testaments and Hymn-books for a Sunday School he has started.

To toil patiently and bravely on, in spite of all these discouragements, shows a resolution and force of character which commend these faithful workers to the respect of all who can appreciate such qualities. There is a bright side however, the children are eager to learn, in many places the parents are interested, and most of the teachers report a friendly attitude towards themselves and their work on the part of the white people, speaking words of encouragement to the teachers. In one case, in N. C. the teacher reports that her school had been visited by the white teacher in the place, and she herself cordially invited to return the visit, which she has done. In not a few instances night schools have been taught. One young man writes from S. C. that on account of ill health, he was obliged to give up his night work, but not until he had induced six young men to join the Grammar School which is a branch of Clafin University. Several of the graduates have organized reading Clubs. A member of the last class, who is now doing good work in Tennessee, writes that the children read all sorts of trash, and that the only way to eradicate the evil is for him to place good reading in their hands. In response to his appeal, a lady in New York, to whose kind contributions more than one Hampton graduate has been indebted during this last year, has sent him a gift of books, which will enable him to start his reading club. Hampton's friends are earnestly requested to bear in mind this need of our Graduate teachers, and occasionally pack off a box or a bundle of magazines or books, so that more Reading Clubs may spring up.

A faithful teacher in Albemarle, Co. having received from some ladies in Maryland a box of clothing for his poor scholars, writes thus gratefully: "When I opened the box and beheld its contents, I could not speak for joy. I cannot tell you the joy of my children when I told them I had received a box of clothing for them. It was no use to tap my bell for order, I felt more like shedding tears when they cheered than anything else. I spread the things out in my room, and with two or three of my people succeeded in marking them so as to supply about ninety of my pupils with something of real value and service to them." He describes in a graphic manner the scene when the clothing was distributed, parents and children coming from four to five miles, and the afternoon given up to speaking and singing by the school, and to grateful speeches from the parents.

Of their interest in the work let a few of these teachers speak for themselves. M. K. thus writes, "I am not ashamed to be called a teacher. I enjoy a pleasure, a satisfaction, 'a good' as Dr. Mark Hopkins puts it, 'that I cannot describe.'"

One of the most earnest members of the last class, who was very sick after leaving school, says: "When my health grew better, I began our Hampton course, that is going around and reading to the parents of the children. They liked it ever so much, and said that I seemed to take more interest in them and their welfare than any teacher they had ever had." From Delaware a young woman, J. L. writes: "The white people here, are very generous towards me and I receive great encouragement from them. My discouragements are numerous, more so than I have things to cheer me, but it is my intention to do my share of the work in enlightening my race. The principles instilled in me while at Hampton shall never be forgotten." This is how R. M., a young man in Vir-

ginia, got a new school house, "As soon as I found that I had succeeded in winning the interest of all, I declared that I would not teach any more unless all would come together and help me to prepare a good house, seats, etc. Rather than lose their teacher, all agreed to fix the house according to my wishes, so during the summer we built a new school house."

A successful teacher in S. C. writes of the recent consolidation of his school with the Polytechnic Institute, "The school which is under the management of a Scotch gentleman, who for 18 years, has devoted himself to labors among the people of the Sea Island region. He adds 'I am proud to write that there is not a scholar in my school of the 117, ten years old, that cannot repeat word for word and letter for letter the entire Commendments.' Another writes: 'I have the approbation of the best citizens, white and colored. Of course I have some that are hostile to me and my work, but, like Gen. S. C. Armstrong, I look at the necessity of the work and surmount the scoffs and sneers of the people and go on.' A young woman, R. D., says: 'I thought of going to Africa, but since I came here, I think this is Africa enough. The people know very little of the Bible. They were very much surprised to have us open our school with prayer. Temperance is something never thought of. We can't do anything with the old people, but we try to hope for the children. One, writing of the school he had before his present one, says: 'My labors there were very hard, but my spirits were constantly renewed by thinking about the good work and not about the hard work.' Another says: 'My Sunday School is getting on nicely, the old people attend as much as my scholars do, and I take the greatest pleasure in trying to teach them the love of Christ and His goodness, the best I know how.' With regard to the 'Word Method' a young woman writes thus: 'I have used the 'Word Method' this winter and have also taught on the type-od' works much better. A teacher in Powhatan Co. says: 'My word method' scholars are doing beautifully. The parents think it wonderful that the children learn to read without learning their letters first' Another young woman says: 'If I had a reading class, I would be more successful in teaching my pupils to read by the word method. An earnest worker in Alabama says: 'I have been told that the man who taught here before I did, was a white Southern man, and he was capable of getting ten pupils. I have on roll 118. I put up the first Christmas tree that was ever seen in this vicinity, it has been the neighbor hood talker since. This young man began teaching in a school house, which was quite different to things at Hampton Institute. I worked evenings and mornings until I made quite a change in the look of things. A young girl teacher writes from a large school in Virginia, 'When I first commenced to teach, some of the grown white girls who go to school used to try to push me off the side-walk. I always got off for them. I did not think it looked well for a teacher to be wrestling over the side walk, but had I been a school girl I think I should have done just as nice as I could wish, and they always speak to me in a respectful way. Those girls were only poor white girls.' From Georgia, A. W. writes 'I am glad to say that I am teaching in a nice new school-house, just built last year, given by a good man, Wm. E. Dodge of New York. I wish so much that Gen. Armstrong could see it, also some of my teachers and dear classmates. I close with one more extract, this time from Norfolk, Va. 'The Superintendent seems to be very much pleased with our teaching. I am glad to say: he came to visit our school not long ago. The teachers of this county have a monthly Teacher's Institute, held at the Academy in Portsmouth. White and colored all attend.'"

These extracts give a fair idea of the general tone of their letters. We do not feel disturbed by the charge, sometimes brought against the Negro, that he is deficient in moral strength, when we have such evidence of his capacity for development in this direction, as is often furnished by those who have gone out from Hampton and its teachings.

By their fruits ye shall know them. Applications for reading matter, in most cases, are referred to Miss Tilton, in charge of that branch of the work.

OF READING MATTER.

By Miss R. E. Tilton, in charge.

In connection with the regular correspondence, which keeps Hampton informed of the labors of her sons and daughters, there was established and systematized, last year, by Mrs. Dixon, a "Correspondence for Reading Matter," through which they are enabled to make their wants known, and to obtain some of the books and papers they

so much need, and are unable, with their uncertain salaries, to buy for themselves, and their scholars. It is difficult for those, to whom a well selected library and opportunities for regular daily reading are the greatest necessities of life, to realize the great disadvantages under which these graduates labor.

Their work lies scattered through the South, miles, perhaps, from any communication with the outside world, and the old newspapers and magazines, which are thrown aside or piled in out of the way places to collect dust, would be a blessing, indeed, to them. If it is a pleasure to help those who try to help themselves, here is certainly a chance to reach that end.

Our own library furnishes quite a supply of all sorts of papers, which, after they have been on the tables for a week or so, are sent down to the office of the "Graduates' Reading Matter," and from there distributed through the South. But with a roll of several hundred names, this would be quite insufficient, were it not for the contributions solicited and received from our friends. Magazines, Sunday school, illustrated, religious, educational and temperance papers; in fact, any reading matter, old or new, has been gratefully acknowledged. In this way several reading clubs and temperance societies have been helped.

The large Sunday Schools, which are almost always found in connection with the day-schools, have been greatly assisted by the distribution of a large case of Bibles, Testaments and Psalms, kindly contributed by the Society of Friends at Philadelphia.

Letters of thanks have been received from many of the graduates. One writes: "My scholars were delighted to think some one was so much interested as to send them something to read."

Another, who says, "Whenever I write to a teacher at the School, I feel that my words go to one who sympathizes with us and our people," and one who has been teaching this winter in a school-house which lies in snow, hail, rain, wind or sunshine, indiscriminately, asks for "magazines, Sunday school papers, in fact any instructive literature."

"The reading matter came in splendid." "The papers and magazines that have often been received from Hampton have been a source of delight to me, and a real treat to many of my reading pupils. Such expressions of gratitude must make all connected with the work feel fully repaid."

The names of a good many graduates have been sent to interested friends in the North, who send them papers regularly, and take a personal interest in them which is very helpful.

With every year the work will broaden; as each class is graduated the need for reading matter will be increased, and any contributions gratefully received.

## OF THE ACADEMIC DEPARTMENT.

By Miss M. F. Mackie, in charge.

The Academic Department for the year ending June 14, has enrolled 582 students, 343 boys, 239 girls; of these 370 have attended the day-school, the balance, 212, the night-school.

### Normal Students.

YOUNG WOMEN.	YOUNG MEN.
Senior Class 12	Senior Class 24
Middle " 41	Middle " 39
Junior " 88	Junior " 91
Night Students 65	Night Students 147
206	301

### Indians.

Normal classes.	Girls.	Boys.
Preparatory " 33	8	12
Night " 41	42	12
	66	

Grand total, 239+343=582.

Average attendance for the year, 510.

The work done in this department compares favorably with that of former years, although there have been an unusual number of irregularities in classes caused by the illness, and in one case the loss of a teacher in the middle of the year, whose place it was impossible to supply. Another disadvantage under which we have labored has been the large size of the classes; this is particularly true of the Junior Class, which has numbered 174 pupils; divided into five sections, the divisions have still averaged 35, much too large a number to be taught at the time when the work is elementary and must depend for its success upon individual teaching.

Reporting for the Mathematical classes connected with the day-school, I find we have had 295 pupils, 141 girls and 154 boys, all of whom have been studying Arithmetic, with the exception of 13, these forming about one third of the Senior Class, who have taken Algebra.

We have made a decided gain on previous years in being able to give our lower classes Mental Arithmetic regularly throughout the year. The want of this training has always been felt to be a serious loss in our mathematical work, but until now we have not been able to give it the attention its importance demands. The benefits resulting from this step have already shown themselves in the blackboard exercises.

As a class, colored pupils are specially fond of the study of Arithmetic, much more so than the ordinary run of white students, and many of them for quickness of thought, correctness of analysis and accuracy of work, will compare well with any students I have ever taught. Want of accuracy on the blackboard is, I think, their fault. They are good in analysis and are anxious to know the reason of each step, but in their work through chiefly at results, and if the analysis is clear in their own minds and they have the correct answer, they do not see the need of having every step on the blackboard strictly true and logical.

The interest of an advanced student is not confined to his own lesson; he can never see another engaged on a hard problem without wanting to test his own strength on it, and he is constantly hunting up problems from other text-books than his own, in many cases using up time which would be much better spent on their studies.

This year there have been 20 Indians in the several classes. Many of these do excellent work and compare well with the best colored students; their want of English in explaining their work is their only disadvantage.

There is of course a great difference in the ability of students, but not more than 7 think than can be accounted for by the disparity in their ages and the difference in the previous advantages they have had for study, and not more than will be found in any white school of this size.

Comparing the progress and proficiency of our present pupils with those of earlier years, it might at first seem as if no great advance had been made. In many branches of study we do indeed go over no ground that we did twelve years ago; this is particularly true in mathematics, but outside of this there has been a very decided broadening of the curriculum of study and a natural Philosophy, for example, when I first came here the text-book in use was such as, at the North, would have been given to a child eight or ten years of age. Written in the style of questions and answers. The same is true of other branches. Now we use such text books as are found in any Normal School.

We also see a decided improvement in the applicants for admission to the school, who every year come better prepared. Ten years ago it was a rare, almost unheard of experience to admit a student to the Middle or Senior Class. Now we often enter a dozen or fifteen into the former and every year one or more into the Senior.

Another very marked contrast is the independence of the pupils in preparing their lessons. When the school numbered one hundred and thirteen students, it was much more busy work for the teacher to keep the evening study hour than it is now, for three hundred. I remember when the applicants for help, waiting their turn at the teacher's desk, would be ten or a dozen; now a half a dozen in an evening is the average, and these are from the Junior class. When once a scholar is in the Middle Class he takes great pride in being independent of the teacher outside of the class-room.

I do not think there is the same earnest application to work that the earlier students manifested; if there were, I think the grade of scholarship would be perceptibly raised; on the other hand it should be said on behalf of the students, that they have much less time to devote to their books than their predecessors did: there is more of a demand upon them for exercising outside of the Academic course, and their regular study hours are not infrequently broken in upon by a call to attend a lecture, which however educating and helpful it may be, does interfere with class work. These interruptions were quite unknown in the early days of the school.

Again, the increased size of the classes must also, I think, be admitted to be a reasonable drawback to rapid progress, if we aim, as we do, at thoroughness.

The strictly Normal work is a feature that we have been able to develop only in the last few years. It has been the Senior Class being small, (56) the students have had more frequent opportunities for putting their theories of teaching into practice; four pupils reporting daily at the Butler, which is our

[June, 1883.]

"Practice School" has given every scholar a half day of teaching in a fortnight, which has been much above the average of the allowance enjoyed by previous classes.

This year we have made a new departure; we have combined the spelling and writing into one exercise, and thus far with good results; interest being added to two studies in which it has always been difficult to engage the student with a fair amount of success; by so doing we have been able to add to our course of study not only the Mental Arithmetic mentioned above, but also Physical Geography for the half year and a course of Botany for six weeks. The Senior Class has had the benefit of a course of lectures on Agricultural Chemistry under Prof. Webster of Norfolk; notes have been taken during the lectures and a recitation made from them the following morning. The interest of the class in this study has been well sustained, and they seem to realize what may be its value to them in the future.

The standard of the school is, I think, on the whole much higher than formerly; the students are more intelligent in various directions and more independent in their thought and under much better discipline. The generous provision of reading matter in the way of papers, magazines and so forth, which our early pupils knew but little of, is doing a great deal for our present classes in the way of general culture and intelligence.

OF ENGLISH WORK IN THE JUNIOR AND MIDDLE CLASSES.

By Miss M. J. Sherman, teacher.

As the general features of the English department have already been reported, we will now confine ourselves to some points of special interest connected with the work done in the Junior and Middle classes during the past year.

Aside from mere mental discipline, our chief aim has been, more than ever before, to train our Juniors to express themselves easily and correctly. As a foundation for this, there has been much drill in analysis and parsing, for we believe that in no better way can they be taught clearness and accuracy of thought and expression. Our great need in this work is a book containing several hundred carefully graded sentences. Many in our present text-book are too figurative for the average student; moreover, only twelve are given under each new subject, a number insufficient to afford thorough drill.

It had long been a pet hobby of the writer that, in defining the pupil should never commit to memory the words of the book, for we believed that, if he understood a subject, he could make his own definition. Four years' experience in this school has decidedly changed our views. Facts prove that, though a student may be able to distinguish a complex sentence, and learn to write one when called upon to do so, he will in most cases fail to give a definition both accurate in meaning and grammatical in construction. Hence, if to define at all, he must commit to memory. It has been our practice, therefore, as soon as a subject has been thoroughly understood, to draw from the class by questions a correct definition, which has been written step by step on the blackboard, and then learned word for word by the pupils. We believe this has aided in a better comprehension of the subject, and in clearer expression on other points.

Our chief aim has been, we repeat, to train our Juniors to express themselves, and most of all in writing. Examinations have been more frequent and more rigid. The papers, with the per cents, have usually been returned, and many others stimulated to greater earnestness in their work. Illustrative sentences, usually tending toward "The dog bit the cat," seem quite out of place when coming from young men and women nearly twenty years of age. In banishing these from the pupils' exercises we have found pictures in the geography, especially life-scenes, exceedingly helpful, as well as some small ones cut from illustrated papers, and mounted on cards for individual use. A large supply of carefully selected pictures would greatly aid in our work.

Compositions in the form of letters and short essays have been frequently required. These are mostly narrative of personal experience or descriptive of pictures. Thus originality of thought and expression is secured; a point we find most needful to guard.

Neatness is always insisted upon, while a constant warfare is waged against bad spelling. As a rule, an average of more than two mistakes in spelling a page necessitates a rewriting. Lists of misspelled words are frequently given to the spelling teacher, who drills the class upon them, a system which has resulted in a great change for the better in this respect.

One cannot accomplish everything in eight months. In previous years we have laid aside the "Lessons" at the close of the Junior term. Too little drill can be given in such a limited time to make the know-

ledge lasting. Many of our pupils, either from dullness or from poverty, are unable to take the studies of the Middle year. These need drill in letter-writing far more than much that they study. We believe, too, that those who complete their course would better understand and remember what they study, if they could have along with it more practice in applying the principles learned. It has seemed best, therefore, to consider no "Lessons" in text-book for the first half of the second year.

As regards the work of the Middle year, the bulk of our effort has been in the direction of composition-writing. The chief difficulty still lies in accuracy. For instance, after insisting for six months on a "corner" at the beginning of each paragraph, we received several exercises a few days since which were perfect models of neatness in every respect, but with no "corners."

A few plain rules for punctuation have been thoroughly learned by the class. Give the pupils a sentence to punctuate, and they will usually do it correctly; but in a composition, nine out of ten will fail to observe the rules.

The same course has been pursued with the Juniors in regard to spelling, and with the same good results.

Our students show considerable fluency in the use of language. Some descriptions of home-life are really very pretty. They are slow, however, to appreciate the leading points of a given article, but take rather to its minor details. In their own composition, they manifest a great fondness for naming the day and even the exact hour of arrival at a given place.

To train them in clearness of thought we have spent some time in teaching them to make out topics on what they read, a plan which has been followed in the reading classes also. Here we would say that much has been gained by increased co-operation on the part of the teacher. A concentration of effort on the spelling question, the supply of composition subjects by the geography and history teachers, the requirements of written analysis in the arithmetic classes have aided the composition teacher, who feels that much is due to the timely service thus rendered.

We believe, not only that our students should be able to express themselves correctly, but that all possible addition should be made to their stock of ideas to be expressed. Last fall one of our teachers gave the school a fifteen minutes' talk on the comet, and it was reviewed in some of the classes, and made the subject of a composition. We believe that a fortnightly course of similar instructive talks would be of great benefit to the students. The teacher may give them in class, but if the whole school could listen, time would be saved, and all be instructed.

Certainly no better work can be done for those who are so soon to train others than to teach them to see and accurately describe the wonders about them. To this end we have given a few lessons in leaves and flowers, requiring students to write descriptions from a given analysis, thus aiding them in the use of topics and in expression also.

Give a student a certain page to study, an exercise to write, or a few examples to work, and he knows that to do so, but tell him to prepare himself on a given subject, and, in the majority of cases, from lack of energy or ability, it will not be well prepared. He cannot find his own implements and the spot which needs cultivating. He does not work independently. Consequently much of our work must be done in class. How necessary, then, that the student should always be present!

After much damage from previous irregularity, an effort was made at the beginning of the present term, the result of which is that every section has at least two days when no one is out at work. The good effect upon all is very marked. May we venture to suggest that far more and better work could be done, for the Middle class in all who work should be out the same day? The few who have no work would have extra drill, but no new ground would be gone over.

Looking at our work as a whole, we are tempted to feel discouraged when we consider that of about eighty Juniors under our charge, not more than half can be promoted. This is owing partly to the rapidity with which our work has to be done, and partly to the poor training many of the students have had before coming here. Many a "repeater," however, makes a good scholar in the end, and by reviewing he lays a good foundation for the later years of his course.

We feel that the past year shows a marked gain in material, and hence in work accomplished. There are fewer gross grammatical errors, and in many respects the work is much better than that of previous years, making the outlook exceedingly hopeful.

OF ENGLISH IN THE SENIOR CLASS.

By Helen W. Ludlow, teacher.

I have had, this year, both sections of the Senior Class in English Language and Litera-

ture. Our time being short for the study of literature, it seemed to me that the aim should not be to cover much ground, but to cultivate a taste for reading.

To give some idea of the best American literature. With the first object especially in view, I have tried to make the exercise always one of pleasure, and have therefore not required much outside, original work from the students who are not, indeed, capable of studying a literary work by themselves at first. They have also done some committing to memory of short poems and prose extracts. Each student was supplied with a common-place book in which to copy extracts from every author studied, chosen generally by himself; also, a brief outline of the life, with special points of interest, as follows, for example:

Name: Henry Wadsworth Longfellow.  
Birth: 1807, Portland, Maine.  
Education: Bowdoin College, Brunswick, Maine.

Occupation: Professor of Modern Languages and Belles-Lettres, at Bowdoin and Harvard.

Residence: Cambridge, Mass.

Character: Gentle, pure.

Style: Simple, sympathetic.

Principal Writings: Voices of the Night, etc.

Death: April, 1881, Cambridge.

These outlines have been copied from my writing on the blackboard. They have no text-book except to read from in the class, or to study a piece. The biographical sketches in the text books are apt to be long, and discursive, and I preferred to spend the time rather on the study of the author's own works. For this purpose I have taken two or three or more specimens—not generally fragments—and we have studied them together in the class, their meaning, form, proper expression in reading. They have been generally much interested in this exercise, and their selections for their extract books have been usually from the pieces we have thus studied, so that these will recall to them in future days many pleasant associations and suggestions. To increase the value of their books to them, I have, from time to time, pasted into them some of the beautiful, illustrated "Longfellow, Whittier, and Holmes' Leaflets," published by Houghton, Mifflin & Co.

A sample of their best kept books I present with this. In this way, we have studied something of our principal American poets of both sexes:—Bryant, Emerson, Longfellow, Whittier, Helen Hunt, and Julia Ward Howe, Holmes, and Lowell. Julia Ward Howe, Helen Hunt, and Celia Thaxter; and of our noted public speakers, living and dead.

Preparatory to their study of speeches, I drew from them and wrote upon the blackboard what they considered the essential "Elements of Success in Oratory." They did remarkably well, and after a very few suggested additions to their list, they classified the qualities of intellect, sensibilities and will; physical, educational, and external advantages. Our study of the speeches was based upon this classification, which was a great assistance to them.

To arouse their enthusiasm at the start, I began with the colored orators, Douglass and Eliott. Then, for the sake especially of our Indian orators, we had one or two specimens of Indian oratory, and then came down to the white speakers, beginning with the living ones and working backwards. We studied some fragments of speeches, but mostly whole ones, to get the form and argument. Some extracts were copied into their books. Besides the names mentioned above, we studied speeches of Wendell Phillips, Brown of Georgia, a sermon of Henry Ward Beecher, speeches of Garfield, Lincoln, Garrison, Sumner, Webster, Clay and Calhoun. We spent more time on speeches than on anything else, because the students—the boys especially—are more interested in them than in anything else. After studying Webster's Eulogy of Adams and Jefferson, Section A. made a very excellent abstract of it from memory, in the class, and another of the closing scene of the Phædo, and another of our noted speakers in various departments of oratory, that they may be directed in future reading.

At this point of our winter's work in American literature, quite a break was made by the introduction of Miss Mason's translation of the Crito, Phædo and Apology of Socrates. This doubtful experiment turned out to be an eminent success, from the beautiful clearness, and simplicity of this translation, and has sufficiently proved its admirable adaptation to use in schools.

The closing scene of Socrates' death was first read from the Phædo, as a test, with great interest and appreciation; then his closing speech before his judges, in the Apology; then we took the "Crito," and then the entire having never flagged, we ventured upon

the whole of the Phædo. I thought that would carry them entirely beyond their depth. But their earnest attention and zeal took both sections through the deepest, even of Platonic theories of "innate ideas" and "conceptions" and "types"—with, of course, the help of much explanation and illustration and simplification. It would have been cruel to withhold it after their enjoyment of all the rest. The greatest benefit of the whole, perhaps, was the intense excitement of interest and enthusiasm. They had happened, by a fortunate coincidence, to have just been studying about Socrates in their ancient history class, so were especially prepared to enjoy the book. I think that the waking up which they have experienced will last them a long time, and that the impression made upon them by the noble lessons and elevating sentiments of the Apology, Crito, and Phædo, will have some practical influence on their lives.

After completing the "Socrates," we took a brief glance at our historians, essayists, and novelists—chiefly to suggest and direct future reading. Essays are generally over their heads; novels they consider a waste of time—at least the boys do—and it is as well they should, I think, having so little opportunity to read, and so much to learn. History and biography they are especially fond of, and they were interested in learning who our historians are, and what their departments; and, in reading fragments in the class—which was all, of course, that could be done—to get some idea of their style.

After thus much study of American authors, we took a slight glance at the literature of England; taking up first, at their own desire, Shakespeare's Julius Caesar, which was timely, like the Socrates, in connection with their study of ancient history, and was made still more interesting by their taking out Froude's Caesar as supplementary reading in their reading class. In studying this play, our plan has been for each to take a part, to study as best he could outside—though they did very little such studying, and then to read the book, and then give it in their own words. This was a difficult exercise, but they were generally interested; though, on one occasion, one of the girls objected to changing the language of Shakespeare because, she said, she thought it seemed to be in very good English already.

We are still on Julius Caesar (May test). I hope to be able to give them also a few bits of modern British authors. But if we do little more than we have done, I shall not be altogether dissatisfied with our year's work. Certainly not if it has, as I trust, given them some idea of the delight there is in good reading and some power to obtain it.

The difficulties and deficiencies that have hindered our work are the same old ones we are all familiar with. There is, naturally, as with all pupils—a proneness to forget the earlier lessons of the course; and, for the sake especially of preparing them for examination as teachers, it may be necessary to shorten our proposed plans. A review of grammar, deficiency in which was made apparent by testing them in the winter, on the Norfolk county examination.

But the great trouble is the smallness of their vocabulary, and the unfamiliarity with written English. I spoke very fully of this in my last year's report. I might repeat it all from this year's experience. But the additional point I wish to emphasize—said, I think, a suggestive one—is that this unfamiliarity with the language of books is more of a defect, or lack of training of their eyes than of their ears. A young man in the class was reading in the "Phædo." Reading at sight, as he was, fairly well, but of course not without now and then a blunder. I found it myself decidedly pleasant to follow his reading in my own book. I noticed two or three of the class looking off their books, though not apparently inattentive. I said to one of them, a very reliable fellow, and one of the oldest and most mature: "You had better look on the book." This requires the closest attention." He answered, "I can understand it better by listening than I can by looking on myself." Immediately thereafter he chimed in and said they also could I made no more objection. In a certain stage of training children will listen by hour to loud reading, but seldom take up a book voluntarily. You don't throw them on their own resources, but read and read to them till they are able to read for themselves—training them of course, meanwhile to do so. They know many words, and express them when they hear them which they do not recognize by sight. Their ears are trained ahead of their eyes.

This is very noticeable in one young man in the school who cannot read as well as many a well trained child of seven; but who, even from hearing his own blundering reading of a paragraph, catches the idea and can express it in his own words. It is, in your frequent surprise. This is an exaggerated example of the general fact. It seems to me that this fact points to a radical defect

and to its possible remedy, or, at least, amelioration.

It results, of course, largely from want of practice in reading; but also, I think, more essentially from a want of observation that is noticeable also in other subjects. I think this explains their great difficulty in learning to spell. They do not observe the form of the words; they have not the habit of observation. Even with a printed page before them, some even who have gone through the whole course, cannot be relied on to make a copy without blunders. The Indians, often on the other hand, learn to spell quickly, and more accurately—partly, no doubt, because they are careful training from the first, but it is not also because they are, by inheritance and habit, close and keen observers?

So it seems to me, and I would respectfully suggest that more pointed and systematic attention to the development of the perceptive faculties from the very first of the course, and all through it, but especially in the Junior year, would be of great advantage to the students in various ways: to their accuracy in industrial work; to their clearness of thought; to their moral accuracy; to their habit of truth—and certainly to their English.

It seems to me that such training might be conducted without further demands on time which, I know, is already crowded. I have begun the experiment in my own Junior Grammar class, by making their written exercises description from observation.

They are describing themselves at present, discovering all the productions of the School farm; the trees, vegetables, and flowers; learning to describe their forms, their parts, and habits and uses; making collections of leaves, drawings and descriptions of them. All through the winter, I have given them more copying than original work, and I think they show improvement from it. They are taught spelling by copying, by their spelling and writing teacher, also, which is in the direction of this training.

Many other opportunities for it will no doubt suggest themselves to others. Whatever is already done in this way, would it not be well to do more?

#### OF HISTORY.

By Miss M. F. Diddle, teacher.

Few of our students enter with any knowledge of History. To the majority it is the "Great Unknown"; and, to some, it proves to be the "Unknowable."

Beginning at the middle of the year, when the novelty has worn off from their other studies, History is hailed with delight. It opens to them a new world. They are at first pleased as they would be with anything new, but soon come to like it for its own sake. A full year is given to the study of United States History. The stories of exploration and settlement, the Indian wars, the deeds of Revolutionary heroes, are full of interest, and therefore are remembered without great effort. During the long period of political development the interest flags, but is roused by the guns of Fort Sumter, increases as the struggle goes on, and abates only when the last Confederate soldier has laid down his arms.

The work of the Senior year consists of a mere outline of the ancient, Oriental monarchies, followed by a brief history of Greece and Rome.

As for methods, the simplest are the best. The aim is not so much to store the memory with facts, as to teach the students to think and reason about facts. Events are studied with relation to cause and effect. Each subject is analyzed and the topics are copied into blank books. Typical recitations are required as far as possible. The student tells all he can about a subject, the remainder being drawn out by questioning, or supplied by other members of the class. A superabundant use of words, and inability to stick to a point, are characteristics which show most plainly in these recitations. The use of text-book expressions is always discouraged, but not easily prevented. It is vastly more easy for them to commit words to memory than to grasp the thought and translate it into their own words. The moral side of every act is the one which they wish first to investigate. The frequent occurrence of the question, "Was it right?" is strongly suggestive of a class in practical ethics.

It is constantly borne in mind that nothing clinches a fact so well as an interesting story in connection with it, and a great many stories are introduced into the recitation. Frequent reviews are found necessary. They are conducted in various ways—by rapid questioning, by written topics, or sometimes by questions from the class. A written examination is given upon each subject or epoch as it is finished.

At the beginning of the year we had no maps for Ancient History. One of the young men in the Senior class was equal to the occasion, and prepared a map of Greece which was a great aid in teaching the history of that country. A fine map of the Roman Empire, and a plan of Rome, have since been presented.

The use of obscure expressions in the text-books, the limited range of reading, and small vocabulary of the students; their inability to grasp the salient points of a paragraph—these are difficulties which only hard study can overcome. Beginners in History seem to think that every sentence is of equal importance, hence the necessity of reading in class each paragraph before assigning it as a lesson. By the topical method of study and recitation the important points are made to stand out so that, in time, the students learn to find them without help. They have little time for reading, and as a rule, depend entirely upon the text-book and recitations for their knowledge of History. A few have made good use of the library and have gained broader views and more general knowledge. Until they have acquired more perfectly the ability to grasp the thought of a printed page, and the art of judicious skipping, large works on History are of little use to them.

The way in which one department is made to supplement another is perhaps best illustrated by History. It is taught in connection with Geography; it forms a part of the Reading and the Literature classes; historical subjects are assigned for work in composition, while the copying of topics is made a lesson in writing and spelling.

It is almost impossible to estimate the value of the daily reading and discussion of news items. It does not look for great results. A knowledge of the present creates a desire to know what preceded it, and awakens a spirit of inquiry. History thus becomes to them not a dead thing of the past, but a living and ever developing science.

The most important question is that of results. What does the study of History amount to, in practical value, to these students? We do not look for great results. In two years we can give only the prelude to the world's great drama. We can merely introduce a few of the leading actors, with the hope that this slight acquaintance with the few will create a desire for a more thorough knowledge of the men and deeds of History, and so lead our students to read for themselves. Expecting little, we are not disappointed. The study of History is universally liked before the end of the course. Historical subjects are chosen for essays, they are worked up into speeches, they are debated in the Societies. Why our students like the study, and how it helps them, may be learned from the following summary of their own statements:—

Ancient History supplements the work of the whole course, explaining and fixing in mind many things that come incidentally into the earlier years of the course. It explains allusions that are constantly made by public speakers. It helps to a better understanding and appreciation of our own times. It leads to a more intelligent reading of the Bible and books in general. It teaches many lessons and gives many warnings. The study of grand characters gives an inspiration to those who study them. One young man enthusiastically exclaims that he is "just full of Sparta." Best of all, History gives a taste for good reading. This is the testimony, not of one, but of many.

There are few suggestions to be made for the department of History. The facilities for teaching are fair. A change of text-books by the Senior class, and an increase in the Outlines being better adapted to our needs. A more general use of books of reference by the students would be an immense gain, a suggestion which could hardly be carried out without an additional hour in the day. A short course in English history would supply a great need. The last half of the middle year would be the best time for it.

#### OF READING.

By Miss Margaret Kenwill, teacher.

It has been truly said that our students need a "fact library." This is especially true of the reading classes. We need more books of facts, so that we may pleasantly and profitably combine the study of reading with the acquisition of useful knowledge.

For each year's course there should be a set of books adapted to the needs and progress of the pupil. This need has in part been met. We have used Swinton's Supplementary Readers, and The Boys of '76, in the Junior classes with good success. In the Middle class, Mackenzie's History of the 19th Century, has been read with eagerness and delight, while the Senior has, for a short time, been reading Froude's *Cambridge* as supplementary to the study of Roman History; Shakespeare's Julius Caesar has also found a place in the reading classes.

Thus by giving the student a palatable mental food, a love of reading is developed, which is the chief end sought, and which, is a pretty sure road to success in mechanical skill in the art.

One faculty, which particularly needs developing, is the ability to see the point of what is read, to grasp the thought, for without this power the student is of course unable to read intelligently. In a simple sentence like this for instance, "They put ferns and mosses around it," the student reads, They

put ferns and mosses around it. Clinging to the last word with a hard blow on the end without reference to the meaning. "In a paragraph or even in a whole article, the same thing is true. For example, after reading in the Southern Workman the story of the life of Wm. Lloyd Garrison, a student was asked to give the important points of the lesson; he began and ended by saying, Wm. Lloyd Garrison was born in Newburyport, Mass. Dec. 12th, 1805; never by any chance missing a date, while all the story of devotion and self-sacrifice was quite left out.

To teach the pupil therefore to get the gist of what he reads, he may be required in descriptive or historical selections, to write out the line of thought, or the leading points in the form of a set of topics, drawn from the class during the recitation and from which the lesson may be reproduced.

Here is a reading lesson as sometimes conducted to bring out the history, thought, motive, feeling, manner, style, etc. Take for example the familiar and stirring lines of Sir Walter Scott's beginning.

"The train from out the castle drew;  
But Marmion stopped to bid adieu,  
And so on till, Lord Marmion escaping, across the trembling drawbridge."

"Halts and turns with clenched hand,  
And shouts of loud defiance pours,  
And shakes his gauntlet at the tower."

The questions would be something of this order.

Who and what was the Author of this poem?

Where is the scene laid and what are the circumstances connected with the story?

From the reading of the piece what idea do you gain of the character, personal appearance, etc., of Marmion and Douglas? Then the student would be read so as best to represent these characters. What is the prevailing emotion to be depicted? What is the general style of the piece and what manner, attitude, expression, tone, etc. is required to express it? What is the point of the story? Relate the story in your own language. Explain the meaning of the sentence beginning, "Though something I might plain, he scorned to express his mind in words." Make a sentence using the word "lists."

An so on with obscure sentences and difficult words, thus acquiring the ability to express the same thought in different ways and adding new words to the vocabulary.

#### OF GEOGRAPHY.

By Miss M. W. Clock, teacher.

In the time allotted us for the study of geography, we endeavor to assist the pupils in cultivating their powers of observation and reasoning, that the work in this subject may continue after it has been put aside, in the school room, for other studies.

The majority begin the study for the first time, making it necessary to have the general plan of work similar to that of children; being guided by the laws of simplicity and dependence, and using the most objective methods.

In the introduction of the discussion of the physical features of the surrounding country leads to definite ideas in regard to the kinds of the low and high lands. Then by presenting the earth as a whole they naturally come to the divisions of land and water. These are considered in giving concise descriptions of the miniature representations made on the moulding board. After a little work in regard to the equator and the poles, with a knowledge of what is included in the terms climate, vegetation, occupations and commerce, they advance to the study of the continents.

In considering a continent it is first moulded in sand, the mountains and rivers are represented, and the productions placed on that part of the moulding which is known to correspond to the part of the continent in which they are produced. Then by adding the cities they have a miniature continent before them, making it a reality and helping to form a comparatively accurate, mental picture of the country studied.

When the moulding-board is not used, corresponding work is done by drawing on the black-board or paper. In this, construction lines are not used, the whole work being imitative. The object of both drawing and moulding is to impress contour, relief and political facts.

They are especially interested in map drawing, striving with surprising perseverance to make each drawing better than the preceding one. At first, after hours of sketching and erasing, many can only present a much soiled paper bearing a confusion of lines. Yet after a little direction and practice, they can outline so the drawing is recognizable, from which time there is continuous improvement. I think the attraction of map drawing lies in their ability to see the advancement that is made.

As the time for this study is limited to the Junior year, and the pupils are able to work more rapidly, the former has been considered almost to the exclusion of the latter.

The more abstract work on latitude, longitude, the laws governing the change of seasons are to the pupils, the most difficult. It is not fully taken until the latter half of the year. At this time the cultivation of the reasoning powers, in the work that has gone before, enables them to draw inferences that at the beginning of the year, they could not have grasped. They also enjoy these lessons more than the previous ones, especially the boys. They are surprised in finding, they can slowly collect, step by step, facts which simply explain to them the causes of the change of seasons, also of our long days and short nights in summer, and *vice versa* in winter.

At the beginning of each recitation the previous day's lesson is reviewed. In these oral reviews, I find it necessary to devise as many methods as possible to obtain variety, as they are strict adherents to the adage, "Variety is the spice of life." When topical reviews are desirable, questions are written on numbered slips of paper, then distributed, from which the pupils can do all the work of the recitation period. They delight in matches conducted on the ancient spelling match plan, also in giving descriptions of places and having others guess what has been described; in fact, the interest never flags when there is any chance or lottery in connection with the review. Of course, all this requires time, yet it insures thorough and attentive preparation, followed by an animated recitation.

We close the term with noting the resemblances and differences of countries, thus reviewing largely the term's work and giving a reality to the pupils' conception of descriptive geography by comparing the "seen with the unseen."

To give a completeness to the study of geography, we need a black globe for representing the equator, parallels, meridians and continents; specimens of the various productions of foreign countries, and sets of pictures showing the vegetation and animals belonging to the different zones.

#### OF WRITING AND SPELLING.

By Miss Belle F. Small, teacher.

Students entering the Junior class this year were, as a rule, wretched spellers. They were evidently accustomed to spelling words by sound. Even when this is allowable in the English language, their slipshod pronunciation led them into countless errors. They were not able to write words correctly, because the right form of the words was not familiar. Often they had never seen words they attempted to spell.

Since copying is the exercise which requires pupils to notice words most carefully, and which best impresses them upon the eye, that exercise has been used in teaching Spelling.

The teaching of Writing in connection with Spelling followed naturally, since making the forms of letters calls for the same accurate observation as making the forms of words. Pupils took a new interest in learning to write, and they were studying their writing to a useful purpose, and were writing that which meant something to them.

I have always used the words I wished to teach in sentences, and in this way pupils could have much practice in spelling words in their own vocabulary. Those words that the students need to use every day have been placed in sentences. The names of objects in the school-room, buildings on the place, articles of dress, food, names of the months, days of the week, cardinal and ordinal numbers, and words occurring in connection with their studies, have been used. Teachers kept lists of words that were misspelled in daily use or in written examinations and these words were woven into sentences again and again.

Words in daily use so often occurred, their correct spelling was indelibly impressed. The right use of capitals and marks of punctuation was also taught by copying sentences. I found that soon they were used correctly without thought.

So far as possible I let these sentences convey interesting and valuable bits of information. We talked about these sentences and made them language lessons.

Pupils often put words in sentences, and wrote and answered questions. Each day, several sentences were carefully copied from the board. These sentences were kept to study for the following days. That day the sentences were copied and dictated. Pupils wrote, passed in the papers for examination, then copied a new lesson. It was found necessary to require every misspelled word to be rewritten so many times that the correct form would leave a stronger impression than the error.

The words were often copied wrong, and an error not seen, even after it was pointed out.

Oral spelling has been sometimes used for variety, or as a test exercise.

I have found, without exception, that good readers are good spellers. The Spencerian

Chart has been used in teaching forms of letters.

In writing, all can not be required to hold pens in the same way; since often their hands are clumsy and the Quinby ruling has been used with good results.

The penmanship of the Indians is, without exception, excellent. Their hands are supple, and are controlled so as to execute the dictates of keen eyes.

Classes have been noticeably eager to learn to write well. They like writing because any improvement made is so clearly seen with the physical eye.

My experience has shown me clearly that, with the students here, perception of form needs to be cultivated. I would suggest that the teaching of drawing might lead to good results in this direction.

#### OF BOOK-KEEPING.

By Genl J. F. B. Marshall, Treasurer.

There is no change in the method of teaching Book-keeping, and little to add to my report of last year. Thomas's Single entry System published by H. H. Peck, New Haven, is still used, and is the simplest and best work I have found.

Very little can be done during one term with a large class, divided into two sections, each having but two lessons a week, towards proficiency in the theory and practice of keeping accounts. A general idea of methods, and a knowledge of the proper forms and meaning of business papers, the importance of written agreements, receipts for payments, etc., is all that can be expected or accomplished. Even this imperfect training will be found of much service in the country, places where many of our graduates teach. Indeed, I do not know of any class to whom such knowledge is more useful or where a thorough knowledge of accounts could be put to more practical use. Many of them go out into communities where great ignorance and illiteracy prevail, and where a good knowledge of accounts, agreements, etc., would enable them to be of great service in the settlement of disputes arising from a want of such knowledge. Many of the students have as much natural aptitude for accounts, as those of any other class, and their handwriting is better than the average of most other schools. The books of the treasurer's office, which are more than usually intricate, embracing the accounts of over a dozen different shops and industries, large farms, two boarding departments, over fifty teachers and five hundred students, all brought together into one set of books, are satisfactorily kept by one of our graduates who has had no other training than what he received in the Senior Class, and in the office. It would be desirable if the few who manifest a special aptitude for this could have more thorough training than they now have time for.

#### OF THE NIGHT SCHOOL.

By Louise K. Day in charge.

The night school opened last October with one hundred and seventy students, seventy more than the preceding year. As employment could not be found for all, several were compelled to leave. The average attendance was one hundred and forty, ninety-seven boys and forty-three girls. At first there were two white teachers and four graduates, but the force proving insufficient, two more graduates were added in the course of the winter. The graduates teach during the day at Butler School under Miss Hyde; the other teachers have two or three classes in the day school.

There are seven sections in the school; the first and second are taking the Junior studies: arithmetic, American history, grammar and geography; with the hope of passing the examination for the middle class in day school next October. There are about twenty in each section. If the earnestness which they have thus far manifested, is continued to the close of their term of study, many will prove successful. Much time is devoted to English, trying to enable them to tell and write a logical story. In the second division, especial attention has been given to this and the history of the country, showing a marked improvement. Arithmetic, on the whole, seems to be the favorite study, it being of more practical use, in their opinion, than any other. Mental arithmetic, and the explanation of examples, have been most difficult, as very few of these students have been accustomed to anything of the kind. They thoroughly enjoy hunting up some puzzling question to place upon the board for their mates to solve. Sums are found everywhere, on horse troughs, work benches, etc., showing that they are thinking of these studies outside of school hours. Grammar, too, has a great charm for some, they never having known the correct use of language. Miss Alfred, teacher of the second division, has a happy way of writing, each evening, on the blackboard an apt quotation, which fastens itself in the minds of each scholar, and exerts an influence which could hardly be expected.

The next four sections are studying to enter the Junior class. The third and fourth began with writing numbers in arithmetic, making sentences, and reading, Miss Hall's small geography, "Our World." Now they read well, can express their own thoughts intelligently, and can work problems as far as United States Money. Two sections are using a geographical reader as a reading book. It serves every purpose as a reader, while giving excellent subjects for language lessons. In the language lesson, sometimes a story is read by the teacher and written out by the pupils from memory; or a picture is used to suggest a story. Then again, words are placed upon the board with which sentences are formed. One of the teachers, engaged during the winter, has been in charge of a class of sixteen, nine of whom are Indian boys. This section is of an irregular grade, some reading the first reader, others in the second. The experiment of having the Indians in the night school, on the whole, has worked well. They feel the push of the other students and the most of them study with a will. But it should be said on the other side, that it takes an immense amount of patience. A teacher has been known frequently to stand waiting five, ten, and even fifteen minutes for an answer to some questions.

There are seven Indians, members of other sections. Two are in the second division and are studying with those preparing for the grade school. To the Night School department belong also eleven boys and one girl who work at the Shellhans farm. An evening school is kept for them, and taught by the wife of one of the graduates.

Our class has been composed of younger students than that of last year, but they have shown an earnest spirit. The grade is much higher. One of the great difficulties found in all of the sections is inaccuracy. Much of the struggle is in undoing former poor teaching and filling the gap in the pupils' knowledge. At first, in some compositions, the English was so poor that it was impossible to find a place in which to begin correcting errors. Several times, the papers were all destroyed and new ones written, with very little improvement. The spelling is by no means perfect in any of the sections. It is not always phonetic, but very original. The use of words is sometimes very amusing. A boy in one of his papers spoke of Longfellow as an "extinguished poet." The colored child hears the English language used incorrectly in his home, and he finds it hard overcoming his faults. In some cases, it seems impossible to root them out. By this, his speech, spelling and writing are seriously affected.

As the students work all day, there is no opportunity for outside study, therefore, all that is learned, must be given in the recitation room. The time hardly averages more than nine hours a week.

The pupils come to their evening study, generally bright and cheerful. I think the general opinion was voiced by one who said, "I'd rather go and learn something, than stay in my room and do nothing." And believe that one of the teachers has but echoed the sentiments of all, when he said, "although I feel somewhat tired after teaching during the day, in my night class there is so much real interest shown, that I can but enjoy the two hours spent with it."

#### OF THE PRACTICE TEACHING CLASS.

By Miss Elizabeth Hyde, in charge.

The present Seniors have been able to have more practice in teaching than usual this year, owing to the fact that the class has been so small. They have taken hold of the work with considerable interest, and no class has given me less trouble or been more prompt in its attendance at the Butler. I think they understand rather better than some of the previous classes have what it means to be a teacher, and as far as methods and ways of teaching are concerned are better fitted to teach. Much time which should have been spent in methods, I have had to use in reviewing and teaching; their lack of good primary training must be very much against them as teachers. Their course in Practice Teaching has been as follows: Reading, including word method, and Phonetic spelling, number and Arithmetic, Spelling, Writing, Language, Form, Color, and lessons in Theory and Art of teaching. At Mrs. Walton's request, I have left Drawing and Geography for her to teach when she comes down. The study of Outline of Man helps the Seniors very much in their teaching, that part in particular which treats of Sense Perception is of great value to them, as it leads them to see the importance of cultivating the perceptive powers of the children, and shows them the value of object teaching. I think the students realize how much they have lost from lack of proper training in this respect, and they promise to try and prevent their scholars from suffering in the same way. Our students are not accurate enough to

be good teachers; there is so much ground to be gone over during the three years' course, that the work can not be thoroughly done. When they become teachers they are satisfied with very poor work from the children, and care more for covering a large amount of ground than for the quality of the work done. Their inaccuracy is one of the most serious faults I have to find with them as teachers, and it seems impossible to teach them that the children have plenty of time before them, and that they must be made accurate. They are not good disciplinarians, not because they can not govern, but because they have not the right idea of order; they will allow their children to talk in passing to and from their recitation; as their classes change once in every twenty-five minutes, the school room is anything but orderly most of the time. Those of my teachers who are most quiet and refined in their manners make the best disciplinarians. In order that our students may be good teachers and good disciplinarians, we must first make them orderly; in order that their scholars may be good we must give them the best models to copy from. I think it would be well another year to take one of the rooms at the Butler, pick out some of the best of the children to put in it, and have an ungraded school, which shall serve as a model for the Seniors to copy from. I would like very much to have a first rate teacher in it. One day in a good model school would do much for our students; they are too easily satisfied with their own work, and need to have something much better to compare it with. I feel sure that in this way the grade of our teachers would be raised very much indeed, and, if anything, I think the expense would be less for the Normal School.

#### OF THE BUTLER SCHOOL.

By Miss Elizabeth Hyde, in charge.

The Butler School opened October 3d, with an unusually large attendance. Number of children on roll for the term about 330; number of teachers six, three of whom are residents of Hampton. The work done by the teachers has been much more satisfactory than in this way the grade of our teachers would be raised very much indeed, and, if anything, I think the expense would be less for the Normal School.

The discipline has never been so good; the children have been managed by the teachers with very little interference on my part, and I am glad to say that they are gradually learning that there is a better way of governing than by the use of the rod. We have had seven months of county school this year; the children have appreciated their advantages, and those who have not been obliged to go to work, have been prompt in their attendance at school. We have now a pay school of 160 children; the largest number ever enrolled at this time of year.

A new feature of the school is the introduction of Industrial training. Miss Galpin reports favorably of the class of girls under her supervision in the Industrial room. The bedding made by these girls for the kitchen garden is remarkably well done, considering the amount of training they have had in sewing. As a whole I think the children have enjoyed the work, although now that the weather is getting milder they are a little inclined to drop off. Another year, I think, it would be well to arrange for the girls, as we have done of late for the boys, and let them have one day a week for a work day instead of sending them into the Industrial room every afternoon. They are not used to so many hours of work, and their parents feel that it is too much for them.

The boys seem to be getting along nicely with their work in the carpenter's shop; some of them promising to become quite expert at their trade.

#### INDIAN REPORT.

By Miss Isabel Euglis, in charge.

There have been 110 Indian students at Hampton during the year. One has died, leaving the number at present in the School 109—41 girls and 68 boys.

They represent 16 tribes.

Sioux,	62	Ab. Shawnee,	4
Gros Ventres,	8	A.ache,	3
Mandan,	8	Mohave,	2
Ree,	7	Pawnee,	2
Sac and Fox,	7	Papago,	2
Omaha,	6	Menomonic,	2
Pima,	5	Yuma,	1
Winnebago,	4	Onondaga,	1

#### SCHOOL WORK.

Twenty-two Indian students, a much larger number than ever before, are taking the regular Normal course.

In the Senior Class,  
Middle Class,  
Junior Class,

Twelve Indian boys have voluntarily become work-students this year. There can be no better training than this for an Indian boy, when he enters into the arrangement intelligently and heartily. He has the discipline of six full days' work in the week, and studies two and a half hours every evening, with the colored students who are making most sacrifice for an education.

The remaining Indian students are divided into seven classes. Four classes attend school in the morning and work in the afternoon. Three work in the morning and go to school in the afternoon.

The plan of the school is to give to each class a daily drill in reading and spelling, arithmetic and language (including penmanship), with one daily recitation, as soon as their knowledge of English will permit it, in some study which will give them new ideas and broaden their minds. Geography, history, natural philosophy, and natural history are the studies chosen for this. When the scholars are sufficiently advanced, we use the reading classes to some extent for the same purpose.

An account of the school-work of three representative divisions is given below.

#### THE FIRST DIVISION.

(3 years' work).  
furnishes an example of what can be done, by a little more than three years' training, with bright scholars who come with no knowledge of English. It is made up of such scholars, with the addition of some new work best done in a shorter time, than in the Mission Schools before leaving their homes.

The First Division in Reading  
Miss Cora Fobson, teacher.

The object of the class this year has been to establish a good foundation in spelling and a clear and intelligible manner of reading at sight. To read well with an Indian child, he must be interested, and to be interested, he must have something to think about and study over out of school. With this thought in view we took up Dr. Hooker's book on Plants, and that proved such a success that we have lately taken up the volume on Animals by the same author. The Indian habit of observation shows itself very plainly here. The wonders of plant and animal life are in a great measure new to him. The circulation of sap in the tree, the breathing of the leaves, and the development of fruit from seed to seed, are inexhaustible subjects and doors to him into a new world of thought. But little time has been given to elocutionary work—plain every-day reading being all we have attempted yet. We read every day from our little book, aiming at a clear pronunciation, thorough understanding of the subject—spell and define all the difficult words, and occasionally write a short abstract of what we have read or illustrate it by drawings. Indians are almost invariably good spellers, and this class is no exception to that rule. There are not more than two who cannot spell all the words they are able to use.

One girl in particular is quite remarkable in this respect, coming as she did directly from the Indian camp, with no knowledge whatever of our language. Although she has but little confidence in the English tongue, she reads remarkably well—though with a slight accent—writes a very pretty hand, and will spell without hesitation almost any word found in ordinary reading.

Mr. Brandon, a graduate of Hampton, teacher of Indians, and in charge of the Indian boys, reports on the

#### First Division in Arithmetic.

At the beginning of the year they could work Addition, Subtraction, Multiplication and some Division pretty well.

This year they have studied Long and Short Division, Factoring, Multiplication and Reduction of Common Fractions. They are now working in Addition of Fractions. The majority work well, doing their work quickly and neatly. The girls are careless. Regarding their capacity, I see nothing extraordinary in either direction. I have not been able to see any difference between them and the colored students with whom I have studied as far as their ability to understand arithmetic is concerned.

#### First Division in Language.

Miss Laura E. Thelston, teacher.

The First Division in Language has followed in a simple form the regular course of grammar taken in the Junior class. The lessons are given entirely without the use of books. Parts of speech are taught in the class, by object teaching. Pictures are used for home work. Words are suggested by these and classified. Sentence building is hard work for many of them, verbs tripping them at every step. The principal parts are taught

as four chiefs, two of them lazy and two smart; helping verbs (the auxiliaries) being necessary in the former case, and nothing in the latter. Diagrams are of great service in showing which words belong together, and as one boy said, "are as good in grammar as working out a sum in arithmetic."

Recently we have paid more particular attention to letter writing and composition, changing poetry to prose, and forming sentences from diagrams. Pictures are used in the composition work. With this help they have improved steadily, and where at first it was hardly possible to get more than three or four lines, now they hand in as many pages, the writing and spelling being, with few exceptions, wonderfully good. A compound sentence in a paper just received, is rather more expressive than elegant, but is quoted as showing the general spirit quite fairly. "Grammar is good and don't you forget it."

#### First Division in History.

Miss Josephine Richards, teacher.

"The studying of history is learning what we never knew before," wrote an Indian girl, and even with so bright and thoughtful a class as the First Division it is a very true definition. Names and stories, which have always been household words with us, are not so fresh to them, but they pick them up very quickly, and seem to enjoy their new treasures of knowledge. Some of them thus commented on the question, "What is the good of studying history?" "The history is good for learn about all things going in past time." "Because we want to learn about the world." "Discoveries, Settlements, also about Presidents." "Because the people wanted to know who is the greatest man in the United States."

In teaching the same general plan has been followed as last year. The familiarity of most of the class with English has made it very interesting to read them from works other than their simple text book ("Quack-embos" Primary History of the United States), more detailed accounts of the men, the battles, etc., of which they have been learning. "The Boys of '76," and Hawthorne's "True Stories," have been very useful.

A sister of Bright Eyes, from Omaha, has been one of the stars of the class, a Sac and Fox boy from Indian Territory, its most intelligent questioner and learner, perhaps, while a little Sioux girl, the youngest of all, has shown a wonderfully retentive memory.

#### THE FIFTH DIVISION, ALL BOYS.

(1-2 years' work.)

This division is composed chiefly of Sioux from 12 to 30 years of age. A Negro boy from the Western coast of Africa has joined the class this year; also, a native of Ceylon, who was for some time cruising about the world in the yacht of an English gentleman, as his vessel.

At one time a Zulu, who was brought from Africa with a travelling show, and left the party to seek an education, was a member of the class.

#### Fifth Division in Reading.

Miss Laura Tilton, teacher.

A year and a half ago, on a very warm morning, we welcomed a party of Indian youths and maidens. Dusty and tired, they sat about the rooms, while we endeavored to make them feel at home, and at the same time satisfy our curiosity, for it was a new sight to many of us to see tall, strong-looking men glance out from beneath long locks of dark hair. When a few days later they entered the class rooms, nicely dressed, it seemed that such a step in their lives must be warmly met, and every nerve was alert to help them. Not one word of English could the Fifth Division boys use, with one exception. How, then, were they to read? The first lesson was in sounds, m, n, l, r, etc., through the alphabet. These amused them exceedingly, and often the teacher, on entering a room, would hear r, s, t sounds over, and then words made, Monroe's Chart, and the blackboard doing every thing to aid them. After the sounds were learned merely as sounds, we paid no more attention to them, except as an exercise. Words were taught at sight, and as a whole; the sounds were not further pointed out. In the cat, it is in ten, in pin, o in on, u in up; and since then the long or short sound has been given in words, but no attention drawn to the difference. The Primer was used with the Chart, and afterwards the Franklin and Reader as a preparatory to Monroe's 2d, it being thought best for them to read two books of that grade. The attention this year is given especially to voice, pronunciation, position and spelling. All lessons are first taught from the board until words are recognized, then each member of the class reads a paragraph. Expressive reading is particularly noticeable by its absence. Still there is a slight effort at exclamation, or question

marks, and the comma and period are fairly noticed. A lady who visited the class, a teacher of elocution, gave them some points in opening their mouths, which did them a great deal of good. Reading in concert is the next step, and helps them in any attempt at expression, as they are more willing to try when well supported. Another day each boy goes to the platform in turn, reading the whole lesson, and taking corrections from the class. One lesson is often all that is taught in a week, as every step has to be illustrated by drawings, no matter how crude, acted out, or in some way made clear to them; sometimes being put into Indian by the smallest member of the class, a bright little half-breed. The last time that a lesson is read is always the most exciting, as each tries to read the story through, or, as they say, "Read, all, make mistake, sit down." This exercise holds the attention of all to watch, and makes the reader especially careful of endings, such as *ing* and *y*, as an error is quickly noticed. In spelling, they have several written lessons a week, and for the most part, the words given are all learned. Once in a while oral spelling matches are tried, and again the class will go to the board and write as many words as possible from memory. It repays all trouble to see these boys, after a year and a half, able to stand in any service with Bible, Prayer or Hymn book, and know that they read for themselves the message of good will.

#### Fifth Division in Arithmetic.

Miss Cora Folsom, teacher.

The characteristic of this class is faithful and hard work. Most of the boys came a year and a half ago, without a word of English—learned to add 2 and 2, and finally mastered the first two rules of Arithmetic and the mechanical part of Multiplication and its table.

This year they have had short and long division, U. S. money, reduction and very simple fractions, such as are found in the Franklin Elementary Arithmetic.

For several weeks past they have been doing their hardest work, the analysis and explanation of practical examples. Their knowledge of English is so limited, and the expressions in the books so different from their ordinary conversational English, that sometimes the example becomes almost entirely a language lesson. Still they are very wide awake, and never satisfied until the work is thoroughly mastered.

A very complicated example put into words, with which they are familiar, will be readily thought out in Indian (or Singalese or African), but the difficulty is always in expressing these thoughts in English words. The abbreviations, too, are a source of considerable real confusion, as well as fun. They will insist upon reading 5 lbs. 5 cts. bows, I am afraid, longer than it will be funny to do so.

Upon asking one little boy how many dollars in 500 cents, he answered "5 dollars and no cents;" then after a little pause, he asked, "Which you rather have dollars or cents (sense)?" To which one big boy responded, "I'd rather have sense, because then I could get dollars." And another little fellow said, "I'd rather have dollars because then I would have cents (sense), too, wouldn't I?"

#### Fifth Division in Language.

Miss Laura Tilton, teacher.

These are exceedingly bright boys, but being nearly all Sioux, are very averse to saying anything in English unless fairly sure that it is right. Many of them went North last summer, and so understand much more than they can say, and it is a constant temptation to talk to them rather than make them do so for themselves, for they are excellent listeners. Single words taught by objects came first, and afterwards were put into short sentences—the Present, Past and Future of the verbs was taught by the use of to-day, yesterday and to-morrow. Finding that they had many single words in their vocabulary—such as where, when, who, what, there, here, etc., whose exact use they were not sure of—a sort of game was tried which gave them confidence, and was a great help. About one hundred cards were written with simple questions, such as "Where are you?" "Answer 'Here I am.'" "What are you doing?" "I am sewing," etc. Two sides were chosen, and these cards were shuffled and distributed. A question was read from one side, and whoever thought he had the right answer would reply. Of course there were many funny mistakes, but they would try again and again until each answer was properly placed, and at last all were learned. Then new cards were given, or new answers to the same question. In this way they learned many of our every-day phrases, and were very quick in using them. Now they are giving more particular attention to letter writing, as that will be of the greatest service to them when they go home.

#### Fifth Division in Geography.

Miss Laura Tilton, teacher.

The 5th Division take Geography for their 4th study.

They have been taught the divisions of land and water by the use of the sand-table. Picture lessons of the people, costumes, and animals of different lands, have been given, and the minerals and products of different countries have been brought into the class as far as possible.

They have been interested in the different ways men build their houses, and in their methods of finding communication with each other. A lesson on telegraphy, and one on the Atlantic cable, given in this connection, aroused great interest.

#### SEVENTH DIVISION.

(5 months' work.)

The 7th Division consisted of but 7 scholars until December, when it was increased to 22 by the new arrivals from Dakota. These of all ages between 9 and 24, knew no English, and only a few could read or write even the Dakota language.

#### Seventh Division in Reading.

Miss Cora Folsom, teacher.

In teaching these beginners, what is known as the "word method" is used in connection with object teaching. They must be taught like little children in many ways, and yet in many others they must be regarded as they are, full grown men and women. They have been reading from the Monroe Chart, learning to write, spell and use the words as they go along.

They are, on the whole, an ambitious class, and the prevailing spirit is so good, that the less thoughtful ones are swept on almost without their knowledge.

To-day they are able to write from dictation a sentence like this: "I want to stand in that little boat and toss a stick into the pond."

#### Seventh Division in Arithmetic.

Miss Josephine Richards, teacher.

A very interesting class, but somewhat heterogeneous in age and acquisitions, ranging all the way from six to ten, at the very first, when little White Corn, our Sioux baby, used to come with his papa and mamma. His problems were rather philosophical than arithmetical, how to find his centre of gravity being more absorbing than additions or subtractions. To teach the new scholars to count in English was the first step. One or two of the little ones have not yet got very much further, but others have gone on rapidly, and a few have been promoted to a higher class. Objects and a numeral frame have been found useful in giving the idea of simple addition, subtraction, multiplication and division. When in subtraction the difficulties of borrowing were to be met, the little straws done up in bundles of tens proved friends in need. It was pleasant to watch an Indian boy, who at that time assisted in the class, explain this operation in Sioux to the scholars. Judging from their eager interest and the merry smiles called forth, he made it anything but a dry theme.

#### Seventh Division in English.

Miss Josephine Richards, teacher.

"Good morning," "good evening," "how do you do"—thus we begin our Language class with the new Seventh Division, the members of which, however little they can say in English, have very speaking faces, remarkably free from the stolidity generally considered a characteristic of their race; and their faces, we think, do not belie them, for most have made steady progress since their arrival. Objects and pictures have, of course, played a prominent part in their instruction. Perchance some day, if Indians continue to come to Hampton, Academic Hall will boast a recitation room especially fitted up for such language classes, its walls hung with colored prints, and its cabinets filled with objects which, ornamental or not, would be sure to be useful as something to talk about and carefully observe. Sutting the action to the word is very needful, and some of the hall boys go through the exercises of pulling hair or sleeve, bending wrists and arms, shaking right hand or left hand with great gusto. They seem to show much interest, too, in writing down the sentences put on the board as the lesson for the day, and it is surprising how well they will afterwards read these or re-write them from dictation when erased.

#### WINONA.

This year has been marked by the occupation of Winona, the new building for Indian Girls. It has done more for them in some ways than ten years of school-work. The pride they take in the building is an education in itself. They have now a good opportunity for industrial training, and are taught to cut, sew, mend, sweep, scrub, dust, wash, and iron, under careful direction. The new building has broadened and strengthened the Indian work in almost every direction. The Assembly room provides a place for

the weekly prayer-meeting, and for a Saturday evening singing-school for boys and girls together. The large hall, with the other rooms thrown open, affords ample space for social games on holiday occasions.

The sunny hospital rooms make the care of the sick easy, and increase their chances of recovery.

We have been able to organize an Indian Sunday School for the first time, dividing the students into classes according to their ability, giving them more individual religious instruction.

No record of the year would be complete without an earnest expression of gratitude, on behalf of the Indian girls, to all those who have opened wide this new door of opportunity to them. We expected much from the building, but the inspiration it has given to the girls, has been a continual surprise.

#### THE INDIAN SEWING DEPARTMENT.

Mrs. L. A. Seymour, in charge.

The school year of 1893 has been one of marked improvement in the Indian Sewing Department. Our removal from the crowded room, in "Va. Hall," to the spacious one in "Winona," has added an impetus to work. If the donors of King's Chapel, Boston, who gave the room, and the kind friends who brightened its walls with lovely hangings, could but realize how much they have done to elevate and encourage, I think they would be more than paid for their labors of love. We have now 41 girls; 14 have been added to our number since the last report. Also, 2 little papooses—"Little Bear" and "White Corn"—who are very busy, and show the effect of sanitary measures. They do not appreciate them or their parents' desire for an education. They help to enliven the sewing room, where they are left during their mothers' absence in the morning, and are kindly treated and waited on by the girls who vie with each other in caring for them. Beside making the bedding, wardrobe and window curtains, etc., for Winona—283 pieces—452 articles of clothing (166 of them dresses) have been made, almost entirely by the girls, and many of them cut and fitted by them. Most of the dresses have been made as we have but one machine, and that is nearly worn out by the almost constant use of those who understand its use, and by others who are learning. Each school day has classes for sewing, running, from 9 a. m. to 4 p. m. Friday is devoted to mending, and it is gratifying to see how even the youngest will come, with her bundle of nicely mended clothes (done by herself), to repair the wear of time and the rents which will happen "we don't know how." Very little fancy work has been attempted, but a great deal of cutting, making, and mending, that will fit the girls, useful, and make them self-reliant and independent, has been accomplished.

The help of our colored graduates in the education of the Indians, deserves grateful acknowledgment. We doubt if it would be possible to find elsewhere, in any other race, service so faithful, so intelligent, so conscientious, and so unassuming.

The following report is from one of these.

#### The Girls' Housework.

Miss Lucy Mayo, in charge.

Last year the Indian girls were with the colored girls in Virginia Hall. There were a great many of the former, and as the latter had a better right to the building, the work in it was divided among them; thus leaving the Indian girls without anything to do but to take care of their own rooms, make their clothes, and wash and iron them at many disadvantages. The colored girls had a nice sewing room. Every afternoon, when the time came for the Indian girls' sewing-school to begin, instead of going into a large room, furnished for that purpose, they reported in the small bedroom of one of the Indian teachers. This year, they have a handsome home of their own, with sewing room, laundry, and a splendid chance to learn all those things that will be of so much value to them when they return to their homes. The work of the whole building is divided among them. The earnestness, willingness, and thoroughness, with which they perform their several duties, is very creditable indeed. It is a large building and requires a great deal of scrubbing and cleaning to keep this in order, yet there has never been a cleaning day when there were not plenty of willing hands to do the work required.

All of the Indian girls, from eight to twenty-four years old, make their own clothes, wash and iron them, care for their rooms, and a great many of them take care of teachers' rooms. Besides this they have extra work, such as sweeping, dusting, and scrubbing the corridors, stairs, hall, sewing room, chapel, and cleaning other parts of the building. When one thinks of this he cannot help saying, or at least feeling, that it is remarkable how they do all this and go to school. The way in which they do their work, too, would put to shame many who are far ahead of them in advantages. It

would be hard to find a set of girls, of any race, who would do better were they placed under similar circumstances. It is, of course, a very good thing to know how to do, to these things, but the lovely part of it is, to know how to do them cheerfully. It is one of the rules of the building, if a girl is sick and cannot do her work, she must send her room-mate to make it known just after breakfast, that some other girl may be appointed to do it for her before school time. We have had a great many sick girls this term, and whenever a girl was asked, "Will you please take—'s work for her? She is sick," in spite of her other duties the girl would almost always answer cheerfully, "All right," or "Yes, marm."

There has been a very great improvement among the girls this term physically, mentally, and morally, and it is earnestly hoped that next year will bring it even greater success.

The following report is from another graduate.

#### The Girls' Laundry Work.

Miss George Washington, in charge.

Before Winona Lodge was completed the Indian girls did their washing and ironing in Va. Hall, late in the week, after the colored girls were all through. This, of course, was very inconvenient, especially when we had rainy weather and the clothes had to be dried in the house, so that their ironing came on Saturday. The girls bore these troubles very patiently, looking forward to the time when they would have a laundry of their own to wash and iron in, and to keep clean. They began work in their new laundry, the latter part of October. There are two laundries—one wash laundry, and the other ironing laundry—ten stationary tubs, clothes boiler, and starch kettle, new stove, five long tables, and plenty of soap and starch. With all these conveniences, the girls, of course, were expected to do better work, and I believe, and to keep clean. They wash in different squads of eight and nine girls in each squad. Their clothes are inspected as soon as washed, and, if not clean, they are washed again. This was hard at first for some of them to do, because they could not see the reason; but, after being told and having to do them over a great many times, I notice they make it a point now to wash them clean the first time. I felt very much encouraged at finding one girl willingly washing one piece of clothes four times. I could not say that it was perfectly clean, but she did her best. Another difficult thing, at the beginning, was to make them understand what I wanted them to do. I had to use a great deal of natural language, because sometimes I would tell them something they would not understand, so the next thing was to show them what I wanted done by pointing out the object. A number of girls came to the laundry to wash. They could not speak a word of English; so, here was the hardest class of all. As I inspected their clothes, I would tell them the name of the different pieces in English, at which they all laughed, and thought it the funniest thing they had ever heard. I thought I had succeeded very well at making them understand the name and use of the different things in the laundry, when one morning, as I was about to make the starch, one girl, under- standing the starch kettle to be the boiler, put her week's washing in and had it boiling instead of the starch. "Now these girls wash and iron very nicely, indeed; and, when one thinks of the progress these girls have made, since Christmas, they cannot help feeling that their next two years at Hampton will make them satisfactory workers. Whenever a girl is sick and unable to wash her clothes, I ask some girl who is well and strong to wash for her, and I must say I have been very much surprised in some of them by the willingness with which they do it. The girls could not understand, at first, why the under-clothing should be ironed as nicely as the outer clothing, their excuse being no one would see them. I was not surprised at this, because I have seen a great many people do the same thing for the same reason.

Some may think these Indian girls do not appreciate their clothes, and the chance of keeping them clean and nice, but they do; they like to wash and iron very much. Some, of course, do better than others; that is true of all people; but the most of them like to have their clothes look clean and neat.

#### Girls' Cooking Class.

Miss M. A. Guitton, in charge.

The cooking classes are now in Virginia Hall. Another year we hope to move them to Winona, and improve the girls' chances for instruction. This year four classes have had lessons in plain cooking. They have roasted and boiled meats, made and baked bread and cake, and learned to prepare tea, coffee and chocolate.

They are much interested in the lessons

and frequently talk over the use they will make of them when they go back.

#### EDUCATION OF YOUNG MARRIED PEOPLE.

A feature of this year's work has been the taking of young married people as students in the School. Three such couples have been received, two from the Omaha and one from the Sioux tribe. The Sioux family and one of the Omahas, each brought with them a little papoose about a year old. The parents attend school half-a-day and work the other half with the other scholars. We have had in this in training Indians. The husband and wife advance together with common interests. A home will be established, and their return to reservation, and their future will be comparatively secure.

It is interesting to notice, as side issues in this experiment, the increase of courtesy in the brave for his wife, and the growing care of the mother for her child, and the effort she makes to keep her husband's possessions, her room and her baby, and—last of all—herself, clean and tidy. It is touching, too, to watch the increasing expression of tenderness of the father to his child. At first he evidently regards tending the little bit of humanity with scorn, and the woman carried the heavy baby while the man walks unburdened beside her. But the father grows to take great pride in his boy, and often relieves the mother now of part of the burden. He is never urged to this course but is, probably, aware that it gives great satisfaction. We have seen some striking developments of Indian character in this direction.

Nothing could be more exquisitely tender than the care of one of these boys, for a sick child, a few weeks ago. The mother seemed awkward beside him. Hurrying through Winona, late for dinner the other day, we met the same big brave in the doorway of the third floor when he was in his arms, and felt it our duty to challenge his position. "Phillip, what are you doing up stairs?" Answer given slowly and impressively, "I'm in charge of my baby. Where's the baby's mother?" "Gone to dinner." A gratified chord vibrates in our heart, but duty compelled a further investigation. Why don't you take him down stairs to your room?" The brave turned with grave dignity, and walking scornfully to the other end of the corridor, stood looking in at an open door through which we saw the little Sioux papoose rolled in its blanket, deserted by his parents, and wrapt in rosy slumber in the empty room. It was an effective tableau. The Omaha baby, pointing to his little sleeping playmate, made a gallant defence for his father in his infant jargon, while the brave watched his charges without a twitch of a muscle, though a twinkle in his eye revealed that he knew himself on unassailable ground, and thoroughly enjoyed the position.

The three families are now in Winona. It is intended to build, during the summer, two small frame houses—costing \$200 each—like the better class of houses at the Agencies, and to teach two of the families to make, in them, as attractive and happy homes as possible with such materials as they can find at their homes. The two places in Winona will be filled by other carefully selected young married people who will, in their turn, make the same experiment in house-keeping. Such, for these two cottages have been procured.

#### LITTLE BOYS HOME.

Miss J. Koch, in charge.

We have been able, this year, to partly carry out a cherished plan of separating the little boys—7 to 12 years old—from the older ones, to give them something like home training. Miss Jacobina Koch, who has charge of them this year, and also the care of the sick boys in the Wigwam, makes the following report.

Until this year, the younger Indian boys had been living with the older ones, and had no care other than that which the older boys received. This year they were removed into Division A, of the Wigwam, and have had more special attention paid them. The little fellows sadly needed mothering. They needed special care in almost every direction. Being small and headless, as all small boys are, their clothing gave out sooner than that of the older boys, and as they could not understand the virtue of mending in season, they were often in a sad plight. On this point the effort was directed, not so much toward keeping them neat and clean for the time being, as toward teaching them self-respect, and making them anxious to look well; that they would take care of their own clothes. With this object in view, it has often seemed necessary to let a boy go ragged for a little while as a punishment for not caring properly for his clothing, and the lesson of neatness has been more surely taught in this way than it could be by precept; for, to the Indian pupils, a certain amount of clothing comes too easily, and they give no thought to where it comes from, being used all their lives to Government support.

The small boys, as well as the larger ones, are expected to buy their under clothing, as well as their shoes, with the money they earn at work; and, in order to control them in the use of this, and thus teach them the value of money, it was necessary for me to keep their accounts. They were allowed spending money only when all their bills were paid; and were advised, when they did get it, both as to the amount and the manner of expending it; which advice was rendered effective by a knowledge of the state of their wardrobes, and they have shown themselves more and more willing to save money for a specified object, and not to spend before earning. As to spending their money, an additional hold was gained on them in this way, for, when it was discovered that one of the boys had been buying cigarettes he was allowed no more money for two months, although he had saved a dollar to his credit. The punishment was effective, not only with the boy in question, but served as a warning to others. The rule that a boy who had a zero for bad conduct, and was therefore obliged to work on the Saturday morning, could draw no spending money, has also worked very satisfactorily.

There has been a growing interest manifested in looking over their accounts, and they get much excited over the making up of their accounts every month, and often wish to see the book between whiles to calculate how much will be left if they get certain articles which they might do without.

The responsibility of choosing their clothing and spending the money—with such restrictions as have been mentioned—has always been thrown upon the boys; and if, by good care of their clothes, they lay by any money, they are at liberty to spend it as they please, provided they do not break the rules. The plan seems to have worked well.

When the Indians first come, they are apt to go to bed with all their clothing on, caps and boots included; especially is this true of the small Indians. It takes regular night visits and frequently interrupted slumbers to get them into the good habit of taking off all day clothing and wearing proper night wear. Not even when you think they have learned the lesson thoroughly, is it safe to stop inspection. They take it very kindly, however, and, if visited early enough, open their eyes with a sleepy smile and a yawn, and say, "All right," if they are all right.

One of the best opportunities of getting a good hold on them has been afforded by the "Children's Hour." Every night after study hour, they come trooping in to their sport before bedtime. An open fire made a good part of the attraction at first, before we were thoroughly acquainted, and as we became friends we talked of the day's doings, looked at pictures or read some good story; and the lesson for slipping in a word of advice or reproof or encouragement seems to come in just then; and many little lessons of politeness and thoughtfulness have been learned at that time. On Sunday evenings they are excused from prayer meeting, and spend their time in a meeting here, where they may ask as many questions as they please about the "Story of the Bible," which they find very interesting and after some marvelous bit of his history they often ask, "Is it true?" When I found the place in a Bible which had been given to one of the boys and read about the Holy City which all hope to enter, their merry eyes opened wide and their little faces grew thoughtful, and they wondered if the little boy who died last autumn, went there, and asked, "Did the angels come to take him?"

The inspection of their rooms, with little prizes given to the neatest among them, has spurred them on to making greater efforts to keep them neat, and much improvement in that direction has been made this year.

The health of the small boys has been uniformly good during the year; even measles, mumps, and whooping-cough—though prevalent on the place—have not come nigh them.

Discipline has been maintained among the boys without much difficulty. Prompt and invariable, though not severe punishment, has had its usual good effect, and made the task of government light. It but one case that corporal punishment resorted to, and in that it had a most excellent effect. My authority has never been questioned by them, and I am seldom obliged to change an order; and in but very few instances, has a boy been unwilling to do one of the many small things in which they help me.

#### THE HEALTH QUESTION.

which threatened to be an obstacle, if not a fatal barrier to Indian education at the East, has been to a degree settled. It is proved, we think, that constant care, regular life, and the physical condition of the Indian in spite of the change of climate and new mode of life to which he is subjected.

#### CARE OF THE SICK.

Among white people we find those who bear pain heroically, and others who whimper over every little hurt, and think they are surely going to die if they have a sore throat or a stiff neck; and the same individual differences are found among the Indians, though the former class predominate largely. As a rule, the northern Indians seem to bear pain much more stoically, and are more unwilling to acknowledge themselves sick than their southern brethren; and, among the latter, the small boys seem to have more courage than the larger ones, and are much less inclined to give up for trifles.

During the first part of the school year, lung trouble, sore eyes, and other manifestations of a scrofulous condition, were the diseases most prevalent. One boy who went to Massachusetts, apparently in perfect health, came home far gone in consumption, having already been told by his Mass. physician that he must die. Coming back, all worn out with the trip, and finding a stranger in place of his former nurse, he wanted to be sent home; but, after a few days of rest and acquaintance with his new nurse, he said he wished to die here. He was a most patient and even cheerful sufferer, responding to all attention with a grateful smile; and, although he lived but about seven weeks after his return, he was much missed by some. His has been the only death that has taken place during the year. Most of the sickness, during the Spring and late Winter, has been of a malarial type. Those among the Indian boys, who have been exposed to chills and fever at their blakket, the sufferers. We have had few cases of chills, and no severe cases at all. Malarial headache has been the most common form of the disease.

The Indians may be divided into two classes—those who have lived in houses and are accustomed to the white man's clothing before they come here, and those who come directly from the tepee and wear the blakket. The first are more easily trained to good physical habits, and as some northern people say, "know enough to go in when it rains;" the others usually disregard all warnings, and only learn to take care of their health under that hard schoolmaster, experience, through whose object lessons our wise Father teaches us when we are not willing to learn in any easier way.

One day came to me for medicine for a severe sore throat and was perspiring profusely. "Too much water," said he, passing his hand over his dripping face. I administered the medicine, and, about two hours afterwards, having occasion to visit another part of the Wigwam, found the boy—it was now twilight—sitting on the fence in his shirt-sleeves and bare feet, allowing a raw November wind to dry the perspiration. This Spring this same careless boy has suffered from an attack of pneumonia brought on by wearing moccasins in wet weather. The Indian boy is not accustomed to working in the open air, and of the least exertion among them try to evade the rule here by malingering. These are soon found out, however, and if a rigorous course of discipline is followed up, they are soon getting rid of their medicine, and go manfully to work.

When a new physician or nurse first comes, it is almost impossible to get any of the patients to speak a word to them, or even to show their faces. They keep themselves tightly rolled up in their blankets and lie like so many mummies, but there is no difficulty after once gaining their confidence, and I have found but one boy who was unwilling to do one of the many little things they are frequently called upon to do for each other.

Taking the year as a whole, and considering their general condition on arrival, and their carelessness, the amount of illness has been surprisingly small. The greatest number under treatment, at any one time, has been 17; the smallest, 2; and I think the average is somewhere from 6 to 8.

We should keep in mind, in connection with the health question, the fact that when the Indian comes here he changes his climate, generally his clothing, his food, and all his habits, and begins a more confining life; works and studies nearly all day, and entirely gives up the free, self-indulgent life of the plains; and yet, in spite of everything, their general health has been constantly improving, year by year, and our report compares more than favorably with the health report of the Agencies.

The danger which now threatens to annul the effect of an Indian's education is his relation to this Government.

The sin which lies at the door of the American people is that robbing of Indian lands. It is robbing him of his manliness.

There is almost no incentive and no reward for an Indian's labor on a Government reservation.

It is heart-sickening to think of students, after years of training in habits of industry and self-help, thrown back into such an atmosphere of miasma.

We acknowledge, with the deepest gratitude, the private enterprise and generosity which has made the appointment possible of wise efficient men in charge of three important Agencies in Dakota, who will do what is possible to stimulate and support the Hampton boys and girls who return to their care.

We do not claim that the Indian character furnishes no difficulty in the problem of his civilization. He is weak.

He adapts himself now with ease to the public spirit of the school, and readily accepts its training, but this does not prove his ability to resist the spirit and traditions of his own people when he shall return to them. His mind is unenlightened.

An Indian whose intelligence we have learned to respect, surprises us sometimes by a darkness of mind and superstition which is appalling. It is revealed only to one he trusts, after most patient and sympathetic effort.

He is so dependent on others for moral support, that those who teach him feel a strong sense of personal responsibility for his failure.

But there is a clear sense of right about him, and a possibility of such power of manliness and self-control that our respect for him is continually renewed.

We have yet to find any one who has worked intelligently and unselfishly for Indian education who doubts the possibility of his civilization.

REPORT OF REV. J. J. GRAVATT,

Rector St. John's Church.

Since my last report I have held services with the Indians as follows: During the Summer vacation I met them four times on Sunday and five evenings in the week. Those from Episcopal Agencies attend, regularly, Sunday-school and church services in St. John's church, Hampton, where it may be, years ago, their forefathers worshipped with the settlers. Their behavior is very good. Their attendance upon the services is not only helpful to them, but it awakens an interest in their behalf among residents and visitors. In addition to this, I conducted services for them and the other students, twice on Sunday, and twice in the week. During the term they worship, as usual, in the old church, and I meet them Sunday afternoons and Friday evenings at the School. The Sunday-school is well graded, and by the valuable assistance of the teachers who take classes into different rooms, we are brought into personal contact with each Indian. At the close of the exercise they come together and are questioned on the lesson. I think this a great improvement on last year. We make the teaching objective, as much as possible, by taking prominent characters in the Bible, and by clustering events around them. I dare say the Indians are in better shape now than at any time since their stay here. With many there has been a radical change of life. Some under the faithful guidance of the Rev. H. B. Frissell, school chaplain, have joined Bethesda chapel, and eight have been recently confirmed, by the Bishop of Virginia, in St. John's church, Hampton. God's blessing is resting on this work. May He give us grace to do it aright, and may the students become messengers of "salvation and peace" to their benighted people.

#### OTHER DEPARTMENTS.

##### OF THE LIBRARY.

By Miss E. H. Lathrop, in charge.

Both the usefulness and the attraction of this pleasant room have been much increased during the present school year. Much of the needed furniture has been made, the alcoves for the books, and the cases for the Indian and Hawaiian curiosities, the geological, conchological and other specimens. The number of volumes in the library at present is about two thousand six hundred. Nearly five hundred volumes have been added during the year, some of which were bought, but the greater part given to the library by friends.

The record since October shows that one hundred and nine books have drawn two hundred and eighty-nine books. This does not mean however that two hundred and eighty-nine different books have been taken. In many instances the same book will be charged successively to many students. The same is true of the number of books drawn by the girls. Their reading is however much more limited, being confined almost entirely to fiction. Sixty-four girls have drawn during the last seven months one hundred and sixty-five books.

More this year than ever before have books been read in the library. One hundred and nineteen students have called for three hundred and sixty-six books for use in the room. This number includes all references

to the Encyclopedias. This reading is I think more profitable than that done outside. Here they are free from the noises and interruption which must come to them while reading in the cottages. Here also there is someone ready to help them when they stumble over a word used figuratively or some other obstacle in the way of understanding what they are reading. Many of these students were sent by teachers to look up certain subjects in connection with class work. Direct reference from a teacher to a certain book or subject is one of the best ways to get them to come to the library, to give them an object for reading, thus helping them to acquire a habit of reading.

There is much carelessness on the part of some of the students in the care of books. The practice of losing them has been considerably checked by re-placing lost books at the expense of the loser. There is one source of loss to the library which cannot be met in that way. It is caused by some of the students who leave school without returning their library books. During the summer vacation one hundred and fourteen books were lost, two of which have been found. The number of papers and magazines which come to the Reading Room is one hundred and eleven, sixty-one of which come as exchanges to the "Southern Workman." Most of these papers after being read here are sent away to graduates who are teaching. Pictures are a power superior to reading matter to attract and interest the majority of both colored and Indian students. The illustrated papers, so kindly sent by friends in response to a suggestion to that effect in the "Southern Workman," have been much approved by the students.

Some recently published illustrated books of travel and adventures for young people were given to the library and put with the papers within the sight of all. More earnest readers than those books had would be hard to find. Some of the work students would come regularly and hurriedly to read them during the fifteen minutes between the work and supper bell.

##### MEDICAL REPORT OF THE SCHOOL.

From Oct. 1st, 1882, to March 6th, 1883. By Dr. Martha M. Waldron, Resident Physician. The average health of the School has been better this year than last. There have been comparatively few cases of serious illness, and with one exception, all of these have yielded to treatment. There has been no death among the colored students. One Indian boy returned to Hampton after his Summer vacation, in an advanced stage of phthisis, and died in a few weeks after his return. He had given no evidence of any disease before leaving the school. Two Indian boys (Sam. Brown and Baptist Setee) have passed through long and serious illnesses, but each has made a good recovery. Two Indian boys, (Battiste and Cracking Wing) who, in the early part of the school year, seemed on the verge of a fatal decline, have greatly improved, and are now in a very favorable condition. Another (Medicine Butt) was also in such a condition when he returned home, in consideration, but he improved under treatment and has, I think, a fair prospect of completing his school course and doing good work.

No Indian boy or girl has been sent home on account of ill health. One Indian boy, (Deluska), who was received at the School October 1881, had, at the time of his arrival from the West, serious disease of the lungs, which was noted at the time. He has made no permanent improvement, and has been unable, during the greater part of the school year, to fulfill his duties in school and industrial work.

From April 1st to May 5th, 1883.

By Dr. W. H. Birchhead, Relieving temporarily, the Resident Physician.

I have come so recently among the classes represented in the Hampton Normal School—the African and Indian—that any observations of mine must necessarily be crude, and incomplete. But some facts which have impressed me, in the course of my daily duties as School Physician, may prove of interest.

The average health of the students has agreeably surprised me, for when the large number of persons represented here is considered, and the poor conditions of life from which so many of them have come, the percentage of those on the sick list is certainly small. This is partly due, no doubt, to the climatic and hygienic surroundings of the place, and partly to the fact that all cases of sickness are taken in their incipency; every deviation from health being promptly reported to the proper authorities, as soon as discovered.

In regard to these races, as to susceptibility to disease and their power of endurance in cases of severe sickness, I think that, under similar hygienic conditions, they would compare fairly with the ordinary "hospital patient" of our great cities.

In some types of disease, however, as, for

instance, those in which the elements of scrofula are prominent, the Indian, and the African likewise, are at a present disadvantage. This arises, no doubt, from hereditary tendencies and from other causes acquired in their former mode of life, and over which time and proper surroundings must inevitably have a marked influence.

The physical condition of both races, in state, in this School, is unquestionably in a state of development, or rather change; owing to the contrast between their former habits of life and the better hygienic and moral influences under which they are here brought. And, as time goes on, and their improved existence becomes more confirmed, there seems to be no reason why they should not gain a greater power of resistance to a class of diseases to which, just now, they are peculiarly liable.

The want of morale, if it may be called so, is another peculiarity of the African when overtaken by sickness. He seems to have but little power to combat disease, and too easily—seemingly almost too willingly—succumbs to its influence. This, of course, would make him an easy prey to epidemics, and even to comparatively ordinary maladies. This holds true, also, in regard to the Indian. He seems to bear pain with fortitude, as a rule; but becomes easily despondent about himself when sick; and, when he loses hope, he is very hard to rally, and often sinks under comparatively mild types of disease. In cases of wounds he seems to expect to get well, and generally does recover quite readily, and he endures an operation with much stoicism.

There have been no deaths in the School since I assumed the duties of School Physician temporarily, April 1st, 1883; nor have there been many cases of severe sickness. There is one thing, in closing this Report, which calls for special notice; and in which cause and effect are so obvious as to suggest an immediate remedy. This is the fact that almost all, if not all, the cases of malarial disease occurring in Virginia Hall, have been in the north side of the building, in that part situated over the Laundry. This has been so marked that, in the opinion of all who have been the masters of the building, the investigation, the removal of the Laundry to some place outside of the building is the only way by which the difficulty can be remedied; and I would respectfully urge that this be done as soon as possible, as a matter of sanitary improvement. There seems to be no other source to which the continued prevalence of malaria, on one side only of Virginia Hall, can be traced.

##### REPORT OF THE PASTOR,

REV. H. B. FRISSELL.

The religious work of the year has been of unusual interest and attended with most satisfactory results.

Contrary to the custom of former years, the religious services of the Sabbath were kept regular during the summer months, conducted by the Rev. Mr. Gravatt, Rector of St. John's Church, Hampton. Previous to the last year, the religious services of the Sabbath were discontinued during the first of August, those of the students who remained during the vacation had no regular services on the place.

The presence of Mr. Gravatt, and his work among the students, was most excellent in its influence upon the school. The prayer meetings and the services were well attended all summer.

At the commencement of the term the religious work of the school was more thoroughly systematized than in former years. So far as possible each class was organized, each section had its leaders, and an earnest endeavor was made to engage every Christian man and woman in the place in some definite labor for the good of others.

The regular preaching services held in Bethesda Chapel, a frame building in the National Cemetery, used by the soldiers during the war, are attended by the whole school, with the exception of those Indians who come from Episcopal agencies. In addition to the Episcopal Church in Hampton.

One, certainly, could not ask for more attentive listeners than are to be found in the audience of five hundred, composed of colored, Indian, and white worshippers. Responsive services have been arranged so as to give the students as much opportunity as possible to take part in the exercises.

The Sabbath school has so increased in the growth of the Institute as to make it impossible for all the students to meet in the Assembly room of Academic Hall.

During the past year the Indians have met in Winona Lodge, and Rev. Mr. Gravatt has acted as superintendent, while the colored students have remained in the Academic, under the care of the Pastor. It has been found that, owing to the imperfect knowledge of English on the part of the Indians, they do better by themselves. They have been instructed in the Old Testament, while the colored students have followed the International lessons through the Lectionary, Christ and into the Acts of the Apostles. The Young People's Christian Association

has done most efficient work. Its prayer meeting committee has advised with the Pastor as to the best times and places for holding meetings. Its recent committee has looked after the new students, and endeavored to interest them, and companies of workers have been sent out on the Sabbath, and sometimes during the week, to render aid to the poor and to read the Bible to those who have never had the opportunity to learn. During the past year they have started cottage prayer meetings, where several families could come together to hear the reading of the word. They have found a hearty welcome and attentive listeners in all the country round. On Christmas Day a party of the students gave up the extra dinner which the school provided, and others aided with money, so that some twenty-five poor families were supplied with a good dinner.

All of Christmas morning was spent by students in distributing these among the poor, and thus they were taught an object lesson as to the means of the day never to be forgotten by many of them. An effort has been made during the past year to interest the students in the work in foreign lands, and with this end in view, certain countries have been assigned to different classes for them to study them up and present at the monthly concerts. They have been quite enthusiastic over the matter, and thus they have gained a fair knowledge of the geography, customs, and religion of the prominent countries where mission work is being done. The meeting has been entirely in their own hands, conducted by one of their own members, and they have shown much pride in working up their subjects.

Between forty and fifty of the students have been engaged in the Baptist and Methodist Sunday Schools of the place, in some cases acting as superintendents. Although it has not been possible to do much in the country around this year, there has been more interest within the school itself in the temperance meetings than ever before. Several of the boys have been asked to take part in the meetings in the school-house with Mr. Rowe, who has been hired by the school to do temperance work in this country, but having been ordered to the ministry, has gone further south to take charge of a church.

From the first of the term there has been an increased interest in the prayer meetings, those for the whole school on Sunday mornings being very largely attended. With the coming of the Week of Prayer special interest manifested itself among the students, many of whom were present at the evening meetings, which had been held for twenty-five minutes before the evening study hour, he continued, the request was granted, with the beginning of the new week there came a quiet but powerful influence over the school which every one felt. There was much earnest thought among the students upon religious subjects, and many who had been careless and thoughtless before became earnest in their endeavor to follow Christ. No unusual methods were adopted; there was the greatest quiet in all the gatherings of the students, and the religious daily programme was the giving of a few extra minutes at the time of evening prayers. Those who professed their faith in Jesus Christ were taught that they were expected to show their faith by their good works in the school-room and the work shops. Between eighty and ninety of the students took a stand as Christians during the meetings in January, and with very few exceptions those who started out in the Christian life at that time are still holding on in an earnest endeavor to walk the new road. The religious interest was felt among the Indians, and in the meetings a number of them arose to tell of their love for Christ, and their determination to follow Him. At first they seemed hardly to understand the meaning of what was going on, but afterwards they took part, either in their own tongue or in English, sometimes using an interpreter and sometimes commencing a prayer in English and ending in Dakota. There is a marked difference between the two races in the way of looking at the Christian life. The Indian takes God's word for it that he can be saved through Jesus Christ. The only evidence of a changed life he seems to look for in himself is the power to put down the old temptation. When he can do that he is quite ready to believe that it is God's help which makes him do it, and he sometimes asks admission to Christ's Church. The colored student, on the other hand, finds it hard to take Christ's word alone as sufficient basis for believing. He frequently expects some evidence which will appeal to his senses. He finds it hard to believe that Christ calls him. Many of them wait for years for an experience such as others have had, and will not be satisfied until they gain it. Religious work among both races is most interesting. They are both naturally religious; they accept the truths of the Gospel, and when they understand what the new life requires they study it as earnestly as any people I have ever seen to be conformed to God's law. That their conception

of the requirements of that law is very imperfect, that their moral standards have been degraded and their moral perceptions blunted by the dreadful training of the past, no one can deny; but after close observation in school and on the plantation I consider that they offer a most hopeful field for religious work. The well known universal testimony which I have received to the pure lives and honest work of Hampton graduates, by southern men, both white and black, on a recent horse-back trip visiting the schools of tide-water Virginia, makes me more hopeful than ever of the capacity of the colored race for moral and religious growth.

Certain school experiences of the past year have given us a clearer insight than ever before into a dreadfully imperfect conception of right prevailing among them. We have found nearly a whole class pursuing a course of conduct almost as utterly wrong as Paul's persecution of the Christians, with quite as much ignorance as had he of the wrong they were doing. These experiences, while they incite us to new endeavors to make these students understand what is right and wrong, yet create no discouragement in our minds, nor make us believe in the statement so often made, that the religion of the Negro is of no value.

These students show to still better advantage after graduation, when they get out into the work. When one considers their surroundings, the staid which they are able to take among the Christians, with quite as much ignorance as had he of the wrong they were doing. These experiences, while they incite us to new endeavors to make these students understand what is right and wrong, yet create no discouragement in our minds, nor make us believe in the statement so often made, that the religion of the Negro is of no value.

In a recent trip through some of the counties of tide-water Virginia, I found several young men in the military service were doing as well as they could with the limited advantages they had had in the way of an education, but were anxious for an opportunity to pursue their studies. In some of the schools in this region where they can receive instruction in English and at the same time pursue a regular course in Bible study, and many are unable to avail themselves of the institutions in Washington and Richmond. I have inquired in many places hereabouts, and have found a strong desire for something of this kind in this part of the country. I recommend to the trustees of the Hampton Normal and Agricultural Institute that a school for Bible study be established in connection with the other departments of this institution, where men already in the ministry can come and learn more of the use of God's word, and those having the ministry in view can gain such a knowledge of English and of the Bible as will enable them to preach the truth intelligently. Under the circumstances the school must be denominational, and I recommend that the students who come from Baptist and Methodist churches be placed under the spiritual care of the pastors of these churches of those denominations in Hampton, these gentlemen being invited to take part in the instruction of the school. I would suggest that the students in the Bible school be allowed to enter such of the regular classes as they may be qualified for by their previous advantages, and that opportunity be given for earning a part of their support in the industrial departments of the school. In many cases the congregations are unable to support their pastors without their engaging in manual labor, much help might be rendered to pastors and people at the same time that they gain the mental and moral training which comes from the labor of the hands. I would recommend that two or more cottages be erected upon the school grounds, to cost between \$200 and \$300 each, for the accommodation of those men who may desire to bring their wives with them, so that they too may feel the influence of the school, and thus more permanent work be done in raising the whole family.

In connection with this school I suggest that a Ministers' Institute, for the study of the Bible, be held for two or more weeks in the year, to which the colored pastors of Eastern Virginia be invited, and where the professors from the leading institutions of the State be asked to take part.

#### NEWS ITEMS.

In order that the students might be able to read the papers intelligently and know something of what is going on in this world, I have spent a few minutes of each morning with the whole school, discussing the news items, and a daily bulletin of news has been posted in one of the halls of Academic Hall. I have questioned them upon what they have read, called their attention to certain paragraphs in the papers in the reading-room, and endeavored to correct certain wrong ideas gained from their reading. I believe that they are quite as intelligent on subjects of general interest, and more anxious to know, than most white students of the same age. They never fail to be interested in what is going on at Washington or Richmond. They have expressed considerable

sympathy with the Irish people in their troubles, and have taken a lively interest in the murder trials in Dublin. It is not easy to show them that the Chinese have any rights in this country. It is quite natural, under the circumstances, that they should be inclined to think more of their own rights than the rights of other people.

The discussion of the advantages of Liberia as the future home for the colored people was exciting. At the time of Dr. Byden's visit many were ready to say that they would go back with him. Several of them however, had friends who had been out there and had returned not entirely satisfied. After a pretty thorough discussion of the subject, considerable of the enthusiasm died away. One of the most interesting exercises of the week has been the talk about the news with the students of the night school on Saturday evenings. This is the only time during the week, except Sundays, that they have to themselves, yet they have picked up considerable general information.

#### POLITICAL ECONOMY AND CIVIL GOVERNMENT.

I met the Senior class four times a week, during a part of the year, in the study of Political Economy. The tariff has been the one exciting topic of discussion in this class. We have read and heard reports from many of the articles that have appeared in the Reviews and newspapers on both sides of the question. Mr. Porter's letters in the *New York Tribune* have been read with much interest, and the articles on the subject in the *Princeton Review*. Although the textbook used is decidedly in favor of free trade, the class was about evenly divided in their convictions. They took up the subject of the tariff for debate in their societies, and often seemed to feel a sense of wrong when asked to give the arguments on the side opposed to the one which they had espoused. They are inclined to be decidedly partisan in their way of looking at these subjects, and it is not easy for them to see both sides.

The Seniors and Middlers have united together, during a part of the year, in the study of Civil Government, thus producing laudable emulation between the best students of both classes. We have used Townsend's Analysis in connection with the study of the Constitution of the United States. A very good knowledge of American History has been shown, and a rather remarkable power to cite cases, in their own experience, in illustration of the subjects under discussion. They have very decided opinions on most of the questions taken up, and do not hesitate to express them. Their strong desire to talk is sometimes a hindrance as well as a help in teaching them.

#### INDIAN EDUCATION.

The foregoing reports, together with those of Capt. Brown, Commandant, and of the Superintendent of the Indian workshop, herewith submitted separately, both very encouraging, complete the account of the year's work for Indians, who, thanks to the liberality of friends, are now provided for in every important respect.

The total charity for Indians at Hampton, from October 1878 to Jan. 1, 1883, has been \$60,428.16. Government has given \$35,935.98. Charity has erected and fitted up all buildings, and supplied one-third of current expenses. There is room for twenty more girls, but there is no money to help, the appropriation bill providing for only one hundred. We now have one hundred and nine Indians—nine wholly at our expense, and do not feel justified in adding to that list.

Arrangements are being made to send North twenty-five of our youth who have, in response to a suggestion, applied to be sent to spend a year and a half with the farmers in Berkshire county, Mass.

After one or two years at Hampton, the change has many advantages. The Indian office can help in the matter only when children are sent for three years, which is a foolish limitation. It is well for Indians to spend four or five years in the East, dividing the time between regular school and farm life, according to each individual case, giving from one to three years to the latter. It is impossible for Congress to legislate wisely in such matters.

The children should be sent North, and an appeal to private benevolence be made to supply the necessary, but moderate expenses of our Indian colony in Massachusetts.

While the charitable are willing to help in this cause, it is an unfortunate

fact that they have too often been called upon to do what both those who have appealed and those who have been appealed to have felt was forced upon them unjustly, and their liberal giving has been attended with no respect for those who are really responsible for them.

Sending Indians to Massachusetts for the summer has been our practice for five years; leaving them there for a year or more is similar to Capt. Pratt's admirable plan of putting his pupils with the farmers of Cumberland valley, Pa. Another year we might have one hundred and sixty Indians in our care, placing fifty in Berkshire county, Mass., at moderate expense. All such work should be connected with and a part of a central institution, which shall first receive the wild children, "break them in," and then judiciously scatter them. Politicians have faintly comprehended and sadly muddled wise work for the Indian, and with good intentions have made the best men reluctant to take hold of their education.

If people knew how much the work at Hampton and Carlisle, as well as Indian education generally, has been disadvantaged by unwise legislation, my reference to it would surprise no one. The hindrances to this cause are chiefly at Washington. In the Indian himself there is little to discourage.

Last January the Faculty of the School took the following action:

*Resolved*, That the duty of the Government to its wards, the sentiment of the country and the welfare and capacity, as well as condition of the Indians, demand a just and liberal policy towards all well conducted efforts for the education of the red race.

*Resolved*, That when private institutions, properly approved by the authorities, are willing for any reason to educate Indians for less than actual cost, for less than the Government can do in its own schools of like kind, besides providing land, buildings and outfit at their own charges, they and not Congress should fix such terms; that such reductions should be voluntary, and not forced for by our national Representatives.

*Resolved*, That the action of Congress in fixing, regardless of the recommendation of the Department of the Interior and of the application of the Hampton Institute for a higher rate, (but less than cost), the rate of \$167 apiece, as the annual payment for the education of Indians at this school, is unworthy of the Government, and unfavorable, as far as private and charitable efforts are concerned, to the cause of Indian education.

This action explains itself. It is in behalf of combined private and public education for the Indian especially, which attempts to thoroughly carry out the best and broadest practical education. The Society of Friends has received thirty Indians into one of their schools in Indiana, on the terms allowed to Hampton, and when they shall come to introduce elaborate mechanical teaching, will feel, as they even now do, the justice of our position. The allowance of \$200 a year for each Indian at Carlisle is by no means a generous one.

The last Congress provided for the education of four hundred Indians anywhere in the United States at the rate of \$167 apiece, who are to be kept, clothed, &c., for the entire year, calling for the same in a more complete and difficult training than, so far as I know, is given in any school in the land for whites. We can do it here only because the immense "plant" for the Negro makes it possible.

People may be glad to take Indians at that rate, but the work called for will not be done. I regard the provision as most unfortunate for the cause of complete training; it is adequate only when the labor instruction is simply in farming; then even less might suffice.

Well situated army posts under good officers seem to afford the best conditions for economical Government schools, from the large number that can be brought together, in buildings already provided. Private schools will never, I think, take over fifty pupils, which makes the cost *pro rata* much larger than when there are two hundred or more. What Capt. Pratt does well at

\$200 apiece for 300 Indians, a private school will find it hard to do at \$250 apiece for fifty Indians.

Of the industrial training of our Indians I can only repeat what was reported last year, that they are willing and apt at work; twelve of them have recently, at their own request, preferred to work ten hours a day, studying two hours at night, to studying mornings and working afternoons. In the latter case they, as a rule, receive \$2.50 a month, with which they get their underclothing and shoes, the school uniform being allowed; in the former they are paid \$3 a month. Some of them show a disposition to save. They work all day because they see the advantage of skill. They are like other people when they have corresponding advantages. Their failures are in effect forced upon them.

The kind co-operation of the Commissioner of Indian Affairs in again giving us contracts for supplies is appreciated. This year we are making for the Indian service as follows:

2,000 pair of men's brogan shoes.	
1,100 doz. articles of tin ware,	
100 sets of double plow harness,	
all at prices corresponding to the lowest bids of outside contractors for the same article. The profits are scant, but it is well to get back cost of material and labor.	

Our boys are working as follows:

On the farm.....	16
In the shoe shop.....	12
As carpenters.....	17
In tin shop.....	5
In harness shop.....	4
In paint shop.....	4

Their new work shop, a gift, costing \$2,000, from a lady of New York, has given them many advantages.

The health question, which is the Indian's weak point, is no longer serious. They have many ailments, and are rather irregular as well as slow in their labor, but their spirit and their productions are excellent.

#### OF RETURNED INDIANS.

Of the twenty-five boys and five girls whom I left in October, 1881, at their homes in Dakota, I would give the following accounts from reports dated on or about May 1, 1883:

*From Yankton Agency.*—Frank Yellowbird is teaching in the Government boarding-school at Lower Brule. Says Rev. Mr. Cook: "He seems to be doing well, and I have the faith to believe he will be an honor to Hampton Institute, and to us." David Simmons is in the employ of the Agent as an issue clerk, saves his money, supports his mother and sister, is a consistent Christian, and commends himself to everybody. Edwin Bishop, a most promising boy, was accidentally killed a year ago. Oscar Brown died this spring of consumption. Both these boys were true Christians.

"Carrie Anderson and Lizzie Spider," Rev. Dr. Williamson says, "have not done as they should, but are both on the upward track now. Carrie is now in the Government boarding-school as a pupil. Lizzie Spider has united with the church lately, and appears to be leading a more earnest, reformed life. It would have been different with these girls if they had had respectable homes. When one knows the temptations which surround such girls, he condemns with compassion." These youths have not had the help that a capable Agent could have given them. The inefficiency of the present one is most unfortunate for the educated Indians who are under his care. A good Agent is as important as a good school for those who try to improve.

Of those who went to Fort Berthold Agency, under the care of Capt. Brown: Josephine Malnourie has married a white man of repute, and is doing well. Arahotchis is living with his parents. Laughing Face has behaved badly, but with Ka What and Ahuka is interested in farming at the Agency. "All," says Agent Kauffman, "show marked improvement over those who have not had the benefit of training." Karunach has returned to Hampton, paying his way, to improve himself in English and at

his trade.

The selection of youth from this agency was a poor one, the head men all opposing education at that time, but none have gone back to Indian dress; all are wearing citizens' clothing and short hair. Limited appropriations have prevented the Agent from giving adequate employment to these youth.

**Lower Brule.**—Crow Creek and Lower Brule Agency (now consolidated), contain together nine of our returned Indians, who are reported on as follows:—George Bush Otter taught in Agency school for about one year, then attended school at Yankton Agency for about six months; after that returned to Hampton at his own request, that he might complete his knowledge of English and better fit himself for the work. Has done well.

Zedo Rencontre. Worked at Agency at first, doing well; but afterwards fell out with Agent, and has since been at home. Wears citizen clothes, and helps his mother, a widow. Henry Rencontre, same as foregoing.

Wichackasaka. Did well at first, but is now at home. Has not gone back to Indian ways. Asks to return.

Winnabago. Worked at Agency off and on for some time. At last report he was working at Agency.

Agent reports that boys did well at first, but fell away later. Did not stick steadily at work, &c.

**Crow Creek.**—Edward Ashley: has been steadily employed at Agency boarding-school since his return home; has done exceedingly well.

Zie Wie helped her father in his store for some time, but has not done well of late. She has just died of consumption.

Frank Pamani did very well at Agency shop for the first year and a half; but is now reported to have returned to Indian dress and the camp life.

**At Standing Rock Agency.**—John Pleets is hostler, at twenty dollars a month and rations; slow but reliable; soon to be married to a nice girl from the Agency school.

Thomas C. Fly, assistant carpenter at twenty dollars a month and rations; reliable and improving steadily.

Andrew Fox (from Crow Creek): employed from October 1, 1882, as apprentice carpenter at five dollars a month and rations; not bad but dilatory; has just left to work on his uncle's farm.

Rosa Pleets, after an unsatisfactory career of several months entered the girls' boarding-school last March, and has been "doing splendidly."

**Cheyenne Agency.**—Henry Fisherman is at work in Agency shops, doing well.

Henry Brown taught one year in Agency school; worked with Agency herd and on the hay contract; is now at home with his father; is reported to have done very well.

LeRoy Shutashay: worked at Agency for about a year; is young, and was found fickle and boyish; wants to come back; is now at home.

Joseph Wahn worked very well in the Agency blacksmith shop for about a year, doing well; he is now at home; his brother, "Pretty Boy," has a farm and a small herd of cattle; has since returned to work at Agency.

Louis Agenougha worked very well at the Agency for some time; but returned to the camp; his uncle is well to do for an Indian; has a ranche and cattle; all the family dress in citizens' clothing.

"No Heart," leading Sioux chief, reports that the boys have not done as well as they should, and requests that the boys now here, and to be sent hereafter, be kept at school for a longer period; he doesn't think three years long enough; he applies for the admission of another nephew; he has had a son and five nephews here, four of whom have returned home.

The foregoing details are given because the question is not can Indians be civilized, but what becomes of the civilized Indians? As a whole, those sent back from Hampton have not been a failure. The success of the educated Indian depends on himself and on his Agent, who, when bad or weak, destroys half the chance of the pupil.

Of our thirty returned Indians but four (those at Standing Rock) have had the benefit of a first-rate Agent. Four of the six Agencies above mentioned have been till recently in bad hands, owing mainly to the small salaries, which will seldom command the services of competent men. Our public policy is most pernicious in this respect. Twenty-two of the sixty Indian Agents have salaries of \$1,500 apiece; twenty-one get \$1,200, or less, and seventeen receive from \$1,800 to \$2,200; three only have the latter. None should get less than \$2,000.

When the Agent at Standing Rock was about to resign to accept a better situation, a friend provided an addition to his salary, that saves to three thousand Indians one of the best men in the service. When other friends wished the 2,500 Sioux Indians at Crow Creek and Lower Brule to have a chance to improve, they urged a competent man and provided extra salary.

But the best of Agents can do little while Indians are indiscriminately fed. The thousand Sioux at Devil's Lake Agency, Dakota, have, in thirteen years, been all brought near to the point of self-support, because (by a special provision) they were fed and helped only as they worked. The rest of the Sioux are worse off than ever, for the lazy and intractable among them fare as well as any.

The treaties that provide food, etc., for Indians, state most emphatically that education and ultimate self-support are their end. But this result is put far off than ever; one provision of the treaty is made to defeat another. Is this right? It would be right, I believe, to deny to lazy, intractable Indians at least coffee, sugar and tobacco, the luxuries—letting them have beef, flour, etc.—until they should do better. Remarkable results were wrought among the Shoshone Indians in this way.

Looking at this great pauperizing system, which has no parallel in our time, which would make a mob of the poor of our cities, and is ruinous to the red man, I believe that any revolution in our Indian management desirable that would change it to a generous fair help of the Indian under the treaty, according to their needs, putting less pressure on the idle and thriftless, in virtue of the expressed objects of the treaty. I think this is appreciated at the Indian Department, and that some such measures are likely to be adopted when the agents can be trusted.

On the educated Indian girl rests most heavily the burden of disadvantage. She cannot, like the boys, work at the Agency shops. She can teach, but the schools promised by the treaty to every thirty children have no existence. She is hardly fit for the drudgery of a family servant. Girls go to their old camps, and have hardly a chance. Bringing well selected married couples here is full of hope and promise. (See Miss Eustis's remarks on this subject.)

So far as this school is concerned, I think there would have been little cause of complaint had a single official visited it in the past two years.

Unless looked into by the authorities personally and carefully, this and like work will find their relations with the government unsatisfactory, because they will not be understood or appreciated. There should be a better way of dealing with work like this if men and money are needed to extend it as the people are disposed to do, to meet the exigency of the Indian.

The space given to the Indian question in this report is due to the critical condition of the red race; the scarcity of intelligent ideas about them, and the importance that they should be better understood.

#### OF THE INDUSTRIAL SYSTEM

The reports herewith submitted give an account of the year's work, which has been, on the whole, a satisfactory one.

Colored students have been employed as follows—an average of one hundred

and forty of them working all day and studying at night:

#### YOUNG MEN.

In Farming,	132
In Hunting Industrial Works,	23
In the Machine Shop,	23
In Knitting Department,	9
In Carpentering,	3
In Harness Shop,	2
In Tin Shop,	2
In Shoe Shop,	5
In Blacksmithing,	1
In Printing Office,	3
In Wheelwrighting,	3
In Tailoring,	3

#### YOUNG WOMEN.

In Sewing and Tailoring,	66
In Housework,	185
In Cooking Class,	40
In Laundry Work,	60

All girls do house-work. The total earnings will be given at the close of the school, and fiscal year June 30th, and published in the annual reports. Total earnings last year were \$31,530.56.

There is a disadvantage in student labor, which requires as much regard for instruction as for production, teaches all departments of a trade instead of one alone (hence frequent change of work and less profits), and calls for great forbearance with many who, on a strict business basis, by reason of youth or slowness, or want of toughness, would be discharged. Wages which they need and deserve must be paid rather than what we can afford to pay. All this makes it necessary to provide, as a basis for industrial education, buildings, outfit, and, for a few years at least, the salary of foreman, without expecting interest on capital. Some of our industries do better than this. I think all will in time, but this is the way to begin. The value of training the hand, of industrious habits, and of self-reliance, and the effect of it on character, is such that no one who has had experience with the labor system will ever give it up. The system is difficult and costly, but it pays in the best sense. Perhaps twenty-five per cent. more student labor is required to do a given job than outside hands; the pay being the same, the difference being in practice and in endurance.

Night students not unfrequently finish from the ordeal of ten hours' work and two hours' night study, but the plan with an average of one hundred boys and forty girls is a success. The disposition of the Negro to "work out his own salvation" seems as strong as ever. The country region furnishes more labor students than the city; this school represents the brain and the strength of the race rather than its culture. The absence of the classics in our course in part explains this.

The conditions for the favorable solution of the problem of combined labor and study at Hampton seem remarkable. For the Negro student there is no way to an education but by hard work; white youth will not work for what they can get more easily. The exigency of the former becomes his advantage; it is the heroic age of the one, the golden of the other. The ex-slaves are the best material for our purpose.

It was little dreamed fifteen years ago how fortunate would prove this location near Hampton Roads, which is a converging point of water routes and of railroads, one trans-continental, destined to be the centre of a great commerce; its shores to be a resort for purposes of health and of pleasure. The entire region is stimulated, creating a demand for our manufactures, while access by water to the Northern markets secures a ready market for the produce raised on our 650 acres of arable land.

The mechanical department was quite limited until the arrival of Indians in 1878, who (government paying for their personal expenses), were put under competent foremen, with whom a few colored youth were mingled to great advantage. Recently, through the kindness of Miss Catherine Wolfe, of New York, they have been provided with excellent work-shops.

Mr. Geo. H. Corliss, of Rhode Island, started large operations by presenting to the School an 80-horse power "Corliss" engine.

Soon after Mr. C. P. Huntington's gift of a saw-mill and wood-working establishment was received, and provides for 30 colored students. The "Stone Building," from Mrs. Valeria Stone, gives ample room to the printing office, sewing room and knitting department. A shop for iron work, the gift of Mr. Moses Pierce, of Connecticut, awaits an outfit of steam engine and machinery to make more complete our system of mechanical industries.

All our industries are at a disadvantage for want of working capital, which is as indispensable as buildings or machinery. Each shop should have an amount of material on hand and be able to make up and hold stock till it could be sold to advantage. Each manager should exercise his or her trade interest or skill, subject, of course, to the central authority; but putting his thought and interest in his work like those who are working for their own living. Now the central office decides on nearly every detail, having no fixed amount at its control, for the work department. We must conduct our business as other people do, each branch being separate and independent by itself; they are now indeed, all separate as to accounts, but not have that separate existence that they should have, excepting the saw-mill, to which was loaned last year ten thousand dollars of the endowment fund, at five per cent. interest. It is the largest and yet the simplest of all the industries from its complete independence.

I therefore appeal to the friends of the school and of industrial education to contribute the sum of \$25,000 working capital for our industries, on which some of them could now pay a moderate annual interest. This would strengthen the school, relieve the undue pressure upon the central office, and establish on the ordinary business foundation the industrial system of this school, which, if this is done, will not be assured for the future. The special task of the coming year is, I think, to complete and establish our departments of labor.

#### IN GENERAL.

Your attention is called to the report of Capt. Brown, Commandant, herewith submitted. The value of a cadet organization depends chiefly upon the character and efficiency of the officer in charge. Under Capt. Brown our military system is educational in the best terms, promotive of self-control, good habits and of manliness. Upon both races its effect has been marked and most satisfactory.

Your attention is also invited to the accompanying reports of the Farm Manager, Engineer, Superintendents of the Indian Work Shop, and of the Hunting Industrial Works, Business Agent, Manager of the Girls' Industrial Room and of the Printing Office. They are generally satisfactory.

A thorough inspection of the grounds and buildings has been made by Mr. Frank Wingate, of New York, Sanitary Engineer, who kindly volunteered his services. His most important recommendation is that of a new laundry for reasons of health. The present one in the basement of Virginia Hall, where the garments of five hundred students are washed, having caused sickness in the girls' room above.

I refer you to Dr. Birkhead's very strong statement, above, in this matter. A two-story brick laundry, fitted up, will cost \$5,000, of which \$2,000 are already secured.

In the past three years the School has had an unprecedented growth; all the buildings so far required have been completed and paid for with surprising generosity on the part of friends. It is free from debt.

The Gymnasium, 125x60 feet, with a bowling alley, commenced by the late Mr. F. Marquand, will be completed from the proceeds of his estate at a cost of \$6,500.

## SOUTHERN WORKMAN.

73

Many have suggested the need, and we have long realized the probable advantages of a green-house, with a view to the local and northern market for flowers. An excellent start in this direction has just been made by a gift of \$222.00, from a friend, for one complete green-house. Additional space under glass, with stock, to cost not over \$1,500 more, would be enough for the prospective business.

The new two-story brick shop, 40x60 feet, for work in iron—corresponding to the Huntington shop for wood work—the gift of Mr. Moses Pierce, is finished and needs not an engine and boiler besides five thousand five hundred dollars worth of machinery. Of this, two thousand dollars worth have been contributed. A grist-mill costing \$500, and a small brass and iron foundry costing \$1,500 should be added, all to be in charge of our chief engineer, Mr. Goff, who, with a corps of nine student-workers, is already in our employ. These are simple and easily learned industries, for which Negroes are well adapted and are in steady demand.

The special needs of the School are summed up as follows:

For a Laundry.....	\$5,000
Already given.....	\$2,000
For Machine Shop.....	5,500
Reside engine and boiler.....	
Already given.....	2,000
For Green House.....	1,500
Already given.....	922
For grist-mill and foundry.....	2,000

In addition to this, is the \$20,000 above asked for a working capital. This, and all but \$5,000 of the above, would be productive capital varying, of course, in its yield from year to year, but, in the nature condition of most of our industries, and from the advantage of our position, may be expected to give an average yearly interest of three per cent., to say nothing of the moral and educational results involved.

Our annual expenses, amounting now to about \$40,000 a year besides public aid, have been met as heretofore by the charity of friends. More comes in the shape of annual scholarships of \$70 than in any other one way. Funds for general purposes are needed quite as much as for tuition. Constant effort is required to secure additional scholarships as the number of students increase as well as to make up for those who discontinue their contributions. We have had this year a hundred students for whom no tuition was provided. It is no easy thing to make ends meet at the close of the fiscal year, June 30th. During the past four years, however, the school has paid its way without employing any soliciting agency whatever.

Nine thousand dollars received from legacies, and two unrestricted gifts, one of five and one of ten thousand dollars, have been most opportune in meeting the great cost of erecting and furnishing six large substantial buildings. Paying for them so soon after completion was a gratification we had not dared to hope for. The school is out of debt, thanks to a generous few.

We cannot but hope for increased endowment funds as a permanent and reliable means of support. This work must eventually retire from the front rank of the charities of the day, but I trust it will always be in relation with the hearts of the people. What they do for they care for.

One permanent scholarship, of \$1,500, has been received; also \$14,000 for general endowment.

I would recommend that the salaries which, in 1874, owing to deep embarrassment, were reduced ten per cent. (see per schedule herewith submitted), be restored to the original amount. The total increase will be \$580.

Respectfully submitted,  
S. C. ARMSTRONG, Principal.  
Hampton, Va., May 24th, 1883.

## REPORTS OF DEPARTMENTS.

From the various reports from heads of departments, accompanying and referred to in the above, we make the following extracts and abstracts, which may be of interest:

## FARM REPORT.

By Albert Howe, Farm Manager.

The past year has been on the whole quite satisfactory—good crops and fair returns. We have cut and housed about 75 tons of hay, which, with about 120 tons of ensilage fodder corn, furnished us with abundant fodder for stock. We have now on the school farm 12 acres in potatoes, 20 in corn, 7 in oats, 15 in fodder, 2 in rye, 25 in grass, 9 in asparagus and early vegetables, and 40 acres in the "Soldiers' Home." We made the past year 500,000 bricks for the machine shop, Indian training shop, and new blacksmith and wheelwright shops, and have on hand enough for the new laundry.

On the Hemenway farm, in charge of Mr. Chas. Vanison, a Hampton graduate, we have raised the past year 1,500 bushels of wheat, 2,500 of oats, and 2,500 of corn. We have now 50 acres in wheat, 110 in oats and 43 in clover and orchard grass; we have also raised over 600 chickens and 80 turkeys. The stock on both farms consists of 23 horses and mules, including a Percheron and a Morgan stallion, 17 colts, 30 cows, 3 yoke of oxen, 35 head of young stock and calves; 3 bulls, a pure Jersey, Ayrshire and Durham, 10 sheep and lambs, and 230 hogs and pigs. We have slaughtered, to supply the school and families, 140 head of cattle since last July. The total receipts for 10 months, including brick kiln, are \$17,801.38; expenses, \$16,850.22; leaving a credit balance of \$950.86; and we have now on hand \$1,000 worth of bricks. We had more applications for work students at the beginning of the year than we could find places for.

## HUNTINGTON INDUSTRIAL WORKS.

Steam Saw-mill and Wood-working Shop.

Albert Howe, Supt.

In the wood-working department, under charge of Mr. Jas. Brinson, a thorough mechanic and draughtsman, various styles of scroll work and turning are done, and all kinds of joiner's work. The boys are all doing well—some have made fine progress. The saw-mill is in charge of Mr. W. T. Westwood, of Hampton, who reports as follows:

During the year ending May 24th, 1883, there have been sawed 2,123,738 feet of lumber, an average of 8,955 feet per day, when the saw was moving. We ought to do this three million feet a year, and expect to do this. We have on hand about 360,000 feet of logs bought at reasonable prices. We have sold during the year 17,375 packing cases to the canning factory and to trucking merchants. By the gift of Mr. C. P. Huntington of a No. 6 matcher and surfacer we are enabled to do more and better work than heretofore. The exhaust fan given by Mr. B. F. Sturdivant, of Boston, is also in operation. The stock of lumber on hand is, with one or two exceptions, fully up to the requirements of the local market. This gives great satisfaction. I take great pleasure in commending the boys employed for their good behavior and politeness towards all placed over them. We have now a considerable number of orders for lumber, and a fine prospect for the summer work.

## ENGINEER'S REPORT.

J. B. H. Goff, Chief Engineer.

We have been very busy all the year. During the vacation we put pipes in Winona Lodge for steam and water, and fitted up its bath rooms and laundry, chiefly by student labor; in the winter we put gas pipes in Virginia Hall—all the work done by student labor. We are now at work on the Wigwam. Sixty-five iron bedsteads have been made, half by colored and half by Indian students. New gas works have been put in, and supply as good and cheap light as can be obtained in any section of the country, to five large buildings. The average consumption per night is 4,000 cubic feet, not half the capacity of the works—which will be connected with other buildings in time.

## NORMAL SCHOOL PRESS.

At no time during the year has work been slack; most of the time it has been necessary to employ from one to four extra journeymen—secured from the Soldiers' Home. The class of work has been better than ever. Hotel registers, check books, ruled blanks have been turned out to satisfaction of customers. We have published a book on the history of Emancipation, written by a colored man, J. T. Wilson, of Norfolk, and are running off the first of a series of Practical Scientific text books, by Prof. N. B. Webster, of Norfolk, which will keep us busy through the summer. We still publish the *African Repository*, *Southern Workman*, and *Alumni Journal*, and are printing an eight-page illustrated paper for a party in Newport News. The value of the work done for the past ten months exceeds that of the previous twelve by \$425.43.

Receipts for past ten months, \$5597 28  
Expenses (including salary of Manager)..... 5,023 65

Cr. balance... \$ 736 63

## SEWING AND TAILORING.

Mary T. Galpin, in charge.

Our new quarters in the "Stone" building are delightful, light and airy. We have not had to change any of our workers for ill health this year, and give the credit largely to the improvement in our working room. In the tailoring department, under Mr. Hamilton, the number of uniforms made are 155 coats, 306 pairs of pantaloons, 169 vests; of other garments, 1,233. In the general department, 2,524 articles have been made for the household department, etc., besides the mending, which amounts to a great deal of work. The students have done remarkably well in both departments; all girls but three, two colored boys and one Indian learning tailoring trade, all doing well; one going home this spring to start for himself, in his trade. Two new Howe sewing machines have been added to replace two worn out by heavy work. Another year we want a Domestic machine very much for general use. The store has done a large business in filling orders for students and departments of the school. The pottery painted by the Indians and dolls dressed by colored girls have gone as far as London, Rome, and New Zealand. The bookkeeper reports on this department: "By an accurate record of the work done during the month of April, it was found that the school received back the work of six girls an average of \$16.14, each. Each one of the six was paid \$4 for her month's work. For the same amount of work done by outside hands we should have paid an average of \$9.04 to each of six girls. (Student labor is, that is to say, educational rather than pecuniarily remunerative. Industrial education and development of character is its primary object.) To capitalize this industry, I estimate, would require about \$3,000, though the account of stock to be taken in July may change this figure somewhat.

## THE LIBRARY.

J. F. B. Marshall, Committee.

The library now contains 2,664 volumes, of which about 40 relate to the war, as many more to the efforts for education in the South; and it has quite a number of works on Africa. The committee recommends that in addition to works of general interest, the Normal School Library should make these subjects specialties, viz.: 1. Books related to Negro education; 2. African history and biography; 3. Travels and explorations in Africa; 4. History of the North American Indians; 5. History of efforts for Indian education; 6. Works on Industrial education.

The Museum at present contains a small collection, chiefly of Indian, Polynesian and African curiosities, with shells, minerals, and other objects of natural history. The plants and the woods grown in the United States. The library is now fitted with shelves and cases made at the Hampton Industrial Works, and paid for by contributions solicited by the committee of teachers who had charge of the erection of the library building. They are very creditable specimens of work in Virginia woods. They are ready for contributions of books and specimens, and funds given for the purpose will be expended under direction of the Library Committee of teachers appointed by the Faculty.

The reading-room is fairly well supplied with the exchanges of the *Southern Workman*, and other papers contributed and subscribed for. More good illustrated papers are much needed. After papers have been on the files in the reading-room, they are sent to graduates teaching often in remote districts where newspapers rarely come.

## DRILL AND DISCIPLINE.

Geo. LeRoy Brown, 1st Lieut. 11th Infantry, U. S. A. Commandant.

Drills have been continued through the term, five days in a week. The battalion has received thorough instruction in Infantry tactics up to and including Battalion drill. The Battalion has been reviewed and inspected by the Principal and by Maj. Gen. Geo. B. McClellan, a comment highly appreciated by its members. It has also received instruction in artillery drill, including the "Manual of the Piece Dismounted." The improvement has been marked in drill and general deportment and fidelity to duty—the day scholars and youngest boys, of course, show it least. Guard duty is at once the most important and most developing duty in this department. The courts-martial have been more thorough and effective and better received by students than last year. There has been no appeal from the decision of the court during the term—a fact speak-

ing highly for the justice of the decisions and the law-abiding spirit of the students; an increase of self-respect and mutual respect is apparent—the system is working satisfactorily. It is unfortunate that the Indian department of the Institute, coming later, has been somewhat segregated from the colored department by the necessity of different methods of instruction, and of the erection of new buildings. In spite of this segregation, which has been pretty well broken up in my department, there has been a growing cordiality between the races; the boys fraternize in their games and visit each other's rooms. This is of great benefit to the Indians in the acquisition of English, vivacity and cheerfulness. Visitors from the Indian country mix with surprise the look of stolid indifference common to Indians in presence of strangers. Six of the officers of the Battalion—one of them an Indian—have merited special mention for proficiency in tactics, interest in drill, and soldierly bearing.

The kindly courtesy and co-operation of the officers and teachers of the Institute have made it possible for me to execute satisfactorily the duties required of me by the War Department here, and I desire to express my hearty appreciation and thanks.

## A Pretty Flower Bed.

Last summer I saw the prettiest flower bed that I ever pottered. It was arranged to show flowers at good advantage, and very easy to keep free from weeds. The form was a circle, about four feet across. A row of bricks was laid in a circle, and on the top of these were laid large bits of common quartz, which looked very white and pure, and the soil was of soft green grass. The inside was filled with rich loam, leaving about ten inches of this for the outside flower bed, another row of the white stones was laid, and earth filled in to raise it some six inches above the outside. In the centre of this bed a row of larger stones was laid compactly, and raised up about eight inches, forming a nice large flower pot. Growing in this was a splendid Happy Thought geranium, loaded with immense clusters of flowers. Sweet millionette was growing in the crevices of the rocks. The middle bed was filled with China-pinks of all varieties, and lovely balsams. The outside bed had roses, nasturtiums, pansies and other bright-budded flowers; and sweet alyssum grew in the crevices of the quartz.

It was free from weeds, and the whole had such a lovely appearance that I thought it was a new arrangement, and was quite surprised to learn that it had been made three years, and was much easier to keep in order than it was the first year. In another part of the grounds there was growing a large clump of white petunias, completely covered with pure, sweet, white blossoms. The secret of their wonderful growth was simply a bottomless earthen pot, sunk into the earth and filled with old chip dirt and stable manure, to within six inches of the top, the rest being filled with the earth taken from the ground where the pot was set. I never saw so large a growth of the plant, or such an abundant bloom, and it kept its beauty till November—S. H. R. in *The Cultivator & Country Gentleman*.

## Horsford's Acid Phosphate.

promotes sleep when the nervous system is overworked or worried by care and anxiety.

## Frank Leslie's Sunday Magazine.

For delightful, edifying and instructive reading this magazine is not excelled by any of its contemporaries, and the June number, in these respects, we think could scarcely be surpassed. The following admirable articles are prominently illustrated: "What is the Baptist Church?" by Rev. Dr. Chas. Briggs, being a continuation of "Religious Denominations in the United States"; "Among the Natives of the North," (No. II.) by Lieutenant Swoboda; "The Other Side of Greek History, Ancient and Modern," by Rev. Wilbur F. Crafts; "Sacred Musicians of the Nineteenth Century," by Alfred Hervey; "The American Pilgrim in Palestine," by E. De Leon, etc. There are also articles by the editor, Dr. Talmage, on the late Alexander H. Stephens and Peter Cooper, and a sermon in the Home Pulpit, "The Cloudless Morning." There are also articles, essays, stories and poems by Andrew L. Black, Ida Hervey, Oliver M. Birrell, Rev. W. W. DeBar, & T. B. Mrs. W. Fawcett, Rev. E. Payson Hammond, etc., etc., and a most interesting miscellany. Price 25 cents, or \$1 a year, postpaid. Address, Frank Leslie's Publishing, 55, 53 and 57 Park Place, New York.

Work Given Out. On receipt of your address we will make an offer by which you can get \$5 worth of magazines at year home. Men, Women, Boys or Girls can do it. Address, FRANK L. LINSBORN & CO., 126 and 127 Fulton Street, New York.

## Horsford's Acid Phosphate

For Wakefulness.  
Dr. WM. F. CLOTHIER, Buffalo, N. Y., says: "I prescribed it for a Catholic priest, who was a hard student, for wakefulness, extreme nervousness, etc., and he reports it has been of great benefit to him."

# Southern Workman.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. XII.

HAMPTON, VA., JULY, 1883.

No. 7.

HOME, SWEET HOME.

## A Strike Among the Tobacco Hands.

By ORRA LANCHEORE.

The city of Lynchburg worships a dingy, dirty, ill-scented idol. Its temples are great brick buildings heated by steam, reeking with foul odors, highly detrimental to the health of those who spend their lives in offering oblations at the shrine of this false god.

Recently the idol has been shaken upon its throne by a convulsion in the work of its votaries, called in common parlance "a strike."

Have the Northern readers of the *Workman* ever visited a tobacco factory? If not, let me give them a glimpse into its mysteries. When the chance visitor sees through the dense atmosphere laden with fumes of tobacco, clouds of dust and steam, and the breath of a hundred dusky workers, and children standing at tables when the weed in various forms is seen.

Some of the bands work machines, some strip the soft leaf from the tough stem; others knead lumps of the dark mass into small round cakes like ginger-bread.

Here armfuls of tobacco are tossed down a flue, followed by the nimble heels of a dirty boy, who jumps into the barrel he has filled and stamps and tramps the mixture of tobacco, licorice, etc., into the form in which the roll-maker will presently call for it. There a couple of able-bodied men in

seam attire, with perspiration streaming from every pore, will seize the tray on which the rolls and twists are spread, and rush in on the air to place it with hundreds like it on the drying-frames which the manufactured article will harden into the proper consistency. Then an angry twister snatches up a bunch of stems and belabors the lads, a victim who has failed to keep his pouch full of tobacco; there a woman, with a flute-like voice, begins a low, soft chant, swaying her body to and fro, and never for a moment relaxing the deft motion of her fingers as they ply the trade which brings food and clothes to her and her children. One by one, the rest take up the strain, and soon the air is filled with the music of rich voices. Sometimes it is a hymn from the note-book, carefully practiced at the choir-meetings, oftener still some refrain peculiar to the Negroes. Let us see if we can catch the words as the notes swell out beyond the creak of machinery and the tread of many feet:

"The devil is a liar an' conjurer, too,  
He can't help me, and he can't hurt you;  
But God Almighty! he's a-y-a-y-a-y!"

Apparently these workers, of every shade, from almost white to iron black, are the merriest most light-hearted creatures in the world.

In the factory, all seems good-tempered and cheerful. The white "boss," who overlooks the hands and goes in and out examining, weighing, giving orders, seems to have little trouble with his colored laborers. But under these seeming faces human hearts are beating, and to these dusky toilers, as to the other children of men, come seasons of joy and sorrow, hopes, fears, ambitions and cares.

The revolution in the labor system of the South, and the great progress made in its internal interests in twenty years, have wrought many changes in the tobacco trade, and as mankind is all "hooked and buttoned together," these changes are felt, not only by the manufacturer who begins to count himself a millionaire, as his business extends to the ends of the earth, but also by the humble stemmer, who has nothing to keep the wolf from his door but his skill in handling the weed in the short seasons when tobacco is "in order," and his factory working.

Lynchburg has been famous for tobacco from its earliest days. The trade flourished when the heroes of the Revolution, who had risked "their lives, their fortunes, and their sacred honor" to prove that all men were "born free and equal," bent their swords into pruning-hooks, and sent to Africa for slaves to raise tobacco in the fallow fields of the new Republic.

So highly was Virginia tobacco appreciated in early days that the burghers found it a paying business to send the weed by wagon to Rhode Island during the war of 1812, bringing in return the calicoes and cottons of that thrifty little State. So well does the stand among smokers these days, that the Sultan of Turkey has recently ordered Dilmast of Armistead's Occidental, with the request that he may be informed as to how he can procure seeds, and learn the method of culture and cure practiced here, for the benefit of the planters and smokers of the Orient.

When the Civil war began Lynchburg was a rich and prosperous town. The tobacco-nist of that period owned his laborers, or hired them from their masters, giving board and clothes in part payment. His wares were always in demand, and his work, done mainly by hand, went steadily on the year round. When the war closed he found that,

while he had been cut off from the markets of the world, the cultivation of tobacco had been begun in many districts, where it had once been quite unknown, and there were new competitors in his field. Then machinery was everywhere taking the place of manual labor, and his workmen were no longer under his absolute control, but must have money wages paid them weekly.

Like the rest of mankind the manufacturer has his grievance. He says the nature of his business makes it irregular. The revenue laws are being constantly changed, and are always interfering with him. His expenses are enormous. His taxes go on, his overseers must be employed by the year, his machinery must stand rusting in long periods. His Negro laborer, though in the main docile and faithful, is not to be depended on when "excursions and holidays" are in the air.

His trade, after being slack for months, may have begun briskly, orders on which his success or failure for the year depend, may be coming in fast, it may be all important to him to fill them, the tobacco may be just in the proper condition to work when Easter Monday or Whitsuntide comes round, the colored military are to "turn out," or there is to be an excursion somewhere under the auspices of the colored church.

The hands all scatter, argument, persuasion are unavailing. The factory is stopped, and work is resumed under serious difficulties, many of the workers being made the worse for the holiday carouse.

Saturday, which is usually pay-day, and Monday, when the hands are "getting over Sunday," but little can be accomplished, and the heavily burdened manufacturer, who has thousands at stake, has no resource but to yield to these idiosyncrasies of his laborers, though he well knows the effect of indulging them is as bad for the hands as for him.

The Negroes have almost a monopoly of the factory work, few white people being employed in the business. Men, women and children work at the trade, and skilled workers make excellent wages. The best hands in a factory sometimes earn as much as \$25 per week, while children ten years old, employed as stemmers, can often make \$2 to \$3 per week. If their work was regular the tobacco hands would average better wages than any mechanics in the city. But as there are two sides to every question, here comes in their grievance.

Manufacturing tobacco is a trade in itself, as much as cabinet-making or bricklaying, requiring long practice to make perfect. The irregularity of the work, trying as it may be to the capitalist, is doubly so to the laboring man, who, unfitted by his trade for active work, is compelled to stand idle half the year, oftentimes in the winter, when food and fuel are dear. Highly as he values his freedom, he realizes painfully that out of him must now come the victuals and clothes, the fire and shelter, once provided by old master for himself and his family. Then, the new system by heating the factories by steam renders the business very unwholesome to the employees. It was always so to some extent, and it was maxim among slaveholders never to buy a Negro among slave-factory-bred, as he was sure to be delicate and unfit for out-door labor.

"I don't wonder the negroes have struck," said a white carpenter, while the strike was the uppermost topic in the city. "I had a job to do in one of the steam factories lately, and I thought I would die before I got through it. 'T'll kill the last one of the niggers if they don't give it up."

When work is brisk, the whole community feels the influence of the business. Large amounts are paid in wages every Saturday night, and the hands who, as a class, are extremely thrifless, though there are some very sensible, careful people among them, lavish their funds on "the butcher, the baker, and the candle-stick maker." When the factories close, the busy, cheerful sales-dealers, grocers, and confectioners, who coin money from the hands in the working season, know they have lately squandered cash. Some of the children go to school, and the teacher, who recently contemplated almost empty benches, is overwhelmed with a dusky throng, clamoring for knowledge.

The women, less dependent than the men on the factories, fall back on laundry work and domestic service to bridge over their idle time—cooks and nurses, but lately in great demand, suddenly become a drug in the market, and "lady, don't you want to?" greets the householder at every turn. A few of the plain find work as wood-sawyers, drivers and jobbers, and the rest, aimless and hopeless in aspect, stand in great, mournful, ragged rows on the streets between the man has hired them. Hungry laborer, in the 19th century, as in the days of old, dependent upon grasping capital for sustenance.

This winter the work has been more slack

than usual, the tobaccoists having delayed starting the factories in order to get the benefit of the rebate. The class of hands known as roll-makers have long been discontented with their wages, and early in April their complaints culminated in a strike for better pay. For several years past an organized body has existed among the colored people of the city, under the name of the "Lynchburg Labor Association." The so-called representative from one of our eastern districts, obtained at the last meeting of the General Assembly a charter for this society, and as a result, held real and legal property not to exceed \$10,000, and make such rules and by-laws consistent with the laws of Virginia and the United States as it may deem proper. The object of this society is stated to be "to protect the interests and promote the general prosperity by legal and honorable means of the laboring classes of this city." (See acts of Assembly, 1882, chapter 213.)

The society has so far been confined to the colored people, but is not necessarily limited to them.

A prominent Virginia official, some years ago, in considering the color-line, stated, as one of its advantages, that Negro laborers would not be apt to engage in strikes.

In this, as in other points, I think experience proves that Negroes are "intensely human," and in the same circumstances would be likely to do so.

When the great rail-road strikes were going on in the West, some of the factory hands here, catching the spirit that pervaded the air, proposed getting up a strike on their own account. The heads of the manufacturer declared that they would not work without an advance in wages. The movement was not general, hands being abundant and work not pressing. The tobaccoist stood calmly waiting to see the result of the disturbance, when a steady old Negro, being a faithful employee of the concern, who had been a slave, feeling anxious to begin work, mounted a barrel and delivered a short but effective oration as follows: "Look here, you niggers, you better be gwine long to work. Don't you know your foolishness, dis born, if you all starts any foolishness, dis white Home Guard bound to turn out drickly an' kill de las' one on you."

The colored people travel about a great deal these days, many of them take newspapers edited by both white and colored men, and as a class they are wide awake on questions pertaining to their own interests. On the present occasion the Negroes, who have long been dissatisfied with the wages allowed them as roll-workers, were especially agitated in regard to the reduction and rebate of the tobacco tax, perhaps not unaturally considering that they ought to be rich, the manufacturer the benefit of these changes.

There was no race question involved, though the terms "white folks" and "niggers" were constantly heard among the strikers. It was altogether a question of wages.

The community heard little about the strike, until the movement was taken in charge by the Labor Association and twenty names on its list, announced that they would work no more until wages were advanced. The association held many meetings by day and by night, and no little excitement prevailed for a time. A local recruit proposed to attend one of these meetings was dissuaded from entering the hall by a stout colored citizen wearing a drawn sword at the door. At first some rioting was felt lest the affair should end in a blood-bath, but on the whole the strikers behaved extremely well, being kept under control by their leaders. In one or two cases a few hands continued working, and were threatened with violence by the strikers. The authorities were vigilant to prevent disorder, and the police to disperse those who called on the police to disperse those who were interfering with their laborers. It was soon found, however, that secret influences were used with those who were withering at old prices, and they, too, soon suspended work.

Many members of the Association, ignorant of the meaning of their charter, applied to the Mayor of the city for assistance in preventing the factory hands from working in opposition to the orders of the League. His Honor received the deputation sent to him kindly, but replied to them in courteous terms, that neither he nor the Labor Association could enforce such regulations as

they desired, and that it would undoubtedly be his duty to prevent any violence being used toward any of the citizens, upon any grounds whatever.

Delegations from the leaguers to the tobaccoists, who have also a society for mutual benefit, passed frequently to and fro, and after many conferences and much delay, the question was finally settled by the manufacturers yielding to the schedule of prices demanded by the strikers. As soon as this was announced, the Association suspended its meetings, and the factory hands resumed work. No doubt they were much relieved to go on as usual, after the heavy strain of enforced idleness during the long winter, which has brought them many expenses and no wages.

As "all's well that ends well," both parties seem content with the result of this affair, which at one time threatened serious interruption to the business of the city.

Outside of the tobaccoists, who were very reticent on the subject, it seemed to be the general opinion of the citizens that as the factory work is extremely irregular, and very trying to the health of those engaged in it, the hands are justified in demanding high wages. It was interesting to see how strenuously the colored people stood up to the orders of the League, and though not exactly logical, one could but be impressed with the sentiment constantly reiterated when asked if they could stand going longer without work. "I have stood it all winter, I reckon I can stand it all summer." "Black-berries will be ripe soon," heard a merry-looking youth to this formula, added on every side.

The colored preachers, who have almost boundless influence among the people, and by no means confine their discourses to abstract doctrines, but deal with current events according to their knowledge, stoutly urged upon their hearers in public and in private to stand up to the orders of the Association.

The colored people are very exacting with each other, and one of the number who should try to break ranks in such an emergency as the strike, would doubtless fare hardly at the hands of his fellows.

## Home, Sweet Home.

It was a worthy and gentle sentiment that moved an American citizen to bring the body of the poet who sang of Home, Sweet Home, from its lonely tomb in a foreign shore to rest at last in his native land.

John Howard Payne, the author of the familiar song which has thrilled so many hearts, was born in New York City, in 1841. He began his literary career in extreme youth, editing anonymously a little paper called the *Theatrical Mirror*, before he was fourteen. The *Evening Post* did it the honor to attack it, and young Payne called by invitation upon the editor, who was utterly astonished to find what a youthful David his Goliath had challenged. But feeling quite secure of his head, published a kind account of the visit in the *Post* of January 21, 1856.

Family reverses forced young Payne to give up his college education, and go to work. He went upon the stage and to success, both as actor and writer of plays, in this country and England. Among others he wrote an opera, and for one of its songs the one which has made him most famous, Home, Sweet Home. The music was written by Mr. Henry Bishop, but the air of the song was contributed by Payne, who had caught it from a young Italian girl. The opera was a brilliant success, and the song thousands of copies were sold as soon as it appeared, and its publishers made \$10,000 in two years. As has often happened, the author was the only one concerned not enriched by his genius.

After varying fortunes, he was appointed, United States Consul at Tunis, in 1841. After some years he returned to America to try to get an easier station, but was unsuccessful, and returned to Tunis, where he died in 1852. There his body has rested until it was removed last March by his distinguished countryman, W. W. Corcoran, of Washington, to the beautiful Oak Hill Cemetery in that city, where "the exile" now sleeps at home at last. Over the grave, which was his resting place for thirty years at Tunis, was this inscription:

"Sure when thy gentle spirit died  
To realms beyond the azure dome,  
With arms outstretched, God's angels said,  
Welcome to heaven, Home, Sweet Home."

A monument is to be erected to his memory over his final resting place in his native land. A most interesting one is the song which touches all hearts that throb with love of home.

The following are the various versions of the song since it first appeared:

July 1883.]

## SOUTHERN WORKMAN,

TWELVE PAGE MONTHLY.

(Reduced to eight pages from July to October, four months.)

Printed on the Normal School Steam Press by students trained in the office.

S. C. ARMSTRONG, Editors.  
H. W. LUDLOW,MRS. M. F. ARMSTRONG, Regular Contributors  
MR. W. N. ARMSTRONG,  
MRS. ORRA LANGHORNE,

Terms: ONE DOLLAR a year IN ADVANCE.

Specimen copies sent upon application. To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly, give name in full, and name of Post-office, County, and State to which the papers are to be sent.

A limited number of advertisements inserted at the following rates:

SPACE.	1 mo.	3 mos.	6 mos.	1 year.
1 square.	1 00	2 75	5 00	9 00
1-4 column.	3 75	7 50	13 50	23 00
1-2 "	5 00	12 50	23 00	40 00
1 "	9 00	23 00	40 00	70 00

Special notices 10 cents per line.

Job work from all parts of the country is solicited, and will be executed cheaply and well. Estimates given.

For further information, address J. F. B. MARSHALL, Business Manager, Hampton, Va.

Entered as Second-class Matter in the Post Office at Hampton, Va.

## Hampton Tracts for the People.

SANITARY SERIES. Ten numbers published by H. W. Ludlow.  
1-Health Laws of Moses. by E. W. Collingwood.  
2-Duty of Teachers. by M. F. Armstrong.  
3-Preventable Diseases. by M. F. Armstrong.  
4-Who found Jamez? by H. W. Ludlow.  
5-A Haunted House. by M. F. Armstrong.  
6-Woman's Work in Sanitary Reform. (English) by M. F. Armstrong.  
7-The Rights of the Body. by Rev. Charles Kingsley.  
8-The Two Breasts. by M. F. Armstrong.  
9-Cleanliness and Disinfection. by E. Harris, M. D.  
10-Our Devils. by M. F. Armstrong.  
Published by Putnam's Sons, New York  
Edited and printed at Hampton Institute.  
For sale at both places. Specimen sent from Hampton at 6 cts. a number, or 50 cts. a set.

Subscribers are reminded that, from July to October inclusive, this paper is reduced to an eight page form, resuming in November the twelve page form.

DR. TUCKER's speech before the Episcopal church congress, last fall, on the "Relations of the Church to the Colored Race"—since published in enlarged pamphlet form—has excited, as was to be expected, great feeling among the colored people; and a "Defence of the Negro Race" against his charges has been published "at the request of the colored clergy of the Episcopal church," by Rev. Alexander Crummell, rector of St. Luke's church, Washington, D. C.

The substance of Dr. Tucker's speech was an appeal to the North for a great increase of pecuniary aid to carry on the work for the freedmen, but henceforth by Southern hands exclusively, and through the medium of the Episcopal church, because only the Southernmen truly know the Negro and know how to help him, and most of the other efforts have only done harm. His view of the race is that while it is increasing largely in numbers there has been very little rise in material prosperity on the average, and if there has been any change in morals it is downward since the removal of the restraints of slavery. This dark view is based expressly on his own experience in working for them in Mississippi, where his own parish is situated. He gives a very terrible picture of the condition of immorality and heathenism which prevails there, and which he believes extends to a great degree all over the South, due to the "circumstances of slavery superimposed upon the circumstances of barbarism," and now aggravated by the opportunities of freedom.

Mr. Crummell replies by pointing to the inconsistency of the large and rising rate of increase of the race with any general deterioration in morality; to

educational statistics, "the grand fact that while before emancipation there were not more than 30,000 people of color in the United States who could read and write, there are now 500,000 who can, and that over 15,000 of them are employed as teachers, and over 15,000 more training in their high schools, normal schools and colleges, and schools of law, theology and medicine; and, that there have sprung into existence since the war over eighty newspapers edited by men of the Negro race. He gives statistics of colored church membership in the South, and deprecates for these two million professing Christians Dr. Tucker's declaration that "the great mass of them are hypocrites and do not know it." He points to the Negro's acquisition of land since the war, amounting in the cotton States—which include a fraction over two-thirds of the race—to over two and a half million of acres, a territory equal in extent to the State of Connecticut; to the increase of cotton production in the five years since the war compared with the five years previous, showing a balance of nearly nine and a half million bales in favor of freedom, and no decrease certainly in industry and thrift; to the deposits by 61,000 Freedmen of over \$50,000,000 in the Freedmen's Savings Bank in the year following the war; to the exodus which he thinks was not the act of degenerate beings, but of high-souled, as the North, albeit poor and ignorant, who had been cheated and refused any of the land by those who, Dr. Tucker says, are the only ones who know the Negroes and love them with the tender remembrances of childhood; and finally, to the projected railroad from Wilmington to Wrightsville, North Carolina, already begun by the black citizens of that State; the route graded by a black civil engineer; and the whole scheme, in capital and execution, the work of Freedmen.

All these facts are "significant," and should have their full measure of encouragement for the race and those who study it. It is aptly that Dr. Tucker should not have given them the recognition which would not have weakened his position when he came to speak of that which he has seen and known of the darker side. There are some points of striking agreement between himself and Mr. Crummell. Both say that there is wide-spread demoralization among the Southern black population. Both attribute it largely, in greater or less manner, to the curse of slavery; Dr. Tucker to a degree that has called upon himself the protest of some of his Southern brethren. Both show a desire to be fair on points where it would be easy to be otherwise. Mr. Crummell recognizes a large class of good, natural slaveholders in the old times. Dr. Tucker acknowledges exceptions—"absolutely many," though relatively few—"to the general rule of badness, and has hopes of the race in spite of all. If some extremely impartial redactor could make the two pamphlets into one without too much care to reconcile inconsistencies, we perhaps should have a truer view of the question than we have had yet.

We are too much afraid of inconsistencies. We all know life is full of them, yet we go about trying to cheat ourselves and others with a one-sided view of things, or with abstract averages—no less ideal. Those who engage in benevolent work often fear to give the who, truth of their difficulties and failures, lest they discourage the support that must carry it through. Too much suppression is common. Dr. Tucker sees this, and goes to the opposite extreme of ignoring the good side; or, he lets the near obscure the far, which it can at the same ratio in mental optics in physical.

There is a fascination in generalizing, but sweeping statements never strengthen any position; and we are sorry that Dr. Tucker should in any way weaken his hands in the good and great work which he believes he is doing among the colored people in the dark district in which he is stationed by Providence. A Southern man, born at the North,

which means, we know, none the less of a Southern man—and an officer in the Confederate army, ordained a minister after the close of the war, he has devoted a great deal of personal thought and labor to the religious and moral elevation of the colored people in his parish and outside it, where nearly a thousand colored children are gathered in the "Unique School," held in his own church and superintended by himself, and four other Sunday-schools which are the outgrowth of this one. The colored race has reason to be thankful still for that work in spite of what has wounded them. He has discovered, in his own experience, as he pathetically says, as he "was not aware before," the "overwhelming severity of criticism poured upon him since his speech, how much abusive words can hurt."

We hope his really good work, and any similar undertakings by Southern churches, may be helped by Northern Christians, though we suppose, that those who give their money will for the most part continue to desire some oversight as to its disposal, even if the receivers should promise to be grateful instead of promising not to be, as Dr. Tucker frankly does, "because the gratitude shown came from the other end of the line." It is likely, too, that, vindicated by Dr. Tucker's assertion, that "the Northern missionaries do not know the Negro." But will rather conclude that Dr. Tucker does not know the North. No greater ignorance could be manifested than that he shows of the brighter side of the darker as well as the brighter side of the Negro condition, and the work in the South, has been constantly discussed and taken into the thoughts and efforts of Northern Societies and missionaries whose work has met with growing appreciation generally in the South, and sometimes with cordial co-operation.

Dr. Tucker has taken, we regret to say, the very best way to alienate Northern confidence by such unwise attacks as that, "Various Northern missionary bodies have poured money into the South, since the war, by the hundred thousand; and every dollar of it, so far as I know and believe, which was not given into white control, was wasted;" that, "most of their efforts have done harm; and Southern Christians, of all churches, know it." Because he may have seen in one or two institutions bad management which would justify condemnation, he has no right to pass wholesale judgment on others. He visited Hampton Institute and makes handsome mention of it. He saw its methods and approved them. If he should visit many others he would find them, while dissimilar, yet working in the same spirit to the same ends.

Dr. Tucker even attacks the State fund prospectively, saying, "I have heard of a recent gift of a million dollars for the benefit of the Negro, yet if my understanding of the disposition of that gift be correct, it might almost as well be thrown into the sea." Yet as we well know, if he did not know or want to know it, that fund has been devoted to the very kind of work which Hampton represents, and has a Southern man—Rev. Dr. Haygood—as its agent for distribution. We greatly regret a mistake which will inevitably retard a good work, and for which a man of Dr. Tucker's position must be held morally, as well as intellectually responsible, while we thank him for his deeds which are better than his words, and the contribution he has made to the facts on one side of the question.

THE INTERNATIONAL FISHERIES EXHIBITION, which was opened about June 1st, in London, England, has been so great a success, and promises so much of practical value to the world at large, that we trust our readers are proportionately interested in its progress. Being under the patronage of the Prince of Wales, and other royal personages, the exhibition was opened with great ceremony, and no expense has been spared in preparing buildings, entertaining guests, etc.

Below we give a letter from Mr. Jas. McMenamin, our fellow townsman, who has been kind enough to put his special information at our disposal. It is gratifying to be able to add that the American exhibit has carried off the palm in respect to completeness of management, superiority of method, ingenious inventions in fishing tackle and gear of all kinds, etc. This is due mainly to the skill and energy of Profs. Baird and Brown Goode, of the Smithsonian Institute, who have devoted themselves to making our national exhibit a creditable one.

No feature of the exhibition has been more interesting, it is said, than the gathering together of fishermen and women from all countries, bringing with them the implements which they use in their special work, and wearing, so far as possible, their usual dress. Among these, we learn from the reports of visitors, a Negro fisherman, from our own southern coast, has attracted general attention, and to judge from his demeanor, has enjoyed his opportunities to the utmost.

HAMPTON, VA., May 26, 1883.

Editor Southern Workman:—I beg to say, in reply to your communication, that I am glad to offer you any information which I may have in regard to the International Fisheries Exhibit now going on in London. You are aware, of course, that it is more comprehensive in its scope than the Berlin Exhibition of 1880, its projectors having the benefit of Germany's experience, besides that of the recent rapid advances in fish culture and everything relating to its interests.

The field it covers may be best seen by a mere outline of the plan. The Exhibition is divided into six classes, and these into numerous divisions.

Class 1st relates to sea fishing and will show gear of every description and of all nations used in trawl, herring, long line, hand line, and every other mode or system of fishing, including all nets, lugs, hooks, harpoons, etc., employed in the same. Oyster dredges, crab, lobster, prawn, etc. Pots and other appliances for catching fish of this description.

Fishing craft of all nations, models and representations of the same.

Steam capstans, compasses, barometers; telescopes, lights, lamps, fog horns, systems of signalling at night for fishing fleets and vessels.

Models of harbors, piers, and slips for fishing purposes.

Fishing tackle and netting in different stages of preparation, and machinery used for working up the raw material.

Appliances and methods for breaking the force of the sea at the entrance of harbors and elsewhere.

Salmon nets, rods, artificial flies, spinning baits, creels, gaffs, spears, trout, and pike rods, etc.

Traps, nets, bucks, wheels, and apparatus for catching eels, lampreys, etc. Anglers' apparel of every description.

Boats, punts, cobbles, collapsible, portable, etc.

Class 2d. Economic condition of fishermen. Apparel and personal equipment, food and medicine chests, models and plans of dwellings.

Class 3d. Commercial and economic. Preparation, preservation, and utilization of fish. (Our exhibit is entered in this class. I will speak of it hereafter.)

Models of fish-curing establishments; methods of drying, curing, salting, smoking, tinning, cooking, etc.

All products prepared from fish, such as oils, roes, singlins.

Antiseptics suitable for preserving fish for food. Oils, manures, and products other than edible, prepared from fish. Sea and fresh water pearl shells, mother of pearl, manufactured. Sponges, corals, and all parts and products of aquatic animals used for purposes useful and ornamental.

Models of fish markets and appliances connected with the same.

Class 4th. Fish culture, models and drawings of fish hatching, breeding and rearing establishments, including oyster and other shell fish grounds, fish passes and fish ladders.

Transporting fish and fish ova; food for fry.

Scientific investigation, models and drawings of diseases of fish, with special reference to their origin and cure, etc.

Class 5th. Natural history (aquaria). Living specimens (marine and fresh water) fresh, stuffed or preserved.

Algae in their natural state, sponges, corals, entozoa, mollusca, star fish, sea urchins, worms for bait or noxious. Crustaceans of all kinds, fish of all kinds; reptiles, such as tortoises, turtles, terrapins, lizards, serpents, newts, etc.

Amalgam and other birds hostile to fish or fishing.  
Aquatic and amphibious mammals (others, seals, whales, etc.) detrimental to fish.

Class 6th. History and literature of fishing. Fishery laws, fish commerce, etc.

Class 7. Loan collections within the scope of the foregoing classes.  
The United States Fish Commission, under the able direction of Professor Baird, will probably carry off most of the honors here, as it did at Berlin, and it will do so deservedly. No department of the General Government has created greater interest in its work, and the results of its investigation are gratifying to the country.

Early in July last Prof. Baird invited all persons interested in fishing, fish culture, and the related industries, to display their work under the auspices of the United States Fish Commission, and that it might be complete and systematic, he undertook to make a "collective exhibit of the United States."

Our exhibit is embraced in this, and, like others, we were restricted to the number of cases, the arrangement of which is being attended to by the officers of the U. S. Fish Commission.

Like every other individual exhibitor, we expect to get the highest award for our goods (not having seen the official catalogue yet I do not know the number of our competitors), as we know we have spared neither pains or expense to bring about the desired result.

First and foremost (and we always put them in the front) are our devil crabs. Only the largest and fattest crabs of last season's abundant catch were selected to represent Hampton Creek abroad, and these were put up with such consummate skill that we are almost tempted to eat some of them ourselves.

The same care was taken in the selection and packing of our crab meat and Quahaug clams, and as to oysters, if we do not get the grand gold medal for the finest oysters, it will be for the reason that in the present excited condition of England, the prefix to the firm's name will lead our transatlantic cousins to believe that the senior member is not of Scandinavian extraction.

It is a well-known fact that our English relatives are not partial to large oysters. This inclines us to suppose that they will look upon the bivalves we have sent them pretty much as the small boy views the elephant at the circus and if asked to regard them in their gastronomic aspect that they will probably do so with fear and trembling.

Very respectfully and truly yours,

JAMES McFARMIN.

THE Indian work at Hampton and Carlisle has proved that success is not a question of the Indian himself, but of his surroundings and circumstances. There is no question of our ability to make good men and women of Indian youths under favorable conditions. The test is home life after their return—and that depends on one man more than on anything else—the Indian Agent. Experience more and more confirms the conviction that the question of raising the Indian to decency and civilization turns often on this point alone. Yet Government makes it next to impossible to secure good Agents. There are sixty Indian Agents in the employ of Government, only four get a salary of \$2,200, twenty-two get \$1,500, twenty-one \$1,200 and under, out on the frontier where living expenses are very high, and a common laborer often gets as high as \$80 a month. With tremendous pressure on their integrity, no society or educational advantages for their families, and no public sympathy in their favor, it is no wonder that good and strong Agents are the exception and not the rule.

The limited number of Indians at Hampton is an advantage in making it more practicable to look after the conditions of their return. As the result of persistent effort in this direction, the three agencies most largely represented at Hampton are now under management which will not only give a fair chance to the students who will return to them, but demonstrate what may be done anywhere under fair conditions.

The public spirit benevolence of some private friends of the cause in putting the agents' salary on a living basis, has enabled the Commissioner to appoint over three of the most important agencies represented here, two of the very best men in the service: Major McLaughlin over the 5,000 In-

dians at Standing Rock, and Major Gassemann over 2,500 at the Lower Brule and Crow Creek agencies, Dakota territory. We gave in our May number Major McLaughlin's account of his previous remarkable work at Devil's Lake, D. T. Since then Major Gassemann has visited Hampton on his way to his new station, and while here gave us the interesting story of his work at Yankton agency—to the report of which in another column we call our readers' attention.

A VERY complete report upon the insane asylums, penitentiaries, and retreats or schools for weak-minded persons or idiots, of the United States, has recently been made by an English physician, Dr. Tucker, who was sent out about eighteen months ago by the Australian government to examine all such institutions in our country and in Europe as should be open to his inspection. His tour in the United States being now completed, the facts which he has collected have been laid before the public, and are of very great interest, as giving a general view of existing conditions and the opinions of an expert in regard to them.

The main facts are briefly these—the present forms of insanity are less violent than formerly, being mostly melancholic, with suicidal tendencies; that general paresis has largely increased in both sexes; that, in the Northern States 60 or 70 per cent. of the inmates of asylums are foreigners, while in the Southern States insanity has very largely increased among the blacks since their emancipation, this being probably due to the pressure upon them of new responsibilities.

Dr. Tucker does not find that the patients in our asylums differ in any essentials from those of other countries, but labor under the disadvantage of being very much overcrowded, which, of course, increases the necessity for discipline.

The faults in our system he considers to be that there is little or no properly organized visiting; that the superintendents and officers are insufficiently paid, and that the appropriations are not such as to make it possible for the patients to be properly cared for with a view to recovery. His suggestions as to methods of work corroborate in the main the experience of all familiar with the subject.

He recommends Government supervision or rather a board of visitors, who, by reason of their social status, or of the salaries paid them, would be above suspicion—permanent officers, with better salaries—a superior class of attendants and more of them—and very much larger provision for the amusement and employment of patients.

Also that such institutions should be located always at the centres of population, and should have competent business managers. He reports that the best asylums are, as a rule, in Illinois, Michigan and Iowa, and that "in all cases the advantage in point of management, comfort and order must be given to those institutions where a female physician is in charge of the female wards, and a woman, say the wife of the resident physician, in charge of the general arrangement of the men's wards. The result is more order, cleanliness and better supervision."

He says positively that carefully chosen employment, combined with pleasant surroundings and amusement, will do away with all necessity for restraint, and is essential to recovery.

In the Southern States, for evident reasons, there is greater need than in the North for a re-modeling of our public institutions, and this must be initiated, as we may learn from the experience of others, by the establishment, primarily, of a system of personal supervision. Nothing but intelligent consideration and constant examination by individuals who are in every way trustworthy, will secure the changes which must be made before our asylums can be anything but a disgrace to our civilization.

Organizations similar to the State Charities Aid Association of New York (which is

an association of volunteers), might be established in every Southern State, and as our people well know, the need is a crying one. In view of the stated large increase of our insane population the subject demands immediate attention, and belongs to the domain of science and philanthropy rather than of politics.

#### EDITOR OF SOUTHERN WORKMAN:

Dear Sir:—I desire to call your attention and the attention of the readers of the *Workman* to the treaty negotiated with the Sioux Indians last autumn, and presented to Congress for favorable consideration as an amendment to the Sanitary Civil Service bill in February last, and which Congress very properly declined thus to consider, as it was obtained in an illegal manner from the Indians. This subject is of great importance to all friends of the work, inasmuch as it lies the root of the evil of the present system of management of Indian affairs. A treaty is an agreement between two or more independent nations having separate and independent dominion over the lands, occupied by said nations. When therefore Congress authorizes the executive branch of the Government to make formal treaty with any tribe of Indians, it goes without saying, that the inherent right of the Indians to a separate and distinct nationality (as well as their right to land occupied, is thereby admitted. Without entering further into the discussion of this point it is, probably, sufficient for the purposes of this article to call attention to the fact that the treaties have all been favorable to the strong and distinctly unfavorable to the weak nation. Acknowledging, by the treaty system, the Indians' right to the country occupied, the General Government has perpetuated treaties upon an ignorant and weak nation (freaks favorable to the Government and disastrous to the other party to said treaties. The Indian has been conquered from time to time, but while his country has been absorbed, he has been compelled to live just on the "ragged-edge" of the body politic of the nation, neither fish nor fowl, held to be independent, to be under the laws of the United States, and not protected by the said laws. His condition, like that of the confirmed insane and idiot, admitting of no advancement or prospect of attaining to an enjoyment of what we so proudly claim to be inherent rights of man.

Do we mean to imply that the grand old framers of that declaration, intended to make a reservation of such a nature as to make as well as idiots and insane from the beneficent privileges set forth in said declaration? The past treatment of the Indians by the General Government would appear to be based on such indication. The Honorable Commissioners sent out last autumn to treat with the Sioux Nation appear to have been actuated by a desire to get the land which it was desired said nation should cede to the United States, as cheaply as possible. Witness their haste to call attention to the fact that the consideration was virtually only a repetition of the promise made by the Government to the same Indian nation in 1868, and again in 1876, except the item of cows and bull, 20,000 in all, no mention being made as to grade of said stock, age or cost. Any cow would fill the bill, is the presumption. Taking it for granted that fair dealing should obtain in selection to the grade and quality of stock, the Government would be called upon to expend about \$400,000 for a territory containing about 14,000,000 acres of land, which land the Commission reports upon as follows:

"Its value for stock-raising is beyond question, and many parts will doubtless prove equally valuable for farming purposes."

From a personal knowledge of the country ceded or proposed to be ceded by this treaty, I say unhesitatingly that one dollar an acre would be a fair price for the land in bulk, whereas it is proposed to wrest it from the Indians for about three cents an acre—and more promises of the 1868 treaty fulfilled.

It is also proposed, as the best way to accomplish the education of Indian youth, to continue, in effect, the policy supposed to have been inaugurated by the treaty of 1868, which provides that a school-house and a teacher (another blind bargain, no time being set for commencement of operations, although careful to curtail the other end allowing twenty years, no statement as to kind or cost of school-house or pay of teacher) for every thirty Indian children of school age. One of the 1868 treaty Commissioners has since intimated, I am informed, that above provision was put in as a sop cast to the philanthropists of the East, and not expected to be put in force at all—of a piece with the provision for selection of kind in severity, which has been pronounced by the Land Commissioner as not of sufficient authority to warrant the granting of patents. It has been a dead letter, whether it

was so intended or not. It is hard to believe that anything but the best interests of the Indians was thought of in making such provisions as the ones alluded to, in the treaty of 1868. They proved fruitless, because no specific annual amount was stated in the treaty and agreed upon to cover over the necessary expenses entailed upon the proper department of the General Government in carrying out said provisions, and a reiteration of said provisions without accompanying clause specifying the actual amount Congress shall be called upon to appropriate to render said provisions operative, is a hollow sham. First millions of dollars must constitute an effective sinking fund for Indian educational purposes. Said education should be largely industrial, and said amount would be about a third of the fair valuation of the land ceded or proposed to be ceded by the treaty. Many objections might be properly raised in opposition to a sinking fund for general purposes, and I seriously question its advisability, but the wisdom of creating a sinking fund for agricultural and industrial education is beyond question, and has been acted upon by the General Government, and by the State governments, and has been proved to be an eminently successful way of accomplishing the object aimed at. Why should not the General Government, give the Indian-dependent for such is the *peaceful status of the red race in America today*, the benefit of the experience and superior wisdom, and take such action in this matter as will eventually lift the dependent Indian from a place of supporting idleness. Without full and free educational facilities for the rising generation of Indian youth, this can not be accomplished, while with the aid of such facilities, under proper management, the extinction of the red race would become a part and parcel of the nation, and be a living monument to the wisdom and humanity of the present generation of the nation's fathers.

I wish to call attention to one more article in this pernicious treaty and I have done. It is proposed to issue a patent *in fee* for its reservation. What is the meaning of such provision? Simply the perpetuation of the tribal relation, which is just what every true friend of the Indian *openly* opposes.

No segregation can be made without this country without bringing disaster to that race or to the nation. If it is desired to exterminate the Indian, then I can conceive of no better plan than the adoption of legislation looking toward the perpetuation of the tribal relation, unless a price be set upon scalps, and the fiery cross-bow, festive train-robber, and frontier desperado be encouraged to turn their entire attention to the matter. Time and time again have the Indians' built houses, cultivated fields and fondly hugged to their hearts the delusion of tribal-reserve promises, only to awake to a realization of their mistake when they found their homes signed away by petty chiefs of the tribe. The provision of the treaty of 1876 requiring that three-fourths of all the Indians must sign any future treaty ceding land, was a step in the right direction; but if that provision be complied with, it may happen that one-fourth who decline to sign the treaty are ones who have made homes and cultivated fields, which they naturally feel loth to part with at the rate of three cents an acre. If it is desired to do the right thing, why not appropriate five million dollars for the industrial education of the Sioux and give the land, or what is left of it by land grabbers, to the several Indians in fee simple, *indivisible for several generations*. By such measures the incentive to improve his land and his condition would be raised to the highest point, and the good people in the Senate and House of Representatives assembled, would have the satisfaction of leaving on record fair and just treatment of an oft-defrauded people. The cows, &c., might be thrown in to boot, and the Government still have the best of the bargain by a very comfortable amount.

I remain, very respectfully, yours,

Geo. LeRoy Brown,

1st Lieut. 11th Infantry.

#### VISITOR'S GUIDE BOOK To Old Point Comfort, Virginia.

ILLUSTRATED.

Contains a brief history, and full description of all places of interest in the vicinity of Old Point Comfort, including Fort Monroe, National Soldiers' Home, National Cemetery, Hampton Naval and Agricultural Institute, town of Hampton, Newport News, etc., together with a map, and instruction how to reach Old Point from all sections of the country. To anyone desiring reliable information regarding any of the above interesting places, or contemplating visiting this section, it will be found invaluable. Endorsed by Board of Trustees and officers of the Hampton Institute and others.

Sent post-paid for 25cts. cloth 50cts.

ADDRESS C. W. BERTS,

Box 10, Hampton, Va.

## Interview with an Indian Agent.

Major — Gassman, whose recent appointment to the Lower Brule and Crow Creek agencies, Dakota, made possible by generous private addition to the meagre government salary, has saved to the twenty-five hundred Indians there, and the students who return there, a good and efficient guardian, stopping at Hampton on his way to his station, gave to the following interesting statement of his experience and views of the Indian work. While the circumstances of his first appointment show the wide opportunity for abuse there is in such a system, its happy result in the present case seems a special privilege. Major Gassman said:

Before I took charge of the Hampton agency I was engaged in the ministry in Omaha, Nebraska. My health failed, my means were limited, it was necessary for me to do something, and my friends suggested that I should take charge of an Indian agency, which were then, you know, in the gift of the churches. I was appointed by our Episcopal Church to the Southern agency, of which it had charge.

I went to my post with fear and trembling. I had had no experience, no business experience, or any but in the ministry; but I was sure of one thing, that good, honest, selfless effort would bring good results. I had heard about many of the iniquities and short-comings of agents. My friends warned me against the position. I knew that the name of Indian Agent had become almost a synonym of nasal or cheat. I felt, however, that it was a position a man could fill with honesty and integrity and good results. So I went to work.

I was horrified at the state of things I found. For many years an agency had been established; thousands of dollars had been expended; a great many men had been employed. But I saw that the Indians were discouraged, doing nothing sulky and adverse to effort. I arrived at the agency early in April, and found that the fields had been left for a year untilled and in a filthy condition. I had had no experience as a farmer.

I called the Indians together, and told them they must clean their fields. They said they had no teams or ploughs. I asked if they couldn't at least clean them up? They said yes. I told them to begin and I'd see what I could do for them, but there was no time to lose. They said they would start to-morrow. The next morning I was waked by loud talking. I looked out and saw at least fifty women with hoes, axes and shovels on their shoulders—not a man among them. I took an interpreter and went out to them. They said they had come to clean the fields. I said that was good, but I hadn't sent for them, but for the men. They laughed at that idea—it was a novelty. I told them the men must come, gave them some good advice on house and field work—women—oh which I am well posted—and sent them home. They went their way, and that was the end of the work. I couldn't get an Indian man out that time. I was puzzled what to do next. I went out to the fields with the interpreter, and we did find one old man who had gone to work. I told him to go on, and I'd plow what he would clean up, which he did. I sent him home and another by degrees, with the gift of extra rations, and so at last we got the fields cleaned and planted.

That first year, though, was very trying, owing to my ignorance of the Indian character. I spoke to them as I would to any one else about truth and duty, etc., but met constant, persistent opposition. I was wearied to death with their councils. Fifty to a hundred great stalwart Indians would walk into my office, sit down on the floor, and begin to smoke. Then I would wait with patience till one of them would rise and make their wants known, and I would answer them. But everything I proposed they would always oppose, for some reason I did not understand. They would tell me my words were sweet, but that like all other white men, I was a liar. So it went on for a year. It was rather hard to take their plain talk, especially as I am somewhat of a musical Christian. I gave them, however, as good, plain talk as they sent, and let them understand what I thought of them.

But at the end of a year I thought I might as well give it up. I wrote to my friends that I thought of resigning. Then I had the Indians to a last council. I told them what I felt, why I came, what I had endeavored to do, I spoke feelingly. When I had finished, an old chief, "Struck by the Res," got up and said, "We have listened to your words for a year. We have now come to the conclusion that we will both listen and obey. We had been told that you were not a good man. We have now believed what we heard, but you have convinced us that you are good, and we will obey you."

Well, I stayed, and I had no more trouble, except such as was unavoidable. The councils were more and more pleasant. I never

had a rude or disagreeable word from them again. They would sometimes disagree with me, but generally took my advice, and were always courteous.

I laid before them first this plan. I told them that rations and aid from government are only temporary. They will come to an end. They are given to aid them to be self-supporting. I told them I had come to help them to become so. They were not much interested in that idea at first, but as continued dropping wears away the rock, my words from day to day had some effect, and here and there I saw some improvement.

I found all the work at the agency done by whites—only two Indians employed out of the 2000 Sioux at the station. I employed the Indians as fast as possible to give them work. I put one boy in the blacksmith shop, another with the carpenter, another in the mill, two or three with the agency farmer, two in the butcher house, and to help issue rations. When I came there I found the cattle were slaughtered in a brutal manner, shot in a filthy yard, where the Indians dressed the meat in a careless, unclean way, applied for a slaughter-house, cattle pens, and a proper butcher, and got them. I put my Indian boys with him, as I said, and at the end of a month they could take hold and do the work properly themselves, and did it so six years. The beef was issued clean.

I found the mode of issuing the rations very defective and injurious. Issue was made to eight bands, to the chief of each, by his "soldiers" among the individuals. The division was not a fair one, as might have been expected. I altered the mode of issue. I got up ration tickets for each family, which indicated the number of the band, the number of the family, and the number of individuals. Then round the margin of the ticket were numbers for the week and month, which were checked out as they were used. I kept a book corresponding with the tickets. You can see the advantage of this. By the old way the strong men and big eaters got the most; the poor and weak, the old women, got nothing but what was thrown to them.

Clothing had been issued in the same way. The Indians had no way of measuring, or even of counting. The things were picked up as they came and made into parcels, and the Indians helped themselves and went off with small reference to the adaptation of the goods to their needs.

Every year I took a careful census of the whole nation. I called in every man with a ticket and counted every individual. So I had the exact number of the men, women, girls, and boys. Then I took the goods and figured it out—so many things suitable for the men and so many for the women, etc. So with all the goods, down to needles and pins. On issue day I had a counter built out before the goods. I marked the counter with yards, half and quarter yards, I appointed a clerk for every kind of article distributed, and I stood in the middle.

When I began this method I was very careful about the issue day to have the Indians see that everything on the bill of lading was received, and then that everything received was duly distributed. To convince them of this I would give some of them the bill of lading, and say, go to any white man you please, on or off the agency, and ask him to read it to you; then on issue day bring him here and see if everything is distributed. Once or twice they did this. After that they said, "You are all right; we trust you."

When issue day came I took my stand at the counter. Each head of a family came with his ticket, and I had my census book open to compare it with if necessary. Then I called out the number in the family—as, for instance, "One man, one woman, two boys, one girl." Every clerk knew at once just what to do—for one man a blanket or suit of clothes, so much for a woman's or child's dress, and so on; so much provision for a family of such a size. The articles were brought to me. I called the next ticket, and while the next lot was being made up I would look over the first, see that it was all right, and give it to the Indian. He would sign the book and go off. The advantage was great, as you can see, over the old way. A chief or powerful man in the tribe got no more than belonged to him; the feeblest got no less than his share. It made a good impression on the tribe. They saw that they were justly treated; there was a growing confidence.

The system of employing Indians and encouraging industry was no less pleasing. They were glad to see their young men employed; they were willing to go to work when there was any encouragement to do so. The old system was to pay in rations. When I wrote for permission to employ Indians, Government said I must pay them in rations. I tried it—so many pounds of pork flour, etc., for a day's work. They agreed. What was the consequence? The work of the week they took their rations, but they

could not sell them, there was no market. They had to eat them up. Now, the Indian capacity for food is great, but it has a limit. The only way left was to invite all the friends to a big feast on the result of that week's labor. If they hadn't been invited they would have come anyhow. The Indians soon saw that that didn't pay; they were only working to feed a lot of lazy people. Those who did not work got as much as those who did; the most industrious could only have all they could eat, and the idliest had that.

I reported the difficulty to Government, and after great labor of writing letters, and long patience, I finally succeeded in getting permission to pay in cash, but not full wages. I tried half wages, but they soon informed me—and I didn't blame them—that they would only do half work for half wages; if they did a full day's work they wanted full pay. I reported again to Government, and at last succeeded in obtaining permission to pay full wages for a full day's work.

My theory is that they should have a little more than full wages. I am not a sentimentalist, but the case is this: The Indian has been brought up in the habit of doing only spade labor. He is constitutionally averse to labor. We have to overcome the habits of generations. The Indian's hand is small and delicate as a woman's; the Indian's arm is slender and feeble; his chest is narrow, his shoulders stooping. All those parts of the body which have to bear the burdens of labor have to be developed. With all this to overcome he needed special encouragement. I gave them an extra dollar and good strong rations. The consequence was that at the end of my term at the agency I could get a number of Indians to do any work if I had it to do.

For one instance: I had several thousand bushels of wheat to harvest. I succeeded in getting the ground broken, the crop cultivated, the wheat ground, and eaten up too. While they were threshing one day, some of the Indians gave out. They sent me word from the field that two more men were needed. I went out on my horse and looked about, but couldn't see an Indian anywhere but in the field. I rode to the trader's store, and there I found a young Indian gentleman, gotten up in fine style, with red blanket, embroidered leggings and moccasins, looking glass, and fan; face painted, hair braided and ornamented with feathers—"a fancy buck," so they say out on the frontier. I went up to him, laid my hand on his shoulder, and said, "Friend, I want you." He looked up with an independent air, and said, "How?" I told him to get on his horse and follow me, which he did. I took him into the field and up to the threshing machine, and told the interpreter that I had wanted him to work and would pay him so much. The Indian boys around laughed. I told them to be quiet. He said, "I don't want it." The only vacant place at the machine was where the shaft and dust came pouring out—not an agreeable place for him—pouring out on his paint and oil. He never had a pitchfork in his hands before, but he went to work manfully. Pretty soon old came his red blanket; then off came the paint itself in streaks. Piece by piece came off the rest of his togetherness, till the Indian was an Indian but not his besides. But he stuck to that pitchfork. I watched him; if he had given out I would have taken his place; but there was no give out to him; he worked right on for three days; at the end of the time his delicate hands were all bleeding.

That shows the pluck of the Indian. I have had other employees, who had never done a thing before in the way of labor work, till the blood ran down their hands. This one was, of course, a remarkable case. But I have had Indians who labored for me industriously for eight years without ever losing one day.

It was difficult to get them to save their wages. I finally adopted a system of banking for them. They let me lay aside their wages till the end of the quarter. Then we talked over the question what they had better buy, and under my advice they generally spent their money in useful articles, wagons, harness, stoves, furniture, etc.

I received satisfactory evidence that the Indian can be made a laboring man, but in order to do it we must pay him good wages to start with.

I laid out each year the year's work for the tribe; told them now is the time to plant now to cultivate—now to harvest. Then I aided all who were trying to work. I sent my own team here and there, and encouraged them, by all means in my power, to start in farming, which is the foundation of thrift and prosperity. I got many respectable farmers out of them.

I am satisfied that if I could have continued working upon them they would all be self-supporting in eight years more.

I also got some sheep, and taught them to care for them and the wool, and taught the women to spin. Then I got the yarn dyed,

and set up two or three looms. The women learned to weave, and made some substantial cloth for women's dresses. The manufacture of cloth and of rag carpets became quite a valuable industry there. I had five women engaged in weaving. They appreciated the chance for employment remarkably.

At one time there was to be a fair at Yankton, sixty-five miles from my agency. I thought my Indians ought to be represented, and they went to work very willingly to prepare. One boy made a wagon wheel another a wheelbarrow, another a set of harness, another some horsehoes. The tinner made some tin ware; the women made some cloth. We got up a wagon load of articles of Indian manufacture, and I took them to the fair at Yankton. I am proud to say we took premiums for work over several competitors.

There was a baby show at the Yankton fair. Baby shows are quite in favor on the frontier. There was one Indian baby at my agency which I thought the finest baby I had ever seen. So I said to the mother, "I want you and your husband and your baby to go to the fair at Yankton."

I went to Yankton, and I had the gratification of having what was pronounced the most interesting exhibition on the grounds. Owing to the jealousy of some of the white mothers, however, our Indian baby did not take the prize.

Finally, after six years' work at the agency, and seeing many wonderful improvements, and a change in the affairs of Government, and a new Commissioner put into office, I left in May five years ago. Since I left there have been five agents there in five years.

I never shall forget the scene of my parting with my Indians. The Reservation was thirty-five miles long; the agency buildings in the centre. For fifteen miles I was followed by old and young lamenting as for the sowed by old and young lamenting as for the dead, crying to break my heart. We held a council. The speeches were very kindly and touching. I don't often give way to tears, but it was beyond my power to restrain them at the words which were spoken. Finally old "Struck-by-the-Res" got up, old, lame, nearly blind. He came to shake my hand, and said:

"My friend, you are about to leave us. All our hearts are very sad. Before you go we want you to tell us one word that we can always remember."

"I have no more to say different from what I have often said."

He said, "We want you to tell us this"—stooping he made a map on the floor with his hand, and said, "Before you go we want you to tell us how to make a fence round this land of ours, so that no white man can ever get over it."

I thought a minute. The thought struck me that I might put in here a word of parting advice that would emphasize what I had taught them: I said, "Yes, I will tell you how to make a fence round your land so high and strong that white men cannot get over it."

They all said, "How, how?"

"And I will tell you how to build it without any money, and so that no wind will ever blow it down, but it will grow stronger every year it stands."

Then, like the old chief, I drew a map of the reservation on the floor, but all round the border and in the centre I put little squares, and in the centre of each I put the figures 160. They asked, "What does this mean?" I said, "You see these squares; in each one there are 160 acres of land. Put an Indian family on each of these squares. Let them stay there, build a house, build a stable, a barn, a pig-pen; plant a crop of wheat, cultivate it. That is the only fence that will keep the white man out of your land; but that will do it, and will pay for itself."

But they all acknowledged that I was right. But the fence is not yet built. I trust, however, that if some Indian Commission don't buy out their lands too soon it will be built. This is what ought to be done, if we ever mean to get our Indians civilized. This ought to be the effort of every friend of the Indians, or we are building on the sand, or beginning our house at the chimney pots. They must own their lands in severalty, with a good title. Till then we cannot hope to make them self-supporting.

## Frank Leslie's Sunday Magazine.

The July number affords the most interesting and entertaining reading in literary and artistic circles. It contains a very valuable and interesting account of the life of the late President Grant, written by the late President's son, General Grant. It also contains a very interesting account of the life of the late President Lincoln, written by the late President's son, General Grant. ## Letters From Hampton Graduates.

FROM AN INDIAN GRADUATE. TEACHER, INTERPRETER AND COUNSELLOR. A YOUNG WOMAN PREACHER AND CARPENTER. "HUNGRY AND THIRSTY FOR THE GOSPEL." A COLORED MINISTER'S LIBRARY. MAKING A FOE INTO A FRIEND. FROM A CIRCUIT PREACHER.

FROM AN INDIAN GRADUATE.

A graduate of last year's class, a young chief of the Absentee Shawnee tribe in Indian territory, known at Hampton as Thomas Wildcat, but who has by his tribe's desire taken the name of Alfred, writes interestingly of his work for his people and their neighbors, the Pottawatomies. Unable as yet to obtain a school among his own people, he has taught in the latter tribe, and we believe will do good work wherever he is. His letter, written in a neat, clear hand, we give without alteration:

"WAGON, I. T., April 5, 1883.

My Dear Friend

Your kind letter of February 27th has reached me some time ago, and I am very sorry to have been so long in answering it. I have just come back from home to resume my duties here again as teacher, and I can now write. I must tell you first that there has been excited times with us during the past week, in which the Shawnees and the Pottawatomies had a joined council at Shawneetown to settle, before Special Agent Townsend, the land question that had been in dispute so long among themselves. I being sent for, closed my school for a few days and went to attend council, but not until I was sent for more than once. As I said before, that I don't like to meddle with their controversies, of course I am always glad to help my people in any way, but this was exceptionally critical. There was ill feeling between the two tribes, arising from the fact that the Pottawatomies are going to take up land among the Shawnees, which they had perfect right to do so, while the latter (Shawnees) here tested and would not have them mingling among them. The Pottawatomies being in favor of civilization and are more advanced in it than the others. I acted as interpreter for their interpreter was deficient in both Shawnee and English languages, and Agent Townsend explained to them the "Act of Congress," which gives them right to select their own land, *provided*, they take allotments. But this was just what they did not want. They preferred holding their land in common, which was against the policy of the Government. No one can realize but ourselves how hard we worked to make them understand that it was their interest, their good, to accept the land as it was proposed to them. But our work was a failure. They finally rejected it entirely, and decided to move off the "30 miles square" in the course of time to a place where they will be at any time liable to be driven off as intruders, and thus remain all their lives without lands. This, perhaps, was the last opportunity that they would ever have to secure land, and they did not know that they were injuring themselves for not accepting what was proposed to them. It was their own superstitious ideas which caused them to be so foolish.

I have been so busy, and most of the time I was on my feet, and I am glad now to find myself again at my post, with my dear school children. Having had sufficient rest from their books, they are cheerfully looking forward to the close of the school work for another rest, they are studying hard again. I read to them from the stories of the Bible, the book you gave me, every morning before hearing classes, and keep up review. They answer my questions as well as I can wish them. It was a great help to me, too. One of my scholars was taken away and sent to White's Institute, Indiana, to pursue her studies there. We all missed her. She was a good girl.

I think we have enough Bibles and Testaments that we can use, but while I am thankful to the Secretary of the Bible House for them, I ask if he would not as soon give us "song books." It was a great help to me, too. They would be thankfully received, for we could not get them. We prefer the "Gospel Hymns," Nos. 1, 2 and 3 combined.

I have not heard from John Downing now for a long time, and I did not know whether he had decided to study for the ministry or not. The last time I heard about him was that he was about to get married. I do not know how true this is. I am looking for a letter from him every mail.

Please excuse poor writing. I close, yours sincerely,

A YOUNG WOMAN—PREACHER AND CARPENTER.

Perhaps "woman's sphere" is in the work that lies right around her to be done, especially if she is the only one who can do it. Would not that statement unite all discussers of the subject? But this is the work one young woman found laid out for her:

"I started Sunday School yesterday, 43 present; most of them young men and women, a few parents, not many children. I was agreeably surprised to find fifteen that could read very well in the New Testament, mostly young men. I read the lesson and gave all the explanation I possibly could. I never saw people so delighted. I was surprised to find how happy I felt to be working where I am doing good to such people. One old man came round to see me last night, and told me that when I was explaining the chapter he felt like he was hearing a good sermon preached. They have no preaching but once a month, and then several miles off, so that those who have no way to ride only get to church two or three times a year. I suppose heard a sermon. They say I shall have a large school next Sunday. I am going to teach a large print and sacred songs or Gospel Hymns are what we need. They have no hymn-books or Bibles. They are hungry and thirsty for the gospel.

I got a hammer and nails and some pine slabs last Saturday, and made my room tighter. You may imagine I handled them awkwardly, which I will not deny, but I stopped the cracks, and then pasted up a great deal more comfortable. We can't tell what we can do till we try. I mean to get in some glass windows next. I have the best room in the house, and when I used to try to blow so strong through the room that I expected the lamp to be blown out, every moment. I could put my hand through the floor in dozen places. The one window has no glass and a shutter of pine slabs, so I am compelled to open it or the door to have light in the day time to read or write. It is the same with the school house. Some days it was very cold, but I had to keep the windows raised to give light, and that made us all tremble with cold. I can hardly believe that I am in—no, Virginia! The people never had a school in this neighborhood before. A very few of the children have been to school a little, by walking eight miles a day. There is not a desk or blackboard in the school now—not even a water bucket. The trustees say they can't furnish anything but the teacher; they promise to pay me, and say the parents must furnish everything else.

I am glad to be here. I certainly believe God sent me, and with his help I am going to see how much good I can do. I am going to start a night school to-night for those who can't come to day school.

I ask your prayers.

MAKING A FOE INTO A FRIEND.

A young man who was an industrious worker among the flowers at Hampton, and now finds still more pleasure in training the "little human plants," as he says, writes:

"I have been depending upon my friends for reading matter since I have been here. The postmaster has been very kind about letting me look over papers, and sometimes gives me one. The colored minister has a nice library, to which he makes me welcome. At the beginning of my school term, the newly-fitted up, weather-boarded building was threatened to be fired by some of the poorer class of whites who were opposed to it. The one who was believed to be the leader I came in contact with daily, going to and returning from school. At first he didn't seem to care to speak to me. However, I always spoke to him as a gentleman, not only he, but his family. I am the first to teach in this district, therefore I have to work under disadvantages. Do not forget me, who sometimes feel working in the corner of the world—that I am in a place cut off from divine blessing. I am the same boy who used to care for the flowers at Hampton, only I desire more, to do God's will.

Truly yours,

FROM A CIRCUIT PREACHER.

A Hampton graduate who came to the School a few years ago, accompanied by his wife, who generously gave her work to help her husband through the studies that would better qualify him for his work as a preacher, writes thus of his present field of labor. He gives, like Dr. Tucker, the dark side of the Southern picture, which has its heavy shadows and its high lights:

"There is an extensive field of labor among the churches; but the people are very poor, and the worst of all is, they are unwilling to do what they are able to do towards the Gospel to keep it among them.

I have visited churches in four counties in Virginia during last fall and winter, and walked over one hundred miles during the months of November and December, 1882, going to and from churches in these counties.

The people in these counties are most of the very low as to society, and the public schools are of very little avail. When a girl or boy becomes able to write his or her name, they are said to be educated, and an attempt to show them their need of more meets the answer, "I know as much as any one else about here. None of the preachers round here can teach me anything. They attempt at reformation among them is met with telling how they 'used to do.' Public schools do poor work up here in the mountains. The pay is small, the teachers are not parents will subscribe for a paper or buy a book. This is a hard place up here, no doubt.

I have charge of a little church at \_\_\_\_\_ I hope the people are nowhere in Virginia worse off than they are here. I shall not offer to tell all the defects of my people. I only give you to see all their needs. They are unable to read a paper, or any thing but the New Testament. Neither teachers nor parents will subscribe for a paper or buy a book. This is a hard place up here, no doubt.

I have suffered greatly this winter. I was unable to walk nearly three weeks, and was deprived of the use of my hands for a week and more, but am better now.

My best respects to all concerned with Hampton.

Yours ever gratefully,

II."

The friends of Rev. Geo. C. Rowe, for some years employed by Hampton Institute, in its printing office, and later in temperance work, will be glad to read the following letter from his new field, to which he was ordained a minister just before he left Hampton, and where he is now laboring under the American Missionary Association:

CYPRESS SLASH, MCINTOSH P.O. GA.,  
May 15th 1883.

EDITOR SOUTHERN WORKMAN.

After a pleasant journey I arrived in Savannah on April 26th, and reported to Rev. Dana Sherrill, Supt. of the A. M. A. work in Savannah and vicinity, at the Beach Institute, where I was kindly received and entertained. While in the city I met Miss Connelia Jackson of the class of '82, who resides there, and who is teaching in one of the city's graded schools. The next day, accompanied by Rev. and Mrs. Sherrill, I went to Snelsonville, the seat of the Dorchester Institute, a school supported by the American Missionary Association, presided over by Misses Kinney and Gibson, where for two days I remained the guest of Rev. Floyd Snelson, a remarkable colored Congregational minister, one who has done much towards establishing and furthering the Congregational work in Georgia.

On the 28th ult. we started from Snelsonville via McIntosh for Cypress Slash, twelve miles distant. The journey was a novel one. For five miles nothing but woods, with now and then a log cabin away back from the road among the trees. Then we came to a place called Fleminging, with a church, two houses and a grave-yard; further on, three or four more houses, and then a repetition of the scenery from McIntosh to Fleminging. We arrived at the Slash about 4 o'clock, p. m., and drew up before the church, an unpainted building about as large as the one at Bethesda chapel, capable of seating between three and four hundred people, though at a first glance it appears much larger. It is unfinished inside. The "parsonage," of two rooms, formerly used as the church, with a two-story addition on one end. There are three large fire-places. The house is unfinished inside, and I have made application for immediate repairs. It depends greatly on suitable repairs whether I bring my family here or not.

I spent the first night at Deacon John Smiley's, two and a half miles from the church, through the primeval forest. A little over half way, one is a mile from any residence, and the woods are so dense that you cannot see twenty rods in any direction. The next morning (Sunday) I started for the church and got lost in the woods, and it was a very anxious time with me, but after a while I struck the right path and reached the church.

Rev. Dana Sherrill of Savannah, and Rev. Floyd Snelson of Snelsonville, came out and introduced me to the people. After giving them a twenty minutes talk on "the new thing," we had a grand hand-shaking, and then had a meeting of the officers to talk over the situation.

During the three weeks that I have been here the people have been very kind to me. They are of the progressive sort; not educated, but what is almost as good, willing and anxious to learn. The schools in this State are continued but three months in the year, and that in the very hottest part—July, August and September. I am expected to teach here as well as to attend to other duties, but hardly think it wise to do so this summer as it is so warm, and I am not acclimated. On Monday, May 14th, the thermometer stood at 90° in the shade from 10 a. m. till 5:30 p. m. I have to do my work now from 4 to 10 a. m., and from 1 to 6 o'clock, p. m., and keep quiet in the heat of the day, and summer has not come yet.

The church membership is seventy-five. We have three services on Sunday: regular church service from 10:30 to 11:45 (a fifteen minute recess); and a Bible service from 12 m. to 1 p. m.; a prayer-meeting at 4 p. m. The Bible service is the hardest work of all, as it takes the course of a lecture on a portion of Scripture. You might ask questions till you were hoarse and not get an answer. I hope to get them into taking an active part in this service. They seem to appreciate it greatly, as they get together in little groups and talk it over afterwards, but they are very backward about "speaking in meeting." We use the chapter for the International Lesson in this instance.

We also have a prayer-meeting on Thursday evening. The people attend meetings well and promptly, and are very attentive. There is no "old-time" among them in their worship. They do not chant their prayers, nor get "happy," but pray, and sit and listen like civilized people. Twice our meeting was rather thinly attended, the crowd coming just as our meeting was out, but since they have learned that we will not wait for them, there is seldom any straggling. One old brother said, "You are a minute man, and I like you for it because some come on time, and they ought not to be made to sit around and wait on the slow ones. Our other pastor always used to wait till the crowd came. I like the idea of working by time. Begin on time and let out on time."

At our church meeting last Thursday evening, the subject of fencing the church property was brought up. Although the church has been organized for more than four years there is no fence around the church or "parsonage," nor a shrub or tree in front. They did not think it was necessary, but they have since been convinced that it was necessary, and \$12 were subscribed—part paid down—for that object at once, besides a quantity of material. They have begun to haul the material already, and we have a number of holes dug for trees, which we shall set out as soon as a rainy day comes. It is late to set out trees, I know. Still there is a chance of their living, and if they live we shall have gained one season; if they die there are plenty more—the woods are full.

We must have a bell, also, and more light for the church, for there are but three lamps now in it, and when we have a meeting in the evening it is difficult to tell who is in the house; and, just as soon as possible, the church must be finished inside and painted. Bro. Roberts said, "Well, I was just simple enough to think that we were doing pretty well, and here Bro. Rowe comes and shows us we haven't done nothing."

To do what is required—what ought to be done now—will require more than these people can do; but if anyone will meet them half way in their efforts to help themselves, it can be done. It is a pleasant field with plenty to do, and I like it.

Yours respectfully,

Geo. C. ROWE.

## Horsford's Acid Phosphate.

For Women and children

DR. JOS. HOLT, New Orleans, La., says: "I have frequently found it of excellent service in cases of debility, loss of appetite, and in general, as a tonic, and in the treatment of women and children."

Work given out. On receipt of your address we will make as offer by which you can get your children at your home. Men, Women, Boys or Girls can do it. H. C. WILKINSON & CO., 195 and 197 Fulton Street New York.

HOME, SWEET HOME.

(Original version.)  
 'Mid pleasures and palaces though we may roam,  
 Be it ever so humble, there's no place like home.  
 A charm from the skies seems to hallow us there,  
 (Like the soft music of mother's sighs)  
 Which, seek through the world, is ne'er met with else-  
 where.  
 There's a spell in the shade  
 Where our infancy play'd,  
 Even stronger than time, and more deep than Despair!  
 An exile from home, splendour dazzles in vain!  
 O, give me my lowly thatched cottage again!  
 The birds, and the lambs that came at my call—  
 Those who nam'd me with pride—  
 Give me them! with the innocence dearer than all!  
 The joys of the palace through which I roam  
 Only swell my heart's anguish—there's no place like home.

HOME, SWEET HOME.

(As revised by the author [date not known].)  
 'Mid pleasures and palaces though we may roam,  
 Be it ever so humble, there's no place like home!  
 A charm from the sky seems to hallow us there,  
 Which seek through the world, is ne'er met with else-  
 where!  
 Home, Home, Sweet Sweet Home!  
 There's no place like home!  
 There's no place like home!  
 An exile from home, splendour dazzles in vain!  
 O, give me my lowly thatched cottage again!  
 The birds, and the lambs that came at my call—  
 Give me them! and the peace of mind, dearer than all!  
 There's no place like home!  
 There's no place like home!  
 There's no place like home!

ADDITIONAL STANZAS.

(By Mr. Payne, presented, with his song, to Mrs. Bates, in London, relative of the author.)  
 To us in despair of the absence of verse,  
 How sweet the remembrance of home appears:  
 From altitudes afar, yet so near to the eye,  
 The unsatisfied yearning, and says, with a sigh,  
 "Home, Home, Sweet Sweet Home!"  
 There's no place like home!  
 There's no place like home!  
 Your eye is blest with all that can be seen;  
 But none has been cherished with many a we!  
 Yet, hark! different our fortunes, our thoughts are the same.  
 And both, as we think of Columbia, exclaim,  
 "Home, Home, Sweet Sweet Home!"  
 There's no place like home!  
 There's no place like home!

JOHN HOWARD PAYNE.

A Horse-back Trip Through Tide-water Virginia.

BY REV. H. B. FRISSELL.

A visit from the wife of one of our most efficient county superintendents, giving us incidents of the work among Hampton graduates in Norfolk, has made the Principal and teachers in the Normal School feel that they ought to know more of what was done by those who had gone out from the School, and to place themselves in more direct communication with the members. Various plans were proposed, and without a very definite knowledge of where I was going; but with the general idea of seeing our graduates in Southampton county, Va. I took the road to Newport News, and after waiting for two hours, led my horse on board the Accomac and we steamed out into the James. When we rose from supper the captain told us that we were entering the mouth of Pagan creek. Although it was now quite dark, he skillfully guided the boat along the winding channel, taking his course from lamps placed in the windows of houses on the shore.  
 To one who has lived for any length of time in Hampton, and has been deluded into expecting to find some rise in the ground at Fox Hill or Sugar Hill, one of the striking things about Smithfield is the real hill which one meets on getting off the boat and pursuing his way up the street. A street lamp with a hand pointing up a beautiful avenue of trees shows that one of the old Virginia mansions has devoted itself to entertaining strangers. "You're a self! apple-tree, ain't you?" said the boy who issued forth from the front door to take my horse. Truth compelled me to answer in the negative. "There was a man round here sellin' apple-trees, and I reckoned as how you was him," said the boy. The sound of the violin greeted my ear as I entered the great, generous hall of the old house and preceded to the main room. I found young men and maidens engaged in a dance, while the guests sat around the sides before the large fire-place. The hospitable host, an old resident, told me of the town, of its wood hams, well-known in London, of its pea-nut factory where the nut is polished so as to obtain a higher price in market. He told me that pea-nuts were shipped from Smithfield to all parts of the

world. The evening was passed in an interesting talk with the rector of the Episcopal church who, being a grandson of Bishop Meade the historian, had much of interest to tell of the history of the place, and of the old St. Luke's church—next in age I believe to the one in Jamestown.  
 I called forth the next morning to visit the former county superintendent of schools, who bore the usual testimony to the work of Hampton graduates of the Isle of Wight county. He directed me to the colored school in the lower end of the town. There, in the old ship-yard, in rather an unpromising building, I found thirty-five children clustering around the stove, and one of the graduates of Hampton institute trying to classify them.  
 The school had only commenced the day before, March 7th, and there had been no colored free schools in Smithfield since July of the preceding year. I met colored children going to a private school in the place, and there was an air of being well-to-do about the people I met. I stopped one colored man and questioned him as to how he was getting on. He told me he owned his own place and had two hundred acres free from debt. "His word is as good as money," said a white man of whom I inquired in regard to him.  
 The pea-nut crop has been very profitable in this county during the last two or three years. "We might make our fortunes here if we weren't so lazy," said the good-hearted farmer with whom I took dinner. "After all, he continued, "we go to fox-hunts and parties all through the winter, and don't do any work on the land." In answer to a question as to the colored people of the county, he said, "We've made a mistake in this county; we've let the Negroes get the land, and now we can't get them help."  
 "There are three classes of Negroes," he said, "the better class, the middle class, and the worse class. The better class, I said, get them to work for us at all. The next class are those who hire land, and we can't get them much. The only ones we can get are the shiftless ones who don't lay anything out and won't work long at a time." I asked him as to the German help brought on to some of the farms of the neighborhood. "Other people may get along with 'em, but I don't want any," he answered. He spoke with pride of a colored school near by, taught by a young woman who went through the Junior year at Hampton. "You'll find a right good school down there I reckon," he said, as I rode away.  
 In a colored Baptist church down in the pine woods, I found a slight built woman with a school of thirty children about her. She had not learned the latest methods of teaching, but it was evident those children loved her and that she was having, as the white man with whom I staid that night said, "a very civilizing effect" upon them. I heard of her in many ways from both white and colored; they bore the same testimony to the influence she exerted, not only during the week but on the Sabbath, on both children and parents.  
 A few hours brought me to Zuni, where there were two Hampton graduates. "The Negroes take more advantage of the schools than the whites and they have better teachers," said mine host, at dinner. "They do cessaries of civilized life, rolled up my blanket, mounted my horse and cantered away to visit schools, with a letter of introduction from General Armstrong to the county superintendents, and without a very definite knowledge of where I was going; but with the general idea of seeing our graduates in Southampton county, Va. I took the road to Newport News, and after waiting for two hours, led my horse on board the Accomac and we steamed out into the James. When we rose from supper the captain told us that we were entering the mouth of Pagan creek. Although it was now quite dark, he skillfully guided the boat along the winding channel, taking his course from lamps placed in the windows of houses on the shore.  
 To one who has lived for any length of time in Hampton, and has been deluded into expecting to find some rise in the ground at Fox Hill or Sugar Hill, one of the striking things about Smithfield is the real hill which one meets on getting off the boat and pursuing his way up the street. A street lamp with a hand pointing up a beautiful avenue of trees shows that one of the old Virginia mansions has devoted itself to entertaining strangers. "You're a self! apple-tree, ain't you?" said the boy who issued forth from the front door to take my horse. Truth compelled me to answer in the negative. "There was a man round here sellin' apple-trees, and I reckoned as how you was him," said the boy. The sound of the violin greeted my ear as I entered the great, generous hall of the old house and preceded to the main room. I found young men and maidens engaged in a dance, while the guests sat around the sides before the large fire-place. The hospitable host, an old resident, told me of the town, of its wood hams, well-known in London, of its pea-nut factory where the nut is polished so as to obtain a higher price in market. He told me that pea-nuts were shipped from Smithfield to all parts of the

work, and had been there. I was told, for an hour. The school-house which I visited had been built by this man. The white farmer with whom I took dinner spoke well of the graduates. Referring to one of them who taught in the district he said: "She has promised to come and show my wife, how to run a school." Near by I found a school formerly taught by two graduates, but now left to the care of one, with sixty children on the roll and every fifty in attendance. The room was small and the scholars closely seated. The teacher was laboring under difficulties, but doing well.  
 I found that there had been no colored school at Jamestown for four years previous to this spring. One of our graduates had started one with thirty scholars. In another district, owing to the failure of the proper authorities to supply a stove, the children were gathered in the teacher's own bedroom where there was an open fire-place.  
 I spent the night with a colored man who was renting a farm of seven hundred acres, and doing well with it. Most of it was planted in cotton. We sat in the parlor of the old plantation house, and talked about the condition of the colored people. I asked him about a certain white man in the neighborhood who had been reported to me as hard in his dealings with the colored people, taking liens on their crops and allowing them little chance to rise. "No," he said, "the trouble's with the people themselves. They trade all they can, and use up every dollar of credit they can get." His picture of the colored people in that region was not hopeful. They own few farms of their own, and are spending too much in drink. He is doing well himself, re-renting enough land to pay his own rent on the whole place. "I try to teach the colored folks to do better," he said, "but they don't believe me." The Normal School had been taught in the little school-house on the place, said that they were not doing as well there as in other parts of the county. The parts where they raised cotton would not compare favorably with those where there were other crops.  
 On Saturday afternoon, after losing my road several times, I came to a little school-house in the middle of a swamp, fully three miles from the main road.  
 "I was built near slavery times," said a colored man, "and we used to have our 'sultations' there." The swamp was filled with water, and I understood what one of the speakers in the school-house meant when he spoke of the children being "water bound." I wondered if they were ever in any other condition, as I urged my horse through the deep pools. The building was filled with children and their parents who had come to attend the closing exercises. Recitations, dialogues, and tableaux, made a very interesting exhibition. Then the parents rose, one by one, to bear witness to the work the school had done and their sorrow at losing their teacher. "Why," said one of them, "she was so much in earnest in teaching I can't see how she could have done it." I was very fortunate in having an opportunity to spend Sunday with a very intelligent Southern man who had thought and felt much upon the relation of the two races. He looked with interest, though with something of suspicion, at the educational work done among the colored people. He felt the graduates through the county bore the best character for purity of life. I met a most earnest worker in the colored Baptist minister at Franklin. His praises were sounded all through the county by those who are striving to raise the standard among their people in the matter of temperance and purity. I met others trying for the same thing. It is only to be regretted that there are not more of that character. In many places they only had preaching once in five Sundays, and almost all the Bible instruction was given by the Hampton graduates.  
 A visit to the Suffolk schools completed my tour, and I returned to Hampton with a stronger feeling than ever before of the needs of the field, and of those who are going forth to teach.

Correspondence.

Fort Sully, Dakota Territory,  
 May 18, 1883.  
 EDITOR SOUTHERN WORKMAN:  
 Your May number is before me. I am much gratified with the publication of my letter, and the kindly spirit of your editorial remarks.  
 There is a curious and rather amusing typographical error under the first heading of my letter. I spoke of the "unaccountable freeze of new men's common to all animal life, and said that these were called "stampedes in plains' vernacular"—that is, that we who live on the plains have borrowed from the Spanish a word to designate the cause and effect of nervousness on a crowd of animals. The typo has made it read, "stupidity in plain vernacular." The typo has the best of it, for however unwittingly,

he is correct—stampede is sheer stupidity.  
 For the benefit of those of your readers who have never seen or heard of a "stampede," I give you an extract from "The Plains of the Great West," published in 1877, by Putnam's Sons, but now out of print.  
 A stampede may be caused intentionally either by Indians or white thieves, or it may come from any accidental and unforeseen cause, which, frightening badly one or more horses, causes them to plunge and snort, communicating the fright to others and others.  
 A stampede among horses is precisely what a panic is among men. It is the temporary ascendancy of an unreasoning fear, during which the instinct of self-preservation seems to supply the functions of all other qualities. Nothing is more senseless and selfish than a panic. A cry of fire in a theatre, the falling of a bit of plastering in the ceiling of a church, is sufficient to change the orderly, well-behaved people into a crowd of unreasoning brutes, who, forgetful of every obligation of manhood or duty, rush blindly to the door, crushing even their own wives and children in the mad dash, each of his own individual selfishness.  
 Even highly disciplined soldiers—men who face death as lightly and carelessly as they turn a partner in the dance—men whose courage is so much a matter of habit that the feeling of fear is forgotten, if ever known by them—become a blind, headlong, terrified mob, with no more sense or reason than if stricken with madness. All animals and birds seem liable at times to be afflicted with this "stampede"; and we have reason to modify our self-glorification of our immense superiority over the brute creation when we reflect that one moment of causeless panic reduces us from our vaunted position "just equal to the angels" to the level of the poor quail in its senseless flight dashes its life out against a wall.  
 It should always be remembered that the susceptibility of the horse to the force of excitement, to all external influences, is so great that no herd is ever to be regarded as more gentle than its wilder, or more brave than its most timid member.  
 The stampede of a considerable herd is not only serious from the probable resultant loss of animals, but as a palpable and imminent danger. When just fully getting under the influence of the panic the herd will likely circle round or through the camp, to the headlong rush each animal appears to be perfectly blind to any or all consequences. Crowded together in compact mass, and moving as speak, the force is almost irresistible. Tents are thrown down and demolished; wagons overturned and broken; and a man caught by the stream would be trampled in a moment to an "unrecognizable pulp." Fortunately the stampede rule is narrow, and can be avoided by care, quickness and presence of mind.  
 A "stampede" is undoubtedly "stupidity." Yours very truly,  
 RICHARD L. DODGE,  
 Col. 11th Infantry.

Chickens and Eggs.

Many farmers say that raising chickens is all luck, but it is management, interest and caring for them and doing the right thing at the right time.  
 Where the hens have a good run, as is generally the case on the farm, they cost little to keep during the summer, and supply many a good morsel, hence it is often taken as a matter of course; but let the eggs and chickens used for one year in a country home be accounted for strictly and one is astonished at the quantity. Very often the farmer's family is dependent upon his pork or beef barrel for meat, and the farmer's wife is troubled how to cook the meat so that there may be variety. Here is where eggs and chickens come in to supply dishes good enough for any laboring man, and they may be quickly prepared for the table, even when the housekeeper is quite busy or tired. A few slices of salt pork or bacon are cut and put over the fire in the spider or frying-pan, and in a few moments are cooked. Then the meat is removed and a few eggs are broken into the fat, white hot, and soft cooked; the meat is cut into half-inch squares, the eggs laid over, and the whole poached together in a suitable dish. This looks as appetizing as it really is to the laborer.  
 Another way is to stew the chickens with a generous piece of salt pork, boil the chicken and the pork being improved to the taste. Other modes of preparing dishes from these materials will suggest themselves to every housewife. Then what would country farm life be without the old-fashioned chicken pie? When on a visit, city and village cousins little realize the straits to which country housekeepers are put—no market or butcher near at hand, but only stores of home production to draw from.—Country Gentleman.

vember the twelve page form.

THE LAYING OF THE CORNER STONE OF THE  
Virginia Normal and Collegiate Institute,  
took place on the Fourth of July,  
at Petersburg, Va. Hampton was  
represented by one of her officers, and a  
graduate. Many of her old students  
were present, and Hon. Peter J. Carter,  
one of the Board of Visitors of the  
Petersburg school, was an early gradu-  
ate of this institution. Notwithstand-  
ing the extreme heat of the day, a large  
number of the inhabitants of Petersburg  
assembled on the beautiful lot which  
has been purchased for the school. The  
laying of the stone was committed over  
by Mr. Thos. Cayton, also a graduate of  
Hampton, who holds the office of Grand  
Master in that fraternity. After the  
proper ceremonies had been performed,  
the company adjourned to the front of  
the old plantation house of the estate,  
which has been purchased for use of the  
school. The front piazza was occupied  
by the speakers and invited guests,  
among whom were Senator Mahone and  
Hon. R. R. Farr, President of the Board  
of Visitors, and Supt. of public instruc-  
tion of the State of Virginia. After  
some introductory remarks by Mr. Cay-  
ton, and some words by Mr. Carter as  
to the prospects of the Institution and  
the ends to be accomplished by it, Prof.  
R. T. Greener of Washington, D. C.,  
was introduced as the orator of the oc-  
casion. He spoke of the important part  
which Virginia had played in the political  
education of the country, and rejoiced  
in the fact that she had now taken the  
lead in the education of the colored race.  
He spoke eloquently of the relations  
which had been made in the relations  
of the two races, of the effects which

slavery had produced upon the mind of  
whites as well as blacks. He thanked  
God that on the spot where it had been  
a state prison office, and where a colored  
man to read, and where a Negro found  
with a spelling book was punished with  
thirty lashes, an institution was to be  
erected under the direction of intelli-  
gent Negro citizens, which was to be  
given up to the education of the down-  
trodden race. He spoke of the progress  
which the colored people had made dur-  
ing the twenty years since the war,  
of the prejudices which they had lived  
down, of the property they had acquired.

He spoke of their struggles and their  
mistakes, but declared that their present  
position was described by the words of  
the little ragged colored boy of a south-  
ern school, who when the children were  
asked by Gen. Howard what word he  
should carry back north from them,  
answered in a trembling squeaky voice  
"tell 'em we'm arisin' si'."

According to the circular which has  
been issued by the Board of Visitors,  
we learn that the new school is to be  
opened not later than the first Monday  
of October. This school is a state in-  
stitution.

The Legislature of Virginia passed  
an act on the 6th of March 1882, estab-  
lishing the Virginia Normal and Col-  
legiate Institute, for the higher educa-  
tion of colored persons. This act pro-  
vides that state students, free of charge  
for tuition, as soon as practicable, upon  
evidence of good moral character, fifty  
young men, who shall be not less than  
sixteen nor more than twenty five years  
of age, one of whom shall be selected  
from each senatorial district, and ten  
from the state at large, all to be chosen  
by the Board of Visitors; and when a  
vacancy occurs or is likely to occur, due  
notice of the time and place of making  
the appointment shall be given by the  
secretary of the Board of Visitors. If,  
after such notice, no suitable person  
shall apply from any district, the vacan-  
cy may be filled from the state at large;  
provided that the students so admitted  
shall enter into a written contract and  
agreement with the Board of Visitors  
to teach or engage in educational work  
for two years.

The cost of living at the school is es-  
timated at \$60 for the school year. An  
examination in the common English  
branches is required of applicants for  
admission to the normal department of  
the Institute, the requirements for ad-  
mission to the Collegiate department  
not having yet been determined. The  
school year is to be divided into three  
terms, and the Normal course of in-  
struction provides for the study of Latin  
through the three years. Mathematics,  
Algebra and Geometry, to be taken up  
the second year, and Trigonometry  
and Surveying in the third.

The proposed building is to have rec-  
itation rooms, lecture halls, rooms for  
cooking and eating, and dormitories for  
500 students. A lot containing forty  
acres has been purchased for the new  
building. It is situated just across the  
Appomattox river, on which the old  
plantation house of the estate from  
which the lot was purchased, is still  
standing. One hundred thousand dol-  
lars have been appropriated by the state  
to the new institution. The principal  
and instructors have not been appoint-  
ed.

Hampton welcomes every new effort  
for the elevation and education of the  
colored race, and extends cordial greet-  
ings and good wishes to the Virginia  
Normal and Collegiate Institute.

THE CORONATION OF Alexander III, of  
Russia, and his Empress, the daughter  
of the King of Denmark, took place in  
the cathedral church of the Kremlin in  
Moscow, on Sunday, June 27th.

The assassination of the late, and the  
numerous attempts upon the life of the  
present Emperor, have proved the exist-  
ence of so strong a feeling among the  
middle and lower classes of the Russian  
population, that every precaution has  
been taken to protect the royal family,

and until quite lately it has been judged  
unsafe to incur the risks attendant upon  
a public coronation. But, in spite of  
all fears to the contrary, the ceremony,  
which was conducted with the greatest  
possible pomp and show, was attended  
with no apparent danger, while mani-  
festations of loyalty among the people  
were numerous, though there is much  
doubt as to their spontaneity and reality.

It may be said without exaggeration  
that the whole civilized world is now  
awaiting with anxiety the newly crown-  
ed Czar's political action. On the oc-  
casion of his coronation he issued a  
manifesto by which all arrears of taxes,  
allies under judgments, not yet enforced,  
are mitigated; permission is given to  
many persons to return to their homes,  
and persons concerned in the last Pol-  
ish insurrection are forgiven. But,  
while the expenses incident to this mis-  
sion of taxes, etc., and to the costly  
ceremonies of the coronation, have been  
generously met by the Czar, he has not  
yet in any way committed himself to  
any permanently liberal policy, or in-  
deed shown his intention to make any  
concession to the demands of a large  
class of his subjects. No monarch has  
ever in a more critical position, on the  
one hand lies before him the possibility  
of action so wise, unselfish, and cour-  
ageous, that it may in the eyes of the  
Russian people atone for the hideous  
injustice of their past; on the other, such  
a continuance in blind prejudice and  
tyranny, as can end only in death for  
the monarch and a reign of terror for  
his subjects.

The whole world may well pray that  
the scale may be turned in favor of hu-  
manity and good government, for Rus-  
sia claims a place among civilized na-  
tions, and the innocent blood which dyes  
her hands is a stain upon all civilization.

THE HISTORY OF AUGUSTA COUNTY, by  
John Lewis Peyton, printed in excellent style  
by S. M. Yost & Son at Staunton, Virginia,  
is a book which would be well for the  
attention of students to read with careful  
attention, for two reasons.

1st. Because it is a useful and instructive  
portion of the history of our native land  
containing much valuable information.

2nd. Because the work affords a remarkable  
picture of human progress within little more  
than a century of growth.

The colored people of to-day, just emerg-  
ing from the influences of slavery, beginning  
to acquire property, struggling for education  
and honorable position in the land, may find  
much to encourage them in Col. Peyton's  
book.

The story is to a great extent the story  
of the Lewis family of Virginia. John Lewis,  
the founder of the colony in the West Aus-  
tina county, which then extended from the  
Blue Ridge mountains to the Mississippi  
river, came to Virginia, in 1732. Many of  
his descendants still occupy the region he  
settled, and the family, with its connections  
by marriage, includes a host of names prom-  
inent throughout the United States. When  
Lewis first came into the wilderness he built  
near the present site of Staunton a stone  
house, half dwelling hall and fortress, the remains  
of which may still be seen.

The county of Augusta was organized in  
1745, with John Lewis and nine other free-  
holders who had joined the colony, as pre-  
siding justices. The political and religious  
dissensions of that age sent many refugees  
from Europe to the New World. The spirit  
of adventure prompted many bold hearts to  
seek their fortunes in this unknown land of  
which such fabulous tales were told. The  
convicts and paupers of the Old World were  
required to "leave their country for their  
country's good," and found asylum here.

The Negroes, suffering all the barbarities  
of the slave-trade, were brought from Africa;  
and thus the colony in the wilderness was  
waiting to drive out the Indian—the original  
lord of the soil. A hundred years have  
wrought marvellous changes. The "wilderness"  
has been made to blossom as the rose, and  
a stalwart and prosperous race, proud of  
their ancestry and comfortable in their pos-  
sessions, have grown from this mingling of  
many tribes and various faiths. The fierce  
Caledonian and the wild Celt, the persecuted  
Quaker from England and the Huguenot from  
France; the dissolute gentleman (often the  
scion of a noble house); the wretched out-  
cast of overgrown populations; the captured  
son of Ham—all have forgotten their stories

of wrong and oppression, their ancient quar-  
rels, the faiths which exiled them from their  
native land, and combined with sturdy arms  
and earnest spirit, to build up in the new  
world a noble commonwealth, enjoying the  
blessings of civil and religious liberty. A  
few of these early settlers were people of cul-  
ture, and brought with them into the wild-  
erness of America the books and other ap-  
pliances of civilized life. The majority of  
them, however, were plain unlettered men,  
and the stern struggle for life in the wild-  
erness left them little time or taste for mental  
cultivation. Tradition tells of a person who  
applied to the Trustees appointed to attend  
to schools for children in the "West Aus-  
tina" who, when asked if he could read, said  
"no, he could not read but he could spell,  
and he thought he could open a school and  
teach the children to spell, and while they  
were learning to spell he could learn to read  
and so qualify himself to continue his in-  
struction."

The mother of Gen. John B. Floyd, who  
lived to a great age and whose childhood was  
spent in Staunton, was fond of telling her  
grand-children how she learned to write and  
cipher on a slate made of the thigh bone of  
a horse, the best the colony could then af-  
ford. Mrs. Floyd remembered the school  
being hastily dismissed one day when the  
fearful sound of the Indian war-whoop rang  
out in the dark forest around the log cabin.

The terrified children rushing with their  
teachers into the street of the village, found  
the citizens already under arms and march-  
ing to meet their dreaded foe. These habi-  
tations in the wilderness were by no means  
the hodge-podge of luxury, and the colored  
people of our day who have around them cook-  
stoves, sewing-machines, clocks, and other  
inventions of the 19th century, may realize  
the comforts they enjoy when they read Col.  
Peyton's description of the manner in which  
the forefathers of many of the "First Families  
of Virginia" lived a hundred years ago. On  
page 41 he tells us, "The houses of the  
pioneers of the valley were usually built of  
logs without the aid of a single nail or spike,  
covered with clapboards. The floor was of  
split pinecones smoothed with the broad-  
axe, the chimney of stone or brick, the  
sun. The furniture was rudely fashioned  
from the timber of the forest. The beds  
were of straw or goose feathers. It was not  
until long after 1732 that the pewter plates,  
dishes and spoons, wooden bowls, treachers  
and noggin, were replaced by glass, china  
and silver-ware. The meat used in those  
days was usually the flesh of animals killed  
in the chase or snared in traps. The corn  
bread and fried bacon which are commonly  
the fare of the Negro and 'poor white' of  
our day, would have been deemed luxuries  
in the cabins of West Augusta, when, in the  
scarcity of mills, bread was often wanting,  
As a substitute for it the colonists used hom-  
iny beaten in a wooden mortar hollowed out  
of the trunk of a tree, and considered them-  
selves lucky when they had bear's grease to  
try it in. The pioneers arrayed themselves  
and their families in the skins of beasts, tan-  
ned with or without the fur, and homespun  
cloth. The women were usually occupied  
with the loom and spinning-wheel, which are  
still to be found in the rural districts of the  
south.

One of the greatest difficulties of the set-  
tlers lay in the total absence of roads through  
the country, so that all travelling was neces-  
sarily done on foot or by following the Indian  
or buffalo trails on horseback. Col. Peyton  
gives a highly interesting account of the  
making of the first road to the older settle-  
ment in Eastern Virginia, by the united ef-  
forts of the colonists.

These sturdy pioneers of the forest were  
early accustomed to labor of various kinds,  
the father of the family being usually his  
own plowman, woodchopper, tannery, black-  
smith, and shearer, as his wife was cook,  
seamstress, weaver and dairymaid when she  
was so lucky as to have cows to milk. It  
would perhaps wound the pride of some of  
the descendants of these industrious people  
to tell of one honored matron among the  
colonists, who, beside performing her house-  
hold duties, kept a little shop over the door  
of which, such of the settlers as could read,  
discovered the legend, "Cakes and Bread  
Sold Here." Yet, "Why should the spirit of  
mortal be proud?"

The head of another aristocratic family at-  
tracted the attention of the Indians (who  
massacred his family) by establishing a dis-  
tillery. The Indians are reported, but dis-  
tilling the "fire-water," which brings so much sor-  
row and shame upon mankind, is still a flour-  
ishing business in the "West Augusta  
county."

Not a few of the white settlers, both in the  
valley and eastern Virginia were slaves, that  
is persons sold into service for a term of  
years to pay the cost of the voyage from the  
old country. Such persons as could prove  
their own importation from Europe free of  
cost to the government, were entitled to a  
certain amount of land, and at once became  
freeholders of the community. More than  
one family, now ranking with the highest in

the land, who trace their descent from the bond servants of that day could be found; and, though the bond-servants were doubtless scorned by the freeholders, their descendants compare well together, and in many cases have intermarried. A gold wedding ring given to his bride by a bridegroom of those days, is preserved in the family, which bears the motto, "Virtue and love comes from above," showing that the sentiment of the colonists was better than their grammar, though whether the mistake was made by the groom or the goldsmith the deponent saith not.

That people as illiterate as the majority of the early settlers, should have been superstitious was natural, and the Hampton Negro or Indian student, who heard strange tales of witches and conjurers in the cabin where his childhood was spent, will read with curious interest of the prevalence of such ideas among the ancestors of the now cultivated and refined white people of Virginia. By those who view the progress of man from the infancy of a race in its ignorance and credulity, the development of intellect, the chapter of Colonel Peyton's book, on witchcraft, will be read with attention. On page 52 he says, "All incurable diseases were ascribed to the supernatural agency of a malignant witch, such as epileptic fits, dropsy, rickets, etc. For the cure of diseases initiated by witchcraft the picture of the supposed witch was drawn on a stump or piece of board, and shot at with a bullet containing silver." "When cattle or dogs were supposed to be 'tricked,' they were burnt on the forehead with a branding iron, or if dead, burnt to ashes. Sometimes the diseased part was cut out, while the animal was alive. The first German glass-blowers in America drove witches out of their furnaces by throwing in live puppies."

Colonel Peyton touches his book with a number of sketches of prominent persons and families who have lived at different periods in the West Augusta country. Among the most interesting is that of Rev. James Waddell, a classical scholar, pious and refined gentleman, who is immortalized in Wirt's description of "The Blind Preacher."

As the colonists grew more comfortable in their worldly condition they began to aspire toward a higher education for the youth of the land, just as the colored people of the better class are now doing for their children. Dr. Waddell was among the first preceptors of the "log colleges" in the wilderness, and his memory is blessed among the children's children of those who were benefited by his instruction and example.

Colonel Peyton also tells of the foundation and history of Washington College, which received the fostering care as it bears the name of the Father of his country. Preparations are now making to celebrate the centennial of the college, and the little provincial town of Lexington, where it stands, expects twenty thousand strangers to witness the celebration of the college and the unveiling of the recumbent statue of General Lee, who ended his eventful career as it is.

It is a blot on Virginia's history that the colored people who form half her population, and who added to her resources the forest, are yet excluded from the colleges supported by State funds; but the prejudices of the past are fast vanishing in the light of a better day, and ere long, we trust, the halls of learning will be open to all who wish to enter.

**SERMONS AND SPEECHES BY ATTICUS G. HAYGOOD, D.D., President of Emory College, Oxford, Ga.**

George Eliot, in one of her essays bearing the striking title of "Worldliness and Other-Worldliness," makes this comparison between the poets Young and Cowper: "In Young we have the type of that deficient human sympathy, that implety toward the present and the visible which flies for its motives, its sanctities and its religion to the remote, the vague and the unknown. In Cowper we have the type of that genuine love which cherishes things in proportion to their nearness and feels its reverence grow in proportion to the intimacy of its knowledge." It is Cowper's type of religion rather than that of Young which this volume of sermons presents to us. The writer's religion is evidently of a practical sort which interests itself in the questions and duties of this work-a-day world. He seems to have little patience for those "who talk much of faith in Christ, and have no good works to prove their faith; when, in use Edward Irving's stinging phrase, 'hunt for the basis of their religion in their nervous system, and not in the law and will of Christ Jesus the Lord.'" Here is another passage from the sermon just quoted, entitled, "Occupy till I Come," full of sound common sense: "That are means of grace? Most persons will answer, prayer, reading of the Bible, the preaching of the Word, devotional meetings, and such like practices and observances. And so they are; but they are not all, nor the half, nor the quarter part.

Work is a means of grace, whether at the carpenter's bench, the blacksmith's forge, the farmer's plow, the student's desk, the mother's work-room, the servant's kitchen—the work we do, to be done in this world is an essential part of God's appointed means of making us what he would have us to be: true children in the likeness of Christ his Son. 'Till we understand this we do not know the true law of human life."

Most of the sermons contained in this volume were delivered before the students of Emory College, Georgia, of which the writer is the President. The first one entitled "Solomon's Experiment and Failure," takes direct issue with the answer to the question of the catechism as to who was the wisest man. He declares that Solomon's life was a failure, and that "the chief service he has rendered mankind is, that he left a volume of confessions in the book of Ecclesiastes that are perpetual warnings against the folly of sin. He gives rather an unusual explanation of Solomon's request for wisdom, and finds in it only "the anxiety of a young king conscious of his unfitness for his duties, rather than the longing of a truly humble and penitent heart for the divine favor and mercy." He brings out of all the thought, which cannot be too strongly emphasized, that the cultivation of the intellectual, without the moral and religious, results in failure; a thought which our educators are beginning to appreciate.

As Thanksgiving-Day has not been widely observed in the South we turn with interest to see what a Southern clergyman would preach about it. He finds reasons for gratitude, amendment, and hope, in the new South. He finds reasons why the people of the South should "thank God and take courage" in the fact that they are "so well off." He declares that there is ten times the comfort in the home-life of the people that there was twenty-five years ago. He finds that the Lord for good mattresses, for cook-stoves, sewing machines, for houses better painted, for parlor organs, pianos and pictures where they were never seen before. He finds that there is more to live for in 1880 than in 1850. As another cause for thankfulness the writer gives the "social and civil order existing in the Southern States," the reasons for which he finds chiefly in the conservative power of the Protestant religion. "Most of all he thanks God for the abolition of African slavery. He is thankful for this for the sake of the blacks, but still more for the sake of the whites, for their children and their children's children."

The author does not stop with mere thanksgiving, but passes on to the things in the South which need to be amended. He mentions the provincialisms to be overcome, the vast mass of illiteracy, the want of literature and educational facilities and the backward condition of manufactures. Among the traits of character which need to be cultivated in the South, he mentions industry and economy in business, sentiments, and habits of political and social toleration, respect for law and authority, "the ceasing from politics as a trust and a trade."

The volume contains two addresses, one entitled "The New South, from a Southern standpoint," delivered in many of the leading cities of the North; and the other, "The Negro a Citizen," delivered at the Anniversary of the American Missionary Association at Cleveland Ohio. "Our brother in black" has already established Dr. Haygood's reputation as a real friend to the Negro, and a close observer of the condition and needs of the South. His position as trustee of the Slater fund will give added weight to his words. The book comes from the press of the Southern Methodist Publishing House of Nashville, Tenn. The type is clear, paper good, and the general appearance attractive.

**THE ORPHEUS YACHT CLUB** of Baltimore, whose members, as its name implies, are musical as well as nautical, visited the school on the 9th ult. After inspecting the various work-shops, they very kindly gave an entertainment in Virginia Hall to the teachers and such of the students as could be spared from their work, which was greatly enjoyed by all present. The music consisted of glee, duets and songs, with piano, cornet and zither solos, and was of a high order. In return the school choir entertained the club and other visitors with "Plantation Melodys." The occasion was a very pleasant break in the monotony of school life in vacation.

For some time past, guests at Old Point Comfort, Hampton, and in the neighborhood generally, have made frequent and fruitless inquiries for some trustworthy guide to the various points of interest lying between the Hygeia Hotel and the embryo city of Newport

News. The enterprising manager of the Normal School Printing Office has, in view of it, want, recently issued a carefully prepared "Visitor's Hand Book," which supplies full and accurate information in regard to climate, localities, historical facts, institutions, routes, time tables, etc., and will be of great assistance to the inquiring visitor. We can thoroughly recommend it, and the publication of two editions, one paper covered at 25 cts., the other neatly bound in morocco at 50 cts., puts it within every one's reach. Sent by mail if desired.

#### Extract from the Journal of Mrs. C. C. Armstrong.

SAN FRANCISCO, CALIFORNIA.  
At 6 o'clock, p. m., went to our usual Chir-na Sunday-school, then took car and went over so far to 28th street, and felt well compensated for the effort, though we had to grope along in the dark some two blocks as the city is too disgracefully poor to have night lamps lighted. And why? The city Superintendents could perhaps give the true reason if rights. So, people grumble and endure, but how long? Cars are lighted, but outside light comes only from lighted windows, except electric lights in some places. There were some of the hundred Chinese students in the schools. All healthy, clad in Chinese garb. The singing was a pleasant surprise, for they sang much better than we had supposed they were capable of doing with voices entirely untrained to sacred music until they came here. They sang the four parts distinctly, and such tunes as "Coronation" sound grand from the lips of such pagans. A small organ was used to lead them. No female voices, but boys sang a sweet soprano. It was queer to see them, when called by name, walk with perfect composure up to the platform, bow to the audience, then recite. All wore Chinese shoes and white stockings made of cloth. The garments were all dark in color, and the large queue hung dangling from behind. Zee Wong, of some seven years, walked up alone, made a graceful bow, and sang his solo very prettily. His embroidered shoes, white cloth stockings, red satin pants and dark silk outer garment, gave him the appearance of a little dignitary. He performed so well that cheering was involuntary. All passed off well as though all were white boys, except as to the pronouncing English. They improve slowly, but fast perhaps as white boys would in the Chinese language. One of the Chinese boys went in the car with us, and paid our car fare before we had a chance, and kept near us when it was well of light.

I send you a letter I received yesterday from a Chinaman whom I met, last year, at their annual celebration. He had lived some two years at the Hawaiian Islands, and could speak quite well in that language. We talked the Kanaka language. Ladies gathered around to hear the strange sounds, and some asked me if I was speaking Chinese. He has returned from the country, where he was teaching Chinese both in their own and the English tongue. The latter he speaks quite well. Well, he called last evening, as proposed in the letter. He has adopted the American costume entirely, even to the short hair. Very polite and gentlemanly without affectation, he came, and first presented me with some "Lai Chin" nuts—such as you boys seemed to like so well when in your childhood's home—then, a very pretty pincushion, shaped like a rose, with painted flowers and bugs on it. We talked in English and Hawaiian which gratified us both. He seemed bright and intelligent, and comprehended the plan of salvation. He asked if the Hawaiians had been cannibals, &c. I then showed him my cannibal pictures, which amused him as they do other people; then briefly told him how pagans were taught; how they were entirely ignorant of letters, &c.; told him how they used to live at the Sandwich Islands, and then pointed out the difference, which he seemed ready to comprehend. Told him how they used to worship idols similar to what I saw last year among the Chinese, but that education and Christianity combined had made the changes. He fully comprehended that there are different classes of white people—some kind and some not kind. In answer to inquiries, he said Chinamen had told him that many white people were kind to them and taught them without pay, and that made them think white people were not all bad. When looking at the pictures of Marquisians, he asked, "We were not afraid of them. I said, 'Yes, we feared them, but as God shut the mouths of the lions when Daniel was in their den, we trusted that he would protect us from the

jaws of the cannibals, and he did keep us." He grasped the idea at once, and said, "I know about Daniel." He seemed quite interested, even more so than white people often do. My cannibal chair and near by, he briefly gave its history and the origin of its name, in which he manifested a lively interest. He teaches his countrymen evenings, as they have to work days. You will not admire his English, but it is about as good as we could speak the Chinese with the same limited advantages he has had in learning. There are a hundred scholars where he teaches, with white lady teachers. I asked how it was that Chinamen were willing to be taught by American ladies, when the Chinese despised women so much? He laughed, and said, "Chinamen desire to learn," and then I said, "It is no good for your people to treat women badly." "God made both men and women, and Christ makes them good. Both should be educated and be kind to one another," said I. He smiled, but did not say much. When he left he put on a nice overcoat, and left in a gentlemanly manner.

Yesterday forenoon I went with Captain and Mrs. Gillette to Woodward's Garden. They went to escort five Gilbert Islanders—four men and one woman—to enlighten their minds by the sights. These people were found at sea, drifted from Gilbert Islands, picked up by a ship, taken to Japan where they were cared for and forwarded to this place. Several dead natives were in the boat, and these remaining ones without provisions, in a exhausted state, nearly dying state, were taken on board. Their first effort after being taken on board was to kneel down, and seemingly to pray. Before reaching here the woman gave birth to a child which died. They were taken to Japan, and then sent here. The Captain of the Tokio reports their conduct as most exemplary on board his ship. Yesterday they were transferred to the Kalamo, which leaves here soon for Honolulu, where they will meet with Mr. and Mrs. Bingham who can talk with them, as they reduced their language to form, and translated parts of the Bible, prepared school-books, hymn-books, &c. Twenty-two ostriches, each eight years old, were in a high pen, besides younger and smaller ones in another place. They were about six feet tall, and when the long neck stood erect, we were told that from the ground to the top of the head measured fifteen feet and should judge that might be correct. They were taken from an African coast to Buenos Ayres, from there by sea, and are now to be taken to San Diego where there is to be an ostrich farm. Their legs were long, with large kneecaps, and looked strong. The feet consisted of two large toes. The black ones were males, the gray ones females. Only a few white feathers and they were not clean. They looked like powerful creatures, but their robes were quite demoralized after sea voyages. Individually what food was given them. The reply was "cabbage, carrots, turnips, alfalfa, &c. &c." We saw two sacred cows with bunches on their shoulders, a buffalo with drooping horns, etc. But must tell of the natives. They looked at various things with not emotion, but perhaps were having wonderful things photographed on their brains, which will astonish their friends at home. They were very placid and serene, and appeared very much as the Hawaiians did when emerging from heathenism. The oldest man—whose hair was sprinkled with white—walked as though his clothes were burdensome, and sometimes he grunted as though to recover strength for the task which was laid upon him. Captain Gillette, who was seven years in command of the Morning Star and had been at the Gilbert Islands, had charge of them yesterday, accompanied by his wife. I joined the company in hopes to use some Hawaiian words that they might understand. Using some Marquesian words and a few Society Islands words which I had learned I named various objects, pointed them out and gave Hawaiian names, etc., but they seemed to understand nothing. Mr. and Mrs. Woodward brought lunch of tea and cakes, as all sat in chairs in a room where an organ was used to interest the natives. The whites then sang the verses in the same tune to the hymn, "In a soldier of the cross," etc. Mr. E. G. Beckwith was asked to pray, when the strangers bowed their heads with closed eyes. Then followed the communion service. Then all partook and behaved with perfect composure and quiet. The Captain and his party then left.

#### Horsford's Acid Phosphate, Overworked Nervous Systems.

DR. EDWARD L. DUEB, Philadelphia, says: "I have used it for several years, considering it valuable in overworked nervous system and in the exhausted condition following protracted fevers."

Incidents of Indian Life at Hampton.

In the month of June, Capt. Brown took a party of eleven Indians to the west, from whom we have not yet received full accounts, and Gen. Armstrong took a party of 14 boys and 11 girls to Berkshire. We give lists of both parties, and are gratified to be able to report that the Massachusetts party were received literally with open arms, their predecessors there having made such a favorable impression that places could easily have been found for a much larger number.

INDIAN YOUTH WHO RETURNED HOME.

June, 1883.

Maggie Goulet, Sioux, Yankton Agency, D. T. Mary Traversie, Cheyenne Riv. Ag'y, D. T. Katy Lemont, Yankton Agency, D. T. Emily West, D. T. Julia St. Cyr, Winnebago, Omaha and Winnebago Agency, Na. Boys. Samuel Brown, Sioux, Yankton Agency, D. T. Timothy Cawke, Lower Brule, Ag'y, D. T. James Good Road, Sioux, Lower Brule, Ag'y, D. T. Deluska, Gros Ventre, Fort Berthold Ag'y, D. T. Wm. Hunter, Winnebago, Omaha and Winnebago Agency, Na. Last three for disability, others expiration term of service. Wm. Benoit, Sioux, Cheyenne Riv. Ag'y, D. T. Wm. Benoit went at his own expense before the expiration of time, to aid his father, who is disabled and can claim no government support.

This and the following letters speak for themselves. We commend them to the attention of our readers.

"Since we came into the new house there are more rules made for us to obey; they bother us a little at first but after awhile we all get use to them and then they are not so hard to obey. You know the Indians never had an idea of what a rule is until they came here, because at home they are not taught to obey their parents, the children most always have their own way in every thing so the rules here will learn them a good lesson. I am sure most of the Indians that go home from here will not wish to have her or his own way in what they do. Because they know right from wrong now. I hope I shall be able to express my thanks in good words for my race, when I go back."

Z. RULO.

Hampton, Va. January 16th 1883.

My Dear Friends;

I am going to write to you, and tell you I am. My name is Lucy La Flesche, and I am here with my husband to go to school. I came from the Omaha Agency. We came here last August. The first time I rode in cars was when we were coming to Hampton. I got very sick on the way. Every thing I saw when we coming seemed wonderful to me. I went to school when I was about ten years old, at Omaha Mission. I went to school about four years. If I had cared more about learning as I do now, I would have learned more then I did, but I cared more about playing, and so lost all those precious opportunities. The best thing the white people can give the Indians is a good education. I thank all you good people very much for helping the Indians to go to school. I live in Nebraska. I live with my mother and mother before I came here. My father lives on his farm. We had a farm too, but we left it for the sake of wanting to learn something of the white people. My mother was sick before I came here, and so get very kindly sometimes. I like this school very much and all the teachers too. I like to stay here well enough, but I get very lonesome sometimes, and wish I could go home. The Omahas live on their farms. Some of them live in houses, those who can afford it, but most of them live in wigwams. They have two school houses built for them where they send their children to. Twenty seven of us came from the Omaha tribe, twenty one stayed at Carlisle, and six of us came to Hampton. Some of the Omahas were very anxious to send their children here, but the lady that brought us, wouldn't take them, because they were not very well. I can't

thank all you good people for helping the Indians. God bless you all, and care for you as you care for the poor Indians, Your Friend, LUCY LA FLESCHIE.

GREENWOOD, P. O.

Chas. Mix Co., Dak. June 28th 1883.

Dear Miss— Yours of 19th is at hand, and care to the students whom we were glad to welcome home. They arrived Sat. night last and Samuel Brown came in on me quite unexpectedly, and then after awhile the girls.

Maggie at once intimated that she would like to come to us again. Mrs. C. invited her to come and stay with us until she knew what she really wished to do. She accepted and is here, and seems now to think that she wishes to stay with us and that is also her father's wish. What she may determine to do as to the position at Hampton at the time approaches I can not say. Emily West, after going home for two or three days to her mother, came back and said that she could not live that way and was not happy, and wanted something to do. Mrs. C. went to Mrs. Johnson and she was glad to get her. She is to be 2nd girl, and has done remarkably well thus far. Katie went home to the upper end of the Reserve and I have not heard whether she wishes to have a place or not. I have no doubt, that all this lot will do well, and do you honor.

Sam. Brown is under my wing, but he have not yet settled as to his position. I hope next winter to take him into my home, and let him in various work both secular and religious, and to instruct him for a catechist. Carrie Anderson has expressed a desire to return and I hope she will. Mrs. C. joins me in kind regards to you.

Respectfully yours, Joseph W. Cook.

Chamberlain Dakota, June 23, 1883.

EDITOR OF WORKMAN.

From the window at my right I look out upon a procession of seventeen wagons loaded with farm machinery, representing the day's sale, they tell me. The street is broad and muddy from recent rains, but the slow moving teams evidence the rapid progress of the development of the country. Two years and a half ago, there was not a house for miles, now the prairie between this point and Lower Brule is thickly dotted with little towns and as we rode along in the cars the settlers were busily turning the pristine sod on both sides of us. Little frame houses are scattered over the prairie in all directions. It is said that for the past three months there has been an average influx of four thousand actual settlers per month consisting mainly of farmers from the older states. In business I find a large element of young men from the East. All this is very favorable to the Indian work, as the general sentiment is in favor of giving the Indians a fair show. The old times and rough border element is in the minority in Chamberlain. Law and order are insisted on and better maintained than in any frontier town I have ever visited. The Indians of the neighboring agencies sold about two thousand bushels of wheat here last Fall and will sell more this year. Major Gasmann is pushing the Indians up to working and there is an emulation among them at present that bids fair to make the production of wheat among the Indian's commensurate with that of the white settlers along the border of their reservation, and there is an under current of interest flowing through the business channels, which bids fair to create a public opinion at this end of the line in favor of industrial and educational development of the neighboring redmen, looking to adoption into the body politic of the future state of Dakota.

Chamberlain claims a thousand inhabitants. A church should be speedily organized here, where the Brule Agent, who is a clergyman, could officiate and build up a parish. The soil is good, the time is ripe and the cementing of the kind feeling that is growing up between the races would be assured. A good school should also be started, having Indian boarders and white day scholars. Both attending church and Sunday school. I trust that the Episcopal church may be able to do something towards establishing these institutions. The Agent, being of that denomination, works on both sides of the River could be more easily harmonized. Now here is the time and place to make a stand and fight for the industrial development of the Indians.

Here is an excellent market for all farm produce and the Indians are imbued with a desire to improve the opportunity; here our Hampton shoe makers, harness makers, carpenters, painters and tin-smiths, can find remunerative employment at their vocations within sight of their fathers' camp fires, here is growing up an intelligent, liberty loving and industrious colony from the older states, who will not countenance the robbery and rapine of an industrious

and advancing community of redmen by a rough, uneducated, and lawless set of vagabonds, gamblers, cut-throats and land-jobbers, who hover over the outskirts of civilization preying upon the weak and defenceless. Here a stationary body of the Missionary Board could and should light a beacon fire. With best wishes, Your obedient servant, GEO. LAROV BROWN 1st Lt. 11th Inf.

The Onondaga Indians.

Our readers may remember an account given in our pages last year, of the condition of the Onondaga Reservation (New York) and of the very unpromising outlook. We are glad to be able to quote from "Sunday School at Work" the following account of a beginning which has been made in the right direction, and sincerely trust that it may be followed by sustained and energetic effort.

"Readers of SUNDAY SCHOOL AT WORK have been kept informed of the progress of the effort inaugurated a year ago for the amelioration of the Onondaga Indians, growing out of the woeful neglect of the Indian children. The appointment of a commission to examine thoroughly the actual condition of the fair resulted in a report to the Legislature fully justifying the action taken. This report was made on the 13th of March, and covers forty-eight printed pages. It recommends the view of the absence of a proper recognition of family ties by the Indians, that hereafter legal and formal marriages be required; that, in view of the immoral and indecent conduct sometimes attending the public national feasts and ceremonies, the laws against acts of public indecency should be vigorously enforced; that, in the leasing of lands in violation of the act, be prevented by law that adequate school facilities be provided; that the public roads be improved; that individual rights be secured to each Onondaga and that a commission be appointed with power to negotiate a treaty covering the essential points mentioned. In accordance with these recommendations, the following bill was enacted by the Legislature, and is now in the hands of the Governor awaiting approval.

The Governor hereby authorizes to appoint three citizens of this State, who, with the Attorney-General of this State, shall constitute a commission to negotiate with the nation of Onondaga Indians, which treaty shall provide for a division of the whole or a part of the lands of said Indians among the members of the tribe now residing on their reservation, under such condition that it shall be forever inalienable, unseizable and exempt from mortgage or sale, and shall provide for the education of such Indians as shall be deemed to be in need of it, and shall also provide that the same shall be subject to the selection of their rules and officers.

Such treaty shall also embrace, if the same can be secured, some provisions for adopting by the said Indians the same laws of legislation and in heretofore as are now in force among citizens of this State. The said treaty shall also provide for supervision by the State over the leases of the stone quarries on the reservation, and shall provide for the protection of the same for the benefit of the nation.

Such commissioners shall also endeavor to secure in such treaty the adoption of some plan for the establishment of an industrial school on the reservation, in which the mechanical and the mechanical trades shall be taught, and shall report such treaty to the Legislature at its next session, and shall also endeavor to secure further consideration.

Section 2. This act shall take effect immediately.

What an Indian Thinks.

Lower Brule Agency, Dakota Ter. June 15th, 1883.

GEN. ARMSTRONG, Dear Sir:

Do the Indians want to learn to take care of themselves?

There are now in the United States 300,000 Indians, 130,000 are taking no help from the Government, and the others that are not civilized, they are kept by the Government. There are not many Indians in the United States who can not take care of themselves. From the above number all can see that more than one-half of all the Indians in the United States have learned to think that the way of the whites is better than theirs and so they want to get into it and live like our white brothers. Some think yet that their own way is the better, they want to keep it and not take the best road.

They never will become civilized, if they don't let their own way go down, and let the white people's way come up. Few Indian tribes are so far advanced that they don't want Indian ways any more, and wish to live in houses, and have farms of their own. Indian ways will never be good any more, it is all passed, gone away, and the other way is coming up to take the place. We shall be glad to see all good people say oh yes give them living; then Indians will not make so much trouble for the American people. Some people say "let the Indians get out of the way; there is no use in trying to advance them; kill them all; they are like the wild animals, deaf and dumb; they never will learn anything; we have already paid so much money for them; they have never become civilized yet." But all good people say oh yes give them an education and plenty of opportunities and send more teachers among them, so they

may come up besides us and live as brothers and live in peace. Indians like to imitate the white people, they wanted to do what they do. Some of them are very anxious to do something, but how can they do it without any white machinery. Some of them are very fond of farming; they think the farming is the best trade, and when the children go away from the tribe to school or with whites to farm, they learn to farm right. We hope all the Indians will soon become civilized people, and we hope the people of the United States will try to advance the Indians all they can.

Well sir, I like to know about school and myself, about I come to school. If you would let me to come in or not. That is all I have to say in this time. From your truly friend. I shake hands your friend, JAMES THOMPSON We-chia-sa-sa-ka.

Eggs as Food.

We put it down as a maxim of eternal truth that a more wholesome, delicate, nutritious, and acceptable morsel was never compressed into so small a compass, as it is to be found in the shell of an egg. Under different forms of cookery, it is good alike for the strong and vigorous, and for the delicate and feeble. The hardest laborer on the farm or in the mines, finds the egg nutritious and strengthening, and the invalid, suffering the horrors of consumption or other forms of wasting disease, derives from them the only meat food his organs will bear. There is no article of food more healthful to all alike, and when the price is low, no food, save milk, is more economical. At twelve cents a dozen, almost any one can afford to partake of them, for at that price they are cheaper than bacon at the same price per pound. A dozen eggs furnish more nutrition than a pound of bacon, and in summer especially (when eggs are cheapest) they should be largely substituted for the heat and fever-producing fat meats. The use of fat bacon in summer is strongly condemned by physicians, and whilopides desire to employ it more or less at that season, it is far better to partake of it sparingly, and substitute eggs and milk in its place. We advise our people to eat more eggs and less fat. They will enjoy better health, be stronger and more lithe and elastic, and perhaps live longer. At any rate they will enjoy life more, and be more useful citizens. Fat meat makes sluggish and dyspeptic eggs and milk makes wise heads and healthy bodies.—Weekly Index Appeal, Petersburg, Va.

Horsford's Acid Phosphate

is a preparation of the phosphates of lime, magnesia, potash and iron in such forms as to be readily assimilated by the system. Descriptive pamphlet sent free. Rumford Chemical Works, Providence, R. I.

The School Tax.

But some one objects to this. "Is it right," says my neighbor, "for you to tax me, in order that your boy may go to college?" "The same right," I reply, "that you have to tax me, in order that your boy may go to the State prison! You have no child that wishes to go to school; I have none that wishes to go to jail; if your boy goes to jail, I have to help support him and pay his way to get there; and I object. (Laughter.) You take my money to build a prison and a gallows, and to pay the salary of the hangman, and tax me to help build a State House—which has a fine prospect of being adorned with a magnificent mortgage. I never expect to use that State House; there is not the slightest prospect that I shall ever be Governor, or Superintendent of Public Instruction, or a member of the Legislature. I am told, and rightly told, that this is for the advantage and the protection of the Commonwealth; and I must pay out of my pocket toward the erection of a jail and the transportation of the prisoners, because it is a protection to the Commonwealth of which I am a part. Shall you not be taxed for the enrichment and adornment of the Commonwealth, in building school houses, colleges, and universities?—Lemuel Moss, D. D., in Penn. Journal.

Horsford's Acid Phosphate

gives strength where there has been exhaustion and vigor in place of impaired vitality

We must not hope to be mowers, And gather the ripe gold ears, Until we have first been sowers, And watered the furrows with tears.

It is not just as we take it, This mystical world of ours; Life's field will yield as we make it, A harvest of thorns or of flowers!

for the disposal of the cane when it was grown. There was no mill in the place; but in the end, it was sold for sale to expanding plantations.

The next stage of preparation for a planter, in which Mr. M. engaged, was to raise by contract 200 acres or more of cane for a neighboring plantation. This required an extensive outlay for teams and labor. Money was furnished by the plantation at 10 per cent. interest, and a certain percentage of the crop was to reimburse the planter. This was the first serious move toward that all-engulfing business which he had chosen as his future occupation. It was a new experiment, and it was on a plantation which, though still kept up, has never paid one cent of profit to the shareholders, but is deeply in debt. The soil was hard and ungenial to cane. The seed cane was a medley of a dozen or more kinds, and no one knew which kind was adapted to soil and climate and which was not. But, to hear the oracles pronounce on the value—each of his favorite kind of cane—one would have thought there was no doubt in the matter. Nor were they less positive in regard to the best season of the year for planting, which in fact a matter of much importance even to the planter, and might materially affect the profit of the crop.

But, on the preparation of the ground, the discussion on each point was spirited if thought fact they seemed like earnest men before whom, in the distance, visions of untold wealth glittered, without, I fear, any very exalted intentions as to using it. Some "would even with those who," they fancied, "had undervalued them. Wouldn't they be cringing to them, by-and-by, begging the privilege of being their overseer?" Wouldn't they have their fine horses and carriage and pass without notice some who," they imagined, "could not see them now. Wouldn't they wear their boiled shirt? Wouldn't they?"

Alas! few, or none of them, ever realized their ideal. A few of their class achieved success, but they were not among the boastful ones, but quietly learned all they could and practiced it. The usual those who knew the least were loudest and most positive. But the wooden mill, with its two or three try-pots and adobe or stone chimneys laid in mud, gave the proprietor a right to speak. Had not he grown the finest cane—seven acres or so? Had he not made "sirrup" for the whaling fleet "ekell" to the best? And who should know if he? But, to differ from him, and though he laughed in his sleeve as he said it "he, too, knew a thing or two." No matter if he did use his wife's sieve for a skimmer. I can't say that he was yet unfinished until, "Haden't he got the best sugar that had been made yet?" Reader, I am tempted to tell you a thing about that sugar. It was put in mat bags containing from 30 to 50 pounds each. The name of it had been marked for shipment with black paint. It was noticed after a while that the paint had spread till the marking became illegible, and a close scrutiny revealed the fact that the paint had only lodged on the backs of mites with which the bags were literally covered, and which in moving carried the paint with them!

Although this class of men were willing to work, and meant to do all their work themselves, and were loud in their criticisms of "book planting and sugar making," and "gentlemen planters," they could not plan their own operations, and consequently while they were doing one thing another suffered; and most of them in a few years found their proper level. The case was hard enough when men of ability and education undertook a plantation.

Separated by a distance of half the circumference of the world from the means of carrying on any extended business, the delay in procuring machinery and other means was very vexatious and disheartening. Often times, after waiting six months or so for a very important article, it proved on arrival to be anything but what was wanted. Either the description sent was misunderstood, or a dishonest trader would palm off some unsalable article and trust to distance to prevent unpleasant consequences; or, either the order would be lost on its way, or the vessel bringing the article would be lost; or, finally, the article itself never had an existence except in the advertisement of some enterprising wind-bag. Again, a man of sense could see at a glance that a business of such dimensions and so varied necessities, could be carried on only by employing "help of various grades and capacity—from the laborer who had only sense enough to handle the hoe to the overseer who understood combinations, the skilled artisan who could combine his two or three thousand dollars a year, and the manager who (unless he thoroughly understood every part of the business) was possessed of more than ordinary tact, shrewdness and will-power, was liable to daily impositions of a very disheartening character.

This is not the place, however, to go farther into the intricacies of plantation life in its later developments. But it should be said that all who undertook—even in a rude way—sugar-making, were obliged to employ more or less labor. And it was a long time to discover that Frank's adage, "Not to oversee workmen is to leave your purse always open before them," was emphatically true of Kanakas, the class most employed. They could never be trusted without constant and immediate supervision. Consequently the planter was obliged to hire an overseer whose sole business was to hire with a gang and stand by that gang, and to see that they did their work properly. With proper supervision they were very good laborers. The overseer kept a book in which was entered a list of the names of the laborers and an amount of the work of each, "docking" the time of any who were tardy or who "loafed." But vigilance did not stop here; a chief overseer was to watch the workers, and his par was no secret; he must be all over the plantation, and must know what each gang of men were doing and see that their labor was where and what was needed, and see there was no collusion between the gang and their overseer, who was often a native. An overseer of teams must see the teams harnessed in at daylight in the morning, and must go with them back and forth all day long, though each team had its own driver. Over all was the manager, who was responsible for the success of the plantation, and whose desire to be known as a successful manager was a sufficient inducement to put forth his best endeavors. But this account applies rather to the result of many years practice, than to the earlier stages of sugar planting, some of the trials incident to it. I have briefly touched on the manager, and have briefly touched on the overseer. In passing around to-day, the old resident recognizes sundry heaps of dirt, or the remains of old patched huts, or an old pit, or a scene of more than usual desolation as the theatre of those earlier exploits in incipient sugar making. Many of them, however, are swallowed up and quite obliterated in the cane fields of to-day.

Mr. M. hired a few men, purchased teams, and proceeded to business. The plows were furnished by the plantation. Were they not the "best light steel plows procured expressly for sugar planting?" Yes, they would run with a very small team. "It was all folly to use the great heavy plow, with its wheels, coulters, etc., requiring a team of seven or eight, often a dozen or more. These plows could be made to cut themselves and keep bright ("scurry"). So, "though they would cut a furrow twelve or fourteen inches wide and eight inches deep, they would only require two or three mules of oxen." The first discovery made was that the "coulters," or knife, caught all the rubbish which was abundant on the surface of the ground, and required a man to follow the plow to travel along with it and keep it clear. After all his efforts it was often necessary to stop the team and turn the plow out of the furrow to give the man time to clear it. A sturdy Yankee might have said, "without this trouble, but we had not snarled Yankees, but only Hawaiians who, if they are to be noted for anything, will be noted for losing opportunities. Another thing learned was that the soil would adhere to the brightest polished steel plow, and that the soil, being stiff and adhesive, and the team required being heavy, the light, thin plow was the best. These plows would be the first obstruction. So, heavy wrought iron plows, were made to replace them. But the plow being light and the team heavy, a collapse of the whole machine was inevitable, and was not long in taking place. After that Tom, Dick and Harry's plows were tried till, finally, the whole matter was settled by procuring a common sense plow with nobody's pet improvements to distinguish it from all other plows and render it fit for the rubbish heap.

Mr. M., who being a born farmer knew the technicalities of farming, went into the work with the men—holding plow, planting and weeding with the best of them. We are now in the year 1860. Nothing unusual appeared in the growth of the cane and—weeds. The latter grew apace, and unless the ground was often stirred by the cultivator and the weeds prevented from growing, the crop would suffer, and it required hard labor to do this. But hand labor was now becoming expensive, and the supply precarious; not because there decided disinclination to steady and long-continued labor. Since Adam required calling from his retreat, men have often been mistaken for the sugar plantations seldom waste time by waiting for their employer. They are sometimes absent when they agree to be present. Boredom have always been scarce, the supply was not been equal to the demand, and a good deal of leniency has been necessary in dealing with them or they would leave. At first Mr. M. hired men by the day or by the month. Though at that time wages were

low they seemed afraid they would earn their money. They would be tardy in the morning and if possible leave before night; and some would work reluctantly all day, slighting their work as much as possible. Then, when weeds were growing and work pressing, they would absent themselves under various pretenses of sickness, or to cook food, or some of their family were sick; though the employer well knew that in three cases out of four the pretext was false. It was well if they hadn't stolen his horse and, after riding it nearly to death, turned it loose into the cane field to account for its absence.

Mr. M. was satisfied that day laborers could not be relied on. A promise to come and work was not considered binding unless money had been paid in advance. This was sanctioned by law. Money paid in advance without security was thrown away. It was therefore customary to sign a contract to work for a length of time on payment of part of the wages in advance, the balance was to be paid monthly as the labor was performed. As a matter of fact it was paid in small sums weekly, that the improvident creatures might have the means to buy food, for the advance paid was at once squandered, if it was not seized by their creditors. It thus became possible to procure labor, for almost any native was greedy to go in debt to any amount to find present gratification. Laws had been made to require laborers who had received money in advance, to labor and cancel the debt, and making it a penal offence to fail to do so. And now opened a game. The point was to see if the laborer could swing his employer and escape. And the history of the mean tricks to which they resorted would of itself fill a volume. I say mean tricks, for in the whole category was not one fair one. Cases did indeed occur where the laborer died with his contract unfulfilled. But in most cases they were careful, if they had property to have it so secured that the employer could get nothing if he wished to sue. I think I have made it appear probable that an employer or overseer would not be likely to trust a laborer's word. The word of a Soudanese Island laborer thus became of little account, and his reasons for asking leave of absence were of little avail. After attending the funerals of half a dozen fathers and mothers, that pretext was used up. Pretence of sickness would not avail where manifestly nothing was the matter, despite all his whistlings and retchings, and especially after he had been often caught deceiving. It thus sometimes happened that a really sick man was obliged to go to work in the fields. But the law was very strict and gave the laborer a great advantage over his employer. The latter sometimes, tried by the purposely induced sickness of the laborer, would strike him. A neighbor not in his employ, who should use similar insolence to him, might get a sound thrashing which in court would be shown to be with cause, and he would be excused if he had not drawn blood or used a dangerous weapon. But not so the laborer. A blow broke the contract and released the laborer from further service, however large the fine he had received. Some, however, finding an advance very convenient while the labor was inconvenient, after securing an advance would abscond and go to another plantation, sign another contract and get another advance before discovery. They pushed for getting out, and would under false pretences; but that only made him a state prisoner, unless the proprietors of the two plantations effected a compromise, in which case he must go back to work. But in such cases he usually absconds again, shipping to a third party and getting a third advance—leaving three planters out \$50 or \$75 each—for he would again abscond. But state prison life was not hard. To one who earned it in this way it was a very comfortable retirement, and freed him from many cares.

(To be Continued.)

### Closing Day at Tuskegee.

Normal School, Tuskegee, Ala., June 11, 1883.  
My Dear Southern Workman:

A Hampton Correspondent of the Boston Journal recently spoke of a belief in "Hampton weather," and at Tuskegee might begin to believe in "Tuskegee weather," but perhaps it is better for us to wait till we have left our babyhood behind, we speak of "experience." This an old saying that nature never repeats herself, but I am inclined to believe she preserved the pattern of your "Hampton day" for a "closing day" week later using an artificer's privilege of improving upon her pattern. We know she has an eye to the fitness of things, and what more fitting than that Hampton and Tuskegee should be made alike by the old day, with a slight partiality for the baby?

Thursday, May 31, our closing day, was a perfect day. Wednesday it rained quite hard from morning till night, and many times during the day the anxious question, "Do you think it will rain to-morrow?" was asked,

When the morning came, every body was made glad—glad of the rain that had fallen, giving such a beautiful freshness to every thing—glad of the lovely day promised by the morning. Even the birds seemed to share in the general gladness. They gave us a perfect Hallelujah Chorus from the trees about us.

We had the good fortune to secure for our main speakers Rev. Geo. L. Chaney of Boston, whose work is now in Atlanta, and Rev. Dr. M. Calloway, formerly of Emory College. Both arrived on Wednesday. The latter was the guest of the white Methodist minister of the town, Rev. Mr. Holcomb. The first part of the morning was occupied with opening exercises, including a military drill with the young men, and class recitations which lasted till 11 o'clock. At this hour all assembled in the chapel to listen to the dedication of our new building by Rev. G. L. Chaney. His subject was one befitting the occasion, and an assurance of the large audience went away no better men or women than they were when they came. If I could I would give you a review of his excellent and helpful address, perhaps I may be able to furnish you with it entire later, and from it you can give your readers such portions as you may have room for. Mr. Chaney has very kindly consented to have it printed in pamphlet form for distribution among our students.

At 12, 30 the "flow of soul" ended for a season, and our "feast of reason" began. We owe many thanks to Rev. Mr. Holcomb for the thoughtful kindness manifested by him. The speakers and a few of the guests were cordially invited to dinner at his house. As most of the students and friends brought baskets, dinner was partaken of in picnic style and was made quite a pleasant social event.

At 2 o'clock we reassembled for the rhetorical and the other of the two main events of the day—Dr. Calloway's address. It was with a feeling akin to that of a social evening mingled with awe that I listened to him. I think the latter feeling was awakened by the expression of his face. No one can look into it without the feeling that there is a powerful mind under the most complete subjection to the will of the man behind it. As I thought of what his resignation of an honored position among his own race, his acceptance of a work among us, the Negro, were, and such occasion, meant for him, as I thought, these things in connection with what he is a man of southern birth, training and sympathies, a feeling of deepest respect for the one who for the sake of a conviction could forego so much that was brightest, and in many respects, pleasantest, and assume so much that is hard and unpleasant, arose within me. Carlyle says, truly, I think, that we are all more or less hero-worshippers. As I listened to his strong, earnest plea for the elevation of the Negro on the basis of his humanity, I felt that Georgia had given us another hero, Rev. Mr. Owen, pastor of a large colored Baptist Congregation in Mobile, followed Dr. Calloway. His earnest entreaty to those present to make the aspiration of the Greek Slave quoted by Mr. Chaney in the morning, "Not, Oh, that I had this or that, but, Oh, that I *was* this or that," theirs, was most forcible.

The students who took part in the rhetorical exercises of the afternoon—three young women and three young men—conducted themselves well. They were of the Junior and Middle classes. We shall have no graduating class till year next. The singing throughout the day was good. Mr. Parrot's success in his department deserves special mention. The result of his work was praised by all present. By the way, I presume he is now making his first acquaintance with Hampton's—industrial—shades. He expected to go to it. Very soon after leaving here.

In the evening all the students and many of their friends came together in the chapel for an informal social entertainment. The evening was spent pleasantly with a few well-rendered duets and solos, recitations, conversation, music, and mazes. Towards the close of the evening "Judgment Day" they used to call it at Hampton, arrived. Amid the most profound stillness the names of the students constituting the different classes for next year were read. There were many happy faces and a few sorrowful ones among the students when this was over.

Soon after, students and friends turned their faces homeward, and the newly christened "Porter Hall" was shortly wrapped in darkness, and its tired inmates in welcome slumber.

The year just closed has been an encouraging one in many respects to us and to present our prospects for a few more successful ones, somewhat clouded by the fear of financial embarrassment, are hopeful. We hope by the close of another year to have a brick building for the boys well on towards completion. The bricks are being made on the farm now. We have a promising crop of cotton, cane, corn, sweet potatoes and fruit. Our "Uncle Harry" is not Mr. Howe, but he has learned his *Arer's*. Few are like circumstances, can show a better crop of cotton, corn and cane than can "Uncle Harry."

OUR FROZEN-OUT PETS.

[From Harper's Weekly.]

## BY ORRA LANGHORNE.

*Myths*. The house vacated by the Frimonts is rented, and I went over to see the new tenants. They were a family of four, rather a rare occurrence among our colored tenants. I found the family at a table, with his mother seated at the head, with his wife waiting upon him, and the two pretty little brown-skinned boys on the floor, with a young girl between them. The mother was a fine woman, with a corn-bread, one hand and a fork with the other. This is the fashion of table-meals among the Negroes; they sometimes vary it a little on Sunday with a slice of ham, or a few slices of cold dinner or breakfast. The father, a very elderly man, sat at the head of the table. The house wife will spread a white cloth on the table and display the nice glass, and china ware brought from the States. The whole family will assemble around the table, the father and mother will assume the impressive manner of old master and mistress, and the respect of their parents, the unwonted quality of the viands and the uncomfortable closeness of their seats. The father will acknowledge the presence of his elders, and secretly long to

John is often called upon to accept a managerial capacity with his colored sons, who come to him with all their wrongs and discontents. I am often amused by his decisions and tell him he is thoroughly impartial as his only design is to preserve the peace among them so that they will not quarrel and ruin his business in his houses. He gave me an account last night of a most absurd scene he had had with Davenport's wife. It seems she has been jealous of Polly and accuses her husband of making love to the damsel. Her indignation revived her falling strength and she dismissed the girl declaring she was fully able to

that the poor soul asked or wanted submitted passively to the remedies which the kind-hearted physician attempted to relieve her suffering, listened without effort at response to what I said to her, in a slight interval of ease after a struggle for breath, turned towards me with an expression of joyful elation on her face, said in broken words, "I have set by this mornin' an' cried out to me." A moment of tenderness and sympathy apparently lasted months, the kindness and neglect so that it was to the end. The pain and struggle continued for many hours, were borne with patience, the dying won

As I walked slowly homeward, following David's melancholy cries, I could but think what a pity it was that some of this tenderness could not have been shown the dear woman in her pain and languishing instead of being kept for the funeral.

The "pets" in our picture have few friends and are evidently to be well cared for but the winter is upon them, as it will be upon us, with all its hard necessities and inevitable demands. There is so much that can be done in the long summer days to provide for the coming cold, the neglect of which means real suffering, that it is strange that any one should require to be reminded of the universal need of preparation in the milder southern climate, and even the winter, which, with storm or cold, is soon to be upon us. We trust that our picture will be a timely suggestion with it.

may carry a timely suggestion, and the

# SOUTHERN WORKMAN,

TWELVE PAGE MONTHLY.

(Reduced to eight pages from July to October, four months.)

Printed on the Normal School Steam Press by students trained in the office.

S. C. ARMSTRONG, Editors.  
H. W. LUDLOW,

MRS. M. F. ARMSTRONG, Regular Contributors.  
MR. W. N. ARMSTRONG.  
MRS. ORRA LANGHORNE.

Terms: ONE DOLLAR a year IN ADVANCE.

Specimen copies sent upon application. To secure safety, it is important that orders should be sent by check, Post-office money, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent. A limited number of advertisements inserted at following rates:

SPACE.	1 mo.	3 mos.	6 mos.	1 year.
1 square.	1.00	2.75	5.00	9.00
1 column.	2.75	7.50	13.50	23.00
1 page.	5.00	13.50	23.00	40.00
1 full page.	9.00	23.00	40.00	70.00

Special notices 10 cents per line.

Job work from all parts of the country is solicited, and will be executed cheaply and well. Estimates given.

For further information, address

J. F. B. MARSHALL, Business Manager, Hampton, Va.

Entered as second-class matter in the Post Office at Hampton, Va.

Published by PUTNAM'S BOOKS, New York.  
Edited and printed at Hampton station.  
For sale at both places. Specimens sent from Hampton at 4 cts. a number, or 30 cts. a set.

Subscribers are reminded that, from July to October inclusive, this paper is reduced to an eight page form, resuming in November the twelve page form.

A NORTHERN man, resident in the South, and a Republican in politics, said the other day, "People think that with the end of the war, and the freedom of the slave, the trouble about the Negro was over. I think the trouble has only begun, and in spite of my strong sympathy with the Negro, I am afraid he may increase the difficulties which arise out of his existence in our political system." On being pressed to explain further, he said, "The transmission from a condition of slavery, which was that of ignorance, both social, political and financial, to a state of freedom and a right to the ballot, was sudden, though it may have been necessary. Possibly there was nothing else to be done under the circumstances, but it was risky. I have more than ordinary faith in the future of the Negro race. In many respects it is doing better than we expected, but it would be very strange if it did not make some grave mistakes, and it will probably make some, which will cause serious alarm." Many of the devoted friends of the colored man entertain the same opinions, and they hope that the education of the colored race will be assured before any evil consequences follow. There are many evidences of the abuse of political rights by the colored men. In many localities they are in a majority, and their political action disturbs their best friends. The vast majority of the Negroes have received no education, nor have they ever had a chance of receiving any. The northern people, in the majority, politically, and superior physically, after securing freedom for the Negro, left him to work out his own salvation. No provision was made for his moral or intellectual improvement

and so the Negro commenced to work out his own salvation without preparation of any kind, excepting a certain habit of industry on the plantation. This ignorance, which was the incident of slavery, is beginning to make itself felt in the politics of the southern States, and has at times presented some alarming symptoms. Students of political philosophy dwell upon the long training which the Anglo-Saxon has had in self-government. One generation absorbed the experience of that which went before it, and handed down its own experience with all it had accumulated to the next generation. The habit of self-government was a matter of slow growth. It came in the blood. Men adopted it as readily as children adopt the language of their fathers. The Negroes have had none of this education, nor do they know anything about this process of education. Probably the majority feel themselves capable of deciding great questions, as well and as soundly as the wisest of the white race. Indeed a colored orator, in a political convention of Maryland declared that "The Negro was to-day the equal in education and brains of the white man." We should willingly admit it, if it were true. The prejudice against color is dying out, and we should gladly see the Negro put himself at the front of our civilization, but he cannot do it yet, and perhaps he never will. The vital question is, not what the Negro can do in the future, but what he is about to do now. There is evidence accumulating on all sides that he is becoming the tool of unscrupulous whites as well as blacks; more than this, he is beginning to sell his vote, or demand office. The complaint is made by the more thoughtful Negroes, that venality is becoming universal, that good men of color are not sustained by their own people. This is to be expected. Why should the Negro hold the ballot in high esteem, if no one has trained him to an appreciation of its character and power in the Republic? The Federal Government, which gave him freedom, has never taught him the duties and penalties of freedom. He is left to sin from want of light. No comparisons are made between the ignorant whites and blacks. There is an abundance of unscrupulous politicians among the whites, but among the blacks there is a much larger proportion of such men, owing to the reasons we have given, and the danger is that they may conduct themselves so as to endanger the interests of their own people. The Negroes depend upon their leaders for ideas, and follow them blindly. They do not understand their situation in the machinery of the Republic. It was not love for the Negro race which induced the forces of the Republic to give them freedom, and enfranchise them. It was a sense of duty, of justice. It was the general belief that if the Negro became a citizen he would conduct himself well. So far, the black race has had behind it, as a firm support, the intelligence and power of the North. It will be an unfortunate day for that race, if that support should be withdrawn. It is useless to conceal the fact that many northern men, the Negroes' best friends, are alarmed at the revelations which are being made from time to time, regarding the political action of that race. They are willing to accept many excuses for blunders already made, but there may be a time when mistakes will become so serious, or corruption so flagrant, that an alarm may take place. If the best of the whites, North and South, acting with thought and justice, should unite against the Negro, it would be a serious matter for him. Such a reaction is not desirable. It has been the sentiment of the nation, that "the Negro should have a chance." If he throws away his opportunity, it will be his great misfortune. There are intelligent and patriotic Negroes who can guide their people safely, but they complain already that their influence is weak. There has been too much boasting on the part of colored leaders, and they are doing incalculable harm.

There has been already severe friction between the blacks and the whites of the South. The danger to be apprehended is another friction between the blacks and the whites of the North. Those who are devoting themselves to Negro education see this, and are pressing schemes of education, which may prevent it. The question of freeing a race by means of the sword, is not difficult. But to deal with that race, after a sudden elevation into citizenship, and without any preparation for self-government, presents extraordinary difficulties. In the working of political institutions character tells in the end. As time goes on, the character of the Negro develops and makes itself felt, and if that character works in opposition to what is best for the nation, it will find itself in antagonism to the strongest political forces of the country.

## NEW PUBLICATIONS

SELECTED LECTURES AND ADDRESSES OF HON. JOHN MERRELL LANGSTON, LL. D., U. S. Senator Resident at Hampton, with an introduction by Rev. J. F. Rankin, D. D. Publisher—Rufus H. Darby, Washington, D. C.

The dedication of this interesting collection should pave the way for its grateful reception by those for whom it has been especially prepared, and we quote it entire, hoping thereby to secure the attention of some at least of those "Young Colored Americans" who in home and school and college are trying to make themselves worthy of the freedom and citizenship with which God and their country have endowed them.

Dr Rankin's valuable biographical sketch of Mr. Langston introduces eleven lectures and addresses, every one of which is worthy of careful reading, while "Equality before the Law," "Pacific Reconstruction," "Future of the Colored American," and one or two others, are notable contributions to the literature of the colored race in this country.

Mr. Langston's position as scholar and orator is too well known to require any notice from us, but we are glad to be heartily to commend this selection from his works, and regret that our space does not permit us to give it a more careful review.

We have received the first number of DIO LEWIS' MONTHLY. The paper and type is unexceptionable. The Magazine is devoted to Hygiene. Published by CLARKE BROTHERS, 68 & 69 Bible House, New York.

MASTERY.—This very attractive looking illustrated Magazine, published weekly by the Mastery Co., 842 Broadway, is devoted to Useful Pastime, Home Handicrafts, Manual Arts and Studies of Nature. Terms \$3 per year. The Publisher offers fourteen prizes at from \$5 to \$50 each for the best original illustration of the International Sunday School lesson for the quarter ending Sept. 30th, 1883. Rev. Chas. L. Robinson, D. D. to be the judge.

From Adrian Times and Examiner.  
A Voice From Texas.

Raised with an Uncertain Sound in Opposition to a recent Georgia Letter against Negro Education.

Our readers will recognize an old friend and Hampton Officer, in the writer of the spirited and effective defence of the Negro's right to an education and the pursuit of happiness. It seems strange that an "Adams" should seriously at this late day, deny this right.

FORT BROWN, Texas, July 4.—read with interest and astonishment, the letter of Mr. Adams, which appeared in a late number of your paper—interest, because it is always interesting to know what an observing man thinks of the people among whom he may be called upon to sojourn or reside—astonishment, that any man born and raised, as I believe he claims to have been, on northern soil, among free schools, and all their ac-

companions, should at this late day attempt to "out-Herod Herod," by holding and ventilating such opinions as he has in his letter. Did Mr. Adams, when he penned those lines, think for a moment what the result of putting his opinions in practice would be? Is he ready to have a constantly increasing part of the population of this country exercising the right of suffrage, yet deprived of all knowledge of what they are voting for?

Does he wish to go back to the old ways and days, when to teach a colored person to read was a crime in a great portion of our land, or does he want to establish a state of things such as exists among the different castes of India? Has he or any other man, any right to say that any other man, or class of men, shall not have equal rights with him, in the pursuit of all or any real happiness? Shall he say to any man, desirous of bettering his condition, "You were not born for anything more than to be a hewer of wood and drawer of water for me and mine?"

It has been often noticed that those who are fearful of elevating any hitherto uneducated or oppressed class, are generally themselves in need of elevation; and if any men in the south to-day wish to curtail the opportunities of "our brethren in black," in the pursuit of knowledge, they are not themselves of the most cultivated class, or are those who have been so long accustomed to seeing him a chattel, that they are too old to keep pace with the new order of things, and like Bunyan's enfeebled giants, can only sit at the cave's mouth, and snarl at the passer-by.

Such men as Rev. Dr. Rufner, of Virginia, Governor Thompson, of South Carolina, Governor Brown, of Georgia, and scores of others of the same stamp, do not desire that the coming man of African descent shall be as ignorant as was his slave ancestor. Mr. Adams is not keeping first-rate company, and his letter in THE TIMES, and in places and families across the south, would call up a smile of contempt on the face of the reader. In any part of this land a man can choose his associates. Many of us have not forgotten the ante-war sneer of the proslavery democrat—"Do you want your daughter to marry a nigger?" Yet it is a noticeable fact that yellow-faced children are in less proportion now than when their fathers could prohibit a chattel from learning to read, and could search for him all over the north. "He wants to wear good clothes, and ride in first class cars." In that he shows his good sense and desire to improve. "He wants to set up as a land owner." Another token of it. And thus we might go through the whole catalogue of Mr. Adams' complaints.

But, grant that some of them have some foundation in fact, Mr. Adams, as well as some others, should remember that though nations may be born in a day as when set free by ukase or edict or by result of war, they require time to grow, and then he will not demand impossibilities. We admit that the Negro is not perfect. Neither is his white neighbor. He may be unreliable; so are many of fairer complexions; but whatever he may be, who have had greater privileges should remember that our present condition is the outgrowth of centuries of personal freedom, while the black has not yet had a score of years of freedom among us, and that, if we will go far enough back in history, we shall find that some of our ancestors, though they had white skins, were sold as slaves, or rounded the forests of Europe, vastly more savage than the southern black man has ever been in this country.

No education is not injuring the colored man. It was the fortune of the writer to serve for about three years as an officer of colored troops during the rebellion, and he kept track of many of his old command since their discharge. Most of them learned to read while in service, and they read now, and their children read also. Many of them own their homes, and some have money in bank, and names that are good for more.

Would Mr. Adams send them back to ignorance and unrequited toil? Is he any worse off because of this prosperity? From 1878 to 1881, the writer was on duty at Hampton Institute, Hampton, Va., a school organized by the assistance of the freedmen's bureau, for training colored teachers. From it have gone forth hundreds of young men and women to teach not only that knowledge that is to be found in books, but that knowledge of the things of every day life that their race need, and higher and more intelligent ideas of Christianity; and to-day they, and the graduates of Fisk, Straight and Shaw universities, and of Howard and less noted schools, are doing a work in elevating their race that cannot be understood by such men as Mr. Adams, and which will last when he and I will be forgotten. And while most of them are teachers, many have found their way into other vocations. The ranks of the clergy, lawyers, and of the medical profession, have been filled from their numerous accessions and (this should cause the hair of Mr. Adams to stand on end), one teaches a school in Vermont; while another, who stood eight in a class of one hundred graduates, at a northern medical college, is employed as surgeon in charge of

of the insane ward of an asylum in Western New York, and is recognized and highly respected by his brother practitioners; and though he was denied admission to one college when he applied, he rides in a parlor car, takes a newspaper, and can set Mr. Adam's leg if broken, as well as he could groom his horse, or hoe his cotton.

Yet, if we are to credit his statement, he would have the minister, quit his pulpit, the physician his patients, the lawyer burn his briefs and libraries, and the teacher dismiss his scholars, and taking up the hoe, devote their attention to their merely animal wants, and to raising cotton, under the oversight of a white man, as in days long since ended.

But, sigh as he may, those days can never return, nor do those who saw more of them than did Mr. Adams, desire that they should.

Revolutions never go backward, and, spite of all such protests as his, the colored man will have schools, will take the papers, will ride in parlor cars, will wear good clothes, will have his race represented in congress and the learned professions, long after the protester shall have gone to dust, and should he be happy enough to stand justified before the Great Judge, he may find our sable friend there also. What will he do then? Ask to have him turned out?

HENRY ROMEY.

Letter From Rev. Geo. C. Rowe.

CYPRESS SLASH, MCINTOSH P. O.

LIBERTY CO, GA, July 10th '83.

EDITOR SOUTHERN WORKMAN

Another month has glided away rapidly, because every month has been full of something to do. As a sequel to my last, I will tell you what we have been doing. The parsonage has been called down-stairs, ceiled and partitioned up-stairs; the stair-case removed, and in a more convenient part of the house, and three new doors made. The lumber for this work, and the carpenter work was paid for by the A. M. A. The front room has been papered and arranged, and is now quite pretty and home-like. As the house is now arranged, we have the front room 18 x 16; a dining room 18 x 14; a kitchen 18 x 12; and two bed-rooms up stairs 9 x 16 each. We hope to build a kitchen back from the house, and use the present kitchen for a family room.

The people have subscribed and paid in \$25.00 toward "Church property improvement," and have purchased \$150.00 worth of lumber and pickets for the fence, besides lumber for a belfry. We have a hall; one formerly used by a small Church near Savannah, which was blown down in the gale last year, and which has not been rebuilt; next week we expect the carpenters here to finish the work and to put up the bell.

We have organized a debating society. The Palmetto, "which is doing well," meetings are a treat. The young men are very bashful and awkward on the floor, and make some very comical gestures. One young man, had the main speech to make in the affirmative on a question of their own choosing. "Resolved, that the hen that lays the egg, rather than the one that hatches it, is the mother of the chicken." He said very confidently, "Mr. President and Gentlemen," then he paused and began, "Gentlemen, I am here to prove, and I say the hen that laid that chicken is his mother. I tell you, gentlemen, it so." He stopped, scratched his head, looked up at the ceiling and said "Yes, gentlemen, it so." He stopped, scratched his head again, bit his finger nails, looked wildly about the room, then said, very meekly, "I guess I'll quit," and sat down. The time was limited to twelve minutes, and he was one of the number that thought *twelve minutes* was just no time at all; but his experience convinced him to the contrary. There is no need of getting the blues, for after attending one of these debates, one has enough to laugh about for a week. For odd expressions and dry humor they are equal to any thing I have ever witnessed.

A short time since, on returning from a visit to one of my members who lived four miles from the church through the woods, I noticed in the road a peculiar trail. It kept a certain position in the road for more than half a mile, and I concluded that it must have been made by one of the poles of a turpentine wagon; but on rounding a sharp curve there was an alligator about four feet and a half long. Just as soon as he saw me, he stopped short and hissed terribly and started towards me. I went back a little way and got a club and hit him across the head, and he rushed at me with open mouth. The next blow caused him to stop and consider, while big tears ran out of his great wondering eyes. He looked so pitiful that I did not know whether to hit him again or leave him, but he was a fine natural history specimen, so I hit him again, which seemingly killed him. I took him by the tail and started, but he revived in a few minutes and tried to fight. On finding that he was powerless to do any harm while he was held up by the

tail, I kept on, and finally got him home alive.

He would not eat anything while confined, and though kept in a box for a week he did not fall away, and was as active as could be.

The next week I took him to Savannah and gave him to Rev. Dana Sherrill, who, when he went on his vacation last week took him to his home, according to a letter received on the 7th inst., he is doing well.

I have caught two others since; one quite large, which I skinned for stuffing; the other a little one about ten inches long. The men here are afraid of them and run from them.

My sexton, a six-footer said why, "Jason," I wouldn't lay my hands on that thing for five bushels of gold. Why if I was walking with a lady and should meet that fellow in the road, I would politely tell her good evening, and if he cooched me he'd have to do some running." Just then I poked the alligator with a stick and he jumped and hissed, and my brave sexton started to run, and collided with a post with such force as to knock himself down. You can hardly find one who is not afraid of them, and several were afraid of me because I was not afraid of the alligator.

There is a little superstition among them, and a few believe in conjurers, but the majority are above that. At first they were afraid of me, on account of my reptile collection, and seemed to think that I was some sort of a conjurer, but since I have explained to them the object of such a collection, they look at it in a different light, and some have brought me specimens. In some future letter I will describe the joint snake, a beautiful creature.

In visiting a colored church in this vicinity several times, I have gained an insight into the sort of preaching which many of the people get. The pastor will charge of four churches, and can scarcely read. In his discourse he spoke of Zachariah, and said "The Bible, say, brothering, that Zachariah was struck dumb, but I tell you it ain't so. It was God's husband that he hushed him. For you know when Jesus was coming along, and Zachariah was up that sycamore tree, I'd duppo whether that sycamore tree was in Liberty Co, Ga, or not, and he said: "Zachariah, Zachariah, yere!" he answered him, so that proves that he wasn't struck dumb, so it does. You jest feed me an take care of me, brothering, and I'll tell you the truth: that I will, brothering; and the "brothering" and "sistering" all united in saying, "Amen, brother, preach de word!"

There are a great many "localists" (local preachers) hereabouts, who are as ignorant as can be, and who are exerting a very bad influence. One, who had a first fight with a brother local the week before, was preaching the next Sunday night, when a young man who knew of his fight, smiled audibly. He stopped in his discourse and said:

"When I was a young man, my father and mother would never let me go to church to laugh and carry on. No, sah!" Then others began to snicker, which proved the last straw on the camel's back, for he said, with voice quivering with wrath "I wouldn't preach no such darned congaconation nohow" and thus concluded his discourse.

We need missionaries here! Earnest educated men, for the influence of the ignorant preachers is most degrading. It is literally the blind leading the blind. I could give you a small volume of incidents of a similar nature to the above which have come under my notice since coming here, if time would permit.

Earnest work is needed. As we witness these things we can see the great need and value of school like Hampton Institute and can rejoice that so many are taking advantage of the opportunities there offered for fitting themselves to do this work.

On the 22d ult. I attended the examination of teachers at Snelsonville. The examination was in writing. Ten questions in each of six studies. An average of six was necessary to pass, which entitled one to a third grade certificate or one year's license.

Seven and a half gives a second grade or two years license; and an average of nine entitles one to a first grade certificate, or three years license. Thirty-five entered, and quite a number failed. I entered the examination fearfully, for it has been fourteen years since I left school and my time for review had been limited. I was agreeably surprised, however, with a record of 6 and four sixths, missing one in geography, and one in grammar.

We shall begin school on the 16th inst. Miss Emma Thomas of Savannah, a graduate of the Beach Institute, who has been employed by the A. M. A. as assistant teacher at Woodville, for several terms, will be my assistant.

The school work will be the most discouraging of all, as in three months the children cannot more than get well started. I hope to build up a permanent school here, taking advantage of the county appropriation for three months school, and soliciting aid for its continuance. If it succeeds it will give employment to two teachers and prove a great blessing and help to this community. The missionary pastor here ought not to

teach, as it will give him no time for pastoral visits and visits to the sick, and very little time for study, and both are necessary in order to make the work of a missionary. We shall have to work at a considerable disadvantage, having neither maps nor black-boards, but by the opening of our next we hope for a brighter outlook.

Yours respectfully,

Geo. C. Rowe.

#### Correspondence.

Sault St. Marie, Mich. July 23th, 1883.

EDITOR OF WORKMAN.

Returning to the scenes of one's childhood after a lapse of years, the fact that one is growing old is brought home. It is nine years since I visited here and nineteen since I rambled through the woods and whipped the "Rapids" for trout. Many of the Indian boys I used to play with are now in the employ of the canal, in the Custom House service, or on homesteads and in business in the town.

Many of the old ones remain much the same, fishing, making fishy bark canoes, and gathering berries in the summer and living as best they can from day to day.

They are practically independent of government aid, except in point of fact, but are good, some indifferent, some poor; but all very much in advance of the Western tribes. Their condition compares very favorably with that of the colored people in the South.

A few of the old Indian families have been educated at the High School and are in a fair way of becoming wealthy and prominent. The old Indian families have been educated at the High School and are in a fair way of becoming wealthy and prominent.

The outlook for them all is encouraging. Across the river in Canada an English clergyman has established a home for Indian boys and another for dirty back and head, but as the schools were not in session and the managers away on a missionary tour, I was unable to obtain satisfactory information in regard to their practical working. The theory or system appears to be much the same as the one adopted at Hampton.

The boys' home can accommodate about fifty and the girls about twenty-five. Both are very prettily located and have industrial training features, the boys having shops of various kinds and the girls being taught housework.

I regretted very much not meeting Mr. Wilson, the superintendent, as I would like to have obtained reports and figures from him in regard to his work. Perhaps I may be able to do so before leaving here, in that event I will write again, giving full particulars.

The country round about is undergoing a rapid transition from pristine wildness to the civilized rural, the hill sides are dotted with farms and thousands of acres have been cleared off on the benches back from the River Sault, which rolls, by a mile wide and no one knows how deep, to Lake Huron.

The old French habitants along the Sault intermarried with the Indians, and much of the land to-day belongs to their descendants. The first mission was established here the same year Philadelphia was located, later a trading post was established and after a course of years, a portage was effected here by means of a horse tramway on which cargoes and small ships were transported by the rapids. This old tramway gave way in time to the ship canal, which to-day is one of the grandest pieces of masonry on the continent.

The rapids are about 1/4 of a mile wide and about the same length, having a fall of 19 1/2 feet.

The water rushes over the rocks with great force and the roar is heard for miles away. Three railroads are now making their way towards the Falls and it is probable that iron bridges will soon be spanning the roaring flood. With the advent of the railroads the water power will undoubtedly be utilized, having all of Lake Superior back of it, it will afford a steady and inexhaustible supply of power to grind the wheat of the Great Northwest.

The development of the country has been so wonderfully slow as compared with the rest of the United States that the Indian race has had time to get a foothold and to assimilate with the whites, so that it is probable that we may yet see the descendant of the sturdy Huron or Chippewa taking a prominent part in the New World's history.

There is as yet no thoroughly distinctive American race; it is for the future to develop.

With best wishes,

Your obedient servant,

Geo. LeRoy Brown.

DIED in Boynton, Va. July 29th, Eva Shelton, aged 17 years.

We are glad to give such good report of the Indians who have so many places in the North, and present the following as witness of their success.

MONTREY, Mass. July 17, 1883.

Editor Southern Workman.—There are 35 Indian boys and girls in this vicinity and they are a brighter set than we have had for many years, more intelligent, quicker in their movements and in their understanding, and compare favorably with white boys, certainly when you take into account their limited experiences. Because of their intelligence they are less easily controlled, more independent in their feelings and actions, but they are giving general satisfaction to their employers and generally are quite as industrious as white students, and show their satisfaction in being appreciated, especially when it is expressed to them in some substantial way, by the gift of a dollar occasionally and other presents, which in justice they are entitled to, when they do their best. The girls are pleasant, more social in their natures, generally fond of children and kind to them, and like good clothes and respectable appearances, and are careful of their reputation and honor.

M. S. BIDEWELL.

DIED.—July 14th, at Mt. Creek, Va., Anna Diggs, of the class of '83. Thus ended the struggles of one of the most faithful earnest students that ever came to Hampton Institute. The one desire of her life was to gain an education. Her father's family was large, her mother was an invalid, and she was obliged to go out to work and teach in order to gain means to go on with her school course. When at last, it seemed as though she was about to accomplish that which she had so much longed for, her mother was stricken down with paralysis and she was obliged to care for her at the same time that she was about to graduate. The struggle was too great, and she died after night when she had left her mother's bedside she went to her own room and there worked at her studies until midnight. She was taken with consumption early in the Spring and it soon became evident that before many days she was to be graduated from this school into a higher. Her name was read among the graduates of the class of '83, and the diploma for which she had so much longed, which told of good faithful work done, was sent to her mother as she lay in her bed. Her real commencement day came a little later, when she quietly entered into the other life, when she who knew of her earnest Christian character could doubt that she heard from her master, "Well into the joy of thy Lord."

DIED Aug. 14th, at Hampton Institute, Henry Kendall of Yuma tribe of Indians, from Arizona. He was taken with meningitis some days before his death, and was almost entirely unconscious. Sometimes his eyes would brighten and he would be moved by some little motions that he appreciated the faithful labors of the nurse who strove so earnestly to save his life. The funeral services were conducted by the pastor and the Rev. Mr. Gravatt.

We have received from C. W. Larson, M. D., an attractive looking volume called "The Tenting School," a description of the tours taken and of the field work done by the class in Geography in the Academy of Sciences and Art at Ringos, N. J., of which he is principal. Would that we were a boy again, that we might study geography in this way, under a teacher who takes his pupils in a carryall with four horses, for a camping tour, and who, after devoting the day to their comfort, spends most of the night in writing up notes of the journey for their benefit. The accessories chiefly used by our geography teacher were the ruler and the rattan, but even the driver of the four horse carryall which is shown in the frontispiece, carries no whip, nothing more being requisite to train them in the way they should go, than moral suasion. The work is profusely illustrated with cuts of implements used, buildings and

To ordinary eyes, however, this is a sealed book, owing to what at first sight, seemed the blunder of the printer in upsetting his case of punctuation marks over all the pages, but which we learn from the introduction, are the diacritical marks used in printing the author's Elements of Orthography. His purpose in thus disfiguring the book was to call attention to the need of a reform in spelling. The result is to discourage if not wholly prevent one from reading the book.

Horsford's Acid Phosphate In Debility.

DR. W. H. HOLCOMBE, New Orleans, La., says: "I found it an admirable remedy for debilitated state of the system, produced by the wear and tear of the nervous energy."

## Incidents of Indian Life at Hampton.

The following note from one of the Indian girls who left Hampton last June shows both the hopefulness and discouragement of our work. The faithfulness of our pupils after their return to the unfortunate conditions of their homes depends largely of course upon their individual temperaments, but in all cases the indications point in one direction, viz., to the imperative need of longer and therefore more thorough training before they are subjected to the extraordinary temptations of frontier life.

Winnebago Agency Neb.

Aug. 2, 1883.

LIEUT. BROWN:

Dear Sir: I am going to write you a letter and tell you how I am getting along. I am glad to say that I am getting along very well. And again I am glad that I am going back to Hampton in the fall. I wish you would write and tell me what I am to do. When do you expect to go back to Hampton? Some of the Winnebago boys are very willing to go for I told them what a good school "Hampton School" was.

Wm. Hunter, I am sorry to say is trying to tell all he can about Hampton; he says it is a bad school and everything like that. I tell them good stories about Hampton. Tell me just what to do about going home. I remain yours respectfully.

JULIA J. ST. CYR.

## The Indian Pic-nic at Monterey.

There were some anxious hearts in Berkshire on Wednesday, the 1st of August, watching the mists through which the morning tried lazily to break. These clouds had the happiness of nearly forty people in their keeping, for this was the day appointed for the Indian Picnic, when the braves and maidens from Hampton scattered in Berkshire, were to meet in happy carnival at the lake in Monterey. A rain would spoil it all.

Perhaps the clouds knew it. At any rate they kept good guard over their shower. The mist rolled slowly away down the valley, and at half past eight the baskets were packed, the teams harnessed, and soon after nine the Berkshire party had collected and were ready for their start.

We made a jolly line of conveyances as we drove along. In some cases the farmers and part of the family had come, and brought the Indian in the wagon with them. Here was a load of Indian girls with a brave to drive them, and here an excursion wagon full of happy friends.

The August day proved sweet and fresh as June. The air was fragrant with the new mown hay and full of summer sounds. The click of the mowing-machine was still busy in some late fields. As we drove through Monterey, a four-in-hand of beautifully matched greys, swept down the hill, the reins in the hands of an Indian boy, riding with two of his friends happy as kings. It took it calmly as possible as it looked as if it were just what we expected as they came up and took off their hats, and announced the team as Mr. Bidwell's lent them to drive that day.

Most of the Monterey party had reached the ground before us. The Sheffield girls came soon after—then such merry greetings, such hand-shakes and hugs. The boys and girls rowing in the lake hurried back to welcome their friends in the pine-grove, and stoical faces were radiant with sunny smiles.

Such an exchange of confidences and experience in all sorts of languages. Hattie Miles at Sheffield under the beautiful mountain, worked for a family of sixteen. What a chance for an Indian girl to make a record. Sophie Little Bear was happy as a bird. She didn't say so much about work. She talked more about the beautiful pond behind the house where she went swimming, and of the showers that caught them while they were berrying, and how the lady she lived with hurried home drenched to the hair, while Sophie staid out in great glee to be rained on.

Karunach was there. He had come from Hampton alone a few days before, taking a vacation at his own expense.

Annie Lyman had a rosy-cheeked blue-eyed little boy clinging to her hand—one of the children she helped take care of in a happy home, where there were twin babies besides.

One of the pleasantest things of the day, was to hear her employer praise her.

Ida Rencontre and Emma Fallis, who cannot speak English, told volumes, by their bright faces, of the love and care which had made them happy since they came, and taught them to be helpful.

The call was given for dinner before long, and the response was quick and enthusiastic. Thirty-seven Indian sat down in the pavilion to the generous collation provided by their Berkshire friends. They had all

they wanted and there was more beside. No one unaccustomed to provide for Indians knows what a tribute that is to generous provision.

The Indians were kept a little while after dinner for some good advice, and given a chance to tell their grievances if there were any.

Hearing Indian grievances separately is a slow task and the boys knew it. Two or three who had no complaints to offer, started for the door—the driver of the four-in-hand as a leader. He was unexpectedly halted and turned into guard—his first duty being to face the boy just behind him and keep him in. The Indians, (they enjoy a joke immensely even at their own expense,) entered readily into the plan, and no one passed the door till the last words of counsel were received.

About an hour afterward the clouds began to break into gentle showers and the whole company gathered in the pavilion for shelter.

Gen. Armstrong was introduced by Mr. Bidwell. He spoke strongly of the pressure upon the Indian, forcing him to civilization or death. Help must come quickly or not at all. He urged those before him to make room for more in their homes, and to give them the practical training which is the in-

Sassafras, Va. June 21st, '83.  
GEN. S. C. ARMSTRONG.  
Hampton, Va.

Dear Sir:

I have not written to you in relation to my work for some time. I like always to be able to tell you of some progress, when I write. I am glad to say that our work is telling for itself. Our school closed on the 10th inst. and I am exceedingly glad to say that the examination and the closing exercises generally were a grand success. Rev. H. B. Frissell of Hampton Institute, was with us on that day and seemed to be well pleased. He urged upon the school officers and parents to keep us here, and urged upon us to stay. The County Supt. was present and spoke in the highest terms of our school and work. He said that "it was the best school in the county that it was better attended and was making better progress." Our school ran eight months this term again. The county gave us seven and we continued one month longer, making eight. At the closing exercises we raised money enough to pay for that month.

We were over ran this term. We enrolled 135, and turned off ten. I spoke of the great need of more room and another teacher. We need another room and another teach-

phants and tigers, and hence many houses are constructed in the trees, out of the way of wild beasts. These houses are said to be quite comfortable, though it is doubted if any of us would like to live in one of them. There are about two hundred of these wild tribes, all quite distinct from the ordinary Hindus. They are very ignorant and superstitious, and have been supposed to be very savage, but missionary efforts among them have been quite successful, and when under the influence of the gospel they seem a simple-hearted and kindly people. They have no caste like the Hindus.

—Missionary McRaid.

The second of Mr. Frissell's letters in regard to his horse back trip through Tidewater Virginia, will appear in the next number of the paper. It was crowded out by other material which made an earlier appearance.

DR. W. S. POWELL, Defiance, O., says:

"I have used it with satisfactory results in dyspeptic ailments associated with great mental depression or despondency.

A VILLAGE IN SOUTH INDIA.

dian's crying need.

Prof. Hunter who has just returned from a visit to the Sioux country, where he has been investigating the terms of the new Sioux treaty requiring a new surrender of view with the Sioux Chiefs. They acknowledged sadly that they had signed the treaty, "not for hope of what the white man promised, but in fear of what he threatened."

The showers were over. It was time to say "good bye" and we went home in the evening sunshine.

Driving about Barrington and Sheffield to see the girls in their homes, we were caught late Tuesday afternoon by a sudden storm, and sought cover in a neighboring barn.

We were a little tired, the empty carriage house was rather barren of suggestion and there wasn't much for it, while the rain fell in torrents, but a confusion of sad and perplexing thoughts.

As we drove out after the storm, a cry of delight broke from us. Behind us, the mountain rose, still dark in the mists of falling showers. Before us, the broad valley lay in sunshine. The silvery grain-fields sent back a flood of light. The soft long evening shadows fell around the quiet homes.

Over all, a rainbow hung, a perfect arch, in unbroken radiant beauty.

Was it a promise that for the Indian too, over the mountains of bewilderment and pain, there lies a Beulah-land, where harvests ripen and where love is safe? Perhaps the answer is written in the hearts of those whose homes lay glorified before us.

## Waiting for an Opening.

At the latest report from a promising field, we publish the following, trusting with the writer that "a chance will open" for the deserving effort who are knocking at Hampton's doors.

er and we must have them. The county can not help us any on the room but they have promised to give us a teacher if we can add the room. So we need about \$300, to add another room and to make some repairs on the old building. The parents are anxious to do what they can to aid in adding the room. They have all agreed to help. Some will give work and some money. In a few days I shall order the lumber and commence work.

By this you see that our educational spirit here is not lessening but growing. These people are earnest and are doing all that they can to help themselves and deserve help and encouragement. I have about eight pupils, that I wish to send to Hampton Institute, two of whom are ready for the middle class, but I see no chance of sending them as their parents can not pay for them and they are too young to work their way. However I hope that a chance will open. The public schools of this (Gloucester) county generally are on a march upward.

Yours at work.

W. B. WEAVER.

## A Village in South India.

Among the most interesting people living in India, and perhaps one of the most helpful classes to labor for, are the hill and jungle tribes, such as the Santhals, the Gonds, and the Khonds. These are the aborigines of India, corresponding to our Indian tribes in the West. They are rude people, having different languages, but none of them written. These tribes probably were compelled to take refuge in the hills during some of the early invasions of India, and there they remain, finding it safer to contend with the numberless wild beasts infesting these regions than with their fellow-men on the plains. Our pictures show how some villages of the hill tribes are built. Dwellings on the ground are not safe from the attacks of ele-

### Letters From Hampton Graduates.

"CIVILIZED WHITES." THE FIRST COLORED TEACHER IN THE PLACE. FAITHFUL WORK STOPPED BY SICKNESS. SUCCESS UNDER DIFFICULTIES. "THE ALMIGHTY DOLLAR." GRATITUDE FOR READING-MATTER. "LOOKING UP AND NOT DOWN."

"CIVILIZED WHITES"  
It is well to look at civilization from different stand-points, and remember that while we are watching others, they are watching us. The following lively and interesting letter is from a young man who did well as a student, and is doing well as a teacher:

—S. C., Jan. 31, 1883.

Dear Teacher:

Your letter was received sometime ago, but on account of being very busy. I have so shamefully neglected to answer, that I am almost ashamed to do so now. However, when you learn that my school is made up of three school districts, you may imagine how it is. The children are coming in from every direction, from one to five miles around. I began to teach in October, and think that my school will close in April. The scholars from two districts are stopped, and now I have only one to encounter. I have a full school still, but not near so many as I have been having. Teachers here have to work very hard, that is one is compelled to teach as many scholars as three or four should, if he wishes to have his school year longer than one or two months.

The appropriations for free schools are so little that they cannot employ more than one teacher to a school. I am glad how even that I have yet met with nothing that is really discouraging in teaching. It is true that at first I had considerable trouble with trustees, who did not show that they had such interest in the school as they should, and in that teachers cannot get their salary as readily as they should and many other little failures, but I am still encouraged, and believe that most of the weak places in our school system will soon be mended, and that we shall have better trustees, more good teachers and longer terms.

The colored people are getting more and more in earnest about educating their children, and show it after the free schools close, by keeping private schools, yet there are many from whom to get seventy-five cents a month for schooling a child is like drawing an eye tooth. The civilized whites are getting more and more in favor of the Negroes being educated, and we find many who five years ago were bitterly opposed, now strong advocates of universal education.

My community is quite an industrious one, though they are not so friendly towards each other as they should be, but I think that this brotherly love will come in its time, when they are educated, for no ignorant man will realize the fact that what helps his brother helps him, or what injures his brother injures the whole community. Hoping to hear from you soon.

Ever your faithful pupil, E.

### THE FIRST COLORED TEACHER IN THE PLACE.

This is from a young woman graduate—class of '75—who has a responsible position in a city school under colored teachers.

City schools in Virginia have greatly the advantage in the length of the sessions, over the country schools with their "school year of two or three months," as the foregoing letter describes.

—Va., Dec. 31st 1882.

Dear Friend:

I received your most interesting letter this month, and would have replied sooner but I have been very busy teaching in one of the public schools of our city. I graduated in the Class of '75, and have never taught school before. I like it only tolerably well. I am teaching in a very large school house.

We have ten teachers, and a colored principal, about 650 scholars. I have 35 in my room. I have a class that goes home at 12 o'clock, and another that comes in at 12½ o'clock.

This is the first time we have ever had colored teachers here. Our schools in the city have always been controlled by white teachers.

This is my home. I was born and raised right here, and of course the people all know me. They are as a general thing very friendly. The greater portion of the colored people here have good homes and are getting along very well. I began teaching on the 2nd of Oct. and my term will end sometime in June. Will you please have the Southern Workman sent to me, and Alumni Journal and I will send the money on in January. If you have any reading matter that would assist me in teaching, it would be gladly received, as I am just a beginner in teaching.

Respectfully yours, F.

### FAITHFUL WORK STOPPED.

One of Hampton's most faithful workers, sends an interesting report of his labors, which have been arrested by failing health, we trust not permanently.

—Md. Jan. 6th 1883

Miss C:  
I am very thankful to you for your letter. Sickness has kept me from answering promptly.

I have been teaching at the above named place ever since the fall of '78; teaching ten months in the year, and spending the other two vacation months (July and August) at my home.

My school house was built the year before I came; it is well plastered and furnished with potent desks.

The people are friendly, and most of them interested in the work of education, but yet they send their children to school so irregularly, that scarcely any of them get the benefit of more than two-thirds of the time allowed by the county; they are kept home to assist in planting and gathering crops. I find most of the whites to be no more advanced in learning than the colored. I can't find more than five or six literary men in the community. They all are friendly and polite and always speak well of my work.

During my first year I organized a Sunday school in a Methodist church, and of my fifty day scholars only twelve attended it, the parents of the other children were Catholics, and of course their children went to that Sunday school. I worked with the twelve until I got their parents and others to attend, then we had a good school; it is in operation yet. I haven't done anything in the work of temperance except to advocate the cause of Local Option, which I am glad to say, prevails in this county; and I have much good.

I am much pleased with the result of my work. With the teaching help received from Mr. —, I have been able to teach quite successfully. Children and their parents seem to be devoted to me; the Examining and Trustees express themselves as being well satisfied. All that is enough to encourage me. My discouragement is that I am not able to continue the work; my health has failed. I was sick two months last winter, and my friends advised me to give up teaching, but I felt that my poor circumstances would not allow me to do so, but now I am obliged to give it up regardless of circumstances. I am only trying to make this month, but I am afraid that I shall not be able to do so.

I am not married, but I have a widowed mother and an afflicted sister to take care of, and for whom I had nearly purchased a home, but what will become of it now, I don't know. However, I have resigned everything to the will of the Lord. I hope to hear from you again.

Yours truly B.

### SUCCESS UNDER DIFFICULTIES.

A handsomely written letter from a graduate of '77, gives an interesting account of successful work under discouragement of appreciation.

—Va., February 12th, 1883.

Dear Friend:

I left Hampton in '77, and have taught every term since, always in the same county. I have taught in all five different schools, numbering about 200 pupils. I was called to the above place as principal of this school in '79, and have been teaching ever since, here. I am now a resident of this place. I have been called to teach a spring school for the last two years in the county, which I have always done, with very good success. My school here now numbers 96 pupils. One, has been able to assist me in teaching, and another is now off at an Institute. I like teaching very much. I am satisfied that education and industry are the only hopes for our race.

As to the school house, the officers have none here. We are, and have been, teaching all the while in the basement of the Baptist church, which is in no way fit for the purpose, being too dark and damp, especially when the weather is cloudy. The people seem to appreciate me and my services and are generally friendly.

The white people here, with many of whom I have some dealings almost daily, are entirely friendly.

One of the leading lawyers and residents of this county, said to me a few days ago about the colored school. When I commenced to tell him about it, I was not a little astonished at finding that he knew about as much about the school as I could tell him. He told me that the colored school was larger than the white school, though there were more white children in town than colored. He said "you deserve much credit for keeping up such a good school."

The school houses for the colored people in this county are nearly all unfit for use, and cheap teachers are in demand.

Very truly yours, B.

### "THE ALMIGHTY DOLLAR."

A teacher who loves his work has something to say as to various motives in teaching.

"I heard a teacher remark, not long ago that if it were not for that 'almighty dollar' he would never be caught teaching school. I fear that this has been the impediment to progress all along through the past. There are too many who are teachers only for the pay. I must say I am proud of my profession, it is so proud and so noble a calling to mould the minds of those who are to be the future men and women of our race. I closed a six months session of my school about three weeks ago. I have never heard a complaint as yet, therefore I must believe my labors were a success. I always try to do the best I can with my pupils, and if I fall short of success, it is not to be attributed to any neglect known to myself, but to my inefficiency.

I highly appreciate your gift of the New York Observer, and will ever owe a debt of gratitude for your kindness to me. Those Sunday school tracts you sent me were also acceptable. I distributed them among my Sunday school scholars, and they were considered very much of a gift. Our Sunday school is too poor to purchase such things, though we hope to be able before long to re-fit our library."

Truly and gratefully yours, S.

### "LOOKING UP AND NOT DOWN."

A faithful worker sends the following cheerful account of herself. We believe that most Hampton graduates are following the good aim Mr. Hale set before us, "Look up and not down; look forward and not back; look out and not in; lend a hand."

—Va., Feb. 5, 1883.

My Dear Miss —

Your nice letter came to me Saturday. I am teaching school in Prince Edward Co. and about nine miles from home. I have enrolled sixty teaching fifty-five scholars.

My school house is not so comfortable as it should be. It is built of logs and is open about with mud. The floor is not closely joined together, therefore the wind does not find it hard to creep through. The black boards are very nice, also the desks, but the seats are poor. They have no backs to them, consequently the scholars' backs get pretty tired. There are enough pupils in this district to have three schools besides mine. Yes, Louisa — is in this district, she has been teaching here four terms. We are about three miles apart. It is nice to have some of my school-mates near me. The Trustees told me not to take any more than thirty-pupils, but seeing that they were so plentiful and only one school to look me. This keeps me later in school than I should be.

I have worked hard ever since I first began teaching, and don't feel tired although I have had some trouble, and felt discouraged at times. But I remembered what Mrs. Walton said to us during the three weeks she had us. It was this "Look up and not down; look forward and not backward."

The people told me that school had been here before, but it was taught by careless teachers.

They have had one Hampton teacher before, but that was quite a while ago. Every body is kind to me and think that I have taught their children more than any one else. The whites treat me kindly. Several of them visited my school and seemed much pleased at my teaching. I also have a nice Sunday school. But they do not appreciate it as I want them to. I have been to see their parents, and now they come more promptly. A lady in Waterbury Conn. sends me papers and books for it. She said that Hampton introduced me to her. Her Sunday school class of young men are sending me a paper every week, the New York Weekly Witness. It is a nice paper. Miss — sends me papers too, so I have plenty of reading matter. I have heard of the good which is being done at Hampton in this term, surely they must be all happy. Especially those in the Senior class. I am so glad that I confessed Christ before leaving Hampton.

Many of the '82s have become Christians since teaching school. I feel that I have done some good toward the advancement of my race, and can be the means of doing more. I hope that you may have health and strength to do the tireless work which you have undertaken. You must keep very busy writing to all the graduates and others scattered about. My school will continue seven months.

Sincerely yours, T.

### Horsford's Acid Phosphate,

Indigestion from Overwork.

DR. DANIEL T. NELSON, Chicago, says: "I find it a pleasant and valuable remedy in indigestion, particularly in overworked men."

### Temperance.

The Savannah News, in a recent editorial referring to the progress of the cause of temperance in the State of Georgia, says:

"The temperance cause in Georgia has been quietly conducted, but the results of the work done are so striking as to attract wide attention elsewhere. A surprising feature of the movement is the fact that where the traffic has been abolished or curtailed it has been effected with a degree of spontaneity upon the part of voters not witnessed in other sections.

"Many of the counties where the change has been effected were noted for the amount of liquor consumed and the reign of violence to which drunkenness gave rise. These communities are now recognized as the most orderly and progressive in the State. The testimony of citizens of Washington, Scriven, Liberty, Spalding, Pierce, Wayne, and other counties proves the wisdom of the change. A gentleman, who has a large store in a town in one of these counties, and who for many years sold liquor, speaking about the effect in his county, said that he was a drinking man and had made considerable money in selling liquor, but he had advocated and voted for prohibition in his county. Previous to the passage of the law his store was crowded with men, who spent their money for liquor, and would quarrel and fight, and occasionally a man would be shot. They would go home with nothing for their wives and children, and were always in debt. Now, there was a radical change. Farmers came and exchanged their produce and bought what they wanted, and went home sober. They were raising better crops, were better clothed, and were getting out of debt. This merchant, who is one of the shrewdest of the many who visit Savannah, added that now it was a pleasure to do business in his town. Before he was anxious to quit the place on account of the disgraceful necessity of trading with unreasonable drunkards."

### Something About Bread-Making.

By the process of bread-making it is intended to convert the flour of certain grains into a cellular structure, in which it is most easily chewed, saturated with the fluids of the mouth, and digested in the stomach.

Thus a small portion of the flour converted into glucose, which again is transformed into alcohol and carbonic acid. The former is recognized by its peculiar vinous odor, exhaled by the oaves, when sufficiently raised. Both gases produce the raising of the dough—i. e., the porous and spongy appearance.

By this fermentation the flour not only loses weight but the bread also attains qualities which may injure the process of digestion.

In order to evade these inconveniences chemists have long ago searched for means to produce a spongy structure of the dough by other means than yeast, respectively by substances evolving gaseous bodies, or which, in the oven are transformed into gases themselves. To the best known belong the bicarbonates of soda and cream of tartar, certainly well known to all housewives. And with regard to most of the baking powders of the trade, they are mainly preparations containing these substances. However, it cannot be said of any of them that they exert a beneficial influence on the system, not to speak of the adulterations, to which most of them have lately been subjected.

We are glad to learn that Prof. F. N. Horsford, of Cambridge, Mass., who held the chair of chemistry in Harvard University, invented some time since, a baking preparation forming an exception to those spoken of, which has already attained universal reputation.

The idea by which Prof. Horsford was guided, was not only to furnish a substitute for brewers' yeast, but also to provide those nutritious constituents of the flour lost in the bran in the process of bolting. These are the so-called phosphates, which contain nutritive salts of meat, and of the utmost importance for the building up of the organism. If we take into consideration that the nutritive value of wheaten flour is from twelve to fifteen per cent. less than of the wheat grain, and that this loss is now restored by Prof. Horsford's invention, then we must look upon it as the greatest national economic importance. As Justus von Liebig said: "The result is the same, as if the fertility of our wheat fields had been increased by one-seventh or one eighth."

### Horsford's Acid Phosphate

In Sick Headache.

DR. FRED HORNER, SR., Salem, Va., says: "I know nothing comparable to it to relieve the indigestion and so-called sick headache, and mental depression, incident to certain stages of rheumatism."

### The Missionary Sugar Planter of the Hawaiian Islands.

BY EDWARD BAILEY.

While the planting was going on, preparations were making to build the mill for grinding the cane. The grinding and boiling were to be entirely done by steam—at that time a new phase of sugar making in the island. It was untried, and, without experience, was entered on with fears as well as hopes. But it was to have all the modern improvements. The cane was to be laid in the armful on the "automatic" cane carrier which led to the mill; the rind, as it left the mill minus its juice, dropped onto the "automatic trash carrier" which took it to the mouth of a furnace that had been made deep in the ground, into which it was dropped and fell upon a "skeleton arch" of iron, where the heat was supposed to dry it and prepare it for various evolutions of the gases, to act as fuel. It had also been made in front of the furnace communicating with the outside of the building, where wood was taken down for fuel, and fed into the furnace by hand, in case the cane trash or rind was found insufficient. A stock of green kikai and other wood had been collected for that purpose, and with great exertion the logs were shoved under the skeleton arch on which the wet trash was dropping. The heat was to be so intense as to kindle both the green logs and the wet trash. But it was a failure. To begin with, when the fire, kindled by dry refuse lumber, possibly some of the old plows and carts, had succeeded in making tremendous smoke, it came evident that the smoke must go somewhere. A brick chimney, four feet high, built for it at a expense, and communicated with it by a passage, but for some reason the smoke had not found the passage. It should have passed under the long boiler, then turned and passed back, then under the furnace, and then have entered through a "bonnet" into the passage and out the chimney. But it chose to go by the much shorter, direct and ascending passage over the mouth of the furnace by which the trash, dropped in and as that opened inside of the building, the dense cloud of smoke followed by a full flame filled the capacious house in spite of all its ventilators and drove the workmen outside. And not only that but as soon as the flame had time to warm things, the trash carrier which was over it took fire, and was partly consumed before it could be removed outside. And not only that but the trap doors which being "automatic" should have closed after the dropping of each mass of trash, did not see fit to close so as to prevent getting things started, boards were brought and laid on to shut the opening, with what result it is easy to imagine. But the fire in the furnace had got headway and, by some means the smoke found its way up the chimney, and the heat being great, the slight rind of the "skeleton arch" in the centre of the fire were burned, bent or melted so they would no longer sustain the trash which they should have held up, till the whole arch, among it had dried and kindled it to flame. Instead of that they bent and fell with the damp mass of trash directly on the grate which they choked, while also preventing the feeding in of new trash. After a few days' trial the idea of feeding wet trash was abandoned, the opening was effectually shut; the "skeleton arch" was among things which disappeared—trial of heavier iron resulting also in failure.

An opening was made through the side of the house, and the trash was carted off and dumped in a great pile to dry by fermentation, or not at all, as it would; the frequent rains rendering it impossible to dry it by the heat of the sun, and skeleton trash-houses not having been thought of at that time.

It had not been thought necessary to employ a first class engineer to run the mill, so a chance hand under ordinary pay was set to the work. His trials were serious enough. The engine was often stopped by the too crowding cane fed by the "automatic" cane carrier, and all hands were required to turn the fly wheel backward to relieve the mill of its too large mass. Sometimes a little help to turn the hesitating wheel forward, when the cane was loaded back from the feeding, would answer the purpose.

But what had become of the juice while all this was going on?

Like all the rest of the outfit the boiling apparatus was an experiment.

Conversation with those who made sugar-producing apparatus had led to procuring some enormously heavy hemispherical pans surrounded by a "jacket" through which the exhaust steam from the engine was made to pass with more or less back-pressure, causing a greater or less amount of heat accordingly. Probably these were somebody's cast off pans—only worth their weight as old iron. But unfortunately the amount of back-pressure required to clarify the juice took away just as much pressure from the engine, rendering it incapable of grinding the cane. Less than this would not clarify the juice.

So the clarifying was delayed or imperfectly done.

From the clarifying the juice was drawn into two "sweeping pans." These were square iron pans of 300 or 500 gallons capacity, having an iron steam drum in the middle, through which from top to bottom were a great number of iron tubes which admitted the juice—adding so much to the capacity. These were intended for evaporating pans, but the clarifiers failing in their office it became necessary to use them first to clarify and then to evaporate. The juice admitted was made to foam up to the top by admitting a small amount of steam. A man with a broad wooden blade fastened to a handle swept off the impurities brought up by the leaping juice till it was tolerably clean, when a full head of steam set it to boiling till it was somewhat concentrated.

The space for the man sweeping the foam was only about three feet wide and the heat intolerable; but there was no help for it, before comfort.

From these pans the juice after being allowed a little time to settle, was drawn into another similar pan where the concentration was completed and the now thickened syrup was passed into shallow iron pans called coolers, to crystallize. Almost from beginning to end the whole thing is now changed.

But the sugar boiling. Toward the end of the season, when the cane was nearly grown, Mr. M. went and took lessons of a sugar boiler at no great distance. He was requested to do so that he might be prepared to bail off the crop when every thing should be ready. The sugar boiler of whom he learned was engaged to commence the boiling for a month or so, and Mr. M. was to continue it.

Scarcely a week had elapsed after boiling commenced when, by the bursting of an imperfect valve, the sugar boiler was nearly scalded to death, and would by no means be persuaded when he recovered to enter the mill again. So it was proposed to Mr. M. that he continue the boiling, and he reluctantly consented. It was a worrisome. Nothing worked well. Fuel was wet; cane was uncertain in the rainy season, and at the best the juice was poor.

The yield was poor, scarcely reimbursing the planters, and falling far short of reimbursing the owners. But Mr. M. continued to plant another year that he might get the benefit of the rain crop of 1882, or the crop springing from the roots after the cane was cut. The cost of cultivation of this latter crop was comparatively light. But when it had sprung up, and was four or five feet high, looking every thing, a woman made its appearance, which ate up the whole plant, leaving nothing but the ribs standing; so that in a field of fifty acres scarcely a green leaf was to be seen.

His was disheartening. No remedy was to be thought of, for the scourge was sudden and complete. It passed away in time, but it had greatly weakened the growth of the cane and the rain crop was always less than that of the first planting, was small.

The distance from home being considerable and an offering received of the management of a plantation in the immediate vicinity, Mr. M. withdrew after the second year from the plantation where he was engaged, leaving a son to continue the business, who also learned sugar boiling, and remained some time on the plantation.

Between the two grinding seasons in which Mr. M. had boiled the crop, he accepted an offer to holl off the crop of a neighboring plantation. The situation was peculiar, but I will here describe it.

The plantation was located at an elevation of nearly 2000 feet above a sea level, and there was no chance for irrigation. The cane depended entirely on the rains, and as the seasons varied greatly in their rain-fall, so did the crops. In the wet years a fine crop was raised, but then the frequent rains great by retarded the manufacture of sugar, by making it difficult to dry the trash which was spread on the ground for that purpose. But about once in ten years two or three dry years occurred in immediate succession, and in these years the crop was small and poor. All those plantations which could not irrigate were liable to the same difficulty. In some plantations where water has been conveyed by great expense for irrigation, the profit has been manifest. But this plantation and some others were above any such possibility; it being difficult and sometimes impossible even to supply the steam boilers with water. At this particular time the season had been dry and all the cane was not only small but injured. Almost every cane being split showed a brown cavity through the centre. The quantity of juice was small and did not act like ordinary juice—showing a great discoloration. A grain of Good sugar could not be made from it. The agent, having had experience of it before, and knowing something might be got

out of it, stipulated that it should be boiled just as he should direct; and Mr. M. knowing his peculiarities and thinking something might be learned, consented. The boiling was done in open pans over a furnace. The juice clarified slowly, hardly at all. Powdered lime was added by weight, no more and no less whatever might seem to be necessary. When the juice in the last, or strike pan, was near the concentration point the lime was urged for a little, and the brown, boiling soap, and finally commenced to send up puffs of smoke from its bubbles. This shows that a crust was forming and that the bottom of the pan was being burned through.

A long handled wooden blade was then thrust to the bottom and the black crust— one fourth of an inch thick or so—was chipped away; the smoke increasing meanwhile till the house was filled to stifling. At length, when the mass seemed ready to burst into flame, and would have done so had a match been applied, the fire was suddenly withdrawn, and the seething mass was poured into troughs where it cooled. It took six hours it had become a hard, dark brown mass on which a man might walk without making tracks. After several days, when the molasses began to separate from the sugar, it was passed through the centrifugals. Great speed only would separate the molasses from the sugar which was dark brown, soft and sticky, and was packed for the market. Whether the yield paid the expense of manufacture may well be doubted; but it seemed better than a total loss.

The plantation on which Mr. M. was now engaged was a new one. It had not built its mill and had only planted a small field of cane, but it continued to grow and plant till it had become one of the largest plantations on the island. It was in a section where the cane was raised by irrigation. This added greatly to the expense of cultivation, for in order to convey water to the cane it must be planted in trenches, and ditches must be kept constantly being applied once a week, and sometimes oftener. But the yield was larger than has been known in places where irrigation is impracticable. Still it had not attained the amount it has yielded since cultivation has been better understood.

The position in which Mr. M. stood on this plantation was not clear. Subsequent events show pretty clearly that it was not intended that he should be sole manager. He had some skill in planning buildings and machinery, and that was soon to be done on a large scale. Water interests too appear to have been considered. Being a resident of the place, and having water rights in common with other land owners, it was his duty to secure his little farm with which the whole place was checked. He might and did help in settling disputes with them and in making transfers and exchanges, which were common in working the plantation. As a venturer his services could be had much more cheaply than if paid for by the piece.

It is not necessary for me to point out the essential meanness of the whole proceeding, when every thing had been put in good running order and no difficulty was apprehended.

Mr. M. continued on this place a year and a half, during which time he superintended the erection of the mill-buildings &c. &c. An "open train" was put up and soon after another was added. The grinding was done by water power.

But for several years the plantation was only feeling its way, and it was evident that as then conducted it could not pay. There was really no head on the plantation. The real manager lived in Honolulu, visiting the plantation occasionally, and spending only a part of his time there. But he had little practical knowledge of the business; and if he had, he could not afford as circumstances required, being overruled by the Board of Trustees resident in Honolulu, who could judge even less of the real needs of the plantation.

Very much depended on the manager, whether the plantation was successful.

We have now to do with Mr. M. in a new position. Hitherto he had been employed for others. While doing so he had been able to support his family. But he had not accumulated property. He had given his children such an education as his means

allowed. But he had nothing to fall back on. The guaranty of the American Board to help disabled or supernumerary missionaries was of a very unsatisfactory nature, and effectually prevented one's making provision for old age, or any special need that might arise. But he was now able to decide wisely—not to look to them. His land and herd remained to him, and it was natural that he should make it available if possible for support. He thought of selling his land to the planters from which he had been discharged, but fortunately they demurred at his price, which was not really one half its value.

By the aid of his boys some cane had been planted with the expectation that the plantation would manufacture it on shares as they had offered to do. But it became evident to him that any interest he might have in the plantation would be little regarded.

When he asked the agent if he would guaranty to grind his cane when it required to be ground, he answered, by a most courteous slip of the tongue that he should attend to their own interests first. Had he not blundered into this honest admission—so unlike himself—Mr. M. might have been hired on to great wages of time and expense, as many another in such circumstances have been lured by promises not meant to be fulfilled except at the convenience of the promisor—or even worse! He had a great deal against the promise. This naturally opened his eyes. Judging from what he knew, he saw clearly that the only result of continuing to raise cane as he was doing, would be to place him in the state of dependence, with no prospect of fair remuneration.

There was another plantation at no great distance; but there was even less to be expected from it. Under the rule of a grocer, who had no interest in the native of the place who were the original owners of the land and the water belonging to the proprietor had managed to get the water into his own power to such a degree that the simple people did not dare to use it, although they had an undoubted right, without, in every case asking his permission; and so completely had he "taken up the land" that the persons, presented an appearance of general signal. He had even entered into government roads—shutting them up as opening others to suit—not his own convenience, for they would have been better for him as they were, but his own obliquity.

He did not yield till he was obliged to do so after long and expensive litigation. As a result, not written by him, Oh, no! was published in the islands paper setting forth in glowing terms his great ability for the people, and the influence he had done for them, and by implication comparing it with the neglect others had shown them.

This was so worded as to be an evident thrust at missionaries, who, for years, while laboring for the spiritual interests of the people had passed their immediate interests, like the priests and the Levites, by on the other side. But it blinded so one who knew the character of the man.

A great deal of the same kind of blowing one's own trumpet has prevailed at times and become fashionable; but in most, if not in all cases, it needs to be qualified. As a rule, not written by him, Oh, no! was published in the islands paper setting forth in glowing terms his great ability for the people, and the influence he had done for them, and by implication comparing it with the neglect others had shown them.

This was so worded as to be an evident thrust at missionaries, who, for years, while laboring for the spiritual interests of the people had passed their immediate interests, like the priests and the Levites, by on the other side. But it blinded so one who knew the character of the man.

you" said Griffin "those missionaries" are a set of hypocrites as I said they were. They love to make money as well as other folks. It became necessary that Mr. M. have an agent in Honolulu, as all sugar must be shipped from that port to whatever quarter; and all supplies must be brought the same way. All plantations had their agent there.

The manager of a plantation could not leave and go there to transact his business; it would keep him away from his plantation most of the time. Besides the price of a passage was very high—not less than five dollars for a single night, for a white man. Deck passengers paid only one or two dollars. But there was much more in an agency than appeared on the surface. There was much difference in the degree of faithfulness with which the agent fulfilled his duties. Usually he was a trader; and often, instead of seeking and furnishing the plantation good, serviceable supplies, there was a constant temptation to send them his own unsalable goods, but without any reduction of price; in fact they sometimes charged retail prices where they furnished by wholesale. The planters lost immensely in this way; the urgency of need often not allowing a return of the article, and the expense in all cases was charged to the plantation.

But here again I anticipate; though it seemed necessary to say so much at the outset. Misunderstood orders may account for some of the difficulties arising in this way; but I apprehend it was often feigned that real; and I know that such conduct has led to a change of agency.

The agent did not always wish to see the planter prosper; for as soon as he became independent he dictated terms to the agent. The latter, therefore, liked to keep him in a state of dependence, and made what otherwise was very uphill work a mountainous precipice. But here again the disease ought to furnish a remedy, for in case of failure the planter lost all. Some agents who, while the planter was dependent on them charged 5 pr. ct. commissions, besides various perquisites, suddenly discovered that they could afford to do the same business even better after the planter had become independent of them for half that commission. But I have allowed my pen to run away again and will now return to my story.

Mr. M. was not a man of financial instincts. His thoughts had always run in a different channel. Balance and Co. who would loan him money to start his plantation, and who would be his agents knew this very well; but what their inner thought was, we will not now enquire. Some of their terms were openly stated in an explicit; they would require a mortgage on all Mr. M. possessed, as security. If they loaned him money at a risk, "it was only right that he who was to have 'the entire profit' should risk his part in the business," though he put in all he had. He did not demur to this. As prices were at present and might be in future, all would soon be paid up, and then whatever might be the profit would be clear gain for the planter.

So the understanding was fairly established and all movements were in accordance therewith and had proceeded too far to be retraced without great loss, when one of those near little operations which schemers know so well how to manage, was initiated by Balance & Co. It was an "of course" statement that money would be loaned to Mr. M. at 12 pr. ct. interest to be paid quarterly; and he was not to have any connection with any outside business; i. e., any outside means connected with other parties were liable for debts contracted in this.

This meant that the interest on the money lent should be compounded four times a year; for, of course the money lent could pay nothing back till the business was in operation. It is easy to figure the time required to double the amount lent; also to figure the difference between interest so compounded and simple interest.

This looked like planning at the outset that the money should not be repaid. Had Mr. M. been apprised of it sooner he would probably not have gone any farther in the business. But things had gone so far that there seemed no retreat and he felt obliged to assent. He determined that the expense should be as small as possible to work with profit.

(Concluded in next Number)

**REST** not, life is sleeping by, go and dare before you die. The moment is mighty and awhile leaves behind to conquer time. \$20 a week for your own work. No effort for it. Nothing. Everything new. Capital not required. We will furnish you everything you are making for. Ladies make as much as men, and boys and girls make great pay. Reader, if you want business at which you can make great pay all the time, write for particulars to H. HALL & Co., Portland, Maine.

## THE HYGEIA HOTEL.

AN ENLARGED AND IMPROVED.

### OLD POINT COMFORT, VA.

Situated one hundred yards from Fort Mifflin, at the confluence of the Chesapeake Bay and Hampton Roads, being the first point of land lying westward between the Capes of Virginia, about fifteen miles north of Norfolk and Portsmouth; all passenger steamers running to and from those cities touch at the pier, going and returning, with the U. S. Mails, landing only twenty rods from the Hotel, which is substantially built and comfortably furnished; has two Otis' hydraulic passenger elevators, gas and electric bells of Creighton's Oral Annunciator in all rooms; water, room for bath, including Hot Sea, and closets on every floor, with the most perfect system of drainage of any Hotel or any public building in the country. As a resort for the pleasure-seeker, invalid, or resting-place for tourists on their way to Florida or the North, this house, with accommodations for about 1,000 guests presents inducements which certainly are not equalled elsewhere as a summer resort or cold weather sanatorium. Has during the cold weather over 15,000 square feet of the spacious verandas (of which there are over 30,000 square feet encircling the house on all sides) vacated in glass, enabling the most delicate invalid to enjoy the sunshine and fine water view without risking the slightest exposure. The climate of Old Point Comfort is unequalled for salubrity. *Material fevers being absolutely unknown.* The record of the Meteorological Observatory, for the past ten years, shows an average temperature of 60 deg., 74 deg., 76 deg., in summer; 70 deg., 50 deg., 40, in autumn; 45 deg., 44 deg., 43 deg., in winter; and 48 deg., 52 deg., 63 deg., for spring. The invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. For sleeplessness and nervousness, the delicious tonic of the pure ocean air and the lullaby of the ocean waves rolling upon the sandy beach, but four feet from the bedroom windows, are most healthful specifics of the Hygeia.

## Wings at the Pane.

EDWARD S. CROSBY.

Oh and again in the winter  
I hear the driving rain  
As it drifts at night on the window,  
And rattles against the pane,  
And rattles against the pane.  
It seems to me in the darkness  
As if the wings of a bird,  
Striving to enter the chamber,  
Were at the window heard.  
But I joy to know that the tempest  
Raves at the window pane,  
And rallies its eerie spirits  
And beats with its wings in vain.  
And fancy weaves in the darkness  
The image of other forms,  
That strive to enter the window  
With wilder wings than the tempest's.  
Birds of more evil omen  
Than wider and wider roam,  
Come in silence and darkness  
And crouch at the eaves of home.  
Do envy and hatred and malice—  
The basest brood of sin—  
Beat their wings at the window  
And struggle to enter in?  
As the rain breaks on the casement,  
In impotent froth and foam,  
Black wings that wait in the darkness  
Are scared by the lights of home!  
And evil spirits that gather,  
And threatening forms that move,  
Take their flight in the shadows  
Before the warmth of love.  
And though each shape of sorrow  
A darkening shadow flings,  
It cannot break through the casement  
Any curse on its wings.  
For the home-light and the love-light  
The shadowy shapes avoid  
With many a grace and beauty  
Beyond the lights of morn.  
And so the brood of evil  
Stops at the window pane,  
With the broken wings of the tempest  
That beat through the wind and rain.  
And each winged form that enters,  
Though dark and dread afar,  
The home-light and the love-light  
Make glorious as a star!

## A VISIT TO THE VALLEY.

BY ORRA LANGHORNE.

Lynchburg, Va., Aug., 1883.

I had appointed the 25th of July for setting out on my annual trip. To my dear old home in Rockingham Co., without reflecting that the State Democratic Convention was also appointed for that day. The only train making close connection for the valley leaves Lynchburg at 1 A. M. and I sent my trunk to one of the city hotels and about dusk went there myself, proposing to take a room and rest quietly until the hour for the train.

My little home in the suburbs seemed so calm and peaceful that it was hard for me to realize how different things might be in the city. Not being disposed to attach any great consequence to political Conventions, especially when conducted by Democrats, I was not a little surprised when I reached the "heart of the town" to find that the "Bourbons" had taken possession thereof and "sloped over" in every direction.

The horse-cars were crowded with what is to be hoped was the second class element, many of the strangers, who wore the olive badges marking members of the Convention being much the worse for the inspiration they had sought in bar-rooms.

Groups of members were strolling about on the hills and in the streets and numerous vehicles were bearing the Bourbons who had "carriage friends" in the city or could hire hacks to visit the various points of interest about the place.

At the hotel, where I had hoped to have a quiet time, the politicians were having it all their own way, and being out in force looked strong enough to alarm Mahone himself if that astute individual could be daunted by Democrats.

A caucus meeting was going on in the parlor, the halls and stairways were thronged with members of the Convention going in and out, the office was full of them, the chambers were all taken, the clerk, landlady and house-keeper were too busy to be seen, and in short there was no place, not even an arm-chair, for a lone woman on her travels. A polite maid who was present only person I could interest in my difficulties, had gone to see what could be done for me, and I was sitting in a hall window somewhat forlornly guarding my luggage when an open door gave me a glimpse of the committee in the parlor, and the drawing rooms of one of the "Tuckahoe" talkers permitted me to hear fragments of what was going on, and amply comforted me for any present inconvenience by showing the dilemma with which the Democratic gentry were dealing. Major Daniel, one of the handsomest and most intellectual looking men in the state, was pre-

siding with the grace and dignity for which he is conspicuous, and a quiet looking country-man standing just opposite me, begging for a moment's attention, slowly gathered himself together, and proceeded to state that in his county, almost the only one of the eastern counties so blest, the hated Redjackets who now rule the roost in the Old Dominion, had never made much headway, but had been discomfited in every canvass, because the Democrats had been able to secure three or four hundred colored votes. With all the force consistent with limited intelligence and natural slowness of speech the worthy Bourbon urged and entreated his brethren not to throw away that precious colored vote; not Mahone himself or one of his "Lieutenants" could more highly have valued or more earnestly have argued for this point.

Some one passing in closed the door and I did not hear the end of the speaker's remarks, but I had heard enough to confirm my impression that the race question is still the vital point between the Liberal and Conservative parties in Virginia.

There has been a steady advance for the oppressed race among us since the war for its emancipation closed, in spite of the efforts of the Democratic party which has been well described as "a standing protest against progress."

In just proportion also has been the advance of the dominant race, who are at last wisely learning to consider the mental and material interests of the country, whilst relating their efforts "to keep the Negro down."

Very many of the white people are forgetting their prejudices and leaning in good faith the stern lesson taught our generation by the bitterness of retribution, and not a few have found among its results the sweetness of compensation for patience in the hour of trial.

It cannot be denied that serious evils have resulted from Negro Suffrage, where there has been a majority of colored voters, but the remedy has been all along in the hands of the leaders of our people, who it is to be hoped will yet awake to the idea of limiting suffrage by an educational qualification and letting that be the only disqualification.

It has been the policy of the Bourbon party to ignore the colored vote, thereby practically ignoring the results of the war; but the remarks of the gentleman I had just heard convinced me that even the Bourbons might take a new idea, after the Liberals had convinced them that it was entirely efficacious in practice. Feeling sure that as famous old Mr. Ritchie was wont to remark "the skies are bright and brightening," I contentedly adopted the advice of the amiable maid and sought shelter in the house of a friend close by, returning to the hotel when the family retired, to wait until train-time.

It was not altogether a pleasant experience for a person travelling for health to spend the next two hours on a hard bench in the corner of a hotel office, with loud talking men going in and out, smoking and splitting after the fashion of Virginians, but after a start of surprise at seeing a lady at such an unexpected time and place, each and all showed the influence of the chivalrous sentiment of our land by making room for me, and behaving like gentlemen as soon as they were aware of a lady's presence. About 12 o'clock the Convention adjourned having adopted a platform in favor of abolishing slavery and intimating that in future they would acknowledge the existence of the people who form half the population of our state. The office was thronged with the members and I found some amusement in observing the personnel of the Convention.

I noted with pride the fine appearance of the valley delegation, most of them old friends and acquaintances, who compared very favorably with the eastern Virginians, the latter in general showing little of the advantage claimed by the Bourbon press for the "best people" of the state. I must except from this statement the Chairman chosen by the Convention, the Hon. John S. Barbour, a magnificent specimen of manhood, who stood like Saul the son of Kish, "a head and shoulders above his followers," and was easily recognized as the only possible leader among the common-place men who thronged about him.

Politicians present an interesting phase of human nature, but one soon sees enough of them, and it was with little regret that I saw them one by one leave the train at their own stations, so that when we had crossed the Blue Ridge we had left most of them behind us. The dawn of a lovely day was breaking when we entered Staunton, and then came another weary hour of waiting for the train on the B. & O. road.

A colored woman with a lively baby sat near me in the station room and when I asked where she was going she began to tell her simple story as if glad of some one to talk with. She was from Charles County, had always lived in Albemarle county; wages was so low there colored people could not get enough to live on; a great many of them were going away north and west. Her hus-

band had been offered good wages in Pittsburgh and had gone a year ago; he had found plenty of work and had sent her and the baby on a seat near him, gave him a cup of milk from the basket, and then putting a biscuit in his hand and telling him sternly not to fall she went out to walk on the platform.

The child, evidently of the Jim Crow tribe, was so merry, laughing, chattering, rolling his eyes and squealing at every one who came near him that it was impossible not to be amused at his antics. A white man standing near the door laughed aloud at the child and called some one else to look at him, some-body else came in to see the fun and soon a little crowd had collected to watch the monkey tricks of the chonny infant. In the midst of the hilarity the mother returned, and apparently quite unconscious of the notice her baby was attracting gravely reproved him for dropping his biscuit and seated herself near him with an air of abstraction, doubtless thinking of the "old folks at home" she was leaving perhaps forever, and the unknown strangers in an unknown land upon which she was about to enter.

After the first greeting with friends was over and I had time to look about me, I found that many changes were going on in my native valley.

The Summer boarder has discovered that Harrisonburg is a neat, quiet, orderly little town in the midst of a beautiful and abundant country, within a few miles of the famous tonic waters of Rawley and Taylor Springs, whence the water can be procured daily, and fully a hundred visitors were scattered about in the pleasant houses of the village. The streets were of strange faces, and one heard constantly of picnic parties to Weyer's Cave, the Natural Bridge, Rawley etc. The visitors were from all points, Boston, Baltimore, Washington, Richmond, and the people of various sections enjoyed very cheap board could be obtained from \$1.50 to \$2.00 per month according to lodgings. Beer was 10 to 12 cts per lb. Butter 15 to 20 cts, eggs 12 1/2 per dozen, flour about \$5.00 per bbl.

Among the ornamental buildings of the town is the new colored school house, built on the edge of "Newtown" or "Africa" as the quarter occupied by colored people is called. Lucy Simms, one of the Hampton graduates, has taught in the public schools of the county and town for several years and ranks high in the estimation of the school superintendent and the people.

The colored Methodist church, a large and handsome building, had been dedicated with impressive services a short time before my visit, and I heard an interesting account of the proceedings. White and colored ministers occupied the pulpit, a fine sermon was preached by the white Bishop, and the admirable singing of the colored Presiding Elder charmed the audience.

The Mayor of the town and other prominent white citizens occupied the front benches. After the sermon, one of the ministers stated that there was quite a heavy debt upon the church and he hoped all present would contribute liberally to such a good cause, loudly urging it, in the custom in the colored churches South, the congregation rose in regular order, except the white persons mentioned, and walked past the table before the altar, depositing money thereon and quietly returning to their places. The white citizens, who always aid the colored people liberally in their church enterprises, but unaccustomed to this method of contribution, sat with their hands in their pockets, bashfully regarding the table which they had not the courage to approach. The "Providing Elder" as some of the illiterate Negroes call that functionary, who had been singing a beautiful solo during this interval, took in the situation at a glance, and when the congregation was again seated and the hymn ended, he remarked quietly that an *offertory* should now be offered to the white friends to aid in this worthy object. At a word from him the deacons took up their hats and handed them to his Honor the Mayor and the other white persons present, who responded with alacrity to the appeal.

One evening during my stay, loud shouts and hurrahs reached our ears from the railroad station, which is not far from my brother-in-law's house, and on inquiring the cause we learned that "Shumatis" gang was passing through town. This meant that five hundred able-bodied colored men, collected by Mr. Shumatis, a Virginian, who acts as agent for Iowa mining companies at various points in the state, were on one of the B. & O. trains, and this hilarious parting between them and their friends covered the heart-ache of separation.

There is no talk of an exodus, but some invisible agency like the "Underground Railroad" of slavery times is gradually drawing

the colored people away from the South and scattering them all over the country.

In companies for mines or rail roads, or one by one, they are fast going North, or West, and where they go they usually stay and prosper. A white friend writes from Portland, Oregon, "there are 1200 Negroes here, and all are doing well. Another says: 'I find 3,000 colored people in San Francisco. Thousands have gone to the Iowa mines, and the rate of wages is advancing perceptibly in the valley and begins to be felt in Eastern Virginia.'

## LISBON.

The streets of Lisbon have not the busy aspect one usually finds in the thoroughfares of a capital. But if the throng is not great, those who frequent them make up for want of numbers by noise. Venders of fish and fruit and other eatables exercise their powerful lungs, boys selling lottery-tickets bawl their loudest, while newspaper boys and knife-grinders add to the uproar. The Galician water-carrier still survives in spite of modern water-works, and his prolonged "A-au!" is heard on all sides.

The people of Lisbon live much upon the street, and it is here that they are to be studied to the best advantage. The houses of the poor open to it, and one can have a full view of home life from the narrow sidewalk.

On one of the seven hills on which Lisbon stands it was once proposed to build a central market, but the cooks and housekeepers refused to go up hill each time provisions were needed; so they continued to patronize the old markets, six or seven in number, where corn, wine, oil, fish, meat, and other provisions are sold wholesale and retail.

The traveller entering one of their markets is at once besieged by an army of *Gallegos* carrying big hampers, and soliciting the honor of taking home his purchases. But to while their markets supply the housekeepers of Lisbon with the bulk of their supplies, there are other articles of domestic consumption which, like corn, wine, oil, fish, meat, are carried round from house to house by peddlers. In all southern climes oil is a necessary of life, and equally indispensable for making a salad is its opposite, vinegar. A peddler for the salt, and a madam to mix them altogether, is an old Portuguese recipe for salad-making. The peddler in the illustration is evidently on good terms with the surgeon, as the prime ingredients, but he is more picturesque clad, and jars and vessels are quaint in shape, than those we see at our kitchen doors. —*Harpers Weekly.*

## The McAdoo and Ocean Side Scholarships.

The following letter from Miss M. B. Sedgwick, gives a very gratifying report of the record made by the Hampton Students, selected by Mr. O. McAdoo, a Hampton Graduate and one of the teachers of the Butler School, as a corps of waiters under his charge at this pleasant water-place on the Massachusetts Sea Coast.

The practical way of showing their appreciation of the services and deportment of these students, chosen by the ladies of the "ocean side" is worthy of all imitation and we should not "make ado" at receiving any number of such scholarships.

Ocean Side, Magnolia, Mass., Aug 25, 1883.

TO GENERAL S. C. ARMSTRONG,

Dear Sir:—The ladies of "The Ocean Side" have been so well pleased with the manners and attendance of the Hampton students this summer, that they are anxious to express their interest in the Institution by the establishment of two scholarships. Mrs. D. C. Holder of Boston is the originator of the plan, and has already collected seventy dollars for the first year of one scholarship. As a mark of our approbation of Mr. McAdoo, who has performed his duties so agreeably to us all, it is proposed that he should select the person to be the recipient of this scholarship, and also to have it entitled "The McAdoo scholarship." For the other, we wish you to select any worthy object, and we should like it to be called "The Ocean Side scholarship." This will of course be continued for the usual term of three years. The first one we hope to make permanent, and if there are any two persons in whom our waiters are especially interested, it would gratify us to have these scholarships presented to them.

A check for a hundred and forty dollars will be placed in the hands of Mr. McAdoo to be delivered to yourself. We have pleasure in informing you of our little plan, as your devotion and zeal enable us to take our small share in this charity, so important to the welfare of our country.

We enclose a list of the names of the ladies interested.

Yours very respectfully,

MARIA B. SEDGWICK.

# SOUTHERN WORKMAN,

TWELVE PAGE MONTHLY.

(Reduced to eight pages from July to October.  
four months.)

Printed on the Normal School Steam Press  
by students trained in the office.

S. C. ARMSTRONG, Editors.  
H. W. LUDLOW.

Mrs. M. F. ARMSTRONG, Regular  
Mr. W. N. ARMSTRONG, Contributors  
Mrs. ORRA LANGHORNE.

Terms: ONE DOLLAR a year IN  
ADVANCE.

Specimen copies sent upon application.  
To secure safety, it is important that money  
should be sent by checks, Post office orders, or  
registered letters. Write plainly; give name  
in full, and name of Post-office, County, and  
State to which the papers are to be sent.  
A limited number of advertisements inserted  
at the following rates:

SPACE.	1 mo.	3 mos.	6 mos.	1 year.
1 square.	1 00	2 75	5 00	9 00
1-4 column.	2 75	7 50	13 50	23 00
1-3 "	5 00	13 50	23 00	40 00
1 "	9 00	23 00	40 00	70 00

Special notices 10 cents per line.

Job work from all parts of the country  
is solicited, and will be executed  
cheaply and well. Estimates given.

For further information, address

10-Our Jewels. by M. F. Armstrong.  
Published by Putnam's Sons, New York.  
Edited and printed at Hampton Institute.  
For sale at both places. Specimens sent from Ham-  
pton at 5 cts. a number, or 50 cts. a set.

Subscribers are reminded that, from July to  
October inclusive, this paper is reduced to  
an eight page form, resuming in No-  
vember the twelve page form.

MORE than forty years ago there was  
established in the city of New York, an  
association for the benefit of colored  
orphans, the history of which furnishes  
a not unsatisfactory index of the  
changes in the condition of the colored  
race during that period. Nearly three  
thousand children have been provided  
for in the Asylum at an average cost  
of about \$91.00 per annum, exclusive  
of gifts of clothing and certain supplies  
received from various charitable societies,  
and the small proportion of deaths  
shows that the children are well cared  
for. During the war riots in New York  
the inmates of the institution were driven  
from their home, which was burned  
almost over their heads, and were saved,  
probably from death, only by the courage  
and devotion of those in charge of  
them. Since that time the work of the  
association has proceeded, undisturbed  
in the main, and successful, so far  
as the immediate welfare of the help-  
less little ones is concerned, but there  
remains always more or less difficulty  
in providing for them after they leave the  
asylum, which they are obliged to do  
at about the age of twelve. They are  
not, of course, old enough to be made  
responsible for themselves, and it is, as  
a rule, impossible to find people of a  
respectable class, who are willing to a-  
dopt them. There exists among them  
a fair proportion of really good mat-  
terial, and there are every year a few in-  
dividuals, to whom the Hampton course  
would be of great benefit and before  
whom it would open possibilities which  
could hardly be supplied in any other  
way.

The colored people in all our large  
northern cities are generally doing  
well; so far as ability and opportunity  
to make money goes, there is a steady

and sufficient demand for their labor,  
but their record shows them up to the  
present time to be wanting in the vir-  
tues of thrift and economy. It is said  
of them that they are usually careless  
and extravagant, fond of pleasure and  
inclined to the future take care of  
itself, and the exceptions are not as  
yet sufficiently numerous to produce  
any such thing as a general sentiment  
among them.

An infusion of the spirit which char-  
acterizes so many of our Hampton  
graduates, and which is a result, to a  
certain extent at least, of the system  
under which they are trained, seems to  
be needed as much among the compar-  
atively opulent colored population of  
our northern cities as among their  
poorer and less responsible brethren at  
the South, and though the problem in  
the former case is even more complex  
than in the latter, there are almost in  
both the same great laws at work.

To send each year a few of the more  
promising of these colored orphans to  
Hampton, could hardly be considered  
in the light of an experiment so far as  
concerns themselves, while it is possible  
that their influence might come in time  
to be felt among that class of their  
people from whom they spring, and  
whose need of sound thinkers and lead-  
ers is as great now as ever.

Such work, of course, must be done  
mainly by private charity, and in read-  
ing the Reports of the New York and  
other similar asylums, it becomes a  
matter of some surprise that an at-  
tempt has not been made before this to  
utilize the resources of Hampton in ed-  
ucating deserving waifs and strays  
from our northern colored population.

We are glad to receive and publish so  
sensible a communication as the follow-  
ing, and trust that those of our readers  
who are personally interested in the gen-  
eral question of colonization either in  
this country or elsewhere, will give it  
special attention.

## Colored Colonization Proposed.

AN ARKANSAS MISSIONARY IN WASHINGTON  
—SECRET ORGANIZATION IN THE SOUTH  
TO SEPARATE THE RACES.

Mr. John W. Niles, a colored man, from  
Marion, Arkansas, was met by a STAR  
reporter this afternoon and questioned as  
to his mission to this city. He stated that he  
came here to solicit the aid and help of  
the colored and also the white citizens of this  
District in a movement that is going on in  
the south. He showed the reporter a letter  
of introduction to Mr. Fred. Douglass, Prof.  
Greener and Mr. Williams, of this city, from  
W. W. Winfield, chairman, and R. H. New-  
sum, secretary, of the Colored National In-  
demnity Association of Arkansas. He said  
the object of this association is to get the  
colored people separated from the whites in the  
south, and to the end that this may be effec-  
ted there are secret organizations all over the  
South. He complains in general terms about  
the oppression of the colored people in the  
south, and he particularly complained of the  
irregularity of the delivery of mails in that  
section.

He stated that because he is connected  
with this movement his letters are intercepted.  
He also said that he had been to see the As-  
sistant Postmaster General and made a state-  
ment to him, and he promised to have the  
matter investigated.—*Evening Star Aug. 27.*

The above is one of the absurd schemes  
for the relief of the real disabilities of the  
colored people. It reminds me of the horse  
that had two faults. He could not be caught,  
but if caught, was good for nothing. So this  
scheme is impracticable if it is right, and  
wrong if it were practicable.

Of the seven millions of colored people  
in this country there are a fraction of them  
in the North, living mainly in the cities, while  
the great majority occupy the best settled and  
the best fertile portions of the cotton growing  
states. The sparsely settled regions of the  
South have generally a poor soil and are oc-  
cupied by white people who, in the main, are  
never slaveholders, but who have quite as  
strongly as the ex-slaveholders the cruel race  
prejudice, which is the greatest barrier to  
the peace and prosperity of the country.

There is no region of arable land either in  
the southern states or in the territories that  
could afford a home for 5,000,000 or 3,000,000  
of people. There is neither means nor disposi-  
tion to purchase it if there were. 2d. A con-  
siderable percentage of the colored people in  
the South have comfortable houses and are  
reasonably prosperous, and their number is  
increasing; they have public schools and col-  
leges cheerfully supported by a common tax.

they have institutions for professional educa-  
tion sustained largely by Christian benevo-  
lence, and in a remarkable degree their young  
men are acquiring collegiate and profession-  
al knowledge. Moreover, as a result of this  
advancement in wealth, education, and morals,  
the crude, fastidious spirit is slowly but steadily  
bating. It would be madness in the colored man  
(if it were possible) to relinquish all these ad-  
vantages and to commence unaided to estab-  
lish a distinct civil society with corresponding  
civil, religious, and educational institutions.

3d. All attempts to isolate the races of men  
is a step backwards in civilization. The ten-  
dencies of the age are all the other way. Such  
attempts grow out of racial prejudice and tend  
to promote it. The good poet Whittier says  
that the white and colored American are in  
the Providence of God, ever marching on-  
ward abreast, what God has joined, no man  
can put asunder. All schemes of coloniza-  
tion or separation of the entire race, will be  
as futile and delusive in the future as in the  
past.

4th. Experience shows that isolation of the  
colored, or indeed any race, has not tended  
to its best and highest development. Friend-  
ly and intimate relations with those who have  
enjoyed superior advantages, is one of the  
best means of our own advancement. This is  
true of races as of individuals. There are many  
people in this nation to whom the Negro  
owes nothing. There are others, both North  
and South, who in his poverty and ignorance  
have extended a helping hand, and he can-  
not yet afford to discard it. Colonization in  
Africa has been a meager success. Hayti and  
San Domingo are no special honor to the race.  
But it is here, under our amended Constitu-  
tion, that we see the finest physical and men-  
tal development of the Negro, and that here  
are all the elements of ultimate and highest  
success. With mental and physical industry,  
patience, economy, and self respect, the tri-  
umph of absolute justice is certain.

5th. A secret organization to secure the sepa-  
ration of the races is a wrong method, even  
if the object were good. A great national  
movement concerns everyone, and everyone  
has a right to, and will know about it. Such  
a work cannot be done in a corner. The  
secret society business, besides being largely  
overdone, is wholly needless for the accom-  
plishment of any good object. Let it be  
shown that anything can be done to materi-  
ally benefit the colored people and many will  
open hearts and hands will respond. But if a  
great movement is left to the control of an  
irresponsible secret society few people of char-  
acter and means will be willing to support it.  
I make no insinuation when I say that such  
a society might be used for the basest of pur-  
poses. Irish secret societies have gathered vast  
sums from ignorant and unsuspecting serv-  
ants and girls whose hard earnings have been squan-  
dered on demons in human shape, men whose  
sole object was to commit crime against their  
countrymen who would not espouse their perni-  
cious schemes. I have no fears of a dynamic con-  
spiracy among those who are in this move-  
ment, but I do say that secrecy is needless, sus-  
picious, and wrong. I trust none of the ex-  
cellent men whose names are given will en-  
dorse it.

H. H. HINMAN.

## A Horseback Trip Through Gloucester Co., Va.

BY REV. H. B. FRISSELL.

Riding up to a school house in Gloucester  
Co., I met a young man with a paint brush  
in one hand and a pot in another. He was  
putting the finishing touches to a two story  
frame building, which had just received a  
coat of paint. I recognized him as a Hamp-  
ton graduate. After receiving the usual  
hearty welcome which Hampton graduates  
are accustomed to pay to any one connected  
with their old school home, I asked him  
some questions in regard to his painting, his  
school house and his school. He told me  
that the regular school session had closed a  
month before, but feeling that the scholars  
needed more than the trustees could well  
afford to give, he had continued his school a  
month longer than the time allowed by the  
board, believing that the parents of the child-  
ren would come to his help, which they had  
not failed to do. The school was to have  
its closing exercises on the following day  
and as he felt a pride in having the building  
look well, he had set to work to paint it. I  
asked him where he got his paint, and he  
told me that since leaving school he had  
been in correspondence with some of the  
northern friends, who had been interested  
in him while at Hampton. One of them  
had sent ten dollars for Christmas for the  
school. He had persuaded them to prac-  
tice self denial so far as to give up their  
Christmas presents and let the ten dollars  
go for the paint. I had before me the result,  
and he told me that it had been put up  
in a large part by the contributions of the  
colored people of the district. The school  
board had helped, outside friends had done  
something, but the most of the cost had  
been borne by the parents of the children

And so among the pine woods of Gloucester  
had arisen a two story school house with a  
fine large room on each floor, making a  
graded school possible. The earnest ef-  
forts of this teacher to raise money among  
the parents had had many good results. It  
had interested the colored people of that  
district in the subject of education. They  
had put money and labor into that  
school building and they wanted to get all  
they could out of it. So they kept their  
children at school longer than any other dis-  
trict in the county. The average attend-  
ance was much larger, and the average  
age much higher than in the other districts.  
The young man showed me his room in the  
upper part of the building where he taught  
the older classes. In the lower room he had  
an assistant, a graduate of a high school  
in one of the cities of the North, a sister of  
one of the graduates of Hampton. The  
County Superintendent had told me of the  
good work she had done in her school and  
I had reason to think in his judgment  
when I entered her room.

I commended the plan adopted in this dis-  
trict in Gloucester Co., to those Hampton  
graduates who do not find their school-  
rooms all that they might wish, and as the  
teacher of this school has been seeking help  
from friends in the North for a still further  
aid to this building, which really seems to  
be needed, I give his name, W. B. Weaver,  
Sassafras, Gloucester Co., Va.

Returning to the school on the following  
morning, I found the woods around the  
building filled with steer-carts and wagons.  
Little groups of gaily dressed colored men  
and women were chattering together under  
the trees. On entering the building I  
found it filled to overflowing with children  
and their parents and friends, three and four  
children trying to squeeze themselves on to  
a seat intended for two. In the front of the  
room stood the county Superintendent, an  
energetic Scotchman, who believes in public  
schools as thoroughly as he does in the West-  
minster Catechism. I had had experience of  
the man on a previous occasion. Calling for  
me at an early hour with his horse and bug-  
gy, he took me out to visit the county schools.  
After driving some fifteen miles and visiting  
several schools we drove up to a country store.  
The Superintendent jumped out of his wagon,  
peered again with two brown paper parcels,  
and on we rode. I soon discovered that no  
precious hour of that day was to be given to  
dinner. All the nourishment we were to  
have was to be taken as we rode along, or  
slyly munched between the questions put to  
the scholars in the school room, and was to  
come from the two special looking brown  
paper parcels. There evidently was to be no  
other food for our horse or for me that day,  
and the children in the schools seemed to un-  
derstand that they were likely to have no time  
to go to sleep during our visits. If the public  
schools of Gloucester Co. are not efficient it  
will be from no lack of energy or good earn-  
est work on the part of their county Super-  
intendent.

Having had this personal experience of the  
man, I felt some fear for the class in Geo-  
graphy which I saw on the floor of the

Weaver school house as I heard him hurl-  
ing his questions at them in quick succession.  
He wanted to know all sorts of things about  
latitude and longitude, Baffin's Bay and  
Cape Horn, the Gulf Stream and the Trade  
Winds. But they stood up well under the  
fire and came out of the ordeal in good shape.  
The next class was in Grammar, and we had  
this statement in bold characters in the  
hand writing of the Superintendent, "Some  
saucy sparrows stole my cherries from my  
garden fence." We found out what sparrows  
these were, what kind of reputation they  
bore, what they had to do with the cherries  
and what the relation of the birds and chep-  
perricks was to the garden fence. We went  
through nearly the same process with "some  
foolish persons," who "beg their daily bap-  
piness from door to door." After listening to  
a class in Arithmetic, we adjourned for dinner.  
I noticed that the building was surrounded  
with booths for the sale of lemonade and ice  
cream. I found that these were sold for the  
benefit of the Young People's Christian  
Association, which had been formed in that  
part of the county. They had monthly  
meetings and kept up organization similar  
to the one at Hampton. They worked in  
connection with the Baptist Church, had  
formed various committees for holding  
meetings in different places for Bible reading  
and the relief of the poor. The president, a  
former student at Hampton, told me that  
they had raised considerable money for this  
purpose, they had gone out and repaired the  
cabins of the old people and afforded con-  
siderable relief during the winter months.

After a hearty meal out under the trees,  
we were invited into the Baptist Church  
near by, and shown some articles, of needle  
work done by the children and exposed for  
sale in payment for the extra money need-  
ed. Soon after the children formed and  
marched into the church to the familar  
tune of "Babylon's falling, falling, falling."  
The gallery and floor of the church was filled  
with the parents and friends of the children.

who had come from all the country around to attend the anniversary. After a few opening remarks by the teacher, the school arose and sang a piece entitled "Be in time," which contained a valuable lesson on punctuality. In fact, all the pieces and songs of the afternoon contained good practical lessons and were well rendered. Here are the titles of some of them. Little by little. Speak the truth and have the blame. "Don't talk about all you see." Put your hands to the plough. Don't dream. How to act at table. Don't forget the old folks. There was a dialogue on the subject of temperance and another on the use of tobacco. After the students had had their chances, the friends of the school were called upon for speeches. All the exercises of the day were modeled after the Anniversary at Hampton. It was all good, it was all elevating and helpful and I came away I thought that I had found some explanation of the good things I had heard of the colored people of the country. There was no one in the jail. I was told that no colored man had been sent to the penitentiary for two years from the county. Stealing was almost unknown. The morals of the young people were improving. Parents were careful in the training of their children. There was little drinking. I saw no drunk man in the county. Two story houses were common among the colored people. Thrifty little farms were springing up in the woods. The relation between the whites and colored was pleasant.

This condition was brought about not only by the schools but by the churches. Both colored and white bore testimony to the good influence which the colored ministers of the county had exerted upon their people. I went to the homes of two of them and found them on farms of their own, in large part earning their own support, giving their people an illustration in their own lives of the sort of men and women they should be. Much has been said of late of the immoral character of the colored preachers and the utter divorce of religion and morality. I am glad to bear witness to the honest straightforward lives of the ministers I met in this county and the influence for good they have had upon their people.

#### CORRESPONDENCE.

ALBUQUERQUE INDIAN SCHOOL,  
Albuquerque, New Mexico,  
Sept. 9, 1883.

TO THE SOUTHERN WORKMAN.  
At the instance of the Indian Rights Association of Philadelphia, I am making a tour through Arizona, New Mexico, and the Indian Territory, with a view to ascertaining the leading facts as to the Indians in the Southwest, and soon shall complete the first two territories, expecting, in four days, to go to the latter, and get through about the first of October.

I passed a little over two days at the Navajo agency, which lies in the northern part of Arizona and New Mexico, a still unsurveyed reservation, containing about ten thousand square miles, chiefly a desert, without any rivers, supplied with water, to a very limited extent, by a few springs. The Navajos have had undisturbed occupancy of this region, spreading themselves with their flocks over about twenty-five thousand square miles, ranging fifty miles in every direction beyond their legal limits, which never have been drawn, from time immemorial, excepting for a period of two years, in 1865 and 1867, when after a crushing defeat by the United States troops they were exiled in Texas.

Fifteen years ago the reservation was assigned them, then nine thousand in number, they now number seventeen thousand.

They are the richest Indians in the country, owning on an average over \$100 worth of property apiece; they are the Jews of their race, keen as the cutest Yankee at a bargain. They own about \$25,000 worth of coral ornaments which they have bought of travelers.

They have skillful silversmiths making a variety of rather tasteful ornaments, into which their silver is most cleverly converted and worn on their person; they do not care for gold; they make their own coin, which is strung together.

They own twenty-six thousand ponies, and a million sheep, of poor kind, and subsist chiefly on mutton, buying flour, sugar and coffee from traders, and raising wherever they can, a little corn to help out in summer.

They are willing to work, and have a good eye to the main chance.

They are a powerful race, the best of Indian fighters, all are armed and splendidly mounted.

They can put four thousand warriors in the field.

The young bucks are eager for military glory, but the old men remember their defeat years ago, and so far have kept the more ambitious braves quiet.

Immigration from Colorado and Utah on the north, from California and Nevada on the west, and from New Mexico and Arizona

on the south is pressing this scattered people back upon their legal limits, which are too barren to support them, but the white man must have at least all that is not reserved for the red man, and under the pressure now going on there he has no trouble; it is said to be quietly brewing.

The condition of the agency after fifteen years of government control, is disgraceful.

There is one fine but incomplete stone school building, three stories in height, costing \$50,000, but the rest of the buildings are wretched adobe huts, of one story, with flat mud roofs, condemned twelve years ago as unfit for use.

Here the Agent lives, stores his goods, and transacts his business. In mid-winter his children were tied up in chairs to keep them from the muddy floor, where water stood in pools, and in warm weather snakes crawled out from holes in the walls of his house. I saw streams of mud trickling from above on government stores such as flour and cloth.

Maj. Ritorian is a "new broom" and no doubt will soon improve things, but it will take time; he is too far from Washington for his condition to be realized, and, indeed, resigned not long ago, in disgust. But Secretary Teller seems for him and his friends to hold on awhile. He has an excellent reputation in this region, commands the confidence of the authorities, and no doubt will, ere long, create a better condition of things. The school will be completed and opened with about one hundred children, and the Indians will be looked after, their water resources developed, their stock improved, and the "timpanic crisis," if possible, averted.

Secretary Teller intends to send them several hundred blooded rams. It is impossible to describe the wild, strange appearance of this mountainous region; both the mountains and the valleys are unlike anything in the East. They strike hold, original attitudes, stand up in a savage nakedness, like that of the denizens of this remote country, with a faint coloring of scenery, that make one long for the richly covered deep blue mountains of what they call out here "God's country."

There are low valleys, then mesas or table lands that rise with steep rugged sides to perfect levels, which stretch for miles away.

We lunched at a spring near the "haystacks," huge boulders, sixty or seventy feet in height, and fifty named.

Life is not sad; birds do not sing or fly; there is a solemn stillness. Creation's work does not seem complete; everything is in the doubt; one longs for the music that is not in this air.

I rode out one afternoon and saw a Navajo man weaving a broad scarf, sitting in a dirty, wretched "hogan" or hut, built of brushwood, a summer residence. Here they weave by infinite labor, the famous Navajo blankets, that are worth sometimes \$50 apiece.

With good guidance, such as the present agent is the man to give, with good schools and direction in their work affairs, the Navajos may become a wealth producing people in the Southwest. But far more must be done than has been. All these South-western people are feeling more and more the upper and nether millstones of civilization, and they will not stand everything.

Prof. Thompson, Col. Stevenson, and several other scientists from the "Smithsonian" institution at Washington, have a pleasant camp near the agency, carrying on their survey and researches. These gentlemen have long and carefully observed the Navajos, been all over the reservation, and spoke with enthusiasm and hopefulness of these Indians as most capable of improvement; as docile, yet capable, brainy, and, with their intelligence, wealth and good dispositions, affording a basis of civilization to be found in no other tribe.

Returning to the Atlantic and Pacific Railroad, thirty-five miles away, I rode all day to Ash Forks, where the stage takes me fifty-five miles to Prescott, the capital of the Territory. A mile away is Fort Whipple, General Crook's headquarters.

Most of the railroad ride was through the same wild, desolate country. Late in the afternoon we entered a lovely region as I ever saw; it was like enchanted land, after the desolate hills. Magnificent forest-covered mountains towered into the air on either side, while we dashed through the level green valleys, that lay between; it looked like a grand park with great level or sloping lawns, dotted with clumps of trees, cattle browsing everywhere, while the forest skirted the valleys, or pushed out in a picturesque way upon the plain.

It was Nature's compensation for the drabness of the rest of it. I never was more fascinated. The track lay through Johnson's canon, a bold piece of engineering, affording striking views in every direction as we shot around the curved track cut into the side of the great gorge.

The all-night ride in the stage to Prescott is to me memorable. The road was rather level but full of stones, over which we jolted seven mortal hours before reaching smooth-

ness. We were rattled all over the stage unmercifully, cruelly, till there was pain in every joint and muscle.

Prescott is a pleasant town with some pretty residences; my chief interest was to see Gen. Crook, who kindly made me his guest at Fort Whipple, which is beautifully situated on high ground in the centre of surrounding mountains of great variety of striking forms. The first sunset I witnessed was magnificent; I have seen several of marvelous color and glory in this strange country.

Gen. Crook said much about his experience with Indians. He is a good a thinker as he is a fighter. His face is full of kindness and strength too; his eyes show that he will not kill if he can help it; his mouth means determination; his humor is ever appearing, making his conversation most pleasant and interesting. He has, I think, unusual insight into men; he has read the Indians as few men have done, and discusses the subject differently from any man I ever met.

He studies his subject, makes his conclusions, stakes himself on their soundness; hence his mode of warfare.

Fighting Indians with Indians is his idea. He hunted the Sioux war in the North by arraying their own people against them, and ever since the Sioux have been quiet. Sitting Bull's retreat to Canada was only delaying till starvation should bring him back as a meek subject to his power.

He fought Apaches with Apaches; even relative against relative, success being based chiefly on their personal enmities; they believe in his peculiar power; they trust him implicitly, for he never failed them, and he is careful of his promises.

When he grows well, gives them light flank duty at first; a fair chance at any "loot" that is to be had, letting soldiers do the heavy work. In two years the Indians will do it all and soldiers will not be needed. He had fought two regular and two hundred Indian cavalry on his last campaign. He makes it their interest to be true to him; treats them fairly and kindly, and trusts to a certain sense of fidelity besides.

When Indians had inferior weapons, twenty soldiers could whip one hundred Indians; now, armed as they are with breach loaders, there must be more soldiers than Indians. It is like Greek and Roman. Behind a low rock the perfectly concealed Indian can shoot ten times in a few moments; and do terrible work; you seldom see him when he moves. He dashes, he zigzags, and there is no chance to get a shot. Only a puff of smoke reveals his position.

Getting the breach loaders has revolutionized Indian warfare, and the Indians know their advantage. They can get all the rifles and cartridges they want, though at heavy cost; they will give a dollar a piece for cartridges; they are not as good marksmen as soldiers, for they cannot stand to practice at a target, and are nervous under fire.

I visited at San Carlos the three hundred and twenty-four captives brought from Mexico; there were about thirty-five in all; the rest were women and children, in keeping with the custom: one hundred and twenty-four were children under ten years of age, many of them orphans. Gen. Crook trusted to his personal sense of justice, and when he had captured their camp with the women and children, came at his invitation into camp to talk over things; they, tired of years of ceaseless warfare and of exhausting alertness, agreed to come, later, back to their old home under promise of protection and food.

They have not come yet, and many predict that they will not come, and declare that they never intended to. Time will show the precise results of the campaign.

The Apaches are proud of their brethren who have for years, without a single defeat, fought two nations. Overwhelming defeat is the best lesson for warlike Indians; it has made many tribes peaceful. Not principle but bitter memories have kept the powerful Navajos so long quiet. The Apaches are mountaineers, and have the traits that belong to that life. The wilder the Indian the less their blood and bodies are tainted with white men's diseases. The tamed ones come in short range of whiskey which is keeping their chief cruel. The mental quickness and rigor of the Apaches is remarkable; they have a high order of capacity for improvement. The way out of the Apache troubles does not yet seem quite clear, but Gen. Crook has them in hand, which is the best possible thing.

I rode in a stage one hundred and forty-six miles from Fort Whipple to the Pima Agency, traveling night and day, over a very rough mountainous country, almost banded to pieces in the unstable vehicle. A pleasant surprise was stopping an hour or two at Phoenix, a thriving town upon the Salt River, where about a million acres of land have been made productive by irrigation. The village has a luxuriant look with its rich verdant, great clumps of foliage, and abundant growing trees. There is great variety of vegetation; a pomegranate tree laden with luscious large fruit charmed my eye. Irriga-

tion creates a marvelous contrast in this desert country; the greenness has a peculiar richness; the whole effect is like that of magic.

The Pima and Maricopa reservation where I spent a day, is the home of twelve of our desert Indians; it was interesting to see their old homes and friends. But what would they live in! Their brush, mud covered huts are called "Keys."

The thirteen thousand widely scattered Indians under the care of Dr. Jackson, Agent in charge, are self supporting, ready to work at any job, and only need plenty of wise direction, better utensils and good schools to get into very good condition. Agent Jackson, like all the Agents I have met out here, appears to be an able, energetic, competent man. I am surprised to find so many good men in this field; all are newly appointed, within a year, and do credit to the Secretary of the Interior.

Much may be expected of them if properly sustained. Things look more hopeful than I had expected to find; in Mexico and Arizona thirty-nine thousand five hundred and eighty-five Indians are wholly self-supporting, cultivating the bottom lands of the Salt, Gila, and other rivers, or living as herdsmen in south-western Arizona; five thousand seven hundred and fifty depend entirely on government; one thousand and twenty-six receive one-third of their support. This is a far better state of things than in the Northwest where the great Sioux nations of twenty-five thousand and many others are being spoiled by complete dependence on government bounty. The problem here is simple.

These south-western Indians need and deserve more attention. Sustain the Agents, give them the help to get these industrious people from plowing with sticks, many do, to using plows and other utensils which they will play for, and to fight whiskey men, build industrial schools everywhere and except the few of the five hundred Apaches, no more trouble and much good result may be expected.

S. C. A.

#### Horsford's Acid Phosphate

DR. C. C. OLMSFELD, Milwaukee, Wis., says: "I have used it in my practice ten years and consider it a valuable nerve tonic."

Send 25 cents for a copy of "VISITOR'S HEALTH BOOK OR OLD FATHER COMFORT AND VICINITY," containing a history and description of the following places and institutions: Old Point Comfort; Fort Monroe; National Soldiers' Home; National Cemetery; Hampton Normal and Agricultural Institute; Town of Hampton; Newport News; with reliable information how to reach Old Point from all sections of the country; illustrated. Each copy 25 cents. Stamps taken. Address, C. W. BETTS, Box 10, Hampton, Va.

#### Horsford's Acid Phosphate

Beware of Imitations! Imitations and counterfeits have again appeared. Be sure that the word "HORSFORD'S" is on the wrapper. None are genuine without it.

#### Frank Leslie's Popular Monthly.

For today, it is even more brilliant than when it was first published. It is a repository of information, interest and entertainment. Mr. Kimball's contribution is a very interesting history of "The Bank of the United States" and a most interesting article on "Circus and the Circusmen." J. E. Tanner on "The Manufacture and Uses of Leather," each profusely illustrated. The "Pueblo Indians of New Mexico," is another admirable article. In the department of fiction are a continuation of the serial, "True to Untruth," short stories by K. V. Hastings, Millie W. Carpenter, Janet E. R. Reed, Mary R. Hichman, etc. There are interesting descriptions, thrilling adventures, poems of great merit—soberly but suitably illustrated, and an abundant miscellany. There are 128 quarto pages, over 100 illustrations, and a handsome colored frontispiece, "Hooneyed Words." Only 25 cents a number, or \$3 a year, postpaid. Mrs. FRANK LESLIE, Publisher, 65, 55, and 57 Park Place, New York.

#### Horsford's Acid Phosphate.

Drank With Soda Water. It is delicious. All druggists have it. It is refreshing and cooling. Try it often!

#### Consumption Cured.

An old physician, retired from practice, having had placed in his hands by an East India missionary the formula of a simple vegetable remedy for the speedy and permanent cure of Consumption, Catarrh, Bronchitis, and all throat and Lung Affections, also a positive and radical cure for Nervous Debility and all Nervous Complaints, after having tested its wonderful cures, the power in countless cases, has felt it his duty to make it known to his suffering fellow men. Actuated by this motive and a desire to relieve human suffering, I will send free of charge, to all who desire it, this recipe, in German, French, or English, with full directions for preparing and using. Post by mail by addressing with stamp, naming this paper, W. A. HENRY, 140 Foster's Street, Rochester, N. Y.

## Incidents of Indian Life at Hampton.

When the regular school term is ended, for the sake of improvement in health, and the benefit received by being left on one's own mettle among strangers, many of the Indian students are sent to the hills of Massachusetts to spend their vacation—the boys working on farms. This year there were twenty-one boys to go North, and some who went home. The rest are here.

Last year the boys who remained here, took turns in going to the Hemmeway Farm—one-third going in each squad to stay three weeks. This year, owing to the amount of work to be done in the shops and some disadvantages in the system of sending them to the farm, the old plan has been put aside. All the boys here this year are working at their trades.

The government orders for tinware, harness, &c., are much larger than they were last year; and the labor of the Indian boys is largely depended upon for the filling of these orders. I believe many of them take pride in their work because they are making shoes, coffee-pots, &c., for their own people.

Owing to the previous condition of the Indians here, they are unlike the colored boys, who have inherited the ability to stand hard labor and heat from early morning till night. In our opinion, it is not yet best for our Indians (as a whole) to work on the farm or in the shops all day. Therefore they stay at their regular work only eight hours per day. This leaves two hours that might be used otherwise.

We know that boys who have the privilege of being idle do not stay long out of mischief, so there is school in the middle of the day to keep them engaged. The main study in the school is *drawing*, to which the Indians seem very partial. Whenever the boys get into a recreation room out of school hours, they seldom fail to fill the boards with pictures. If you should see, on entering a vacant school-room, a half dozen of the pictures on the black-board, you would very likely find that two of them were pictures of buffaloes and three of mounted officers of the army. The eyes of the visitors are often attracted by the representation of Indian warriors and buffalo-hunters—painted by the boys, and hanging about their rooms. There is no reason why the drawing of the students who have attended our school should be limited any longer to buffaloes.

The exercises on Sunday are substantially the same as in term time. All attending afternoon services in Bethesda Chapel. In the morning a little party goes to the Episcopal Church in Hampton while others attend Sabbath school with the colored students. It is really interesting to have a class of these boys in Sabbath school. As in other classes, owing to their being timid about using English they do not ask many questions. But they are generally very attentive, and seem to be much interested in the lessons, while their answers are in many cases suggestive of their life in the West.

G. W. B.

## VACATION IN "WINONA".

The restraints of school having been removed by the general roll call on the 13th of June, a number of our largest Indian girls left to spend their vacation to work in Massachusetts leaving Hampton at Hampton.

The work for vacation was arranged in order to keep the girls busy, giving each a certain part of the building to take care of in the morning, besides her own room. At nine o'clock the house is ready for inspection, and the girls report at the ringing of the bell to the sewing-room, where they are kept busy till dinner time. The girls took hold of this work very willingly, feeling the responsibility of keeping one's own house clean. I don't think there could have been anything better done for Indian girls than giving them the house of their own to live in and keep clean. The girls being small, of course the work had to be cut up in little pieces; one girl would sweep a corridor every day; when scrub day came two girls would scrub it. Our large hall that used to be scrubbed by eight large girls during the term, is now very nicely scrubbed by fourteen little girls. They like the idea of doing the same work that big girls used to do, and pride themselves on doing it a great deal better. Sometimes a broom is left in the hall, a room left out of order, a dust pan left on the floor, an apron left in the banister, the corridor left unscrubbed because "I forgot it," but one expects all of this from little girls that think of playing more than anything else. They never complain of scrubbing, although they have to do every week; they seem to think it is all right, because it is necessary to keep Winona clean.

In the afternoon their time is occupied with three hours in school, drawing, which they like very much indeed. After school they play till supper; this is the only time one feels anxious about them, because they haven't anything to do and are sure to get into mischief. There isn't much amuse-

ment for them except a see-saw and a bath house, so they often wander towards the orchard, especially during the time of green peaches and pears.

The evenings are wailed away in Va. Hall most of the time, sometimes they have a dance to the song of "Rain little bit and snow little bit," I aint going to rain no more. The girls speak in their own tongue a great deal to each other, but I overheard a conversation by little Susie Nagle to Sarah Walker, her room-mate, not long ago, given in English. It was something about home, so I'll quote it as it was given. "My mother bad two children, my brother and me. My brother she go away to school, very long time, I cry; my mother say I cry she send me to Hampton. I bush, now I glad I come to Hampton. I wish she come to Hampton, he big now. When I go home I work, scrub, wash, sweep. Mr. Hall, he give me some work to do. One time he come to Mr. Hall, she talk Indian to me. Her wife dead, she got three little children. At Mr. Hall's house, in afternoon we sew. My little half brother, one time big now, he fall off in snow when he try to pull him in wagon." Just here Susie stopped talking to go to look after a little bird, which had been given her by one of the boys; she had put it very carefully in a little basket and covered it over very snugly, saying all the time, "Poor little thing, he got so sleepy now, he afraid to sleep out doors."

After the evening fun is over, we have another roll call, sing a hymn, say the Lord's prayer, and then go to bed.

In the latter part of August, our number was broken for the first time among the girls, by death. While the time was passing so pleasantly away, our heavenly Father saw fit in His mercy, to gather one of the lambs with His arms, and carry her in His bosom to the beautiful home of the soul. She was buried from Winona, which took away the sunshine for a while, but we have it back now.

We are looking out from the veranda now for the return of our Principals, with their big girls, refreshed by their vacation, ready to master work and studies. A more pleasant vacation never was spent at old Hampton. G. W.

## Correspondence.

Lansing, Michigan, August 13th, 1883.

## EDITOR OF WORKMAN:

Overcame an acute attack of laziness and arose at 4 A. M. to-day in time to take the east bound train from Marshall to Jackson, Michigan. The State Prison is located here, but I am not old enough and I trust not wicked enough to merit admission to that Institution. No, I came on up here seeking admission to the Reform School and they allowed me to enter about 9 A. M. The grounds are ample and very handsomely laid out, the buildings appear from the outside to be built somewhat after the plan of those belonging to moderately wealthy people. Nothing indicative of jail or prison is to be seen, windows, doors, gates open and barless. A maximum of moral suasion obtains and comfortable food, clothing, rooms, general cleanliness, half-day work and half-day study, Saturday afternoon holiday, and evening amusements, operate together to make the boys contented and anxious to make good records. Corporal punishment is seldom resorted to and run-aways are of very infrequent occurrence.

The school has a plant of about \$200,000 in buildings, grounds, stock, &c., and costs the state about \$45,000.00 per annum for running expenses. The farm of about three hundred acres affords training for the boys and besides being an ornamental appendage, is a source of income, providing the school with vegetables, &c. Boys varying in age from ten to sixteen, are sent to this school by justices of the peace from all parts of the state, and the law allows them to remain till eighteen. The Board of Control have the power to release an inmate at any time on account of good conduct, and, as a matter of fact, few boys remain at the school till they are eighteen years old, and a large percentage of the present inmates are under fourteen years of age. This system has the disadvantage of rendering impossible the adoption of a regular course of training either in shops or in school-rooms. Boys work, while at school, on the farm, as janitors, in the laundry, dining-room, kitchen, at shoemaking, tailoring and chair-caning. This last industry employed in 1881—82, 256 out of the 361 inmates, and is of no practical value to the boys after leaving the school, though it is highly important as a means of keeping them busy and healthy and brings in an annual income of about \$5,000.00 and above expenses incurred in purchase of material, &c. Think it might be introduced at Hampton to aid girls in paying their way through school.

I was informed by officials of the Reform School that efforts had been made to change the plan of conducting the school so as to admit of thorough industrial training. So change should be made, for the school has

wonderful advantages for the successful execution of such a work and would be enabled to increase its present usefulness a thousand fold. I was particularly struck with the admirable plan adopted in the construction of cottage dormitories. These structures are of brick, three stories and double, having a capacity for one hundred boys and two teachers. The basement, which is mainly above ground, is devoted to bathing purposes, basins of concrete, about ten feet long, three feet wide and one and half deep, have running over them, at a height of about four and a half feet, three two inch water pipes, perforated on the under side with small equidistant holes. By opening a valve at one end of the pipes, the water flows out of the holes into the basin below and is carried off by waste pipes. This plan is neat and insures bathing in clear, clean water, and goes far toward preventing the spread of contagious diseases. Boys form in front of bath-rooms and march to meals, under supervision of teachers in charge of cottages. The second story or first story over bath rooms is devoted to recitation rooms, and the remaining two stories to dormitories. Teachers and assistants have rooms opening into the dormitories. Everything is kept scrupulously neat and thoroughly ventilated. The library and chapel are well adapted to the needs of the school. All the teachers have classes in the Sunday School and are enthusiastically engaged in their work. Through these boys taken from the criminal class, the record of the majority of those who have gone out from the school is highly encouraging, many having become very useful citizens. Many who have left the school find the struggle outside too hard and beg to be taken back. I am informed that it is the practice in such cases to take them back till homes or employment can be found for them, and that it is a thoroughgoing policy to turn out of boys who have served out part of their term. I noticed a number of Indian and colored boys at work in the shops and about the grounds, so I infer that the privileges of the institution are free to all races. Fire precautions are not sufficient and sewerage arrangements are faulty, there is much low land over the farm that should be drained and filled up. The grounds are beautifully laid out and there is much commendable care exercised in keeping buildings clean; boys are neat, orderly and the atmosphere over their comrades in the city streets and country by-ways, and the moral atmosphere that pervades the institution cannot fail to rebound to improvement and reform of the boys and fully repay the state for her benevolent munificence in erecting this home for youthful criminals.

Yours faithfully,

GEO. LEBOV BROWN.

Lansing, Michigan, August 13th, 1883.

## EDITOR OF WORKMAN.

After dinner I visited two or three of the inmates and having found a saddle horse, highly recommended of prepossessing appearance, I determined to ride out to the State Agricultural College, which is located on the banks of Cedar River about three miles east of Lansing. I was extremely fortunate in finding President Abbot at home and in one of his most kindly and courteous moods and I am indebted to him for a very pleasant and profitable afternoon spent in inspecting the buildings and grounds and discussing the features and methods of the College. The grounds are beautifully laid out, grand old oaks and elms stand about the place in all their pristine glory, extensive green house with best appliances and fine collection of plants and flowers, flower garden and lawn, botanic garden, sample grounds for timber trees, beds of fruit trees, arboretum, small fruit garden and the vine clad, prettily modeled brick residences of the professors, with the library and academic buildings scattered about the grounds, all impress the visitor favorably. The College has by far the handsomest grounds I have ever seen. The College farm consists of 676 acres, ten acres being devoted to experiments, one hundred and eighty and ten to woodland pasture. All students work three hours a day during the nine months of the school year. They are paid for labor at a rate not exceeding 8 cts. per hour. Much difficulty has been experienced in working out the problem of properly and profitably (a possible) utilizing student laborers to insure a maximum of useful instruction to the student and as large a return to the College as practicable. No system of management appears to have been as yet crystallized, but the advisability of introducing instruction in the various trades has been taken into serious consideration. As a large percentage of the students work their way through College, it would appear to be wise to widen as much as possible the facilities for acquiring such knowledge as will enable them to earn maximum wages during vacation, without being required to keep up a mental strain, as when the avocation of teaching is sought. Vacation of three months in the

winter was adopted, I am told, early in the history of the College in order to favor students who were working their way through, as at that time schools could be obtained and a large percentage of the students taught in primary or district schools during vacation. Annual expenses of students, apart from clothing and traveling, is estimated at about one hundred and seventy five dollars. This is the first school of its kind established in the United States and well merits its hard earned reputation for thoroughness and practical usefulness. English, application of sciences to every day life, obedience and good morals ought to be taught in public or free schools. The ornamental and polishing branches of the high-schools and colleges pertain to private institutions not dependent upon state or governmental aid. During the afternoon a concourse of ladies and gentlemen assembled on the campus near the conservatory to witness the presentation to the College of a cadet-band by the Senior Class. The good President led the way and as we approached the cadet-band began to play. The band was uniformed, presented a fine appearance and their performance was very creditable. The spokesman of the class delivered a neat and appropriate address, setting forth the sincerity of the affection and gratitude the class felt toward the College and hoping that their example might be followed by each succeeding class, until the grounds be adorned on every hand by beautiful mementoes of the graduates' appreciation of the benefits received at the hands of Alma Mater. Doctor Kedzie, Professor of chemistry, thanked the class for their beautiful gift and expressed the hope that their useful life would prove an immortal monument to their Alma Mater. Referring to the fact that the class of 1873 had moved a mighty boulder, forming the site of the College farm, piled it upon the campus and presented it to the College as a memento of their prowess and gratitude, the good Doctor discoursed on its probable history and travels by land and water till his giant ark of ice stranded on the College farm and did not come ashore by going to the bottom, thus gathering to itself the honor of being the first freshman to enter the Agricultural College. Though a hard-head and hard hearted it had plenty of sand in its get up and would stand by the College till the end of time. At the close of the addresses and while the band was regaling the good people with martial strains, we wandered through the green-house, fernery and botanical garden, all of which were well arranged for practical study, as well as beauty and adornment. A large percentage of the graduates become farmers and it is largely through their example and influence that improved methods in farming have been generally adopted throughout the state. Of the class of 1873, thirteen will go to the farm, the others will enter life as follows: one journalist, one merchant, three teachers, one professor of agriculture, two physicians, two civil engineers, one lumberman, one entomologist and one clerk. Sixteen are in favor of protection and fourteen are free-traders. Does that mean anything politically? Labor, living, liberty and capital are the leading factors in this problem and its solution is probably more dependent upon the development of the country, maturity of growth and consequent cheapening of the necessities of life, with the equalization of the value of the potent dollar all over the land. Mr. Howe would have been specially pleased with the fine exhibit of farm, barn, stable and "Piggery," without which no agricultural school would be considered a success, and I am inclined to think he would approve of them all. Fire precautions and sanitary rules obtained everywhere; but the former were not, in our judgment, adequate to the needs of the institution. Money is well invested, when expended in water works commensurate with the value and importance of buildings exposed to fire-risks, and when human life is in jeopardy, economy or rather parsimony in the expenditure of money, for ample water supply is criminal on part of individual or state. Proper drainage, fire precautions and disposal of disease-generating refuse in such manner as to reduce human suffering and discomfort to a minimum should be features of their importance in the management of every public institution to the end that the same be taught the people by example as well as precept. The maintenance of discipline and order is somewhat delegated to Captains and Lieutenants of the semi-military organizations. The law requires and the faculty desire military instruction, but the matter has not yet crystallized into good form. Tuition and lodging is free and living expenses of students are reduced to a minimum rate by the system of paying students for labor which is really of great practical value to them in after life.

With best wishes, yours sincerely,

GEO. LEBOV BROWN.

U. S. A. Com'dt.

## Horsford's Acid Phosphate.

Excellent Results.

Dr. J. L. WILLIS, Eliot, Me., says: "Horsford's Acid Phosphate gives most excellent results."

### The Missionary Sugar Planter of the Hawaiian Islands.

BY EDWARD BAILEY.

Many have wondered why sugar making could not be carried on in a small way, so each small farmer could raise his own cane and manufacture the sugar. The reason is that a stick of sugar cane is of a size and substance that requires a very heavy pressure to crush it. The expense of machinery to make the requisite pressure is so great that it can only be repaired by doing a very large amount of the business, and the boiling apparatus must be commensurate therewith.

It took men a long time to find this. Machinery was constantly breaking till it had arrived at a strength to withstand the enormous strain requisite; and even now a breakage of the ponderous machinery is not uncommon. There is a limit to the strength, even of iron, and this limit is not far from what is required for the strength of sugar mills.

Mr. M. planned his own sugar making establishment; and while he was operating was carried on by his sons, he went to San Francisco and superintended the making of his machinery. This saved an outlay and insured satisfactory work. The usual wages of six dollars per day was paid to a competent machinist to set it up, and he proved a good, faithful workman. The cane was ready grown as soon as the mill was ready to grind it. A kind of cane had been found which would not tassel, but would continue to grow year after year, and might be ground at any time of the year. It grew a very heavy crop on the ground, but it was not profitable to grind it as soon as some other kinds—thus consuming time while the money was accruing compound interest. Mr. M. felt no disposition to hasten the wheels of time, while compound interest kept turning them.

And now came the testing of the works—always a critical time. But with a few small exceptions, where the attempt to economize had been carried too far, every thing worked well.

Experience had taught its lessons well so far; now this severe school-master was about to give a higher course. The sugar "paved out" well, as miners say, and was of a very fair grade. All the boiling was done by steam—ultimately an attempt to use the sorghum pan, so called, being soon abandoned. Economy of working had been studied in all points.

Just about this time, and before any of the sugar from this mill had gone into the market, the refineries of San Francisco commenced to work against the Sandwich Island sugar interest; a thing they have continued to do till the present time. There is really no ground for antagonism between the two.

But the attempt to monopolize the Pacific islands was the ultimate sufferer. It is true, but the planters suffered to that degree that cane planting became unprofitable, and had not the United States Gov't agreed to the treaty of reciprocity, it would have been abandoned. The refineries having spent so much money in securing a monopoly were bound to reimburse themselves in the use of it. All the smaller operations of plantation life were met, of course, and we have seen that they are not few. And there were some of larger size. A native man employed in the boiling house was caught in the act of discharging a few hundred gallons of concentrated juice out among the common slops in order to finish his day's work half an hour sooner. How long he had practiced this wholesale robbery no one knew, and it was impossible to bring proof against him. All that could be done was to "fire him out" of the boiling house about eight inches ahead of a boot heel. He did not call round for his pay, and was not seen again. Probably he has been taken to the legislature. This was not a solitary instance of the kind. Facilities of working were turned into facilities of mischief. And I should say here that the natives of the Sandwich Islands are as ready as another people to take any mean advantage to revenge a fancied injury. Their revenge is usually out of all proportion to the injury. Their favorite way is setting fire to trash houses full of dry trash; to mill buildings and to cane fields. Many hundred thousand dollars have been thus sacrificed—more probably by far than by all the accidental fires yet experienced. Even if the incendiaries are caught a few years of imprisonment is all the penalty.

But Mr. M. was spared this infliction. The effort on his plantation was to do justice by all, and no reasonable man had any fault to find. As far as possible natives were employed on the plantation, and for a time there was no difficulty in obtaining a sufficient number. With the best of Mr. M. really treated them better than they were treated elsewhere.

But to return a little; about this time the United States Government, set on by the refineries, imposed a duty on raw sugar

which seriously diminished the profits of the plantation. The tariff was graded by the color, and was two and a half cents, more or less, to the pound. When the profits of sugar making were scarcely five cents, this was hard. But it must be submitted. However, it seriously crippled new plantations which were in debt, and stopped at the outset some which would have been attempted.

Now the refineries stepped in to revel in their booty. They would take the entire crop of the islands at a certain figure, but they would not receive it at the mill. It must be shipped by the planter, who paid freight and insurance to Honolulu, cartage, storage, cooorage and loss there; another freight and insurance to San Francisco, and a variety of other expenses there accruing till the sale of the sugar in a market already manipulated by the refineries. This, unless it was sold to the refineries to be delivered in San Francisco. In that case the plantations were not dependent on the market. To this it must be added that the mediums of communication with the San Francisco market appear to have been tampered with, making it as nearly impossible as could be for other parties to ship sugar there and sell it. It was said that a very substantial bribe was necessary to induce Custom house officials to enter sugar at all for other parties than those who sold to the refineries. Other things of the like kind appear to have been in vogue at Honolulu, and the passage between the two places.

In purchasing the sugars of the plantations the refineries required an analysis; and they paid more or less for the amount of saccharine matter found in the sugar by the pretended analysis. Mr. M. submitted to this for one year. But his opinion of two things was a fraud bidding for bribes, and his opinion is not changed now after the thing has passed away. To test the took a mess of sugar and mixed it many times over to insure perfect uniformity, then divided it into two parcels which he numbered and sent to the analyzer for test. After the usual time an answer came. No. 1 differed by several degrees from No. 2. This experiment was repeated till Mr. M. was thoroughly satisfied that the whole thing was a humbug, and that honest sugar would not analyze so high as a much inferior sugar made by dishonest means. He therefore refused to sell longer by analysis. The cost of analysis was paid by the planters.

An experiment was made about this time to concentrate the sugar instead of grading it. This would form the concentrated juice into a solid mass which retained the molasses and whatever accidental ingredients might be present. The Manila sugars—always played off by the refineries against the Sandwich Island sugars, were purchased in this way at a very low figure, and we foresaw, must sell as low or lose our only market. But it did not work. We could not concentrate our sugars so as to retain the molasses. But one of the planters who visited the largest San Francisco refinery saw two teams constantly employed in carting away the sugar which had been separated from the Manila sugars. Sund is plenty in the Hawaiian Islands, but we had not thought to sell it. It might have helped to retain the molasses!

But notwithstanding all difficulties, the account sales made by the agents in San Francisco and copied by the agents in Honolulu with various emendations to include their own accounts, began to come in—but no money. O no! The sales had been made at 60 days notice with how many days of grace goodness knows. Well, the 60 and more days passed and the credits came at last.

But in them was a mysterious item of 1/2 or 2 pr. ct. for exchange; or in other words for remittance of this money from San Francisco to Honolulu! Not one cent of that money had been transmitted from San Francisco to Honolulu, but Balance and Co. had used it in San Francisco to pay for their own goods, and thus saved themselves another 1/4 or 2 pr. ct.—in all 3 or 4 pr. ct. at times 5 or 6 pr. ct. as the rate happened to be. The whole of which justice would have required them to put to the credit of the plantation, but which they actually charged to him. They supposed Mr. M. would not scent the fraud. "Blessed be whose iniquities are covered." Remonstrance was of no avail. They knew they had the reins in their own hands. But they did not always keep them.

Note here that all losses by "accident," or carelessness was set down to account of plantation; agents were not responsible. And losses of that kind were not infrequent nor footed up a small item.

From the time when Mr. M. commenced his plantation there was a steady rise in the price of labor, and labor was more and more scarce. This raised a competition among the planters some of whom were mean enough to try and get away the laborers on other plantations by offering larger wages. To keep them, their wages must be raised, and they were thus raised till now they were more than double what they were at first. And, having the staff in their own hands they

became more and more difficult to manage and performed less work and of a poorer quality as years moved on. Consequent on this rise laborers became more scarce. The native, at such high wages can supply his wants by working only a part of the time and has little disposition to accumulate. The Chinaman very soon acquires enough to set up a laundry, or a dry goods store, or to buy a few bottles of bar whiskey which he will sell on the sly at a great profit; and the country has become filled with these pestiferous vagrants instead of useful laborers.

If justice could be bought and sold by wholesale why not by retail as well, and it is more than probable that the whole police force had a full understanding in all this business. At any rate convictions were exceeding rare, though it was well known that the police knew all about it.

If a Chinaman accumulated enough to pay his fine of \$500, he stood some chance of being caught. It would pay. But as a general thing they took care to conceal or send away their money.

Another dodge of the Chinaman should here be noticed. The runaway Chinaman could not be identified. They are cannish; they change their names; and to an unpracticed eye they are alike. They wander all over the country, putting into any kind of a shanty to live. It therefore became very risky to advance wages to a Chinaman. Some plantations will only employ them by the day, giving no advance.

And now, as if all other difficulties in the way of Mr. M. were too little, his water rights were invaded. The agent on the plantation on which he had last been employed entered suit against him with a purpose no less than to deprive him of his water. Without water the growth of cane could be grown, and land was comparatively worthless. Mr. M. had purchased his land with all the rights thereunto, and was water for irrigation. Water obligations were the only laws known from ancient times, and the system of irrigation was well understood and rigidly maintained. Any interference with it was like striking at the life of the man. The kalo could only be grown in water, being essentially an aquatic plant. This was not well understood by foreigners; and every man soon in a contest with the people for water to which he had no right. Mr. M. had purchased a considerable tract of land from another foreigner who had boldly taken water for irrigation, although it had not been watered before—at least in modern times, and no objection was made to it.

The land was bought by Mr. M. with all the rights thereto belonging; one of which was supposed to be water. It was expected the cane would be ground on shares at the mill; so, as it was for the interest of the above said plantation no questions were asked nor opposition made. Mr. M. had consented that an irrigating ditch should be made through his land—the only possible course by which water could be conveyed to it, on condition that it should not lessen his amount of water. When he afterwards bought the land to irrigate which the ditch had been made, he still continued to water it in the same way, using the same water he had used on his own land before. But the prosecuting agent set up his claim that because a portion of his plantation was purchased from the original landlord of the whole district therefore he succeeded as "lord paramount" of the land, and could do what he would with the water. It was a baseless assumption made in utter ignorance. But it was prosecuted with energy and without minding cost. It was said to have cost them twelve thousand dollars. Mr. M. was distressed. He was poor and could not cope with his adversary without help. But to allow such a claim would be his utter ruin and leave him a helpless prisoner to a life-long debt.

To do his agents justice they came forward with offers of help. But they well knew they would lose all they had lent him if he failed in his suit. All the expenses of starting the plantation had been borne, but a little had been received in return. The whole debt remained unpaid,—in fact it had all the while increased. No doubt the plan was to crush out Mr. M. and leave but one plantation in the place; and the present was the most likely opportunity.

So each party addressed itself for the onset—the rich company of the grove, planter, missioner on one hand; and the poor, struggling missionary planter on the other. The big plantation employed for counsel a blustering, pompous man, not without ability, but of dissolute character. Mr. M. employed the best counsel he could obtain. The case had been appealed from the decision of the Water Commissioners who had decided without any scruple or much examination against Mr. M.—almost as a matter of course, being influenced undoubtedly in the usual way, being men of corrupt minds, of whose history I spare the reader the recital.

So the Supreme Court sat about a week on the case; the judges going upon the ground to make personal inspection.

After a thorough trial the case resulted triumphantly in favor of Mr. M. The only offset to the complete assertion of justice was that the costs were divided equally between both parties. This was probably done as a sop to mitigate the sting of defeat; and because the partners in the great concern were men of note or influence of some kind. Could the Chief Justice who was of an undecided turn of mind, have been able to look forward a few years he might have felt firmer in openly maintaining what he evidently felt was justice in the case.

It was the first considerable trial of the kind; and the positions laid down were of use in after times. Consequent on the new channels of industry and wealth new arrangements were needed; and it was decided that a man who owns water may make what use of it he pleases, not injurious to others. Also that an occasional overflow from another's land does not constitute a right to water so overflowing. Both these were among the main points contested in the case.

But it had been a costly business to Mr. M. though his rights were vindicated. Still though his debt was not lessened there was no way but to keep going on. A change could not be made lightly. But it was evident that some kind of change—or ruin—was not far off. Other plantations, much larger, were failing in rapid succession, being sold at auction like so many toys and given back to their owners; or, where convenient, merged in other plantations.

If Mr. M. had been a younger man, full of life and unspent energy he might have had hope. His endeavor had been to get the plantation well started, and then pass it into the hands of some one of his sons. He had put forth his best efforts to do so, practicing the most rigid economy in all his expenditures, and bringing every thing to bear on the main business.

But after all it was likely to be a failure; and that would be the loss of all he possessed. The San Francisco refineries seemed to acquire new power and skill to harass the plantations with every new season. The United States Government paid the money in its own pockets which should have belonged to the planter. Two and one half cents per pound is \$2.50 per 100 pounds; \$2500 per 1000 pounds, or \$5000 per ton; and for 200 tons which was about the yearly average for the plantation it is \$100,000 a year. That amount of profit for only a few years would enable Mr. M. to retire with a competence. But it was not to be.

It might be supposed that Mr. M. would naturally employ his own sons on the plantation wherever they could be employed; and such was the case. But they were now of age and could choose for themselves. Several of them were employed in various ways on the plantation; and Mr. M. finally sold out the whole to one of them, only reserving a house lot for himself, and a small annuity, barely sufficient to maintain himself and wife for a few years.

So this great enterprise which was to afford a decent living in his old age, ended next door to beggary. Why?

### Ten Lessons on Kindness to Animals.

By George T. Angell, Esq., President Massachusetts Society for the Prevention of Cruelty to Animals. These lessons can be obtained from the Society, 105 Tremont street, Boston, Mass., in any quantity, at two cents per copy.

#### EIGHTH LESSON.

Dear friends! fair women, sweet with all names charm and wiles. Bright, laughing maidens, flitting by in innocence and smiles. Gay children, grave and bearded men, we pray you all give ear: Dear friends, kind friends, we turn to you for sympathy and cheer. Uphold us in our noble work, nor let us speak in vain. For those too helpless to protest, too patient to complain.

#### THE CAT.

(To be read to pupils by Primary Teachers.)

We have many reasons for being grateful for cats. They catch rats and mice. They are a daily delight and amusement to hundreds of thousands of children, and they make hundreds of thousands of homes happier by their presence.

Many eminent men in European countries have been very fond of them. The famous Dr. Johnson, of England, seemed to think quite as much of his cat as of any human friend. The famous Cardinal Wolsey, of England, used to receive the nobles of the land with his favorite cat perched on the arm of his state chair, or at the back of his throne. The great statesman of France, Richelieu, once excused himself from rising to receive a foreign ambassador, because his favorite cat and her kittens were lying on his robes. Petrarch, the great poet of Italy, had his favorite cat embalm when she died.

In Eastern countries cats have been even more highly esteemed than in Europe or America. In Egypt, where it is supposed tamed cats were first used, they were considered sacred, and when they died were embalmed and placed in niches in the catacombs.

It is said that a Persian King once, before going into battle with the Egyptians, gave each of his soldiers in the front ranks a live cat to carry before him, and the Egyptians surrendered to the Persians rather than insure the cats, which they considered sacred. It is said that the Eastern prophet, Mohammed, was so fond of his favorite cat that when it fell asleep on the sleeve of his robe one day, he cut off the sleeve rather than disturb the cat, and it is said that to this day almost every Mohammedan in these Eastern countries has a cat in his house, which he loves and makes to share all his comforts.

Some of the peculiarities of cats are these: They can see very well in the night. They can climb trees by sticking their sharp claws into the bark. They can leap down considerable distances without hurting them, and walk without noise, because they have little pads under their toes. They have long whiskers or hairs on their foreheads and cheeks, by which they know whether holes are large enough for their bodies to go through. They have very sharp teeth, very strong jaws, and very rough tongues. They are very fond of meats and fish. They do not like to get wet, and they have the power, when carried long distances to new homes, of finding their way back again to the old ones very quickly if they want to. I remember an instance in which a cat was carried on a sail-boat some twelve miles from one Massachusetts coast-town to another, and in about two days, as I remember, she found her way overland back to her old home.

That they reason about things I have often proved by turning my cat out of the dining-room into the kitchen, leaving the outer door into the front hall or entry open. She would go up the back stairs, down the front stairs, and in about two minutes walk back through the front door into the dining-room.

It is said that the great Italian poet, Dante, trained his cat to hold a candle in her paw for him to read; and one night a friend turned a mouse out of a box onto his table, when the cat at once dropped the candle and rushed for the mouse.

But while cats are useful in these various ways, they should never be allowed to become too numerous, because they are apt to eat the little birds, which are quite as useful, and sometimes more so than the cats; and when not properly fed they are apt to catch and eat young chickens. I think that every one who keeps a cat should see that it has proper food and water, and should keep it in the house or stable nights, so that it may not kill these useful little birds or the chickens. And I think where there are already cats enough, that all the kittens but one should be killed in a humane way as soon as they are born, and that the most humane way of killing them is that usually practised in this country, by drowning.

## SOME QUESTIONS.

(Others to be added by teachers.)

Why should we be grateful for cats?  
What is said of the famous Doctor Johnson?  
What is said of Cardinal Wolsey?  
What is said of the French statesman, Richelieu?  
What is said of Petrarch, the great poet of Italy?  
How are cats esteemed in Eastern countries?  
How are they considered and treated in Egypt?  
What is said about a Persian King?  
What is said about Mohammed?  
What is said about the Mohammedans?  
What are some of the peculiarities of cats?  
What is said about their finding their way long distances?  
What is said about cats reasoning?  
What is said about Dante's cat?  
What is said about their eating little birds and chickens?  
How should those who have cats keep them?  
What is said about the kittens when they are too numerous?

**RENT** not, life is sweeping by, and dare before you die, something mighty and sublime leave behind to conquer time. Get a week to your own time. No outfit free. No risk. Everything new. Capital not required. We will furnish you everything. Ladies make as much as men, and boys and girls make great pay. Reader, if you have time as which you can make great pay all the time, write for particulars to H. HALL & Co., Portland, Maine.

## THE HYGEIA HOTEL.

AN ENLARGED AND IMPROVED

## OLD POINT COMFORT, VA.

Situated on one hundred yards from Fort Monroe, at the confluence of the Chesapeake Bay and Hampton Roads, being the first point of land lying westward between the Capes of Virginia, about fifteen miles north of Norfolk and Portsmouth; all passengers en route running to and from those cities touch at the pier, going and returning, with the U. S. Mail, landing only twenty rods from the Hotel, which is substantially built and comfortably furnished; has two Out-lying elevators, passenger elevators, gas and electric bells or Griddens's Oral Accumulator in all rooms; water, rooms for baths, including Hot Sea, and located on every floor, with the most perfect system of drainage of any hotel or any public building in the country. A room for the pleasure-seeker, invalid, or restful place for tourists on their way to Florida or the North, this house, with accommodations for about 1,000 guests presents inducements which certainly are not equalled elsewhere as a summer resort or cold weather sanatorium. The climate of Old Point Comfort is unequalled for salubrity. *Male-tail fevers being absolutely unknown.* The record of the Meteorological Observatory for the past ten years show an average temperature of 60 deg., 74 deg., 70 deg., in winter; 70 deg., 70 deg., 40 in autumn; 45 deg., 44 deg., 42 deg., in summer; 70 deg., 72 deg., 62 deg. for spring. The invigorating atmosphere and mild temperature being especially adapted in that class who seek the genial winters of the South and cool summers of the North. For absolute purity and refreshment, the delicious taste of the pure ocean air and the lullaby of the ocean waves rolling upon the sandy beach, but a few feet from the hotel windows, are most healthful specifics of the Hygeia.

For further information address,

H. PRIGGINS, Proprietor.

## A TRIAL OF THE BALTIMORE JOBBER.

WILL CLEARLY SUPERSTITE SIX SPECIAL POINTS OF EXCELLENCE.

1st—It is the easiest running press made. 2nd—It is as strong as any press made. 3rd—It is the most durable press made. 4th—It does as good work as any press made. 5th—It will take less to buy than any other press made. 6th (Last but not least) It costs less to run than any other press made.

ALL SIZE PRESSES, TYPE AND PRINTERS' SUPPLIES. CATALOGUE FREE.

# Southern Workman.

VOL. XII.

HAMPTON, VA., NOVEMBER, 1893.

No. 11.

CAUGHT IN THE ICE-FIELDS OF THE NORTH ATLANTIC.

[From Harper's Weekly.]

# SOUTHERN WORKMAN,

TWELVE PAGE MONTHLY.

(Reduced to eight pages from July to October, four months.)

Printed on the Normal School Steam Press by students trained in the office.

S. C. ARMSTRONG, Editors.  
H. W. LUDLOW,

MRS. M. F. ARMSTRONG, Regular Contributors  
MR. W. N. ARMSTRONG,  
MRS. ORRA LANGHORNE,

TERMS: ONE DOLLAR a year IN ADVANCE.

Specimen copies sent upon application. To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly: Give name in full, and name of Post-office, County, and State to which the papers are to be sent.

A limited number of advertisements inserted at following rates:

SPACE.	1 mo.	3 mos.	6 mos.	1 year.
1 square	1 00	2 75	5 00	9 00
1 column	3 75	7 50	13 50	23 00
1-2 "	5 00	13 50	23 00	40 00
1-3 "	9 00	23 00	40 00	70 00

Special notices 10 cents per line.

Job work from all parts of the country is solicited, and will be executed cheaply and well. Estimate given.

Edited and printed at Hampton Institute.  
For sale in 10¢ places. Specimens sent from Hampton at 6¢ a number, or 50¢ a set.

THE GROWTH of the Hampton Institute since 1878, the increase of Negroes being even greater than the number of Indians added, making a total present attendance of 535 boarders, has required enlargement in many ways at heavy cost.

The utmost capacity of the School has been reached; it is now too full, but will probably be reduced to proper limits by May 1st, through "weeding out" the least competent and worthy.

The exhalations of the basement laundry in Virginia Hall have caused much sickness, resulting in deaths and creating just fear of an epidemic. A separate, two-story brick laundry is nearly finished, to cost complete \$5,000, of which but \$2,000 are supplied.

A thousand dollars have been expended to extend and fit out the teachers' boarding department, and a thousand more are needed for sanitary purposes.

During the four months from July 1st to November 1st, few contributions are received, while the summer expenses of 261 boarders are considerable, and October, the opening month, is the most expensive one in the year, bills for new outfit, books, etc., being large. The School's present need of five thousand dollars on current expense account for the first four months of the academic year, and of five thousand more

for permanent improvements, will, we hope, be responded to by its friends.

Working as we are on the whole circle of living, the hand, the heart and head—for the crude material that comes to us needs care at every point—there must be a large corps of instructors, a double set, including expert mechanics as foremen, about fifty in all, to do the work.

Such a school, when students pay in labor, is far more costly than one where they are boarded for cash, and are taught mainly from books, with mental training as the main object. To meet annual expenses, a scholarship of seventy dollars for the varied tuition of each one is needed, besides a considerable sum for general expenses. While last year there was an encouraging increase of scholarship gifts, nearly a hundred colored students were not provided for, while every Indian was supplied. Only the generous gifts of a few friends and a timely legacy saved the School from disaster.

The strength and the future of Hampton depend upon the wide and widening circle of moderate givers who shall contribute either scholarships, or gifts for general purposes, both being equally important. The circle is not now large enough to sustain the School. There is a yearly gap of several thousand dollars to be filled. The work that appeals to all, is nobody's special business; here is our weak point; we have no patron or full purse to draw on; no society or sect to fall back upon; no soliciting agent to collect funds; we pay nothing to get money. When it comes, it comes from those who think and feel for the Nation's wards—Negroes who have received freedom but no teaching how to use it; Indians who are perishing by indiscriminate feeding and want of wise care.

There is some tendency to drop Hampton for more needy efforts. When a work is established, and pushed with every energy to fulfil its purpose, is there anything better worth helping?

It was the Northern gift of "continuance" that crushed the rebellion, and will finally overcome an evil no less dangerous to the country's welfare.

For ten years, from 1868 to 1878, the entire strength of the Hampton School was directed to the Negro race. During the past five years, from 1878 to 1883, the Indian question has been studied and worked over, the former work meanwhile growing more than ever. Both efforts are in the same line, under the same methods, for the same object—to create character and to dignify labor.

"For the Indian, labor must be;" "for the Negro, labor must be free," said President Garfield. For both races labor training is vital, and to be varied and thorough requires the best of management and great resources.

While the Hampton Institute submits its need of an endowment fund, it does not urge that point, believing that while dependent on the general public it is educating the people and building up a public sentiment on our race questions which is the most important single factor in their solution.

SCHOOL opened at Hampton Institute on the first of October. The number present, as we write, is 560—247 girls, and 313 boys. Last year at this time it was 506. The rush of applicants has been greater than ever. With dining room accommodation for nearly five hundred, it is necessary to give extra meals to fifty. Many more apply than there is room to receive; the pressure on class room and lodgings compels careful selection and strict probation, that the School's advantages may belong to those who will best use them. Of the 560, there are 445 colored and 90 Indian students, and 25 day scholars. Seven of the colored students board and work on the School's "Hemenway Farm," attending night school there.

About twelve more Indian girls are expected during the winter. Twenty Indian students—11 boys and 9 girls—are still in Berkshire county, Massachusetts, where they with others have spent the summer. While still on the roll and under the charge of the Hampton School, (making the number of its Indians now 110), they have been left in Massachusetts with their own consent, to spend a year in the farmers' families where they have found kind welcome, learning industry, English, and the ways of thrifty New England homes. If the experiment results as is hoped, it may in future years be doubled or quadrupled.

The preparation of the applicants examined for Hampton, this year, shows progress in the primary schools. The examinations for admission to the Junior class are reported better than ever, with fewer failures to pass. An indication of Hampton's own influence in this direction, is evident in the large number that rose in the Assembly-room in response to an inquiry as to how many had been sent by our graduate teachers. The general appearance of the newcomers is promising, also, as to character and work.

Two hundred and sixty-one students remained on the place to work during the summer. In the absence of the Commandant, for over two months, the young men were placed under charge of a graduate of the last class. He maintained good order, and his authority was very generally respected.

The night school for the work students was well kept up, and contributed some of the best candidates for this year's Junior and Middle classes. It has again filled up with new recruits, and nearly one hundred and fifty earnest young men and women are taking advantage of its opportunities to work out their own elevation, working all day and studying in the evening. Some of the best material in the School is always found in this class. It opens with a larger force of teachers and more students than ever.

Of the various industrial departments of training, the report of summer work and present condition is as follows:

### THE FARM.

Twenty-three boys—15 colored and 8 Indians—have been employed in farm work and care of stock; 3 colored and 1 Indian in the sheep-shearing shop; 10 colored and 1 Indian in the blacksmith shop; 10 more, all colored, on the Hemenway Farm. All have given satisfaction. All have now gone into school, and their places are filled with others, besides the daily squad of forty from the day classes, working each one day in the week, besides Monday which is now substituted for Saturday as the weekly vacation from school exercises.

### INDIAN TRAINING SHOP.

Various trades are taught in this department.

The carpenter shop has employed 11 Indians and 7 colored students. They have erected and enclosed the new Gymnasium building, 50x125, of frame on brick foundation; have constructed seven lodging rooms for boys in the Stone Memorial Building, and reconstructed dining-room in Virginia Hall; made 27 beds, repaired buildings and furniture, made 85 large packing cases for Government goods, and have commenced the erection of a building, 32x52, for a fire engine house.

The tin shop has employed 5 Indian and 2 colored students. The Indian apprentices completed their Government contract, of 13,000 pieces, about August 1st. Since then, they and the colored apprentices have put about 13,500 square feet of zinc roofing on the new Gymnasium and Laundry, besides repairs on other roofs, and have made 18 dozen articles of tin besides other miscellaneous work.

In the harness shop—employing 2 Indians and 2 colored students—have been made, during the summer, 30 sets of double plow harness, and 60 sets of double wagon harness for Government, and a large amount of repairing has been done. Indian students only are employed on Government work.

The painters—one Indian and one colored boy—have painted four houses; painted a glaze the Green-house with a little outside help, besides doing all the job work required on School buildings and furniture.

### HUNTINGTON INDUSTRIAL WORKS.

The saw-mill has employed an average of 20 students—colored—this summer, and done more work than any previous summer; sawing lumber and lath, getting out building material of all kinds, making fruit boxes and packing cases. The outside custom has increased, and now amounts to seven-eighths of the whole. All hands have done well and all but three who entered late, have now gone into the School. The newcomers are older young men and promise well. The wood-working department, upstairs, has employed 10 students—colored—four of whom have now entered school, having been at work two years. They will still come for two days work in the week, and are good workmen. Work has been plenty for the School and outside customers, including all kinds of house-building work, window-frames, cornices, wood-mantles, etc. Nine new students have entered, since October, to stay two years and learn the trade.

### ENGINEER'S DEPARTMENT.

This industry has employed this summer, 5 colored students and 1 Indian, with 3 colored men from outside. They have put steam, gas and water pipes into several large buildings on the place, and laid the drain for the new Laundry; have worked well. There has been less building, and consequently, less work in this department than for the last three years. One of the five colored students employed has been engineer of the Huntington Industrial Works for a year; one has had charge of the gas works, and one charge of the boilers for cooking and the engine for the Laundry. The engineer having completed his apprenticeship of two years, goes into the day classes of the School. Three Indians have been taken on since October, two working every half-day; one an Onondaga, from New York State, who understands English, working every day and going to night school.

### SHOE SHOP.

The shoe factory has employed, since June, 4 colored and 5 Indian students. They have done remarkably well in every respect, with less force, but more skilled workmen, who have been at the trade for a year. No outside help has been employed. Two thousand pairs of shoes have been made on contract for the Indian Department, besides repairing work more than usual for the place and for outside custom. The new shop is found very pleasant and comfortable—light, wholesome, and con-

of the Atchison, Topeka and Santa Fe, and the Atlantic and Pacific Railroads, appears to have a fine future.

The old town is a sleepy collection of one-story, flat-roofed adobe houses, where men can enjoy their quiet *placita*, or inner court, and the cool rooms that open into it, a perfect plan for the climate.

My chief interest here was the Indian school, under the charge of Prof. Bryan, who, with twelve assistants, chiefly ladies, has instructed, during the past year, about a hundred Indian boys and girls, giving them all the routine work of the place to do; also, but intent upon introducing them, a teacher of shoemaking being already arranged for. His pupils have been mainly Pueblo children, for whom the school was very convenient, and some thirty wild Utes from Colorado.

Government gives, per annum, for the Utes, \$167 apiece, the same as to Hampton; for the rest \$1200 a year. The Presbyterian Home Mission Board of New York provides the buildings and is responsible for teachers' salaries, and all deficits in current expenses. The property is leased, and not owned.

Citizens of Albuquerque have contributed \$4,500, and bought sixty acres of land, which they have given to the Government for an Indian school and farm; information has been received that the building plans are ready, and will soon arrive from the Indian Department. About \$20,000 were appropriated by the last Congress for this school.

Albuquerque is, beyond question, the natural center for a great educational work for the forty-five thousand Indians in New Mexico and Arizona. To a large number of Indians it is accessible, so that they can see their children, and get the direct impression of the institution, and the children can get to and from the school cheaply and easily. It hardly hurts the well-regulated Pueblos to spend the summer at their homes. It would not do for the Utes to go home during vacation.

The town is on a line of increasing travel. Many visit it, and always see the Indian school, which would attract them more every year, and be the effective *object lesson* in this far West than Carlisle and Hampton have been in the East, doing the whites almost as much good as the Indians.

Besides, there is an interest in Indians and a public spirit on this subject in Albuquerque that I know of nowhere else in these Territories. I met, one afternoon, leading citizens who showed an earnest feeling in the matter. They have already done generously for the cause.

I cannot emphasize too strongly the value and suitability of this place as an educational center for the Indians of the Southwest, deserving the best encouragement from Government.

Santa Fe, the capital of New Mexico, is most pleasantly situated, seven thousand feet above the sea, in a plain surrounded by mountains, nestling under a spur of the Rocky Mountains, whose foothills rise from its very streets. In the distance, springing from a plain which stretches away to the South, stand the Cerillos, where are the successful mines of the Territory: of gold, silver, copper, lead, iron, coal (bituminous and anthracite), turquoise, gypsum, with fine clay, lime, and marble, all in abundance. Here, for the sake of these rich ores, the Spaniards pushed their way eighteen hundred miles from their base of operations, within ten years from their conquest. To the east are the Santa Fe mountains, also mineral, and to the west Black Mountains and Jemez Mountains, lofty and commanding in appearance.

The climate is delightful; there is an atmosphere of quiet. The place is not yet Mexican ways that have held for centuries. By and by it will live in to-day, and everybody will be restless and pushing. Now it lives in the past, and "dona templa" (pretty soon), and "manzana" (to-morrow) dispose of the vexations of life.

The view of the town from old Fort Maury is lovely. The houses are scattered, gardens brighten the picture, and trees enbower many an antique house; the eye is arrested by some striking buildings.

The Palace Hotel at our feet is excellent in every way. The new Cathedral is the most imposing structure of all. The Catholic College is conspicuous, but less interesting than the old San Miguel Church near by. Far away seen the towers of the Santa Fe University (Congregational).

Nearer, the Sisters of Loretto have their convent under the auspices of "Our Lady of Light."

The "Adobe Palace," built in 1650, is not very palatial in appearance, but has rather an imposing front. The Army Post is a large square, beautifully kept, with accommodations for officers and troops. Protestant churches of various denominations may be seen, but are modest in appearance;

What with the mountains round about, the plains before us, and the picturesque old town with outlying clumps of flat, one-story, dingy adobe houses, one is richly entertained. The whole effect is oriental. Men who have been in Syria or Egypt say it has a familiar look. It is much more like Palestine than New England. Here is a resting place for the overworked Eastern man. Life will for get business in its amusement over the omnipresent donkey juggling around baskets of fruit, chickens, and vegetables; from one to ten of them, without bridges or driving gear, followed by a Mexican seeking customers, lazily moving about, both man and beast, with the air of philosophers. Nobody is anxious; nobody is doing much; things take care of themselves.

One gets charming glimpses of the *placita* or inner court, often a beautiful garden surrounded by a veranda, where the inmates sit in repose, out of the world, and enjoy their own vine and fig tree.

A Missouri Judge, who has stopped here over a few days, thinks it the hardest town he ever saw, judging from the number of gambling houses within a few minutes' walk. All is done openly; no one plays on the sly; you see just how things are.

We descended from the hill and soon entered the new Cathedral, which is built over an older and most interesting one full of quaint old pictures, and with an atmosphere that centuries only can create: it is to be torn down. Then we visited San Miguel Church, after we succeeded in arousing the sleepy janitor. Nobody is ever on hand; why should they be: there is plenty of time.

The interior of this oldest church in the region is full of interest. We climbed to the outside of the top, picked from the ancient mud walls bits of pottery that were used in building the church more than three hundred years ago, making, with the mud, a sort of concrete.

All their churches illustrate the Roman Catholic idea of meeting the savage on his own ground, letting the outward form down to meet the ideas of the pagan where he is, and finding it hard to get up again. This is especially true of the one at Laguna Pueblo, where only behind the altar does it seem Romanish; the paintings on the walls are wholly heathen, of barbarian rites and symbols.

It is curious to find these antiquities in our own land; it is so unlike America to stand among ruins and think of bygone glories of departed civility, of gorgeously attired priests before kneeling multitudes, of pious artists expressing their devotion in statuary and paintings and architecture. They seem, in some shadowy way, to be present, lingering about their works.

The acting Lady Superior of the Convent of "Our Lady of Light," was very kind. We were shown an expensive and beautiful system of buildings, where two hundred and fifty little girls of the town, chiefly Mexicans, are taught, and eighty from abroad are boarders. All had been done since 1852 mainly by the labors of the Sisters; the annual fee for boarders was \$200. There is no endowment, no public aid; charity is kind to them, but the most of the annual cost of \$7,000, is earned by their own efforts, in school fees, etc.

All is enclosed after the old Moorish style adopted by the Spanish and introduced here. There are great apple trees in splendid bearing, and many fruits and vegetables besides; the garden was luxuriant. The *placita* for the Sisters' private use is a little inner Paradise of shrubs and flowers; there were two or three of these pleasant inner courts. The boarding girls' building was two stories in height, and excellent in every way; the bathing and washing arrangements as perfect as I ever saw; not put off one side and down below, but in the lightest and airiest part of the house. No direct teaching can exceed in force the indirect moral effect of these appliances for personal cleanliness; their value is too often forgotten. The chapel is simple, chaste, and in absolute contrast with those built for the ignorant Mexicans.

Protestants do not realize the completeness and perfection of some of the institutions established by Roman Catholics in this far-off region; one of the best of them is in an obscure corner of Indian Territory, where even white girls from Kansas go for the superior advantages offered.

Santa Fe University was, ten years ago, a little school kept in a crumbling adobe house. To-day it has a \$150,000 building, is well attended with as yet only a preparatory department, but with a hopeful outlook. Such schools are the growth whose seed was some man's purpose. This has already a remarkable start, and the President, a man likely to create a shining light in the new civilization that is coming. He has begun in good time, and his work will grow as the country grows. There is no other college within a thousand miles in any direction; it is needed, and deserves the warmest support. The academic work appears to be as

good as in any Eastern schools. When such a man as President Ladd resolves that there shall be a college, there is apt to be one, not because of the resolution, but of the facts and means on which it is based.

The Presbyterians have a high school, and also contemplate a college, but they do not seem to have found their man. There are numerous churches in Santa Fe; more than are needed for the population. I have seen in the West many cases of thus forming a number of weak churches, when any combination, a few strong ones could be established. Contributions for mission work ought to be used for real needs.

Santa Fe is headquarters of Major Pedro Sanchez, agent for the Pueblo Indians, nine thousand in number. He is a Mexican, and speaks little English. Of the Roman Catholic faith, he took a fine stand in the Territorial Legislature, in which the Catholic majority of New Mexico had failed to give. He is regarded as liberal in his views, and earnest to improve the Indians under his care; and the feeling once not very cordial, has become favorable to him. He is able to address the Pueblos in Spanish, which many understand, and has taken great pains all ways to impress on them the importance of education and of better sanitary laws in their villages.

The fine climate of Santa Fe makes it a very proper and attractive center of education for the cities of the two Territories. The location of Albuquerque, and the special interest there, makes that the proper center for Indian education in New Mexico and Arizona.

Going from Santa Fe to Caddo, Indian Territory, I was compelled to pass a day at El Paso, on the bank of the Rio Grande, opposite to El Paso del Norte, an old Mexican town on the opposite bank. The river was nearly dry, and smugglers seemed to have an easy chance for their operations. The traveler, of course, must put his foot on Mexican soil to see the old church where Chiricahua Indians have worshipped for centuries. It was quiet and solemn; a solitary kneeling woman made an impressive picture.

Take away the antiquity and associations, and one would hardly care to go to the place, yet how well it is to have such places open for silent prayer at any hour.

El Paso is a railroad town, quite new in a commercial way, yet they are erecting the most solid buildings that I have seen in the Territories. Its business men are most energetic; it has, however, a rough, border element, who do not seem very terrified enough; life is too lightly held, as a few outspoken men have found.

In such conditions brave men on the side of truth and honesty are not wanting, as in the end they must conquer. There is a fearless editor, who has been shot at more than once.

The reckless characters out here usually "die in their boots." Wickedness is bold, and justice takes short cuts; the one is usually brief, the other direct and to the point. Order is steadily gaining. The life seems dreary and uninviting as possible, but those who get a taste of seldom are content going West, like the man who puts his hand to the plow, should never turn back. There is an excitement in the life, in the great networks, that often spoils the repose of him who, once tasting of it, tries to live again in the East.

S. C. A.

#### ROBERT MOFFAT.

Born 1795—Died 1883.

During the month of September there died in Scotland, a man who ten years ago said of himself, "In the year 1816 I laid myself on the missionary altar, and from that day to this I have been advocating the claims of Africa."

Under the auspices of the London Missionary Society, Robert Moffat, born in 1795, went to the Cape of Good Hope in 1816, and remained there first as pioneer and then as patriarch, until 1870, when he returned to Scotland. In his days in less arduous but perhaps just as necessary work for the country of his adoption. The story of his life is told in his "Narrative of Missionary Labors and Scenes in South Africa," one of the most fascinating accounts of missionary enterprise ever written, and one which has any interest in the development of Africa, should find to know something of his heroic work, done, much of it, single handed, and with no backing, beyond that of his own invincible determination. His first arrival at the Cape of Good Hope was signalized first by the refusal of the Governor to permit him to land, and secondly, when that refusal was with-

drawn, by his repairing at once to the village of Kraal of the then most dreaded chieftain of South Africa, on whose conversion his heart was set and in which he was successful, for in a comparatively short time he paid a visit to the Governor, introducing as his companion, an amiable, well-mannered native, in whom it was almost impossible to recognize the turbulent warrior, before whom even English soldiers trembled, and none had dared to face.

From that day his lot was irrevocably cast in the dreaded wilderness of South Africa, and the woman whom, early in life he married, proved able to walk with him unswervingly in the weary path he had chosen for his own. Their daughter, Mary, became the wife of Dr. Livingstone and thus linked together the two foremost names in the missionary record of Africa, and united in a life-long relationship the men who were already warm friends and sympathizers.

It has been said that the best blessing Moffat conferred upon Africa was Livingstone, as it was largely through his persuasions that his younger and stronger friend was induced to devote himself to the field where he won his undying laurels; and there is certainly nothing in the history of African work more striking than the connection between these two lives. When one considers the advantage Livingstone must have gained from the experiences of his father-in-law, and the influence that the indomitable spirit of the old Scotchman must have exercised upon his young compatriot, it seems evident that the faith laid the foundation upon which the son built, and that Moffat must have gained from the intensest personal satisfaction and pride in the life and death of his great successor in the one and predecessor in the other.

Livingstone died ten years ago alone in the swamps of Central Africa, following the wife, with whom, eleven years before, he himself says he bridged his heart on the lonely shore of a African river. Within a few days the old man here to whom they were as children had passed from his peaceful Scottish home to rejoin them beyond the reach of the clouds which here darkened their toilsome days and shadowed even their high courage.

Can mortal tongue or fancy paint that re-union?

#### Bright Prospects for Returning Indian Students.

An indication of better opportunities for Indian students returning to their homes, and of the disposition of the Interior Department to encourage the work, comes in a letter from Secretary Teller, asking for a selection of such as would be suitable for assistant teachers or as helpers in various industrial schools for Indians to be opened in the West. Names have been sent in response and there is cheering prospect that here is the beginning of an opening for employment which will settle a difficult problem for many, especially of our Indian girls, giving them profit able and respectable occupation in a safe home.

The suggestion comes from an occasional reader that the *Southern Workman* should give now and then fuller information of the school, not taking so much acquaintance with it for granted. The fact is that most of our readers are acquainted with the general history and features of the Hampton Institute. The account of its industrial departments, on page 114 of this number written by its treasurer for a Boston journal, from which we copy it, may be in the direction of our occasional reader's thought.

#### Horsford's Acid Phosphate.

In Seaisickness.

S. S. PARKER, Wellington, O., says: "While crossing Lake Erie I gave it to some passengers who were seasick, and it gave immediate relief."

### Letters From Hampton Graduates.

A DEFECTIVE SCHOOL SYSTEM.—FRIENDLY WHITE NEIGHBORS. A GIRL'S LECTURE. NO REST. STIRRED UP ABOUT EMIGRATION. FROM AN INDIAN GRADUATE. FROM A PHYSICIAN. "THE VAST WORK TO BE DONE." WORKING FOR MISSIONS.

A DEFECTIVE SCHOOL SYSTEM.—NO REST.

Vacation does not mean play to the young graduate teacher in the South. When one door of work shuts another opens. When the winter school closes, he is glad to find a summer school ready to begin; or failing that, to take up his shovel and hoe, his trowel or his square or his last, and go on hoarding stores for future use. Girls and all find that there are few furloughs in this warfare of life for which they have enlisted. It is no wonder that the imaginations sometimes dwell on the luxury of rest. But they work bravely and cheerfully with many hindrances; but also, with many encouragements.

—, TENN., July 4, 1883.

DEAR MISS C—

Your letter and the map arrived the same week. Both were happily received. You heard of my appointment to this work. I came early in May, and began teaching with forty scholars. Since then the number has been increased to one hundred and six.

This is apparently a thriving little town of about four hundred inhabitants. But it is thriving in appearance only. — county, of which it is the seat, is noted for its defective school system, and for the great amount of whiskey distilled in it. The people are, consequently, ignorant and intemperate; and with two such powerful evils as ignorance and intemperance predominating, you cannot wonder that this has only the appearance of a thriving town. The school system hardly deserves the name of a system. There are no taxes levied in this county for school purposes; the public funds are only sufficient for four months each alternate year; and the School Board, having little or no interest in the matter, have employed teachers with scarcely any regard to their qualifications. With this state of things existing, you can imagine how little the children whom I have gathered into the school room knew about school regulations, or in fact, about anything. But they were anxious for an education, and came determined to do their best, and they have done remarkably well—so well that my school, in spite of its size, is a marvel of quietness and order.

I have found the white people in this community very friendly. Several of the most prominent citizens have visited my school, and have expressed to me and through the columns of the paper, their appreciation of my work. A lawyer visited the school-house the other day, and after witnessing the order in which the school was conducted, came forward and assured me that he was pleased to have me in the community, and would have my stay would be long and pleasant. Another candidly avowed that he was a "Southern man, and had all the Southern prejudices," but he was pleased with the work and would be glad to assist me in every possible way.

These people have many things to learn about their way of living. Every Sunday afternoon I have meetings in my school-house for adults; and, can you imagine me talking to a crowded house of old, middle-aged and young, about living pure lives, about setting examples of piety before their children, and about making their homes pleasant—in fact, about everything that will serve to make their lives pure and better? Think of me, next Sunday afternoon.

I stopped over, as you have learned, to help Harris in preparing his scholars for a May party. He was very happy over some books sent to him by Northern friends for a public library, if I mistake not. The people there are more enlightened than they are here, and in better circumstances. His health is far from good, and I hope the summer, spent as he proposes in the open air, will be beneficial.

I am sorry to learn of Sultana's and Wharton's ill health. I hope they will improve during the summer.

Many of my friends have feared that such constant work was too great a strain on my health, but I have gotten on very nicely so far. I used to think, during the winter, how pleasant it would be if a number of girls of 12 could get together for a month during the summer, in some quiet place in the country, and just rest. It would be so pleasant and so easily accomplished, if it were not a matter of dollars and cents. But I guess the most of them, like myself, can only imagine such a luxury.

I have not yet received my salary from —. Since I have been here I have been

able to close my account with the school, and I feel so glad and relieved.

One feels a sort of loneliness which is hard to describe in a place like this where no one exactly understands you, or is in sympathy with you. But there is a great deal of pleasure in this work of uplifting and one has but little time to think of self; still, once in a while, there will come that feeling which accords with the words, "Alone in a crowd." I shall teach until the first of next month.

I imagine the pink laurel must have been lovely. A vine-covered porch fronts my room, and among the vines a little mother bird reared her family. They have all matured and have all gone out in the world to seek their fortunes. It was very pleasant to watch the loving care of the parent birds for their young.

I shall be very glad to hear from you again soon. Pardon my delay. I am kept so busy. Lovingly, S.

### STIRRED UP ABOUT EMIGRATION.

The following short but interesting letter is from one of our most faithful young women, a good worker and observer.

—, S. C., June 22, 1883.

DEAR MISS C—

Nothing can give me more pleasure than to write a letter to you. Your letter was received with much gladness, for it has been a long time since I have heard from Hampton and its dear teachers.

I have been engaged in teaching ever since I left Hampton. I love my work dearly and think there is nothing better I can do. I have never had any trouble with any of my scholars or their parents as yet. I have been teaching here in —, S. C., for two years, and expect to go back next fall and teach again. The white people show me the greatest of politeness wherever I go. The trustees of my school are all whites, and I have never had any trouble with them. Every year they always ask me to return.

The colored people of this town and county are very much stirred up about emigrating to Arkansas. The pastor of the M. E. Church, who has just returned from a six-weeks trip to Arkansas and the Indian Territory. He seems to be fully converted by what he has seen and heard, and gives a glowing account of the fertility and beauty of the country. Next fall I think there will be quite a number to leave — county.

I will thank you kindly for some papers to read. Miss Longstreet sends me books and tracts very often, for which I feel very thankful. I hope you spent a pleasant time at Hampton. I heard from Russell J. Spann to-day. He is doing well. With my best love I remain yours truly. R.

### FROM AN INDIAN GRADUATE.

Thomas Wildcat Alford, who graduated with honor in the class of 1882, and has been teaching ever since in a neighboring tribe to his own—the Potawatamies—writes now that he has obtained at last the desire of his heart—a school among his own people, to whom, as one of their chiefs and a faithful teacher, he will we trust have many opportunities to do good.

SHAWNEETOWN, I. T., July 17, 1883.

MY DEAR MISS C—

I received your kind letter just before my school closed at Wagoza, but I have been so busy in general at one thing and another—have been at the Agency, and riding over the country, trying to get up teams and wagons to haul lumber for our new school-house at Shawneetown, &c., that I could not well sit down to scribble a few lines.

Having received instructions to go with freights—who are to be all Indians—I intend to give my attention to the work soon; perhaps be on the road most of my time.

I have just accepted the position of principal teacher at Shawnee Boarding School, which I had so long wished for to be among my own people, and take charge of this coming season. It is considerably better financially, and in other respects, than the one I had held. The capacity of the school is fifty scholars, but when the proposed new building is finished it is to be one hundred. I think it will hardly come before Christmas, unless some arrangements can be made temporarily, there is so much work to be done. The lumber has to be hauled from a distance of about one hundred miles, and that may occupy about three months of time. My school at Wagoza closed quietly on the 20th of June. Had at the end eighteen scholars. A new school-house is also to be erected there this coming season. A teacher is already appointed to run it, who left here last Saturday to push the work of building through.

I wrote to Mr. Fissell soon after I received your letter about the "Song Books," and I have already received them. I sent them to Wagoza. I shall not lose interest in my scholars there and the people. Being the

first scholars I ever taught, I do think they are smart little things. The people begged me to take charge of their next school, and they even went almost so far as to send a petition to the Agent to retain me there. Now, understanding this, I have not said it to praise myself.

I have not heard from John Downing yet. I heard of him, indirectly though, that he was still working at the Agency. I comfort myself with the idea that he has a good excuse for his negligence.

I am yours, gratefully,

THOMAS W. ALFORD.

P. S.—Pardon me for writing on an old sheet of a book. Writing paper here is a luxury, especially note paper. Traders here hardly have a supply for themselves. I sent for mine to Hampton, but never got it, although I received a letter from Mr. B. saying that he sent it, by express on the same day I think the letter was mailed. T. W. A.

### FROM A PHYSICIAN.

A Hampton graduate, who has studiously and steadily pushed his way by honest work and manly energy to the position he now holds with a diploma from the Medical School of Syracuse University, writes thus of the purpose to which he desires to devote his skill:

OFFICE OF C. N. DORSETT, M. D., RESIDENT PHYSICIAN OF WAYNE CO. ALBANY HOUSE, ALBANY, N. Y., 3m, 9, 1883.

MISS A. C. Dear Friend—

I received both of your circulars just as I was starting for the South, and intended to answer on my return here; pressure of business since has caused a delay.

I am practicing here and doing nicely, but as it always has been my desire to work among my own people, and assist them in their struggle for elevation, it is hard for me to content myself here, and more especially since my return, as I see and feel that I could be of use to my people in many respects, aside from professional service. My only object in coming North was to get a medical education, and to make my financial position, had I been in proper shape financially, I should have gone back South. If I cared for just making a living, or honor's sake, I should remain; but that is not my only aim. I told the Board of Superintendents, yesterday, of my intention to go South soon, as I have recently had some urgent letters from different cities South.

Please excuse a hasty reply, as I am very busy just now. I shall be glad to give an account of my medical efforts as soon as I can. With many thanks for the kind interest you take in us. I am, your obliged

C. A. DORSETT.

### "THE VAST WORK TO BE DONE."

A young woman—Salutatorian of last year's Class—gives her impressions of the vast work to be done for her people, which makes her glad to labor even without wages, and which makes Hampton—while heartily rejoicing in such well earned and conscientiously devoted successes as those described above—still more concerned to supply the broader needs of the present hour.

—, Co. 5, 4, 1883.

GEN. S. C. ARMSTRONG.

Dear Sir: The present date finds me many miles from my recent field of labor in Virginia. I left there on the 25th inst. and arrived here on the 3d inst. I should have been glad to have paid a visit to my Hampton home before leaving it so far behind, but my time was so limited that I could not do so.

My first experience in teaching was pleasant in spite of the fact that I have not yet received my wages for it. During a term of six months I received two payments, and they still owe me a balance of one hundred and twenty dollars. I found the people in the part of Virginia where I taught, full of superstitious ideas that were the outcome of long years of ignorance. These they cling to, rejecting everything that was new. There was, however, a desire among some of the younger ones for a new and better way of living. I had several among my scholars who, with education, would make excellent workers for their people.

My present work was given me by the Woman's Home Missionary Association, through the introduction of Misses — and —.

The people in this vicinity have had few educational advantages, and the Association has provided them with a teacher for the summer months, and has promised to make the work a permanent one if the experiment proves a success.

A great deal of whiskey is made here. In a range of five miles there are as many distilleries. Intemperance, with all its evil effects, prevails. This, with the fact that there have been comparatively few schools since emancipation, will give you some idea of the

vast amount of work to be done here.

I have been greatly impressed since I left school, by the great work that is to be done among my people. There is no time to sit with folded hands; every moment must be filled with hard, earnest work, when we have done our very best the results will be so small in comparison with what remains to be done, that they will be as a "drop in the ocean."

On my way here I stopped at Greenville, where Mr. Harris, one of my classmates, is teaching. He seems to be working faithfully among the people there, is now collecting a library for them, has already received quite a number of volumes from friends at the North. Unfortunately he can't sing, and I stopped to teach his children some tunes for their "May party," which takes place some time during the month.

I regret very much that I cannot attend the "Commencement" exercises. I learn through the *Journal* that special arrangements have been made for the accommodation of the graduates. It is a great kindness on the part of the Institution, and I greatly appreciate it.

Since I have been teaching I have been supplied with very excellent papers by Northern friends, and have also received several kind letters, evincing great interest in my work.

I have made my letter very long. Please pardon me. I could not get all I had to say in a "nut-shell," at least not in a very small one. I remain yours respectfully,

S. CHISS of 1882.

### WORKING FOR MISSIONS.

It is a hopeful sign when those who have been helped begin to think of helping others. Our faithful young graduate teacher (a former Valedictorian), in all the good work he has done for his people, has done nothing more helpful, it may be, than this of rousing them to interest and effort in mission work.

—, CO. VA, Dec. 17, 1882.

### Dear Friend and Teacher:

I was glad when I found it convenient to come here again. I felt that I had gained the confidence of parents and children, and that the latter would follow where I led. I thought I had impressed the authorities sufficiently to make the needed improvements by way of building. They did some, but much is undone. During vacation text books were changed by a flood. Some of my best pupils are out; unable to get their books. You see, then, there was much to hinder, much to blast my bright hopes. Under these and other inconveniences I think we have and are working cheerfully and willingly, for there are others in the "Old Dominion," or in the "Union," to whose disadvantages ours are but small. In my room I know there is much hard study, and there are most always good lessons gotten.

I have very little punishing to do, but last year I had to do a great deal. I think the change is caused by the pupils finding it is not my chief aim to lord it over them, but to improve them. I have an abiding faith in the good sense of children; and therefore believe, in a measure, in consulting their feelings and prejudices as well as old people. I sometimes tell them of my desire to treat them as men and women. Here are two sentences which may be somewhat original in construction, if old in thought, which I often refer my pupils to: "If not women you can be ladylike; if not men you can be manly." "Do right because it is right, and not for fear of the whip."

I have already given two talks on Mission Work, and expect to give another next Sunday at 3 o'clock. I have arranged so as to take up a collection for Foreign Mission Work. Each church is engaged in that work and the pastors seemed to like my efforts. My missionary maps helped me wonderfully. I wish I had books or papers sufficiently to know more about Africa. I read articles about Africa, marked in my *Journal*, with much interest.

I do not know Mr. Miller, but Miss — told me, at one of my talks, she was in same Class with him in '77. Sister and brother were teaching near home. There is such a need for teachers that my two highest pupils have taken schools. One in an interior mountain county reports the people quite ignorant, but a few owning some property. I enjoy teaching ever so much. I hope I can get another school when this ends. I want to spend a little more time in School study. What do you think of it? I think I will write the General about the matter.

My health has been poor, but I am better now—quite well. I see, by your "Circular," you have taken Mrs. D's place. I wish you much success.

P. S.—I forgot to say my time has been much taken up in teaching a night-school. Cold weather has stopped all except the more earnest. Among them is a little boy who is unable to attend day school. S.

## FRANCESCA RIOS.

time since I heard from you. I was very glad to hear from you indeed, and I am not always happy; sometime such sad thing on me, and make me very sorry and I think I am getting home sick; but I know my parents are well, but great many of them die in this year, and that make me home sick; and the other night I had very tired, and so

many of the Indian students. At Cheyenne River Agency on the Missouri River I found Harry Brown, Louis Agenoughewa and Le-Roy Shutashani at work at the Agency at twenty dollars a month and board. Joe Wahn was in the employ of the Military at Fort Bennett, D. T., situated near the Agency. Felix Benoist had just stopped work on account of sickness. He has a sister who is doing excellent work at the Cheyenne River at \$20 a month. Camp and teacher. She is very well spoken of. William Beck was putting in on a contract and had accumulated about five hundred dollars, was well spoken of, though some seemed to think he was too close with his money. An excellent fault in an Indian. Henry Fisherman was

I am, very respectfully, your obedient servant,

GEO. LeROY BROWN.

The attempts at out-of-door sketches were few, and by the boys only. One of the few was to make me feel that the sketchers would learn to love it well enough to make it a habit. I gave them the opportunity to take it up. Of course, you are familiar with their original drawings and paintings, and see with me, that they easily can make it a habit. I will not report. If they can be taught that, with the right use of the horizontal and vertical lines in determining surfaces in perspective, they can make it mainly to catch their own subjects. This is the important thing that they should draw independently, and then their own individuality will come into it. I will not make it interesting; exceedingly so, if after a while they are to be allowed to visit their own homes and take with them representations of objects here and sketch pictures of Indian life there. Hampton has been a very interesting place for many years, but my Summer work has given me a very interest in the great Institution. I have a new desire, that some permanent arrangement be made for the study of drawing to the many advantages already afforded the students. At the Monday evening class, which was held for the purpose of giving the students an opportunity to see the work of the students, I notice that several of the colored students showed an interest and capacity for drawing which might be cultivated to advantage. I have known of some of the students, for instance, R. T. (Mr. Bannister) is a colored man, and we know that Edmonia Lewis was a name and place for herself in Boston by her work in sculpture. I am sure that *their special share of the Fine Arts* is more likely to come under the head of sculpture. I trust that the next structure to be erected on the campus will be a separate building for the Art-students, or an annex on the north side of Academic Hall, with accommodations for decorative and mechanical, as well as Fine art work, where the students can be taught to draw, and until the studies were finished, and where the seats could be moved at will. The Indian Assembly Room was much the best in the building, and the windows were high and on the left side of the seats. But it has a western exposure and with a class of 35 or 40, and stationary desks, the heads and the papers out of the range of the afternoon sun. In the evening the light was very poor for drawing and in term time the students would be obliged to sit with their backs to the light. I suppose I was told, I am hoping that some one, who is looking for a good investment for surplus funds, will be glad to be identified with the building of the Art building. It was interesting to notice the particular bent of individual members of my class. Some of them, I am confident with proper training, would inevitably turn to landscapes or figure

When the extreme heat of the day had passed I mounted my horse and rode out to the farm of this colored man, of whom I had heard such great reports. The house was far back from the road, and it was about the most comfortable-looking place that I had seen during the day. The house was an old one, but very well preserved, surrounded with fine large trees. When the white-haired owner of the place found that I was from Hampton, he made me quite certain that I was welcome. My horse was stabled, and while the wife was getting supper, he and I sat under one of the old trees and talked. He told me the story of his life, and the wonderful changes that had come over all his people thereabouts. He was a preacher, and had a church further up the country, where he went on the Sabbath, while he still carried on his farm. I have read of a minister who was accustomed to borrow a ten dollar bill of one of his parishioners of a Saturday evening, so that he might have it in his pocket when he went into the pulpit on Sunday morning. He said he could preach more boldly when he had some money with him. One trouble with the colored preachers of the South, and perhaps of some other preachers, is, that they stand in fear of their congregations. In many of these churches there are elections for minister every year, and the preacher must have walked very carefully and spoken very quietly not to have offended some member of his congregation, who is glad to make his power felt in the casting of his vote. Thus, in many cases, these preachers resemble Aaron more than Moses. They are rather led by their people than the leaders of them. They hold up the golden calf more than the ten commandments. But a preacher who owns a farm like the one on which I was looking as I sat out under the trees, is quite likely to have a mind of his own.

Before we had had a chance to finish our conversation we were summoned in to supper. As I sat down to the table, covered with a snow white cloth, and at one of the broiled chickens, the light biscuit, and delicious honey, I felt very hopeful of the future of the colored race. My host pressed me to spend the night, and as I glanced at the comfortable-looking bed, I felt very serious doubts as to whether any such awaited me in Yorktown, but as the evening was beautiful, and there was a full moon, I concluded to press on. I will tell you at another time how I fared.

#### Letter from Tuskegee.

NORMAL SCHOOL, TUSKEGEE, ALA.,  
October 18, 1883.

EDITOR SOUTHERN WORKMAN:—

Our third session began September 1st. The attendance is larger than ever. The students represent a much larger area of the State, and are of a much better quality than at any time since the organization of the School.

#### BOARDING DEPARTMENT.

For the first time, the students now board on the School grounds. The girls are reasonably well cared for in Porter Hall, the boys are in temporary quarters. To start a Boarding Department, with almost no money, has been indeed "making bricks without straw"; and, had not some of us been at Hampton in its childhood, and experienced eating with no table-cloth, drinking corn coffee from yellow bowls, seeing wheat bread but once a week, and sleeping in tents, we doubt if our faith would have brought us through this far. Our students are manly, and endure privations and inconveniences in a good spirit. The girls have made the sheets and the bed-ticks, and the boys some of the furniture. We hope that most of the days that "try men's souls," and women's, too, are over; yet we do have much anxiety about the boys standing the winter in their present poor quarters with the few blankets we are able to give them. However, the advantage of having the students together counteracts, in a great measure, the disadvantages under which we labor.

#### LABOR.

The spirit of labor is growing, and there is not a student on the place who does not work out some part of his expenses. A few work out all, and others as much as half of their expenses. The girls do the washing, ironing and mending for the boys.

#### CORPS OF TEACHERS.

The increased appropriation from the State has enabled us to increase our teaching force. The following compose the Faculty, and it is the most satisfactory we have had:

B. T. Washington, Principal and teacher; Hampton Institute.

Miss O. A. Davidson, Assistant Principal and teacher; Hampton Institute and Framingham.

Mr. R. S. Parrot, Music teacher; Washington High School.

M. J. Maddox, teacher; Worcester Academy.

Warren Logan, teacher; Hampton Inst.  
Miss Rosa Mason, Matron and teacher; Hampton Institute.

Miss Adella Hunt, teacher of Normal Classes and Principal of Model School; Atlanta, Ga.

Miss Addie Wallace, teacher in Model School; Hampton Institute.

Mr. H. Clay Ferguson, Farm Manager; Hampton Institute.

Mrs. Fanny N. Washington, Housekeeper; Hampton Institute.

#### FARM.

The farm has been held back somewhat by the drouth and other causes. Now that we have been able to add a farm manager, this industry will be made still more valuable.

#### WIND-MILL.

Through Dr. A. G. Haygood, Gen. Agent of the John F. Slater Fund, we have a wind-mill which will supply all the buildings with water.

#### PRINTING PRESS.

We are indebted to the thoughtful interest of General Marshall, and the kind interest of Miss Abby W. May of Boston, for a printing press and outfit which is now on its way. Several of the boys are anxiously awaiting its arrival in order to try their hands at printing.

#### BRICK-YARD.

We have burned one kiln of bricks, and another will be ready to burn next week. The students do all the work at the yard except what is done by two outside hands.

#### CARPENTER'S SHOP.

We need very much the necessary tools to begin a carpenter's shop. Much money is paid to outsiders for carpentering that should go to the students. Several of the students are anxious to learn the trade. Our plan is to produce on the place, as nearly as possible, everything consumed.

#### REPORT.

We have now in press a Report showing the receipts and disbursements of the School since its organization July 4, 1881, to September 30th. Hereafter, this Report will appear annually. By this Report it will be seen that the receipts from all sources, for the two sessions, have been \$11,559.69. The greater part of this amount was given for the erection of Porter Hall which, we are glad to say to our friends, is completed without a debt.

#### OUR GREAT NEED.

Our great and pressing need is another large and substantial building. The quarters occupied by the boys are crowded, and the young men are so exposed to the weather that it is impossible for them to keep comfortable enough to study to advantage; besides, the students need to be taught as much as other things, habits of order, cleanliness, and neatness; and this it is hard to do the way they are now situated. The young men say that they will make the bricks, and what they want is the money with which to put the building up. The faithfulness with which they now work in the yard testifies that they will keep their promise. A building such as we need will cost \$10,000. A part of this amount has been secured.

Miss Davidson is going to spend November in Boston and vicinity, soliciting donations for the building, and if our friends aid us in the future, as they have in the past, we feel sure that we shall not be long in proving that their gifts have been well bestowed.

B. T. WASHINGTON.

#### Outline of Method of School Discipline.

The following outline of method may assist in the practical application of the true principles of true school government. The pupil should be told what is expected of him, and, as far as possible, the reasons for requiring such actions should be given. The nature of the reasons given, and the frequency of the repetition, must depend upon the age and intelligence of the pupil. But one point in discipline should be taken up at a time, and when fair progress has been made in the first, another, and then another can be presented, until the formal side of discipline has been completed. Pupils should not only be told what is desired of them, but, after the explanation has been given, they should be allowed to exercise what appears to be their judgment, and to express their willingness to comply, by answering the questions: "How many think this would be the better way?" "How many will try to do this?" Of course, the answer is always given in favor of your request; but the child feels a personal responsibility when treated in this way. Good will and voluntary action are secured; the majority is with the teacher. Watchfulness, care, and well defined plans of action, will secure the rest. By her conduct, the teacher must show her pupils that she has an interest in their welfare; that her own personal comfort can be sacrificed for their good; that she has respect for their feelings

and will avoid, so long as possible, any public expression of displeasure toward any one of them. The habit of calling out the name of a pupil whenever the infringement of a rule is noticed, the "checking" system, should not be practiced. The offender should be quietly notified, as he passes out at the close of the session, that you desire to see him. In extreme cases it may not be possible to delay the notice of an infringement of the rules, but in all cases the transactions between teacher and pupil, pertaining to individual conduct, should be of a private nature, and so managed as not to attract the attention of others. Quietness and kindness toward pupils should ever be the motto, yet strict obedience to necessary regulations must be enforced. A distinction must be made between strictness and severity. The latter implies unkindness, but strictness and kindness can abide together. Kindness prompts one to enforce necessary requirements without inflicting physical pain or wounding the feelings, if possible. The disobedience of the child is not an offence against the teacher, hence punishment cannot be given in the spirit of retribution. The teacher manifests a desire and puts forth an effort, to assist those who need assistance. Under such conditions, when repeated carelessness, or willful disobedience is manifested by a pupil, and he has been quietly notified by the teacher to remain after the rest have retired from the room, the pupil is in the position necessary for the beginning of real reformation; for when the pupil has acknowledged the teacher's kindness, her interest in his welfare and her desire to aid him in his efforts to do well. He is easily led to a free acknowledgment of his wrong, and is prompt to try to do right. I have emphasized the word "try," because I know from experience that many failures have been caused by exacting a positive promise of obedience, for when the promise is broken, the self-respect is weakened. Every other method should be exhausted before resorting to any method that tends to destroy the pupil's self-respect. Success in securing from the pupil an honest recognition of wrong-doing and the promise to make an effort toward right-doing, places him upon the road that leads, if pursued, to the attainment of perfect character. Freedom of action must be the leading principle in discipline, and must be secured through an interest in the school-work, a natural desire to do right, persuasion and reason. Freedom is not caprice, but a willing conformity to necessary requirements.

Authority is sometimes necessary, and must be used when occasion requires. Without authority, another might prevail, and respect for others and for self would be violated. There must not be a constant parade of authority. Authority must be used only when necessary, for the end of school government should be self-government. The teacher should not assume the position of one who must be obeyed because of his authority, but rather the position of a friend who tries to direct the pupil in his conduct and to aid him in his efforts. Earnestness, patience, care, and labor are required. If we ignore these, how great the offence when we consider that ours is the work of perfecting the characters of beings created in the image of God!

The motives presented to pupils for their action or conduct should be such as will be of the highest value in after life. No purely selfish motive should ever be given. Whenever self-interest is involved, the interest of others should be coupled with it. Special incentives, such as the head of the class, merits, premiums, high rank, etc., may be proper within certain limits, but they are not the best and highest motives, and should be dispensed with as much as possible. With strong teachers such means are not necessary. Respect for self, and the thought of the right and the just should ever be present. The desire to please, when the teacher can gain the love and respect of the child, is a strong incentive with young children. The Golden Rule is wonderfully potent, and should ever be presented when the rights of others are involved. A child can very easily be taught the influence of discipline upon his character.

Punctuality, regularity, attention, and conformity to necessary requirements, cultivate the power of the will. A pupil ten or twelve years of age can readily see that without the power to say to himself, "I will do this, I will abstain from that," he never will accomplish anything in life. Without will power he never can be a successful man, much less a moral man. In a more advanced age, the pupil can see that the greatest of all is mastery of self. He must conquer self, that he may be free. Though he not be able to grasp, through intellect, the necessity of the external conditions that seem to limit his action, he can be led to receive this on faith until the time when the mature intellect may be able to grasp the highest truth. His attention should be called to the fact that he is surrounded by institutions created for the protection and welfare of the individual; that these exist from the very nature of man, and are necessary. It is his duty to obey

their mandates, for these institutions—the family, society, the State, the Church—are all for his protection and welfare. Much of this he can be led to see. His passions, appetites and desires must be subdued by the self-brought into willing obedience to the principles involved in these institutions. He sees how it is in accordance with man's nature to be able to cultivate or subdue his tastes, and desires. When he has learned to renounce himself, he is on the road to the highest culture. The highest standard of school government is self government. Teach the pupil to control and govern himself.—Supt. E. H. LONG, St. Louis.

#### OUTLINES OF CHEMISTRY.

by N. B. Webster, A. M. Clark and Maynard, Publishers, New York.

This neat and attractive little book is a great soul in a small body. The essential elements of the study of chemistry, the latest results of modern research, and the experience of forty years teaching, in the methods and art of putting things, are condensed into the 144 pages between its covers. The author, Prof. N. B. Webster of Norfolk, Va., is a teacher of rare tact and power to inspire a class. The degree of information and interest he succeeded in putting into the class at Hampton Institute which had the pleasure and benefit of his instructions during last winter, was surprising, considering the smallness of the time and previous preparation. That this book is in part the embodiment of those instructions, will suggest its clearness and adaptation to elementary instruction. Its condensation demands a teacher with a familiarity with his subject and a power of enlargement and illustration. Such an one will find it highly suggestive and helpful full of ingenious devices, for object lessons, and vivid illustrations, clear in arrangement and method; all that could be wished, while it will be interesting and valuable to put into the hands of students for review and permanent use as a book of reference. While it is adopted by Clark & Maynard, the well known school book publishers, as one of their Practical Science series, it has been printed on the Hampton Normal School Press and its neatness and correctness speak for the ability of that office.

#### A Devoted Indian Missionary Dead.

Dr. Stephen R. Riggs, for forty-six years a devoted and successful missionary among the Sioux (Dakota) Indians, has closed his labor and entered into his rest. He died at Beloit, Wisconsin, Aug. 24th, in the 72nd year of his age. He was an ardent friend of the Indian. His heart was set upon missionary work among them from the commencement of his education. At its close, he volunteered his services to the American Board as a missionary to the Sioux. He received his appointment, and entered upon his work about the beginning of the year 1837. When he began his work, the Sioux could scarcely be said to have a written language at all. At its close, their language was better reduced and more perfect than that of any other of the Indian tribes; and this principally through his personal labors. But the great work of Dr. Riggs, and that for which his name will be held in everlasting remembrance, is the translation of the entire Bible into the Dakota language. He had, in this work, the assistance of a fellow missionary; but the oversight and the largest portion of the labor were his own. The great object of all missionary work is the conversion and salvation of perishing souls. At the outset of his work, there was not a church nor perhaps a single convert among his benighted people. "When he laid aside his armor, he could point back to a dozen churches, with 900 Indian members as the fruit of his and a few co-laborers' work." And in the meantime, not a few, no doubt, of his converts had preceded him to the church triumphant, with whom he is now associated in the song and blessedness of heaven, and realizing the promise "that they that be wise shall shine as the brightness of the firmament, and they that turn many to righteousness as the stars forever and ever."

Dr. Riggs's visit to Hampton Institute two years ago will be remembered with pleasure by teachers and students. We take this sketch of his life and death from the "Morning Star," of the Carlisle school.

has thirty-five, Hampton has eight (I hope not twenty more) and the Agency school, when the building is completed, can accommodate fifty. I am told; which leaves about one hundred running loose in the camps. Could any civilized community improve very rapidly with such educational facilities? Some of the civilized governments have found it desirable to make education compulsory. I don't think it would be found necessary to do so with the Indians, but it is necessary to have school facilities or the rising generation will not be much in advance of the present.

It would be difficult for the government to be too liberal in this matter. In buying land from the Indians, why not reserve certain portions for school purposes? Had the last treaty been ratified or should it be ratified by the next Congress, it will not be over a year or so before there will again be raised a cry for more Indian land and the time would not be far distant before these Indians would be driven to the Indian Territory. As long as there is an "Indian Reservation" the same cry will be heard in the land. There is a glamour thrown about Indian lands and the average frontier settler thinks that paradise is just across the border of an Indian reservation. They will pass by thousands of acres of rich land to locate just on the edge of an Indian reservation, where the land is not half so good as that they have left behind them. When the United States Government feels rich enough and large-hearted enough to give the Indian a patent for his land as it does to the Swede, Scandinavian and other foreign races, there will be an end to the trouble.

If, under the impulse of an awakened conscience, the government should make said patents inalienable forever, not for a term of years, but forever, it would go far toward mitigating the injustice and indignity of the past and present treatment and management of the Indians. There can be no injustice when there is no law and it is inhuman to deprive the weak of privileges and advantages enjoyed by the stronger race. By a recent order from the Indian Bureau, a code of laws has been adopted and Indians appointed judges, to serve without pay. If they have not risen to a condition of advancement, when they can conceive of a code of laws for themselves, it is probable that they will be able to administer laws made for them? We claim to be enlightened; how many of our law officers work without pay? Do we seek our judges from the criminal and ignorant classes? One of the laws made by the Bureau prohibits polygamy and yet at one of the Agencies two of the Indian judges are polygamists. I have argued for years that the United States laws be extended over the Indian reservations and that regular sessions of the United States Court be held on said reservations. If the civil arm of the government is yet too weak to control the Indians the only sensible thing to do is to turn them over to the War Department. There is a fallacious idea that has been industriously spread abroad in the land that the Indians would be cruelly treated by the army. This is merely a bugbear to frighten the good people, who are dissatisfied with the present management of the Indians, from advocating any radical change in the present system.

Provision should be made for retaining in the service certain good men who are now Indian Agents and who are doing a great deal of good under great disadvantages and discouraging opposition. These worthy men are well known to the military authorities and would undoubtedly be retained in the present position, if no provision was made to the contrary in the transfer of the Indians to the War Department. No officer of the army covets the disagreeable task that would be imposed upon the army by the transfer. To properly manage the Indians requires a great amount of persevering care, firmness and patience on the part of those in charge. Requires, in short, trained and disciplined minds as well as kindly and sympathetic hearts, and these requisites combined with experience among the western Indians and an intimate knowledge of their character, customs and habits may be found among the line of officers of the army, who have served several years west of the Mississippi River. Economy and common sense and the best interests of the Indians demand that the entire management of the temporal affairs of the Indian be transferred to the War Department. At present a large part of the annual appropriation made by Congress for the support of the Indians, or as the Indians consider it, the payments due them for land ceded to the General Government, goes not to the Indian, but to pay the salaries of an army of office holders, which is constantly changing its personnel, at the head of the Indian Bureau. No permanent system of management is possible under the Indian Bureau as it now exists. It has been patched up in inception and the sooner Uncle Sam consigns it to the lumber room the better off he will be and the less trouble will he have with his swarthy children of the West.

A slight extension of the supply depart-

ments and clerical service at Army headquarters would enable the War Department to carry on the Indian business in connection with its present cares and duties and the expense would be trifling as compared with that entailed under the present head-and-head-and-unwieldy management.

Punishment is swift and sure for offending Army Officers and the removal of the unit or regiment is easily accomplished. A defaulting Indian Agent has yet to be punished, though their pecuniaries are notorious, and an unit Agent may remain in office for years, if supported by political influence, though the average tent and an office of an Indian Agent is computed to be about a year and a half.

With the enormous pressure that is now being brought to bear to throw open this reservation, there is brought home to every friend of the Indian a realization of the fact that the Indian's tenure of land is inadequate to resist the encroachments of the mass of white settlers surging continually westward and eastward too far that matter, for the flow has already begun to spread from the peaks of the Rockies toward the great valley of the Mississippi. The Indian has hardly time to catch his breath so rapid has been the march of development and, under the circumstances, it is a matter of surprise that he has made as much advancement in civilization as he has in many cases.

Whatever else may be deemed wise to do, sufficient land should be accorded them, under an inalienable title, in order that they may retain a foothold long enough to get rooted in civilized modes of living, and ample school and mechanical and agricultural training facilities should be freely and liberally furnished. That the Government of the United States has not long since done so is a shame. It is an palliation to argue that the Indians may not have demanded these things and therefore no blame can attach to the Government or any property to the people of the United States for not having insisted that practical measures be adopted for the preservation and advancement of the Indian race.

Were the Indians so far advanced in civilization that they could comprehend fully enough the advantages of education and individual ownership of land to demand them for themselves and their children, they would need little help from the Government; but it is absurd to consider the Indians proper judges; they are grown up children and the Government must stand in the place of a father and protector for them and it is in this light the Indians look upon the matter, calling their Agent "Father" and the Government "Great Father."

I am most respectfully,

Your obedient servant,

Geo. Leroy Brown.

CROW CREEK AGENCY, D. T.,  
September 15th, 1883.

#### EDITOR OF WORKMAN:

Left Fort Pierre, D. T., early this A. M. on the steamer Behan, and arrived at this agency at 2 P. M. The run down the river was very enjoyable—the weather cool and pleasant; no accidents, though we had an old-fashioned race with another steamer, and the possibility of an explosion had a tendency to keep one on the alert. The other boat left Pierre ahead of us, and remained in the lead nearly half way down to the Agency, where our boat managed to slip aside, to the great satisfaction of our folks and the disgust of the other party. The most of the time was consumed in going round the "Big Bend," which has been computed to be a mile and a half across and forty miles around. This bend would make a magnificent pasture. One would have but a mile and a half of fence to make to secure thousands of acres. It lies within the Crow Creek reservation, which just now is attracting the attention of the border settlers, who are piling up like a wall around the Reservation, anxious to break over the border. The Indians are located on separate claims here under certificates from the Department. All are farming and improving their claims, live in log houses, have more or less stock, and this year they will turn in a goodly quantity of wheat into the market at Chamberlain. They are terribly in earnest in their efforts to so improve their homes that the Government will not allow them to be driven off. Should full and adequate measures be taken to assist these Indians in their efforts at this juncture, a few years would be sufficient to place them on a solid footing, when they would be able to command protection by the business interests of the Territory. As soon as their production is commensurate with the production of the border settlers, it will be to the interest of the railroads and business men to see that they are protected in their rights to life, liberty, and pursuit of happiness and ownership of land. They want axes and breaking plows, hard wheat for seed, lumber and brick for houses, and an active, energetic man as agent could push

them forward wonderfully. Changing from the tipi to a log house, poorly constructed, and peculiarly attractive to vermin, the health of the Indian is very apt to be injured. Generally there is but one window, and the cooking stove stands in the center of the room in the house; there is no chance for ventilation and the fumes are filthy and unwholesome. One cannot wonder that the Indian should prefer his tipi, with its light and neatness. It is easily moved, and the camp-fire has peculiar charms for us all. A great old-fashioned fire-place in a neatly constructed house would charm the Indians scattered about the hearth, furnishing light, warmth, ventilation and ample facilities for the good housewife to prepare their simple food. We cannot jump at a single leap from barbarism to enlightened civilization; it is necessary to allow for the weakness of the undeveloped natures. The fondness for the dress and the food is not confined to the Indian. We want them to throw away their gaudy colors, varicolored blankets, paints, beads, and gaily ornamented toggery, and put on flimsy, shoddy, ill-fitting, ill-made clothing, furnished by the government, and are surprised at their reluctance. We want them to give up their gay camp life and settle down to hard work on farms, with no relaxation or amusement, and be surprised at their unwillingness. We promise them help in a thousand ways, fail to keep our promises, and are surprised that they don't feel disposed to take our good advice. We go on the principle that "anything is good enough for the Indians," and are surprised at the meagre results of agents and missionaries. Affairs are mismanaged, and policy constantly changing; there is a woful lack of system, union, and thoroughness in all work done for the advancement of the Indians, and it is a matter of real surprise that they have made the progress that have. Earnest, enthusiastic men, whose hearts are in the work, are needed more than anything else, and they should be respected and supported by the government and by all good men and women. A man is elevated by the bringing out and development of his good qualities, not by constantly twitting him about his bad ones. This is true of the Indian; the sooner we realize this the sooner will we devote ourselves to the encouragement and development of his good qualities. Furnish the Indian with material to build comfortable, cheerful dwellings, and teach him how to properly construct them; furnish him with oxen and proper farming utensils, and teach him when and how to use them; furnish him with proper kind of wheat, and teach him how and when to sow and reap. All this has been done at, but never thoughtfully done. There are farmers and farmers. "Agency Farmers," are generally bosses of a gang of hands engaged in the necessary police of the Agency. At Cheyenne River Agency the Indian camps are scattered from forty to eighty miles from the Agency, and it is almost impossible to cross from one camp to another without turning to the Agency. The inaccessibility of the camps renders the Indians independent of the Agent's immediate supervision, and places him at the mercy of the *bad* and *good* how to properly construct them; furnish him with oxen and proper farming utensils, and teach him when and how to use them; furnish him with proper kind of wheat, and teach him how and when to sow and reap. All this has been done at, but never thoughtfully done. There are farmers and farmers. "Agency Farmers," are generally bosses of a gang of hands engaged in the necessary police of the Agency. ## Home.

### Thanksgiving. The "Good Old Times."

Thanks be to Him who built the hills;  
Thanks be to Him who streams who fills;  
Thanks be to Him who draws the night  
That sparkles in the blue afar.

Thanks be to Him who makes the morn,  
And bids it glow with beams new born;  
Who draws the shadows of the night  
Like curtains o'er our wearied sight.

Thanks be to Him who gives us home,  
And deigns within its doors to come,  
Where loving hearts and lowly be,  
As in the home of Father and Son.

Thanks be to Him who sheds abroad  
Within our hearts the love of God,  
The Spirit of all truth and peace,  
Fountain of joy and holiness.

"When thus has thanked thy God for  
Every blessing sent,  
What time will then remain for merriment  
And lament?"

"The halcyon days are in the past, and these are the days of degeneracy." The same cry was heard last year and last year. The records of many hundred years bear the same complaints, the same sorrowful discontent with the present and the same admiration of the past. One of these complaints is that life is waning; that more children die; that a smaller proportion are permitted to enjoy the full period of labor and usefulness and die in a good old age. All this is without foundation.

The records of the earlier ages were loosely made, and are a mixture of fact and fable, including what the writers thought, as well as what they knew to be true. Neither the ancients, nor the people of the middle ages took account of the three great events of man—his birth, marriage and death. It is only within 400 years that, in any nation, state or town, reliable records have been kept by public authority, which could show the longevity of the people. To-day, such records are kept among all peoples with any claims to civilization.

In London, from 1604 to 1682, the births were 69,675, and the burials 94,882. In the ten years from 1851 to 1860, there were in London 86,263 births, and 107,475 deaths. In the former period, for every 100 births there were 137 burials. In the latter period, for every 100 births there were 78 burials. 200 years ago, the deaths in England were 1 in 12 of the living; now the rate of death is 1 in 42.

In Prussia, Silesia, and other countries where such statistics have been preserved, about the same state of things has been found to exist.

In Boston from 1728 to 1752, the deaths were 1 in 21 of the living, while from 1846 to 1865, in the same city, they were 1 in 42. This is a wonderful change. The Life Insurance Company of Philadelphia gave a table in which the expectation was 28 years. The life table of the United States, calculated in 1860, made it 41 years.

#### CAUSES OF DEATH.

In London, from 1675 to 1757, 7 to 10 per cent. of the people died of small-pox. Mortality from this disease is now almost entirely banished. In the 10 years from 1851 to 1860, 1 per cent. in England died from this cause.

Fever was fearfully destructive. More than 15 per cent. of the deaths in London during the last quarter of the 17th century and the first half of the 18th century were from fever, but from 1851 to 1860 only 3 per cent.

Consumption was formerly much more common than now. It formerly caused 17 per cent. of the deaths, now from 10 to 12 per cent.

Some diseases formerly prevalent, traceable to the ignorance, poverty and vicious living of the people, and which were fearfully destructive, have disappeared from the earth.

During all that period of the world's history, the mortality was enormous. When the plague was absent, the "popples," small-pox, autumnal cholera or some other malady was at work. Diseases were then so prevalent and so fatal, that what would now be regarded as very unhealthy seasons, would then have been esteemed highly favorable, and received with gratitude. The seven to ten per cent. mortality was considered as the natural lot, and created no more alarm than a one-and-a-half to two-and-a-quarter per cent rate does at the present day.

They took no pains to search out the causes of these pestilences. Though there were stagnant pools about them, no underground drainage, the gutters full of all sorts of filth, decaying animal and vegetable matters choking up the way so that the water could not run off; though their houses were unwarmed, and their inhabitants wore their clothing unwashed, though the air within and without was reeking with pestilential exhalations—yet the people and the rulers took no note of these things. They believed the wrath of heaven

or the malice of enemies was the cause. These were the special objects of their dread, which they endeavored to propitiate. They believed in contagion, and often exercised the most extreme cruelty in separating the sick from the well.

"In London, for some years previous to 1602, the average annual mortality was from five to six thousand. Then the plague appeared, and there were 42,042 deaths in a single year, and there were 42,042 deaths in a single year, of which 36,266 were from the plague. Again, in the year 1625, 35,417 from the plague. Again, forty years later, in 1665, the epidemic appeared, and carried the mortality up to 97,390, of which 68,596 were from this single cause."

This wretched, horrible story makes one seriously question whether the people of those times were mad beasts or human beings. Instead of the old times being the "good old times," there have never been any times as good as these. The world has never been in as good condition as it is to-day. There are ignorance and vice enough in the world now, but there was ten times as much in former years. Those who talk of the good old times, know nothing of the story of the past.

The earth itself has become more favorable to human existence. Vast lands have been reclaimed, swamps have given place to dry and arable fields. European sanitary reforms contain abundant proofs of the evil influence of marshy and wet grounds, and of the beneficial effects of drainage, and of the mechanical inventions, whose name is legion, have relieved the over-crowded localities.

The steam-engine, man's powerful, tireless and versatile co-operator, has released him from a thousand exhausting labors. Probably no invention in the history of the world has done so much to lift the poor laborer out of his killing slavery.

#### IMPROVEMENTS.

The Englishman lived in holes and caverns of the earth, or built huts of sticks and brush; next he built himself a cabin of stone or brick, mud or clay; next, what we call houses, and the houses were successively improved, and made comfortable and healthful from age to age.

Erasmus, the learned scholar and writer, says of England at the beginning of the 16th century: "The floors of the houses are generally made of nothing but loam, and are strewn with rushes, which being constantly put on fire, without the removal of the soil, in some cases for 20 years, are full of fish bones, with the excretions of dogs, children, men, etc."

#### FOOD.

Foods are much improved. More and better agriculture has increased the quantity and variety of our grains and vegetables. Better provision for feeding cattle in winter has increased the amount of fresh animal food throughout the year.

Potatoes were unknown before 1600. For many years after their introduction into Europe, they were luxuries eaten only by the rich. In 1633, the law made the price of potatoes fifty cents a pound.

Thirty years later, Muffet wrote: "Potatoes are getting to be quite common. Even a farmer sometimes buys them to please his wife."

A substantial diet was the exclusive privilege of the higher classes. A maid of honor might have roast-beef. A ploughman worked on the strength of water-gruel. For 300 years, laboring people have gradually added variety to their diets, then rye, then wheat. Improving their nutriment has improved their capacity for labor, and their longevity.

Animal food has improved more than vegetable; cattle and sheep have increased in size. Whereas a beef carcass weighed 307 pounds, it now weighs 550. Calves weighed 50 pounds, now 105. Sheep weighed 28 pounds, now over 50. The weights given as those of the present time are less than the fact.

Fruits have multiplied and improved. We have hundreds of varieties of luscious apples; where they had the hard, small, sour crab. Plums, peaches and berries have all been multiplied and improved.

#### WAGES.

Wages are larger, money buys better food, shelter and clothing. A good mechanic earns a bushel of wheat in half a day. Two hundred and seventy years ago, it would have taken him nine days. Two hundred years ago, weavers and dyers earned 17 cents a day, and paid 62 cents for the cheapest shirt.

Two hundred and fifty years ago, a good mechanic's wages for one day, would buy two pounds and a half of wheat, or two dozen eggs. He could earn a pound of potatoes in three days, a turkey in three or four days, when in less than a day and a half, and by working six days and a half, he could earn coarse linen enough for a shirt. He is five to twenty times better off to-day.

#### EDUCATION.

Intelligence is among the most effective means of sustaining human life. In six counties of England and Wales, dur-

ing 17 years, 63 per cent of the mothers could not write their own names. Nearly 19 per cent of their children died before they were a year old. A comparison was made with 15 other similarly situated counties, where two thirds of the mothers could write. As often as 103 infants died in the more intelligent counties, 134 died in the uneducated districts. There was no appreciable difference in the situation of the districts, except the difference in education. Inability to write one's name, indicates more than ignorance of geography, a lack of general knowledge, a thick discipline. It represents a less, and more uncertain supply of the means of living, and in the management of family and children, a more frequent failure to meet the necessities of the weakest period of human life.

A recent comparison between different countries of Ireland showed 30 per cent. more infant mortality where two thirds of the mothers could not write, than where two thirds of the mothers could read the newspapers and write their names.

In cities and country districts at the present day, the classes whose poor, insufficient and pestilential living conditions, and the diseases of age, suffer as their ancestors did; they have no consumption, dysentery, and fever, and they drag their slender lives to early graves.

The field of vitality is yet only partly cultivated. Present and coming generations will progress in practical methods, and each will have a longer, richer, longer life. *The Southern Workman.*

## Agriculture.

### The Palmetto Rat Trap.

Mr. J. Wm. Folk, of Jalapa, S. C., reports to the South Carolina Agricultural Department a new device for catching rats, of which mischievous pests he writes: "They are more numerous than ever and inhabit almost every barnyard or barn corner, and their destruction to grain is no little item, and how to exterminate them has puzzled many, while the various traps, poisons and cats have all been tried in vain. I will tell you many ways the best and most harmless plan I have ever used, as well as others; but, with wonderful success, viz:—

Take a barrel that will hold water; cut a notch on edge of barrel on opposite sides after one head is taken out; then take a strip to reach across the barrel to fit in notches; make round each end so it will turn easily; then take a second piece to go across the barrel flat, allow one end to rest on the edge of the barrel and cut the other end two inches from edge of barrel; tack in middle of the first strip, bait by tacking a small skin on the end of the full barrel with water, and after one-half bushel rats can be caught in a single night."

"This," writes, Dr. Polk, "is a self setting trap, and the best I have seen in the world." Any intelligent reader of *THE CULTIVATOR* ought to be able to make, or plan for some one else to do the work, a trap of this kind to put in corn-house, cellar or other places infested by rats. *The Southern Cultivator.*

### Chicken Cholera Cure.

We promised a friend, says the *Covington (Ga.) Advertiser*, to publish a good receipt for chicken cholera in our last number, but it has been misplaced. We present this week the following which the agricultural editor knows personally was tried with great success. It may fall when given to chickens who are far gone with the disease: First, separate the chickens who have shown no signs of the disease from the others, and as signs of moderately strong alum water, and feed, say with meal, and feed them with this once a day when the disease is prevailing. We know of nothing better than this to prevent the attack. Never let them have access to slops, swill tubs, or any kind of sour food; and let them have with their food small quantities of fresh meat, or worms such should be dry. This will save the well ones, or rather prevent their being attacked by the disease. Their water should be fresh and pure. The above is a preventive.

To those already sick and droopy, give two or three teaspoonfuls of strong alum water for at least two or three days in succession, and mix some of the alum water with their feed, feeding it in the morning and evening. As soon as any chicken seems to be evidently past cure, put it out of the way. After three days' use of the alum water and food, give it once a week until all danger is past.

The following is another remedy: Mix two eggs, and a tablespoonful of finely pulverized alum with enough flour to make a thin paste and force the chicken, turkey or swallows a portion of the mixture. This is quite a certain remedy if used in time. We know of nothing better than the above for chicken cholera. *The Southern Cultivator.*

## Health and Humanity.

### Ten Lessons on Kindness to Animals.

By George T. Angell, Esq., President Massachusetts Society for Prevention of Cruelty to Animals. These lessons can be obtained from the Society, 60 Tremont street, Boston, Mass., in any quantity, at two cents per copy.

#### NINTH LESSON.

For, to the days are hastening on  
By prophet bards foretold,  
When with the ever-circling years  
Comes round the age of gold.

When peace shall over all the earth  
Its ancient splendor fling,  
And the whole world give back the song  
Which now the angels sing.

*Edmund Hamilton Sears.*

THE SHEEP THE PIG, THE TOAD.

[To be read to pupils by Primary Teachers.]

For our warm woollen clothing, our blankets, and shawls, and stockings, and mittens, and carpets, and everything that is made of wool, we are indebted to those kind and harmless creatures, sheep and lambs.

The lamb has been for ages the type of innocence. In Eastern countries sheep are most kindly cared for, and tenderly treated. The Eastern shepherd does not drive his sheep, but leads them, carrying the feeblest lamb in his arms. When the Psalmist would speak of God's kindness, he says: "The Lord is my shepherd: I shall not want. He maketh me to lie down in green pastures. He leadeth me beside still waters."

In Europe and America I fear they are not treated so kindly. Some men are so wicked that in winter and cold weather they cut off the warm fleeces from these poor creatures and then send them to the markets, where they sometimes shiver and freeze, several days before they are killed. And in some of our slaughter-houses some men are so cruel that they kill them in the presence of their mother, and not separately as they should be killed.

Pigs are generally considered, and found to be, very dirty, but this is the fault of their keepers. The pigs. They would be very glad to get clean straw, clean water, clean food, and a clean sty, and then they would be cleaner than some children. Nothing pleases them better than to be kindly treated.

Pigs are very intelligent. Some of them have been taught many cunning tricks, such as to pick out the letters of the alphabet, and make a word out of them. Some years ago, I was walking near North Conway, New Hampshire, one day, when a large dog came from a house and bellowed me. A little farther on another dog came from another house, and followed me, and when, a few minutes later, I looked behind, I found a large pig following me. I walked a considerable distance, and they all followed. They went back to the house, the last dog came from and asked how this happened. The man told me that his dog was the friend of the first dog that followed me, and his pig and dog were such friends that it was almost impossible to keep them apart. Wherever the dog went the pig would follow.

I read, some time ago, a very funny story about a dog and pig kept on board a ship. They were good friends, but liked to play tricks on one another. The dog had a nice kennel which the pig would try to get into in stormy weather, but as it was only large enough for one, when the pig got in first, the dog had to stay out. One day it began storming and the pig went to the kennel, but found the dog already there. Piggie thought a little, and then went to the dish out of which both were fed, and began to make a noise with his mouth as though he was eating. The dog pricked up his ears, came out of the kennel and ran for the dish, when piggie ran for the kennel, and got snugly fixed there before the dog had found out the trick.

It is a great pity that men treat these creatures so cruelly in sending them on railroad cars thousands of miles without food or water, so that many thousands of them die on the way. And it is a great pity that many of them are killed in a most cruel manner. When I was in the great slaughter-house of Paris, France, I found that pigs and hogs were always stunned by a single blow on the head with a long-handled, round wooden mallet, before they were killed, and so they died, without knowing that they were to be killed and without suffering.

And now I have a few words to say about that very useful and good creature, though not very handsome, the TOAD. All children should know that toads are not only entirely harmless, but are among our best friends. They live on, and destroy thousands of ants, spiders, and the many bugs that injure our gardens. In France they are considered so valuable in gardens that they are sold for from fifteen to seventeen dollars a hundred, or fifteen to twenty-five cents a piece. The great Duke of Wellington, many years ago, found a little boy crying because he had to go away from home to school in another

## The Present Crisis.

When a deed is done for freedom, trembling on from east to west,  
 Run a thrill of joy prophetic, trembling on from east to west,  
 And the slave, where'er he cowers, feels the soul within him climb  
 To the awful verge of manhood as the agony seizes him  
 Of a century bursts full-blown on the stormy plain of Time.

Through the walls of hut and palace, shoots the instantanous throes,  
 When the true all of the Ages wrings earth's systems to and fro;  
 At the birth of each new Era, with a recognizing start,  
 Nation wisely looks at nation, standing with uplifted arm;  
 And glad Winter's yet mightier than child leaps to smother the Future's heart.

So the Devil's triumph smothered, with a terror and a  
 Contentment to continent, the sense of coming ill,  
 Law where'er he cowers, feels his symphony  
 With the drops shilling earthward, to be drunk up  
 By the soul,  
 A corpse crawls round unburied, diving in the  
 number cold.

For mankind are one in spirit, and an instinct bears  
 Round the earth's electric circle, the swift flash of  
 right or wrong;  
 Whether conscious or unconscious, yet humanity's  
 vast frame—  
 Through the ocean audered fibres feels the push of  
 joy or shame—  
 In the gain or loss of one race all the rest have equal claim.

Once to every man and nation comes the moment to decide,  
 In the strife of Truth with Falsehood, for the good of  
 evil side;  
 Some great cause, God's new Messiah, offering each  
 the blazon or flight,  
 Parts the parts upon the left hand, and the sheep up  
 on the right,  
 And the choice grows by forever 'twixt that darkness  
 and last light.

Hast thou chosen, O my people, on whose party thou  
 shalt stand,  
 Ere the locus from its roe sandals, shake the dust  
 against our land?  
 Though the cause of self prosper, yet 'tis Truth alone  
 is a strong,  
 And altho' thou wander outcast now, I see around her  
 strong  
 Troops of beautiful, tall angels, to ensnare her from  
 all wrong.

Backward look across the ages and the beacon mo-  
 ments see,  
 That like peaks of some sunk continent, just through  
 Obliviousness,  
 Not an ear in court or market for the low foreboding  
 cry  
 Of these Crisis, God's stern winners, from whose  
 feet earth's shaft must fly,  
 Never above the choice momentous till the judgment  
 hath passed by.

Careless scans the great Avengers; history's pages but  
 record  
 One death-grapple in the darkness 'twixt old systems  
 and the Word,  
 Truth forever on the scaffold, Wrong forever on the  
 throne;  
 Yet that scaffold sways the future, and, behind the  
 flimsy mutability,  
 Standeth God within the shadow, keeping watch above  
 his own.

We see dimly in the Present what is small and what  
 is great,  
 Slow of faith how weak an arm may turn the iron helm  
 of fate;  
 But the soul is still oracular, and the market's din,  
 List the ominous stars whisper from the Delphic cave,  
 "They enslave their children's children who make  
 compromise with sin."

Slavery, the earth-born Cyclops, fellest of the giant  
 brood,  
 Slave of brother Force and Darkness, who have  
 drained the earth with blood,  
 Farnished in his self made desert, blinded by our  
 perper day  
 Groined in yet uncharted regions for his miserable prey:  
 Shall we guide his gory fingers where our helpless  
 children play?

To side with Truth is noble when we share her  
 wretched cross,  
 Ere her cause is fine and profit, and 'tis pro-  
 pious to be just;  
 This is the brave man chooses, while the coward  
 stands aside,  
 Doubting in his angust spirit, till his Lord is crucified,  
 And the multitude make virtue of the faith they had  
 denied.

Count me o'er earth's chosen heroes.—They were souls  
 that stood alone,  
 While the men they agonized for hurried the contumel-  
 ious stone,  
 Blood service, and down the future saw the golden  
 bean looked  
 To the side of perfect justice, mastered by their faith  
 driven,  
 By one man's plain truth to manhood and to God's  
 supreme desire.

By the light of burning heretics Christ's bleeding feet  
 I track,  
 Tolling up new Calvaries over with the cross that  
 turns not back,  
 And these mounds of anguish number how each gen-  
 eration learned  
 One new word of that grand Creed which in prophet  
 hearts hath burned.  
 Since the first man stood God-conquered with this fate  
 to heaven upturned.

For Humanity awakes onward: where to-day the  
 martyr stands,  
 On the morrow crosses Judas, with the silver in his  
 hand;  
 Far in front the cross stands ready and the crackling  
 fagots burn,  
 While the boiling mael of yesterday in silent awe  
 returns.  
 To glean up the scattered ashes into History's golden  
 urn.

'Tis as easy to be heroes as to sit the idle slaves  
 Of a legendary story carved upon our fathers' graves.  
 Worshippers of light ancestral make the present light  
 a crime;  
 While the Mayflower, lashed by coward, steered by  
 men behind their time,  
 Turns those tracks toward Past or Future, that make  
 Plymouth Rock sublime?

They were men of present valor, stalwart old icons  
 Unconquered by axe or gibbet that all virtue was  
 the Past;  
 But we make their truth our falsehood, thinking that  
 hath made us free;  
 Hoarding it in monthly parchment, while our tender  
 spirits flee  
 The rallo grasp of that great impulse which drove  
 them across the sea.

They have rights who dare maintain them; we are  
 traitors to our sives,  
 Smothering in their body ashes Freedom's new-lit altar  
 fire;  
 Shall we make their creed our faller; shall we in our  
 haste to slay,  
 From the tomb of the old prophetic stent the funeral  
 flames away  
 To the tomb of the martyr-fagots round the prophets of  
 to-day?

New occasions teach new duties; Time makes ancient  
 grow uncouth;  
 They must upward still, and onward, who would keep  
 abreast of truth;  
 Lo! before us gleam her camp fires as we ourselves must  
 pilgrims be,  
 Launch our May flower, and steer boldly through the  
 desperate winter sea,  
 Nor attempt the Future's portal with the Past's blood-  
 stained key

James Russell Lowell.

## Letter from Lynchburg.

BY ORRA LANGHORNE.

Lynchburg, Oct. 30th, 1893.

The thermometer standing at 80, and  
 gathering a basket of ripe tomatoes from the  
 garden, are a pleasant leave-taking from the  
 warm weather. In the afternoon, a thunder  
 storm with heavy rain cooled the air deliciously.  
 The forests are gorgeous now in coloring  
 and in sheltered spots, dahlias, chrysanthemums  
 and other autumn flowers are radiant  
 with departing glory. As yet we have  
 had no frost and the winter clothing that  
 generally seems suitable at this season is in-  
 supportable now.

Last week beheld Lynchburg absorbed in the  
 Agricultural Fair which was unusually  
 successful. The first day was somewhat  
 cloudy, but those which followed were warm  
 and pleasant, and crowds of white and colored  
 people were on the grounds all day.  
 The fruit and flower department was in  
 charge of Mr. Samuel Patterson a native of  
 Maine, who came to Virginia in search of  
 health and a mild climate thirty years ago,  
 and having found both, has proved his grati-  
 tude to the land of his adoption by doing  
 much to promote fruit culture within her  
 borders.

Sam Purdy and Dan Spaulding the famous  
 race horses given to Capt. Daingerfield of  
 Rockingham County by Jas. R. Keene of  
 New York to improve the stock of Virginia,  
 were at the Fair, and attracted much atten-  
 tion.

Judge Fullerton of New York, recently  
 employed as associate counsel to defend the  
 man who killed Carey, the Phoenix Park  
 assassin, made the opening address, which  
 was greatly admired.

There were premiums for everything, from  
 fat cattle to fine fancy work. Among others  
 premiums for races run by white and colored  
 boys.

The "Barbules Oriole" under charge of  
 "Lord Ragamuffin" afforded great entertain-  
 ment, one of its best features, being a wagon  
 load of Ethiopian performers, arrayed in  
 singing in the most lachadadial style in  
 comic imitation of the Lynchburg Mozart  
 association, a musical society composed of  
 the elite of the town.

Many of the papers for the last few days  
 have contained articles on the recent de-  
 cision by the Supreme Court which pro-  
 nounced the Civil Rights bill unconstitutional.  
 If this decision had come ten years ago,  
 it might seriously have retarded the progress  
 of the colored people, but the past ten years  
 have seen such a wonderful advance among  
 them in education, in property and in the  
 estimation of their fellow citizens, that it is  
 not likely to do them any harm.

As "unsettled questions have no pity for  
 the repose of nations," it seems more than  
 probable that this decision will be the basis  
 of a new agitation of the so called "Negro  
 question" and being made an issue between  
 colored people every privilege enjoyed by their  
 white compatriots under the law.

Southern people are curiously inconsistent  
 in regard to the color prejudice, which is  
 the best hope for its final abolition. For in-  
 stance, about a year ago, Hon. John M. Lang-  
 stone, the accomplished U. S. Minister to  
 Hayti, went through Virginia, making admi-  
 rable speeches in the interest of the Liberal  
 party. Mr. Langston made no point of be-  
 ing admitted to hotels, and when in Lynch-  
 burg was lodged at a neat little cottage where  
 a worthy colored widow entertains colored  
 travelers. I called twice to see Mr. Langston  
 and could not be impressed with the abstru-  
 sity of one of our Ambassadors to a foreign  
 government, an elegant man every way, ac-  
 customed to the society of such men as Sum-  
 ner and Lincoln, being unable to obtain ad-  
 mittance to a Virginia hotel.

On the other hand, when Fred Douglas  
 was invited some years ago to Staunton by  
 the white citizens to speak AGAINST the Ne-  
 gro Exodus from the South, he was entertain-  
 ed at the best hotel in the town, all the promi-  
 nent people called on him and the leading  
 gentlemen of the place, "delighted to hon-  
 or him."

A letter just received from my sister in  
 Harrisonburg mentions that Mrs. Evelyn Cate-  
 chists, who are gathered at that point for the  
 annual convocation. I regret that I cannot  
 stay over with them. These annual meetings  
 must be very interesting and helpful. I will  
 whom I have had the pleasure of talking  
 with spoke hopefully of their work and ap-  
 peared specially pleased with the recent visit  
 of Senator Dawes' Committee at their  
 several Agencies. "Now," say the Indians,  
 "We have men in the great Council at Wash-  
 ington, who have seen us and know our  
 wants." This visit will be long remembered  
 by them with special pleasure. They are  
 full of it now and don't want to talk about  
 anything else. So far as I can learn the In-  
 dians talked freely and sensibly with the  
 Committee and every facility was given the  
 Senators to form a clear and comprehensive  
 judgment as to the present condition of the  
 Indians and the most practicable methods of  
 advancing them in civilized ways. Riding  
 over the Lower Brule reservation yesterday  
 I was greatly pleased to note the marked  
 progress they were making in agriculture.  
 Log-houses and fields of corn and oats were  
 scattered along at intervals all the way up to  
 Fort Hall, where two companies of the 25th  
 Infantry are stationed. My Indian driver  
 remarked as we drove by the Post garden,  
 "Black Soldiers very good farmers," and  
 from the results of this year's work he had  
 good grounds for making such a statement.  
 Everything in the line of what they call  
 "truck" at Hampton, was growing in the  
 garden luxuriantly. The fact is the soil is  
 very rich and productive and only needs  
 cultivation and rain to insure very large  
 crops of all roots and cereals. The two col-  
 ored soldiers, who rowed me over the "great  
 Muddy," said that they liked their country  
 very well in the summer, but found the  
 Winters altogether too cold for comfort.  
 Few re-enlist here; they prefer service in  
 Texas and New Mexico. Many of them  
 they tell me, save up from five to eight hun-  
 dred dollars during their term of enlistment  
 and then buy land in Kansas and other south-  
 western states. They look well and the  
 officers speak well of them as dutiful and  
 useful soldiers.

I found all but two of the Hampton boys  
 usefully employed. One of the idle ones  
 was sick and unable to do anything and the  
 other had given up the place given him at  
 the Agency, on the plea that the wages are  
 not sufficient. I am sorry to say that I am  
 not convinced that he was not justified in his  
 action. All the Hampton boys worked  
 faithfully with the Rev. Mr. Walker this  
 summer, putting up an addition to his church,  
 a very neat and pretty little edifice, standing  
 in the midst of Mr. Walker's fields, which  
 are very well cultivated, he, himself, doing  
 the work, thus teaching the race by deed as  
 well as word. Mr. Walker is a full blood In-  
 dian, a thorough practical man and an hon-  
 or to his people. I had the honor of taking  
 tea at his house, a comfortable frame build-  
 ing, nicely furnished and nicely kept by his  
 worthy helpmate; everything evidenced the  
 presence and work of a Christian man and  
 woman. Mr. and Mrs. Walker are yet young  
 and I trust that they may be blessed with  
 many years of usefulness. I met James  
 Good-kind at Brule. He is a very much im-  
 proved in health, was working in the Ag-  
 ency school-house and said he was very anxious  
 to return to Hampton, but as every thing  
 encourage the hope that the Brule school  
 will be a success this year, I was constrained  
 to advise him to wait until next year, that  
 his renewed health might be thoroughly test-  
 ed. Frank Yellow Bird is married and he  
 and his wife are engaged as assistants in the  
 Agency boarding school; both are highly  
 spoken of. Zedo Rencontre is also married  
 and has taken up a farm and is doing well.  
 Edward Ashley and Frank Faman are both  
 employed by the Agent, who speaks favorably  
 of their work. Edward talks of returning  
 to Hampton, but the Major is loth to spare  
 him from the school, where he has proved to  
 be a valuable assistant. The Indians are  
 threshing their wheat, of which they have  
 raised several thousand bushels this year.  
 They glean their fields, as folks of old, and it  
 is a very interesting sight to see them mov-  
 ing over the fields picking or raking up the  
 scattered ears. They are beginning to under-  
 stand the value of farm produce in a market,  
 for it is brought near to them and if their  
 present worthy Agent be retained and sup-  
 ported in his good work among them, they  
 will in a few years produce more than they  
 consume, but it requires an enormous  
 outlay of patience and practical work on the  
 part of Agent and employees to bring about  
 such a result. These people should be of the  
 best material, pure, earnest and efficient. It  
 is a grand mistake to suppose that anything  
 is good enough for the Indians. But I must  
 close and get into the wagon which is wait-  
 ing. Will try to find time to write to you  
 from Cheyenne Agency.

With best wishes, I remain your obedient  
 servant,  
 GEO. LE ROY BROWN, U. S. A.

I remain very truly yours,  
 ORRA LANGHORNE.

## A Sloop Regatta.

We give on our front page a spirited draw-  
 ing of a sloop race. Few of our readers  
 are aware of the amount of skill and judg-  
 ment required to manage one of these tiny  
 craft even in ordinary sailing trim; but when  
 with their immense spread of racing canvas  
 and nimble crew they cross the line for a  
 race, they seem almost like animate beings  
 striving for supremacy, so quick are they in  
 their maneuvers.

At their annual regattas these contests are  
 keenest. The crews, varying from eight to  
 fourteen in number, are composed of the  
 most athletic and skillful watermen and har-  
 bor pilots, who enter into these contests with  
 the keenest ardor. Each is experienced in  
 scores of races, and fully able, if need be, to  
 command a boat, but the helmsman is usu-  
 ally some keen eyed, clear headed veteran, con-  
 versant with the tides, channel, and dodges  
 known to the profession, and his word dur-  
 ing the race is law.

Forty or fifty lbs. of sand, weighing fifty  
 pounds each, are used as ballast, and piled  
 on the windward side of the deck, the crew,  
 excepting the two helmsmen and jib-tender,  
 sitting on them to add to the weight, and  
 sometimes even hanging partly over the  
 boat's side when hard pressed. The boat's  
 hull when sailing thus appears like a saucer  
 tipped up on one edge. While tacking, the  
 crew transfer themselves and bags to the op-  
 posite side with marvellous celerity.

Driven at such speed, the boats are often  
 forced bodily through the turbulent billows.  
 The boat filled with water, and crew half  
 drowned, but holding on with cat-like re-  
 tacity, they bale out, and resume the fight  
 most defiantly. Under such hard driving,  
 the seams of the hull open, the rigging strains,  
 and after a hot race extensive repairs are re-  
 quired. At the finish the racing sails are re-  
 moved, until required in another contest.  
 When too hard pressed, sandbags are thrown  
 overboard to lighten ship, and tradition has it  
 that some of the more reckless of the crews  
 have jumped overboard and swam ashore for  
 a life purpose.

A regatta of these is always a pretty sight,  
 and when a fleet of them dash by, accom-  
 panied by a huge excursion steamer, they re-  
 mind one very much of a flock of chicks out  
 for an airing attended by the staid motherly  
 hen.—Harper's Weekly.

## Correspondence.

Crow Creek Agency, August 31st, 1893.

EDITOR OF WORKMAN:— I arrived here last  
 evening and thanks to the kind hospitality  
 of Major Gasman and his good wife, I feel  
 happy and refreshed, ready for another  
 day's ride over the prairie. Yesterday at

Col. Hunt, a most efficient officer, has proposed to make these Indians self-supporting within ten years, asking that Congress shall pay up their annuity for five years in advance, a large herd of cattle be at once purchased, cared for by him with Indian help, and at the end of ten years the whole herd be divided among them, stopping the rations at that time. This plan carried out would save \$200,000 to the government and

not cost a cent more than the present routine expenses for the next ten years, and nothing whatever after that. Otherwise, the food-routine will go on indefinitely. Secretary Teller has heartily approved the plan, and already, with the Indians' consent, has used this year's clothing allowance of \$30,000, to purchase a herd of eight hundred cattle as a beginning. Sensible red skins, to deny themselves for a future good!

Here is a possible policy which would settle a part of the Indian problem in a few years, and is well worth public attention. There need be little delay; the right men are on the spot. Will Congress do any thing? The Indian Department is in full accord with the proposed measure. The rub is in the Appropriation Committees which are so likely to cripple wise and liberal measures.

Four years ago, these Comanches and Kiowas were producing nothing. Now, influenced by Col. Hunt, for forty miles up the Wichita river, they have over fifty farms, averaging ten acres each, well fenced and cultivated. Nearly every family has its patch of vegetables. Many even have grain to sell to the garrison at Fort Sill which is, like many army posts, a good customer for the Indians. These farms break up tribal relations and tend to fix the roving people and lead to better living, tents being replaced by log houses, though the latter are as yet scarce.

Such progressive wild Indians as these Kiowas and Comanches, the Mesquero Apaches, and some of the Sioux and other Northern tribes, all now fed by government, can in a few years become self supporting, and that is a great step toward civilization by cattle raising; provided their agents are competent men, and that Congress will appropriate liberally for the purchase of herds.

General Terry says that the solution of the Indian question is in the word "Cows" and has shown it in his successful treatment of the Cheyenne captives in his care, whose warponies he turned into cattle. They are independent and prosperous at Washington. The only real difficulty is at Washington. Col. Hunt's plan approved by Secretary Teller, fell dead in Congress, and with his Indian police he is fighting off Texas herds that are constantly invading his unoccupied pastures. To keep them off is impossible; to use them would be to secure their benefits to the Indians.

There is no greater extravagance than the seeming economy of our law makers; they are pauperizing and entailing vast future payments for feeding Indians who are capable, with proper care, of self support. The Wichita and Comcho Indians draw beef and flour from government; are half civilized, the former living in log and grass houses, and the latter entirely in log houses. They are not blanket Indians like the Kiowas and Comanches.

All these tribes are careful of their women, whose virtue compares favorably with that of the working class of whites. Nefariousness was punished, the custom was suppressed by agents, by cutting off a portion of the nose.

They appreciate their few educational advantages. Considerable occupation is furnished by freighting government supplies from Caldwell, Kansas, a railroad station a hundred and fifty miles away. At least five thousand bags of flour are yearly imported. The agent has found the custom was suppressed by agents, by cutting off a portion of the nose.

They appreciate their few educational advantages. Considerable occupation is furnished by freighting government supplies from Caldwell, Kansas, a railroad station a hundred and fifty miles away. At least five thousand bags of flour are yearly imported. The agent has found the custom was suppressed by agents, by cutting off a portion of the nose.

There are three trader's stores at Wichita, doing a good business. The Indians are good customers, having considerable money, selling about \$15,000 worth of ponies a year, and thousands of hides at \$3.25 apiece, besides some produce. Judging from the contents of the three stores, Indians purchase about the same articles as the white settlers of the West, though candy is conspicuous. Agent John D. Miles has under his charge at Darlington, forty miles north of Col. Hunt's agency, 3794 Cheyennes, and 2283 Arapahoes, wild blanket Indians, all supplied with public beef and flour, but warned as like tribes are, that they must expect a reduction of the rations. Practically, they dare us to do it; we reduce the beef ration at our peril. He has recently leased the portion bordering on Texas, three million out of the four and a half million acres of grazing land, of this reservation, to a wealthy syndicate, at the rate of ten cents an acre, making \$62,000 a year for ten years, half to be paid in cattle in the spring, and half to be paid in cash in the fall. It is to be fenced into six large tracts, and the land with its barbed wire fences, to revert to the Indians at the expiration of the lease. The agent believes the true policy to be to use the land for the Indians first, if possible; when they cannot or do not use it, leave it that it may benefit them. To neglect it is to leave it to irresponsible drovers, for cattle pastures can no longer remain unoccupied in the present demand for them; they will be stocked any day. The cattle pastures are to be herded and kept intact on lands not leased, and

the cash to be used for clothing etc., for they this year agreed that the \$14,000 of their clothing allowance out of their joint annuity of \$34,000, should be put into cattle, which has been and will continue to be done. Indians will have a herd sufficient to divide up and give each family a small herd sufficient to support them.

Of course, careful supervision will be necessary after the division of the cattle. Least many by extravagance shall become destitute and troublesome vagabonds. All these Indians are improvident, inveterate gamblers, continually wasting their substance in games of chance, horse racing, etc. Even with abundant herds they cannot safely be left to themselves. Impudence creates poverty, and poverty hunger, and Indian hunger means food in some way. What one has is everybody's, a custom that terribly tries the thrifty ones and makes personal independence nearly impossible.

The Cheyenne and Arapahoe Indians are pure blooded tribes, the former more hopeful, more manly, more virtuous and about holding their own in numbers; the latter very loose in morals, badly disciplined, and diminishing. The majority of the families in both have small patches of corn and vegetables, the Arapahoes being much the better farmers but their lands are inferior to those of the Kiowas and Comanches. Crops are uncertain: some years they lose everything by drought, for they are in the arid belt. All dwell in tents. The finest Indian picture I have seen is that of the three thousand Indians gathered in picturesque groups about this Cheyenne and Arapahoe Agency. Here are the teamsters and many families whose cultivated patches of land are miles away.

The clans are separate. There is an organization in this seemingly careless and beautiful placing of hundreds of white contented. A few bugles stand outside, with signs of mingled savage and civilized life.

From Darlington, I drove eighty miles through Oklahoma, a tract of some three million acres of good grazing land in the centre of the Territory, purchased of the Indians by government with a view to the possible concentration of the race in this region. The Sioux and others have declined invitations to settle here.

It was a charming drive through prairie and wooded country, a Paradise for the cattle, but uncertain, most of it, to the crops. The North Fork of the Cheyenne river, and other streams flow through it, but water is in places scarce, and cattle often die from drinking from stagnant pools. The grass was luxuriant and waving, and what with the open level spaces and the clumps of trees, chiefly oaks, and masses of dark green forest foliage contrasting with the yellow grain-like grass, the scene was one of continual interest and beauty. I doubt if the country is very healthy; malaria prevails over this Territory, and has been made complained of this month. In about the centre of Oklahoma, I met an intelligent white man who told me that with others he had at that point a herd of a thousand cattle, that eight miles north there was another herd of about four thousand, and eight miles south another of equal size.

This, I believe, the regular cattle route from Texas north and herds can be pastured along the way, but I learn from good authority that Oklahoma is regularly stocked with cattle for which nothing is paid.

The U. S. Agent in charge, Major Tufts, tells me that a proper rate paid for the cattle now grazing there would bring an annual income of \$50,000 a year. A hundred men are ready to bid for the privilege, but so far from outlawing occupancy is practically encouraged. Whose fault is this neglect? Why not rent Oklahoma for five or ten years to the highest bidder, and put the \$50,000, more or less, of annual income into the "civilization fund" at Washington, or use a part of it for a mechanical school in that region. Government builds fine and costly school houses in Kansas and other Western states, but makes so little per capita allowance that, while farming is taught in nearly all, not a trade can be introduced, because of the expense of skilled mechanics, of tools and machinery, and of the difficulty in selling products.

Hampton and Carlisle are doing most of the mechanical education of Indians in connection with schooling them, and but for outside help would have to give it up. As these schools manufacture shoes, harness, wagons, tin and other ware needed for Indian supplies, so could other schools out West, and this dispose of what they make.

Oklahoma could, believe, furnish a fund for a large and admirable work shop in the Territory, where more existence and indirect influence would be a powerful stimulus, and its direct results of great value.

Congress never will do it. To legislators a school which feeds, clothes, teaches the rudiments and household industries to girls and puts the boys on a farm a few hours a

day, is the same as one that employs a corps of skillful and costly mechanics, providing shops and working capital and paying its students mechanical wages, besides doing all that other schools do. It is too fine a distinction to be recognized by them.

Now this education is all important for the Indians. The mechanical work of the "white man" is more than four fifths done by white men. With all their progress, they have no industrial class;—very few mechanics, yet plenty of work for them with their multiplying farm-houses and increasing use of improved utensils of every kind.

These and the wild tribes, are remarkably apt at learning trades; as quick, at least, as the average white apprentice. Wages of mechanics are more than twice those of farm hands; all should have an idea of agriculture, but picked men should be taught trades to help them in the coming sharp competition with whites. At least one first class shop should be opened in the West.

The leasing of the land of the Cheyennes and Arapahoes for grazing purposes has been attacked, in the West. It is claimed that one or two U. S. Senators are parties to it along with St. Louis millionaires and the like; that no Indian agent will dare to take the Indian's side in case of difficulty, lest he lose his official head; that power and wealth put the Indian wholly in the control, as to their lands, of men from whom they can appeal with no hope whatever; that the lease was not made in open market; that the pastures will be left exhausted at the end of the lease, and that herds of cow boys supplied with whiskey will be brought into the midst of the tribes and demoralize the people. If U. S. Senators make such leases, such remarks will naturally follow. But the grass, if exhausted, will grow in two years unless rain falls, and with fenced lands, few cow boys will be required, certainly not more than are now and have been on those lands to herd the numerous cattle improperly brought in.

Nothing can be said for a lease not made in open market. The six million acres of Cherokee land, I am informed, were leased for five years at \$100,000 a year to the highest bidder. So all such land should be disposed of, whether grazing or mineral land, (on which the Choctaws are getting a royalty of about \$40,000 a year for coal beds leased to whites) These resources should be used, first, to give occupation to the Indians and increase their income; second, if not used by Indians, to be farmed out to those who can use them for the red man's benefit.

The principle is sound; its application is somewhat difficult. To properly guard the rights of the Indian is a most important duty of the government.

To keep these great resources which he cannot or will not turn to account is impossible. For influential public men whose duty is to guard them, to have a hand in making money out of their mines or pastures, is to destroy confidence in the government. The wild tribes of the Territory though far behind the civilized Indian nations, are improving and, with wise and proper care, can be established as a self-supporting, progressive people.

S. C. A.

## WOWAPI.

This mysterious title heads the aesthetic cover of a new magazine which lies upon our table. From the editorial "Enigma," and the enigmatic editorial within, we guess that it means a "Page," and that the aim of the editor and contributors is to help turn a new page in the history of the Indian in America.

The story of the enterprise is told very simply by its authors. A few young ladies of Boston, who attended the meeting held last spring in Tremont Temple in behalf of the Indian cause, were moved to ask "What is our part in the work?" Organization followed, some fifty set to work, all summer busy hearts and hands were planning and executing, and as a result a fair has recently been held in parlors in Beacon street, generously thrown open, and in addition to the prettiest things usually found at fairs, were various and characteristic articles of Indian work and use: Indian pottery, Indian baskets, Indian bead work and Indian dolls. To these attractions, a happy thought and a generous purse added "Wowapi," a magazine of ninety-six pages, so attractive without and within that it will be saved the too common oblivion of charitable circulars and instead of being consigned to the scrap basket, will lie upon many a parlor table this winter, as something to be looked at and talked about.

Bright verses and readable stories are, butterspersed among the graver articles, but those who have considered themselves unfriendly or indifferent to the cause of Indian civilization can hardly look over the pages without being greatly interested in the record of the latest efforts and conclusions of practical workers in the field. The history of the Indian work at the Carlisle and Hampton schools, is given by their Principals

and others. A report on returned Indian students is made by the Commandant at Hampton, Mr. Herbert Welch of Philadelphia, president of the Indian Rights Association, has interesting papers on the Indian problem and its solution, and a visit to the great Sioux Reserve. There is also a statement of the organization and constitution of the Indian Rights Association; Capt. Pratt's original and suggestive speech on the question, is Indian Civilization a success, which he answers in the negative; an account of a visit to the Crow Indians in Montana by Rev. H. W. Foote, and to the tribes in the South West by Gen. Armstrong; articles on Indians before the Law, by Henry Pancoast, Army Control by Rev. Edward Everett Hale, and Medicine Men by G. A. Stockwell, Ada Archer, a Cherokee Indian girl, thoroughly educated at the East and anxious to study law, contributes a paper which will be read with interest on the social and political condition of the five civilized Nations of Indian Territory; and there is a paper on the Origin of the North American Indian by a Japanese professor in the University of Tokio. These, with shorter papers on Indian statistics and incidents and domestic life make up a full measure of interesting information.

With all that has been said, "and so well said," on the various sides and aspects of the Indian question and the Indian work of late years, people are constantly requesting information in regard to it all here; and can post themselves up on the history and present condition of the work, by sending for a copy of this magazine to Mr. B. Clarke, Care of Washington St., Boston, who have kindly consented to mail them to any address. The price of the magazine is 50 cts. lots of 25 copies to one person will be sold for \$7. We have 40 copies of the edition of 1000 copies which has been printed will be very soon distributed among friends of the cause and those whom they wish to interest in it. We are glad to hear that the Indian Fair has been, as was to have been expected, a great success, having netted \$3,000 thus far. We trust that Wowapi may greatly increase its good results not only by its sales but by influencing and that the sight of what these Boston girls have accomplished may inspire many young earnest souls to take up their part in the world's work.

A letter in our last number from Lieut. Le Roy Brown, U. S. A., Commandant of Cadets at Hampton Institute, written from one of the Indian agencies he was visiting in Dakota, contained certain hastily chosen expressions which might naturally be misunderstood at the office of the Indian Bureau, concerning which Lieut. Brown desires to make explanations, better defining his position, as he does in another column. While in common with other journals generally, we do not undertake to be responsible for the views of our correspondents, we do not intend to publish any thing that may be harmful to good work and effort. We are happy to give space to this communication from Lieut. Brown, in fairness both to the Honorable Commissioner to whose good will and works we have frequently borne witness, and to the Commandant whose nine years' record as an army officer on the frontier, and part of the time acting Indian agent and all of the time actively working for Indian civilization, entitles his statements to a courteous hearing.

We have received a "Summary of the case of General Fitz John Porter, by Theodore A. Lord" of San Francisco, California. It is a careful and exhaustive analysis of the case in the light of facts which have become known since the war, as well as a discussion of the original facts in a dry light, such as was impossible at the time of the court-martial which condemned General Porter. The vindication of the latter seems complete, and the Lord, who is a prominent lawyer, carries the reader of his vigorous pamphlet with him, in his conclusion, when he says:—

"Porter, who deserved as well of the Republic as did any officer in the army, has been for twenty years, the chief sufferer from Pope's misstatements and mistakes. It is no wonder that the people through their representatives in Congress, to right the grievous wrong inflicted upon one who in two wars served his country faithfully and gallantly." "As the case stands to-day, Porter is fully vindicated by the highest military authorities of this and other nations; by the most eminent statesmen and jurists in the land, and by all intelligent and fair-minded men who know the facts."

## Letters From Hampton Graduates.

A DARTMOUTH COLLEGIAN'S EXPERIENCE AND VIEWS. TEACHING NIGHT AND DAY. A GOOD EXAMINATION. FROM OUR MISSIONARY IN AFRICA. "A FACTOR IN POLITICS."

A DARTMOUTH COLLEGIAN'S EXPERIENCE AND VIEWS.

Another Hampton graduate who has availed himself of the doors that are open to wit and will, sends an interesting account of his experiences, and some of his very impartial views.

HANOVER, N. H. Feb. 28, 1883.

Dear Miss C—

Your letter was gladly received last Saturday. I was glad to know that my other one had reached you. Your letters have been, or rather, are very interesting to me, and I hope that mine may be somewhat so to you. There is another colored young man here in my class. His name is Colson, from Petersburg, Va. We are the only ones here. I was very sorry last fall, when I returned to college from my summer vacation, to find a colored young man here who claimed that he left Barnum's circus and wanted work, but sought the lowest company, and would use such profane language that I thought once or twice of speaking to him. But I knew that I would get into trouble, so I let him have his way. I asked him to call on me but he would not, and when he left he carried many things away that did not belong to him. So, you can see how we felt. I think in a great many cases colored people have injured themselves by their own meanness. No man can injure himself alone, but he surely brings reproach upon others, too.

I believe that the colored man can overcome in a great measure the bad feelings against his race. A colored young man graduated in the medical school here in September last. He was honored by his classmates and respected by the citizens. He was made valedictorian by his class. Observing the different colored men that have found their way here, I must confess that if the fault of any one's failure is not altogether his own, it has been the fault of some colored persons before him, and if he has lived in a community five or ten years and does not win for himself that respect which his classmates and the citizens give, it is his fault. When I see statements in the papers that colored men are misused, in New England or any of the Northern States, I question if by their action they did not compel the people to use them so. But I have taken up more time on this particular point than I intended when I began.

It would take me so long to tell my own little wanderings since my boyhood that it would weary you, so I will just say a few words. I came up to Post Mills, in Theford, in 1868. I came from South Carolina with a gentleman, a Colonel in the United States army. I worked for his father-in-law and went to school in winters, working on the farm the rest of the year. They were good people in the truest sense of the word. He was to pay me for my work, or help me get an education when I got to be twenty-one. I went to Hampton in 1873, and graduated in 1875. I returned to Vermont, feeling that I ought to go through college. I worked that summer and went to Oberlin in the fall; fitted for college in two years (1877) by doing the hardest work I ever did in my life. I did not take any vacation during the two years. I did almost a half-day's work every day for my board and room, and my studies beside. I was so tired and financially poor that I was compelled to stay out two years for rest and recruiting my purse. Through a friend I got the Principalship of the Enterprise Academy in Albany, Ohio (colored school). I worked hard for that school, and felt pleased with my labors when I closed my work there. Though it was my first experience, I had the satisfaction of knowing that my labor was appreciated by the people, and that they wanted to engage me for six years, and after that, as long as I wanted to stay; but I could not bear the idea of not taking a college course. And I had the greater satisfaction to know that by my life and work, in the Sabbath school and daily intercourse, many of my pupils were led to Christ. God did truly bless me and them, too. If I ever felt the love of Christ, and if I ever felt that I was working for my Savior, it was during that two years that I worked there.

I entered college in 1879, (Dartmouth). I wanted to go through Dartmouth for I could get better pay for my summer's work in New England, and it is near Post Mills, and it suited me better than any college I knew of then. I taught two winters in Vermont with as good success as in Ohio.

I hope to work in some place next year, if my life is spared. I have just written to my town Superintendent for a recommendation, (for I intend to apply to the Bureau of Edu-

cation to find me a position,) and he though sick wrote this for me, which I enclose in this letter, hoping that you will send it back in your next letter, which I hope I shall get. I will promise not to weary you again. This is very unsatisfactory and imperfect to me, and must be more so to you.

The Congregationalist and The Alumni Journal came to me to-day from you. Many thanks. Yours very truly,

W.

## TEACHING NIGHT AND DAY.

A young man who was married before he came to Hampton, and did not go through the whole course, but who has been since as he had been before an industrious and faithful worker, writes thus of the rather difficult field where he is working night and day for his people.

—, Co., Va., February 17th, 1883.

Dear Friend: It affords me much pleasure to correspond with you. I am teaching at the same place. The colored people are very ignorant here, not because there have been no schools in their midst, but because they have not been taught well or long enough in the year. The children are influenced by their parents and surroundings, and it is hard to make an impression on their minds for the better. The surroundings are gloomy. They have a worthless school-house. Their parents take but very little interest in education. They are not really moral; therefore they do not impart morality to their children. They will not buy necessary books for their children. Some send their children to school without books; others are not able to buy books. Everything is left to the teacher. I have loaned and given them all the books that I could. The white people are very friendly. We have a very good and faithful Superintendent. He does all that he can to promote the interest of the schools, but the officers of the school Board do not assist him as they should.

I have a very large family, and I could not support them by teaching if it was my only resource; but I am during the time of my vacations. I love to teach, and my whole soul is in it. I am sorry to see my people here so dejected. I nearly wear myself out at times, my pupils are so wild and rude; but I can say that I have made considerable change in them since I first commenced here. I shall ever feel grateful to Hampton and the Faculty for their kindness to me. I am teaching here night and day; I teach the old people at night. I have thirty night scholars. I have the luck to stop and board with the nicest colored lady in the neighborhood. I am in good cheer notwithstanding the disadvantages. Very respectfully S.

## A GOOD EXAMINATION.

A sister of the above writer sends a cheerful report of herself and her work, in which she is successfully following her brother's example.

—, Va. January 29, 1883.

Miss C—

I received your kind letter, and was glad to hear from you. I intended to write you the very week I received yours, but being busy I did not do it, and I received yours first.

I purpose to go up North directly after my school closes. As I am one of the graduates of Hampton I can write to the School, to Miss Tileston, for reading matter, can I? I thank you kindly for writing and telling me about it, as I am in need of papers for my scholars to read.

I will tell you how my time has been spent since leaving Hampton. I left Hampton on the 14th of June, and arrived home on the same day. I remained home two weeks, and within those two weeks was sent for by the Trustees of a village in North Carolina, to take a school at that place. I went there and got examined and passed a first grade examination. This was in June, and I taught until the 1st of October. I came home, got re-examined, and passed the same grade. The examiner said I passed a better examination in history than any one else who had been examined; I was perfect. I think the term of my school is eight months. My school-house is crowded with scholars. I have 50 or 60 as an average. The school-house has been white-washed, and the trustees are getting ready to cell it now. If it were celled it would be very pleasant to there. I have decorated my school-house with mottoes and pictures, and it is just lovely, if I am allowed to praise it. I have 3 blackboards—a belonging to the school, and the other to me. I have addition and multiplication table charts. The addition chart I made myself, and the other is printed. I have two language charts. The Monroe's go, with the primaries, and the other for

higher classes. I have two maps—one N. A., the other U. S. I am always busy, and after being busy all the while I don't do all there ought to be done there.

My youngest brother is teaching in Virginia, too, near home. You have never seen him, but he is very good. I come home and sew on my machine to help mother. It is very pleasant teaching at home, although I have two miles to walk every night and morning.

I have heard from only two of my classmates since leaving School—I mean private letters.

Yours, S.

FROM OUR MISSIONARY IN AFRICA.

The following letter from Mr. Samuel Miller, graduate of the class of '76, and for the last two years a missionary teacher in Benguela, Africa, under the American Board, will be read with interest.

BAILUNDU, W. C. A. June 25th, 1883.  
Gen. S. C. ARMSTRONG,  
Hampton, Va.

Dear Sir:

It is now winter with us; the cool nights and chilly winds have given to all vegetation a beautiful golden hue not unlike the autumnal scenes of the sunny South; harvesting is now in order; the corn, beans, peas, pumpkins, &c. are waiting in the field to be taken to the stores by the women. The fields are far from the villages where the land is better and more fertile, and the soil is good. Wild animals are not numerous enough to do serious damage to the agriculturist. The corn is shocked in the field, stored in huts and later taken to the villages. It is wonderful how the meagre food and soil do not spare farming as they do only with short double handled spoon-like hoes. They disdain to work beasts, contented with eating them.

The forest fires have begun in various districts, but the grass and leaves are not yet dry enough to produce a general conflagration; about two months hence, the air will be thickened with smoke from burning vegetation, after which the whole face of the country will appear a black, barren, dismal desert till September, when the almost daily thunder storms bring new life to earth, bidding nature to dress herself again in glorious green. Then is sowing time; women and girls, sometimes men and boys, may be seen going in every direction to the fields, each woman or girl gracefully carrying upon her head one or more baskets freighted with a hoe, and a lump of mush for lunch. When the grass is burned and there is no covert for animals, then scores of natives surround a given field and walk toward the center driving into close quarters the deer, eland, or any animal within the circle. But, on the whole, very little game is killed. The flint gun, bow and arrow and cudgels are not the best of arms.

I am getting on pretty well with my eight regular pupils and seven irregular ones. The most advanced ones can read and write any word in the language, or read any number under a thousand. We often carry on a short conversation in writing; all the lessons are given in manuscript. I am expecting a printing press soon. A donation has been given to build a school house. Most of us are repairing or making additions to our houses. The first house, built Sept. 1881, is undergoing repairs; parts of the roof have been thoroughly perforated by innumerable boring insects that are capable of seriously impairing a house in a short time. The native roofs last longer; having fire continually in the middle of the room, the insects can't successfully attack the whitened surfaces of soot and smoke. The native hut is almost air tight but fire is absolutely necessary; these cool nights for one without plenty of bed clothing; four or five good blankets are not at all uncomfortable. The air is extremely penetrating; the thermometer varies in twenty-four hours from forty to sixty degrees.

None of us has had the fever for a long time. The natives are subject to chills and fevers more than we are; at this I don't wonder, since some live almost naked. They have no doctors and conjurers too. When one is affected about the head and shoulders bleeding or making a series of gashes with a knife deep on the forehead and temples is in order. If the entire body is weak, and the patient complains of a combination of ailments, he is supposed to be affected with spirits. The doctor then ornaments himself and patient with various marks and colors, going through many incantations at the same time, after which he will thoroughly sweat the body of the patient. Then, taking two chickens by the head or feet (one in each hand) he whirls and jerks them at his patient. The patient is then supposed to be cured. The whole story can't be told in a short letter but the above gives you some idea of the procedure. Thinking or conjuring is believed in here. One of our *secular* or head-men, was employed to take some men to Benguela and bring up loads for us. While pre-

paring he was taken sick and could not go. He told me some one had made him sick by putting medicine in him to prevent his going to Benguela, but could not tell how it was done. The real disease of the *secular* was pneumonia, he thought he was going to die, but is nearly well again.

Dr. Nichols and wife left here June 2nd, for America. Being too late for the June steamer, they will remain in Benguela and take the July steamer. Mr. Saunders accompanied them to Benguela. Dr. N. was forced to return on account of ill health.

Kwinkio, King of Bailundu, has been in camp for over a year, and the reports are that he will not go to war for months to come. His camp is only forty miles from his palace village, but he does not visit it; he seems to be well satisfied in camp.

We expected mail to leave to-day but the carriers did not come; they may possibly go to-morrow. Some months we have had work to get two men to take our mail to the coast. Last May, our mail bag full of letters and papers fell with the carrier, into the Balombo river. The carrier was taken out, but the mail was lost. This is the first time we have ever had any letters lost by the natives. The accident was caused by the falling of a part of an ill constructed bridge.

Give my kindest regards to Miss M. F. Mackie, Gen. Marshall, Mr. and Mrs. Howe. I hope your school is doing well, or, that it will be, when the reaches you.

I am, yours sincerely,

SAM'L T. MILLER.

Your letter dated June 8th, 1882, was received Aug. 21st, 1882.

## FACTOR IN POLITICS.

Experience is the best, though not the easiest teacher. Individual sense and judgment are tested in the application of general principles to particular cases. For the most part our graduate teachers find their hands full in supplying their people's most pressing need, not withholding their votes or the manly expression of their opinion when needed, but keeping out of the arena of party politics.

—, Va., June 23, 1883.

Miss C—  
Your letter to the graduates and ex-graduates was received some time ago, but I regret much to have to say that I have neglected to answer it sooner. I suppose you already want to know something of my career. It will suffice to say that I have been teaching ten months each year ever since I gave you farewell at Hampton in Feb. 1880. I have had a fine school all the time and find my greatest pleasure in teaching. I shall close my school four weeks from now to reopen the first of Sept. with one of the girls as my assistant, who started in a second reader when I first began teaching, and is now quite a fine scholar. I am one of those fortunate teachers who have nothing to impede their progress. My school house is as comfortable as can be desired and the people appreciate my labor. Through the kindness of the people I never had a place in my life where a colored person had more political and social equality than he has in my school.

Though I am to some extent at variance with the teachings of Gen. Armstrong, I must confess that I have been a factor in politics, believing that this is a cardinal part of a colored teacher's work. It depends on the manner in which the colored people (who are the balance of power in this state) exercise their suffrage, whether or not they will enjoy the benefit of free schools. If this be so, they must have some one to lead them, and whose duty it is to take this ungrateful position if not the teachers'. I will not say anything else on this subject, because I know you know something of the condition of the colored voters in this state. I will only say that I will never refuse to advocate the rights of my people until they have secured the future. There are in this state a class of dishonest men without learning who claim to be politicians and who would willingly be used as an instrument by which some white man would sweep the state of political purity. Teachers, some say, must sit still and see all this perpetrated on their color and themselves, but I shall never remain neutral when a question is being discussed in which my rights are involved. I am glad to know that the graduates of Hampton are considered to be the best colored teachers in the state, and sincerely wish that I were one of that class. The Sept. was at my school a few days ago and says that he can give employment to at least six graduates. Male teachers will succeed best here. The pay for good teachers is \$30, and the term is from five to seven months unless they should be fortunate enough to secure two schools, in that case they would teach ten months, as I do. I hope to hear from you soon.

Yours &c.,

W.

*[Faint, illegible handwritten notes]*

Continued from Page 125.

us with the most demoralizing social evils; after having received our protection and devotion while they were completely at our mercy, during the late civil war, they now reward us by ignoring every claim we have upon citizenship, every tie that should connect together the members of a body politic, and withhold from us all sympathy and all encouragement. From the close of the war the treatment of the southern whites toward the colored people has been simply brutal. Riot, bloodshed, devastation and misery have followed the colored people wherever they went. Ku Klux Klans and whitteters, the scum of the south, have done their work and have left the colored people to choose between life and death. They have said to us, "You cannot remain with us if you insist on being our equals." We are given our place, and woe to him who dares assert his full manhood! How we can remedy our unfortunate condition is a matter which we should be seriously considering. We perform all the labor at the south. What would be the effect upon our white brothers if a movement were made to quit the south? When they see the laborers leave their farms, their workshops and their plantations, would they still call them back and promise to deal honorably with them? When they see skinny-fingered starvation staring them in the face, would they not show a disposition to encourage the much-abused colored man? The propriety of emigrating to the West, where there are millions of acres of fertile lands seems to us very apparent. The southern white man is holding his land. He will not permit the colored people to purchase. The South is becoming more and more prosperous, and in that proportion will it become less probable that the landholders will sell to colored people. The West beckons us on. Immigrants from Europe are flocking Westward, are taking up lands. A few years will see the best land taken up by these people, while the colored people are eking out a miserable existence, vainly hoping that the day will come when they can purchase lands from their former master. That day will never come. We should at once form companies who will go West, take up lands, and by industry and perseverance rear homes for our children, where they may be free from the vicious tendencies of southern society. By leaving the south, we will be enabled to administer a rebuke to our former masters which will make them regret their conduct toward us, and be disposed to treat the colored people who remain with proper consideration. Let us be slaves no longer. Let us give the vicious, arrogant and tyrannical southern autocrat a practical illustration of the right of locomotion, and we will be doing ourselves and them a favor. Let us emigrate! Westward ho!—*People's Advocate, (Colored).*

#### The Civil Rights Decision.

*Broad View of a Farmer Slave—What the Colored People have Accomplished—The Only Way to Rise.*

To the Editor of the New York Herald.

To cross a bridge before one gets to it is not an easy matter, but all of us don't seem to agree on that point. Such is the case with our rights. Why stand and swear at the Supreme Court? For one, I am glad that it is over, and feel that the country is safe and so are our rights. I have too much faith in the good sense of the American people to feel otherwise.

As a Southern Negro I feel that the South will do more for us of her own accord than she would if Congress did nothing but pass enforcement Acts, &c. Instead of anathematizing the supreme Court and the Republican party let us go to work and compel to a recognition of our rights, not the Republican party, not the Democrat party, but the civilized world. And how? By doing as every other class has done which has come to this country—save our money, build a few churches, but lots of work-shops, mills, and anything else that will tend to make our children independent. For, as one with a black face, I see, and know, too, that money and education are the two mightiest levers that are to bring the Negro to the level. An educated Negro here and there is not the thing; this only shows the possibilities of the race. We must go earnestly to work and educate our children. We must not educate them for gentlemen until we have something to back it. We must not fret about our children not being able to learn trades while we sit and try to build no machine shops, no factories, no mills or other places where our youth may learn how to become the peers of other people.

Our opportunities are what we make them, and we are destined to be not what other people make us or the law for that, but what we make ourselves. I have found out to my sorrow, to some extent, that we want the pleasures of the rich without suffering any of the hardships that the fathers of our rich

men (the most of them) suffered that their children might live at ease. I am not opposed to agitation; I want all that we can get, and don't blame our people for getting all they can, but I would rather see them go about it right than spend their days fussing and doing nothing.

Twenty years ago I was a slave. Since that time I have spent ten years in the United States Civil Service. If such a change can occur in twenty years, who can tell what the next twenty years will bring. Black men, let us educate our children and in a way to make it possible for them to be free and independent.

We can never be free while we fit ourselves for nothing but waiter men, barbers and coachmen—though all labor is honorable, but then we must learn to strike upward and onward ourselves. We cannot afford to wait for our white brother to stop his onward marching in life to pull us up with him. We must help ourselves, and not for God or man; God helps those only who help themselves. Educate your children in manual and all other kinds of labor and by land and cultivate it, build houses and improve them, build steamboats and railroads—in a word, let us try and learn to do everything that any man can do. You must know that what the white man has learned with hard study after years of toil and much pain, that we, too, with patience, may also gain.

I have no objection to seeing a colored gentleman a Cabinet minister or anything else that he can get, but I do say that he is foolish to lose time fighting for it when by working faithfully he may get more.

I am more than surprised at our brethren in Chicago who threaten to desert the Republican party for what the Supreme Court did—a Court that is supposed to be above parties, the keepers, so to speak, and defenders of the constitution. Did not Congress, with the approval of a majority of the Republican party, pass this Civil Rights bill in the face of these facts as just laid down by the Court of last resort. Lyman Trumbull, Judge Edmunds, George W. Julian and many others opposed it on these grounds.

For one I feel that it is one of the best things that could have happened. It is about the last of the war of class legislation; hence there are no longer the wards of the nation, but citizens in every sense of the word. It is foolish to hold the Republican party responsible for this decision, or think it a cause for desertion on the contrary, to desert them now would be treason. Yet, when the day comes, as it must, when the Negro can see principles clearer, and vote for principles instead of men, that day will be the day of our salvation. It does not look natural to see the Negro all on one side, and yet it is hard for him to do better. Democracy offers him no place of refuge.

B. U. H.

Philadelphia, October 26, 1883.

From Charleston News.

#### The Recent Elections

In the November elections just passed the whole country has been to be satisfied with the result. Nor do we except the South. Far better for it is for the men of this section that the Republican party continue in power. Supposing the South once to have been able to rule the nation more wisely than the North; beyond all question that time has passed, and this section of our common country is less prepared than ever. During the sway of the old time South there could be found a class of men quite worthy of holding the reins, but where the men of this class have not died, aside from the fact of their age, they have refused to step into the new light, and are therefore unprepared to wield authority. And if we seek for young men to take their place they cannot be found; and for the reason that the South has been in no condition to produce them. Busy at repairing the ill fortunes of the war, they have had neither time nor ability to produce national statesmen; sufficient it is if they produce men sufficiently wise and learned to administer the affairs of their individual States.

We say, then, in the prospective continuance of the Republican party, the whole nation has been to be satisfied.

Nor has any class more reason, not only to be satisfied but absolutely joyful, than we of the seven millions. Say what you will, the Grand Old Party, as the worthy editor of the Globe is wont in irony to say, is the party yet. Not without fault, we confess, and yet when it is compared to the Democracy it is as a spotted horse to a white one. We rejoice in the bright prospects of having another Republican President in the White House; and not for our good only, but as we have said for the good of the whole nation.

And just here we feel like saying to our people everywhere, hold up your heads, for your salvation is nearer than you believe. And what makes it the more assured is that it is a salvation that comes from within. The man who is helped over the ditch has

needed to be thankful; but the man who helps himself over has need to be satisfied. And this is precisely what we are doing; and let him who doubts read the following. It is taken from a sermon made by Rev. Dr. Washington Gladden before the annual meeting of the American Missionary Association, 11 Nov. 1883. Says the Dr. referring to the States of Georgia, Kentucky, and Tennessee: "Taking these three states together, we find that the percentage of increase of males of voting age was 27; of illiterate voters 18; of illiterate white voters, 25; of illiterate Negro voters, 12."

Now these figures completely overthrow the statement that the increase of illiteracy is relatively greater among the Negroes than among the whites. They show that the proportions are all the other way; the difference between the two races is startling. The whites are gaining a little, in this battle with the powers of darkness; it is very little; they are scarcely doing more than holding their own; but the Negroes are gaining splendidly; it is to them that the large increase in the percentage of intelligent voters is mainly due.

Now what does this mean? Of course it is due to various causes. The Negroes had had but about five years of opportunity when the census of 1870 was taken; in 1880 they had fifteen years of opportunity. That a better class of men had been educated, and that they are taking the chance that has been offered them, these figures assure us, but they tell us something more, that to us is very significant. The gain of intelligence among the Negroes in the parts of the South has been much more rapid than that of the whites; it has been more rapid in these three states than in most other parts of the South. With the white Republicans of the North united and triumphant and the black Republicans of the South slowly yet surely coming to the front, what have we to fear, even though the Supreme Court has nullified the Civil Rights bill? The race that has suffered as long as we have, can yet bear up a few years longer.—*Christian Recorder.*

The truth is, the progress of the colored people on the scale of human rights will depend exclusively on themselves. They will find every experiment to legislate into this or that position an utter failure. The chief drawback to their advancement in many respects has been urged by themselves. The politics, especially, their conduct has shown utter incapacity for citizenship. They are march, and to polls in elections, local and general as if they were sheep, not men. They are under the most absolute control of the party lash, and submit to dictation that is worse than slavery. They wear the badge of servitude at the very moment they clamor for freedom. They do not investigate and judge intelligently for themselves the practical effects of State and Federal legislation on the promotion of public prosperity, but are influenced by such considerations as seats in cars, berths on steamboats, beds in hotels, preferred locations in theatres, and like matters, that no power on earth can or will decide for them by means of legislation.

We are far from contending that colored people can not advance. They have made progress, but in social respects they must labor for themselves, and with this understanding that social equality is not a subject with respect to which either the State Legislature or Congress can legislate.—*Norfolk Virginian.*

**Resolved**—That it is the duty of the Synod to make a more earnest effort in the direction of evangelistic labor among the colored people, especially in the region where they are most numerous; and the committee recommend the appointment of at least one evangelist who shall be charged with the duty of superintending and fostering efforts to interest the colored people in Sunday Schools, and to labor for the establishment of Presbyterian churches among them whenever practicable.

As the nascent as the evangelization of the colored people must depend in large degrees upon the efforts among them of educated ministers of their own color, our ministers and churches be directed to look out and help, as practicable, suitable young men who may be trained for the gospel ministry. That the committee on Colored Evangelistic labor be continued and directed to find the way, if practicable, to employ a colored evangelist, and are authorized to appoint such an evangelist at their discretion.

Central Presbyterian, Richmond.

#### Report of the Commissioner of Indian Affairs.

The report of the Commissioner of Indian Affairs contains much of interest and suggestion.

Among the things needed to solve the Indian problem are enumerated:

"First, an appropriation to survey the boundaries of Indian reservations, so that

both Indians and white men may know where they have rights and where they have none." Illustration of this need was given in our recent editorial correspondence in the case of the Navajos whose reservation of 10,000 acres has never been surveyed, while they spread in all directions over 25,000, which they claim as their own and have occupied from time immemorial.

"Second, a law for the punishment of persons who furnish arms or ammunition to Indians."

Third, *More liberal appropriations for Indian police.* Our Indian police are an absolute necessity, and have in almost every instance rendered very valuable service, and ought to have more encouragement and support. The pay of these police is now fixed by law is \$5 per month for privates and \$8 per month for officers, a compensation entirely inadequate to their proper support, especially as many of them have families, which, at non-ration agencies are not entitled to rations. As it is the duty of an agent to be careful in making his selections for the force, good men are secured only with the greatest difficulty. One agent, on this particular point, very appropriately remarks:

"Should the pay be increased, the best men in the tribe could easily be enlisted as a road to distinction that formerly was the reward of prowess in battle or skill in hunting." I must, therefore, take this opportunity of repeating the recommendation made in my last annual report, that commissioned officers be paid \$15 per month, sergeants, \$10 per month, and privates \$8 per month."

"Fourth, an appropriation of money sufficient to employ a large number of men, and prosecuting persons who furnish intoxicating liquor to Indians." The reports of my predecessors for the last 30 years agree with singular unanimity in reference to the evil among Indians growing out of the use of intoxicating liquors, and the fact has been established beyond controversy, that it has been productive of more disease, crime, and loss of life than all other causes combined. The laws now in force on this subject are found in Sections 2087, 2139, 2140, and 2141. Revised Statutes, but experience has proven these laws to be inefficient to stop the traffic complained of."

Concerning appropriations, the Commissioner says further:

"If Congress would fix the amount to be expended for the Indian service, and leave the Department to distribute it as the wants of the service seem to require, I am confident it would be a great improvement on the present manner of doing business. Under the present system some non-treaty tribes of Indians receive 3 pounds gross of beef per capita each day, and some 3 ounces per capita each day."

The appropriations for the War Department for the year 1883, amounting in round numbers to \$25,000,000, were made under less than sixty different heads, leaving, very properly as I believe, a large discretion with the Secretary of War to their disposal. The appropriation for the Indian service of about one-fourth that amount is cut up into about two hundred and sixty separate and distinct appropriations, each of which must be appropriated as specially provided, and for no other purpose, although it may happen that in one place there is an abundance, while in another want and famine may prevail."

#### INDIAN AGENTS.

"The impression seems to prevail to a great extent that almost any man will do for an Indian agent, and as a consequence of this belief, men who are broken down physically, financially or politically are frequently recommended for the position. The civilization and elevation of the Indians depends more upon the agents who have their immediate care and management than upon any aid all other instrumentalities combined, and hence none but the best class of men should be selected for this service, and to them a fair compensation should be paid."

Sometimes such men are found who are willing to undertake this work for the good that they hope to accomplish, but they soon find themselves surrounded with difficulties and hampered and embarrassed by regulations and rulings that are not to be found in any other business or any other department of the Government. One agent, who was appointed "in the earnest solicitation of a United States Senator for his State, wrote me a few lines after being in the service about one year, using this language:

"I know at the time of my appointment of the heretofore mentioned difficulties, and I have tampered me to accept the office, and I would be just as willing to resign."

#### LAW FOR INDIANS.

Action has been taken by Congress on recommendations from the office of the Commissioner of Indian Affairs, institutions, religious societies, missions, and other philanthropists, asking the enactment of a general statute putting

Indians of law. The long delay law on the subject might soon be of course and New Mexico, when those courts shall be provided, shall have reservations w States, the con therein with particular ever a S act of the rights, the citi penal in cases treaty o

## A Voice from the South.

The Rev. Dr. Atticus G. Haygood of Georgia, President of the "College of that state and agent of the 'Slater Fund,'" recently delivered an address at Nashville, Tenn., in which he put the cause of Negro Education with great vigor on his part, as follows. As the language of a Southern man, it is especially interesting. No Northern man could speak with such force.

"With not a few persons of good business faculty and shrewd worldly wisdom, it often happens that an argument on the lower plane of policy goes much further than an argument on the higher plane of truth and right. The Negro is here and here to stay. He is a citizen, armed with that thunderbolt of political power, the ballot. That it was given to him unwisely because untimely and without conditions that would develop in him a wise conscience as to the use of it, that as a rule he is unfit to be a voter—all this I understand fairly well. But this is not the subject to discuss at this time. He is a citizen, he is a voter. In some States he is in the majority; in every Southern State he is a tremendous power—a power, whether he uses it or designing white men use it. It is about time to consider facts. Here is a fact. There are now at least seven million of Negroes in this country, nearly all of them are in the Southern States. They increase rapidly and steadily—faster than the white race.

What do the census tables show? The increase in total population of the United States from 1870 to 1880 was 3000 per cent; the increase of the white race, aided enormously by foreign immigration, was 28.82 per cent; the increase of the Negro population, unaided by foreign immigration, was 34.78 per cent.

Some writers, of name and position, have endeavored to break the force of these figures.

If they want the best test for comparison let them try ten decades instead of two sets of two. One hundred years ago there were in this country about seven hundred thousand Negroes; now there are seven millions. That is, they have multiplied ten times in a century. How many will there be in 1993?

A man who does not know that voters OUGHT TO BE ABLE TO READ AND WRITE does not know enough to be argued with. The illiterate vote of our Southern States is simply appalling, and the illiterate vote is increasing. From 1870 to 1880 there was an increase of illiterate votes in the Southern States of nearly two hundred thousand.

## THE VOTES OF IGNORANCE.

How are the votes of ignorant men determined? 1. In small part by the counsels of the wise and good citizens. I say in small part, for the bad and designing demagogue has more power over the ignorant vote than has the good and unselfish patriot. 2. The votes of the ignorant are largely determined by prejudice. Out of prejudice proceed conflicts and all manner of social and political wrongs. 3. The votes of the ignorant are largely influenced by bribes, offered in one form or another. And this bribery, power and corruption without end, and bottomless. The worst thing about this huge illiterate vote is not the incapacity of the voters to vote their ballots wisely; the worst thing about it is this ignorance fits them exactly to become the tools of corrupt men of superior intelligence. With an illiterate vote large enough to hold the balance of power elections are, for the most part, dictated by demagogues and manipulated by villains. It is left to intelligent, industrious, and honest citizens to settle the costs of corrupt government.

## THEY SAY, "TEACH HIM MORALS."

I am not unacquainted with the answer to all this as a plea for the education of the Negro. "Book-learning," we are gravely informed, "is not sufficient; the Negro needs education in morals." This is true, and true as to the Negro because true as to all other men. But will sensible men seriously urge the Negro's education in morals as an objection to his education in books? Is book-knowledge, then, in itself unfavorable to good morals? Is ignorance the master of devotion and the nurse of religion? then recall the fierce Arabs who put torch to the library of Alexandria and bid them burn down your colleges and school-houses; bid them destroy your books and stop your busy press power. Then, stop all education—stop all thinking—vegetate and die.

It is unmitigated nonsense—this miserable pretense of reasoning, that since the Negro does need betterment in his morals the school-house is not good for him.

A most significant fact may be mentioned at this point. The only white people in this country who are expending either much service or much money in the effort to improve the Negro's morals are also the people

who are expending more money and service in the endeavor to teach him the knowledge of books. It is also true that those who have the most to say about the Negro need education in morals as a reason for not educating him in books, are precisely the people who are not doing anything of consequence to educate him in anything. To a plain man there seems to be a degree of sham and cant in their talk.

## FOUR ROOT OBJECTIONS.

The objections to the Negro's education that control men's opinions have their origin in four roots, closely united.

1. In ignorance; there are not a few who are, at bottom, opposed to all education. 2. In stinginess; multiplied thousands deny their own children education because it costs money. Money is their god. 3. In prejudice—prejudice against the Negro because he is a Negro. Avarice is a mean spirit, but this sort of prejudice is meaner.

4. In apprehensions that appeal to two kinds of fear: (1.) The apprehension that the education of the Negro will spoil him as a laborer. I know what I am talking about when I say that this fear is at the bottom of much of the current opposition to the education of the Negro. I go among the people and keep my eyes and ears open.

If the argument that supports this apprehension be worth anything, it proves too much, for it is just as good as an argument against the education of the poor white. Education will as certainly spoil them as it will the Negro. The spirit that is at the bottom of such an objection to the education of the poor of any race is selfish, cowardly and essentially mean. It is worthy only of the Dark Ages. There is nothing in the argument. It is much better for anything in the world to be done because he is ignorant. A trained dog is better than a wild dog. Ignorance is not a qualification for anything that God has intended man to do. It is first, last and all-the-time, disqualification rather. Every principle of right and justice denies it; any law of political economy condemns it; the history of the human race repudiates it.

## THE RUSSIAN SYSTEM.

What is history good for except to teach us by its examples? History teaches anything it teaches that no social, or labor, or national, or race problem was ever truly solved by mere repression—by merely trying to keep human beings down. It is in our times seen at its best and worst in Europe; it is the Russian system. It fails always and everywhere; there is in it dynamite and death and hell. It must fail, for in its very heart it is tyranny and the eternal powers are against it.

## A NEEDLES SCARE.

(2.) With some there is opposition to the education of the Negro from a vague fear of something that is called "social equality." Just now the poor Negro is in a place where two seas meet. There are two classes of extremists: One is in mortal terror lest the Negro should become somebody; the other is morbidly anxious that he should assert claims to which he is no way fitted for. Between the two he does not lose his balance he will deserve the respect of both. There never was in this world, in any nation or community, such a thing as social equality. It is a thing that never will be. The social spheres arrange themselves to suit themselves, and no laws promulgated by State or Church will change the social affinities and natural selections of men. Men choose the circles for which they have affinity, seek the companionship they prefer, and find the places that are suited to them.

## THE QUESTION NOW.

But the question is no longer what we prefer; it is now a question as to what can be done. These millions are here among us; they are citizens; they are voters—taking part in the government of this whole nation. When a man of sense can't have his own way he will seek the next best thing he can get. It may well be that we would not choose that the conditions of our very difficult problem should be what they are. Only fools have contempt for facts. It is now in the providence of God left to us to solve our own problem; it is ours to accept facts and to do the very best we can. Nor is it any longer a question whether the Negro will be educated. That work was begun before Appomattox; it has been going on ever since; it is now being pushed with more vigor than ever before. Of this we may be sure: The Negro will, sooner or later, be educated. The State Governments recognize him in the public school administration; Northern liberality has spent more than twenty millions of dollars in the South since the surrender of the Confederate cause, for the education of the Negro. With our approval or without it, this work will go on and ought to go on. I thank God for those who have carried it on thus far; for the liberal men and women who have given great sums of money, and for the devoted men and women who have given their personal service.

During most of the time that this work has been going on in our midst, its promoters have had little countenance or encouragement from us. Many times they have been opposed and despised and made to feel our contempt.

## ABSURD AND CHILDISH.

In all truth and common sense, there is no room for discounting, in any respect, a white man or woman simply for teaching Negroes. It is utterly absurd. I believe it to be also sinful. Let us consider our attitude on this subject for a moment. We have the Negroes to cook for us and if they do not know how, our wives and daughters teach them. We employ them in all sorts of ways. When elections come on, we ask not only their votes, but their "social influence." Candidates, from Governor to Coroner, do this, earnestly, invariably, and without social discredit. We sell goods to them, we buy from them, we practice law for them, we practice medicine for them, and it is all well enough. In all business relations, except teaching, so far as I can remember our ways on this subject, whether as employers or employees, we think all very nice, and so do our wise neighbors. How utterly and childishly absurd it is to "make an exception" if one teaches a Negro child how to spell, to read and write. Will some master in such fine knowledge explain just wherein it is seemingly to sell goods to a Negro, or to buy from him or to practice law for him, or to give him medicine, or even to preach to him, some-thing, but a thing abhorrent to teach him whatever he can learn that we can teach? Of what shams we are guilty.

Think of people going in raptures over David Livingstone's explorations of Africa, and his pioneer of Christian civilization, and then turning up their noses at a teacher, not because he is ignorant or ill bred or bad, but because, forsooth, he is a Negro! A word more I add on this point. If the best results are to be achieved, both for the white and the black races, in the education of the Negro, then Southern white people must take part in the work of his education.

## TIME CHANGES AND THE GRAVE BURIES.

Let us take courage; prejudices that must hold their own both against conscience and against their own best interests, must die after awhile. Great changes occur in the life time of one generation, and the law of mortality buries the resolutions in sentiment fifty years may produce, many facts of our country's history illustrate. It has been only fifty years since a fierce multitude in Canterbury Green, Conn. mobbed a cultivated and Christian woman only because she was teaching a few Negro children.

## THERE ARE SIGNS OF PROGRESS.

In May, 1882, at the late General Conference of the Methodist Episcopal Church, South, the College of Bishops, in their quadrennial message to the Conference, earnestly recommended some adequate provision for the better preparation for their work of colored teachers and preachers.

The committee on education reported in the General Conference, without a dissenting voice, adopted the report of the committee. The result so far, is the appointment of a board of trustees, the sending forth of a general agent; the selection of a place and the election of two of the best men in that church to serve in the faculty of Paine Institute, Augusta, Ga. For seven months the general agent and the president, both of them distinguished and old ministers in that church, have worked hard with small success.

It may be considered "unparliamentary," but I take leave to ask, did the General Conference mean anything by the action it took on the subject of Negro education in Nashville, Tenn., in May 1882? If so, what did it mean? It is incredible that we should think too much conscience to repudiate a duty, but not enough to do it—just enough to use good words. If that General Conference represented the church, in its action on the subject of Negro education, how are we to interpret the non-action of that church when asked to do what the General Conference put into words?

If it did not represent that church, what is to become of a church that does not even put into words its recognition of an obvious duty? What finally will be the attitude of this church if it shall drop the work, which is solemnly declared, through its bishops to us General Conference, that it ought to do and that it promised to do? It will be discredited and it will never recover from the wound given its own heart by its own hand. These churches in the South have small occasion to glory over the church whose General Conference action I have discussed, for of none of them have done anything worthy of special mention; few of them have even gone so far as to talk of doing anything.

## THE ONLY PLATFORM.

It is one of the sad things connected with the difficult problem of the two races living together in this country that not a few good people of both races have despaired of its solution. The author of the Declaration of Independence wrote it, it is said, in 1782, this prediction: "Nothing is more certainly written in the book of fate than that these people are to be free; nor is it less certain that the two races, equally free, cannot live in the same government."

It does not surprise me that Mr. Jefferson made both these predictions. As to the first there was at that time in Virginia and other Southern States, a strong party that favored the emancipation of the slaves. As to the second, he had studied French philosophy more than he had studied Christianity. If this country had been pagan Rome or infidel France, the first prediction would have failed—the slaves never would have been set free by the will of man. Had they been set free, the second prediction would have been fulfilled, for in a pagan or infidel country the two races could not be "equally free and live in the same government." They would not have been set free had this not been a Christian country; as it is a Christian country, the two races "equally free" before the law, can "live in the same government," and the problem of their free citizenship can be solved.

As to this whole subject, full of difficulties as those best know who have personal relations to it, there is just one platform on which Christian people can stand. Our problem with those millions of Negroes, who must be properly solved, not by force of any sort from without the States where they live; no more can it be solved by repression within those States. It can be solved only by the force of the Gospel, and the Gospel can solve any problem whatever, whether personal, social, industrial, political, natural, or spiritual that Providence brings before it. On any lower platform we shall fail and always fail.

## Temperance.

## The Price of a Drink.

"Five cents a glass." Does any one think that that is really the price of a drink? "Five cents a glass," I hear you say. Why, that is very much to pay. How great! Ah, no, indeed; 'tis a very small sum. You are passing over twist finger and thumb; And if that were all that you gave away, It wouldn't be very much to pay.

The price of a drink? Let him decide Who has lost his courage and lost his pride, And lies a grovelling heap of dust and clay, Not far removed from a beast, to day.

The price of a drink? Let that one tell Who sleeps to-night in a murderer's cell, And feels within him the fires of hell, Honor and virtue, love and truth, All the glory and pride of youth, Hopes of manhood, the wreath of fame, High endeavor, noble aim, These are the treasures thrown away As the price of drink, from day to day.

"Five cents a glass." How Satan laughed, As over the bar the young man quaffed The beaded liquor; for the demon knew The terrible work that drink would do; And ere the morning the victim lay With his life-blood swiftly ebbing away; And that was the price he paid, alas! For the pleasure of taking a social glass.

The price of a drink? If you want to know What some are willing to pay for it, go Through that wretched tenement over there, With dingy windows and broken stair, Where foul disease, like a vampire, crawls With outstretched wings o'er the mouldy walls.

There poverty dwells with her hungry brood, Wild-eyed as demons for lack of food; There shame, in a corner, corners low A Thrice violence deals its cruel blow; And innocent ones are thus accursed To pay the price of another's thirst.

"Five cents a glass." Oh, if that were all, The sacrifice would, indeed, be small! But the money's worth is the least amount We pay; and whoever will keep account Will learn the terrible waste and blight That follows the ruinous appetite; And that is really the price of a drink?

—N. O. Christian Advocate.

depends on heeding that little voice."

The celebrated Dr. Channing writes in one of his books, "I would not crush the meanest (harmless) insect that crawls upon the ground. It has the same right to life that I have. I received it from the same Father, and I will not harm the works of God by wanton cruelty."

In my parlor I have a beautiful picture,—a hunter with bow and arrow about to shoot a mountain deer that stands unconscious of his danger; but suddenly, behind the deer, appears in the mist the dim but gigantic form of the Spirit of the mountains, with uplifted hands. The terrified hunter drops his bow and spares the life he could not restore. Remember, children, whenever you may be tempted to take without cause the innocent life of any creature, that there is present everywhere, that great and pure Spirit upon whose mercy you depend, and who knows every wrong that you may inflict on the humblest of his creatures. Protect the weak, relieve the suffering, make the world happier that you have lived in it, and you will be happier yourselves in this life, and better prepared for life immortal.

#### SOME QUESTIONS!

[Others to be added by teachers.]

- Who can recite the first piece of poetry?
- Who can recite the second?
- What is said about large public school in England?
- What is said about a French school?
- What about lessons on kindness to animals, in French schools?
- What about societies of children in England, France, and other countries?
- What is said about criminals in American prisons?
- What about prizes given in English schools?
- What can you tell about two brave English boys?
- What about a distinguished clergyman of Massachusetts?
- What did the celebrated Doctor Channing write?

### DENTISTRY.

Hampton, Va., Oct. 1883.

Dr. T. H. Parramore begs to inform the residents of Hampton and vicinity that he has resumed the practice of his profession in Hampton. Office in G. A. Schmelz's building on Main St.

### "IVY HOME,"

HAMPTON, VA.

#### PRIVATE BOARDING HOUSE.

To friends of the Hampton Normal School or others wishing to find a quiet, home-like place to stay while visiting the School, or wishing to escape the cold weather of the northern winters, we offer inducements not found at any other place in the vicinity.

For terms &c. Address:

DANIEL F. COCK,  
Hampton, Va.

### DAMON & PEETS, 44 Beekman

Street, N.Y. dealers in Type, Presses, Paper Cutters, and all kinds of Printing Materials, both New and Second-hand. A corrected list of prices issued weekly, of all material on hand for sale, (much of which are genuine bargains) will be mailed free on application.

We can furnish anything from a Bodkin to a Cylinder Press.

**REST** not. Life is sweeping by so and dare before you die, something mighty and sublime have behind to conquer time. \$30 a week in your own home. No risk. No risk. Everything new. Capital not required. We will furnish you everything. Many are making fortunes. Ladies make as much as men, and boys and girls make great pay. Reader! If you want business at which you can make great pay all the time, write for particulars to H. HALATT & Co., Portland, Maine.

### T. A. Williams & Dickson, WHOLESALE GROCERS

—AND—

Commission Merchants,

2 & 4 ROANOKE SQUARE.

5-54

Is situated one hundred yards from Fort Monroe, at the confluence of the Chesapeake Bay and Hampton Roads, about 180 miles south of Baltimore, and 15 miles north of Norfolk and Portsmouth. The place is reached by the splendid steamers of the Bay Line, Potomac and James River Companies, running daily between Baltimore, Washington, Richmond and Norfolk, and by rail direct from Richmond via the Chesapeake and Ohio Railway.

The Hygeia is four stories in height, substantially built and comfortably furnished; has two Otis' hydraulic elevators, gas and electric bells or Creighton's Oral Annunciator in all rooms; rooms for bath, including HOT SEA, and closets on every floor, with the most perfect system of drainage of any hotel or public building in the country.

As a resort for the pleasure-seeker, invalid, or resting place for tourists on their way to Florida or the North, this house which has accommodations for 1,000 guests and is open throughout the year, presents inducements which certainly are not equalled elsewhere as a summer resort or cold weather sanitarium. Over \$150,000 have been expended in enlarging and improving the place within the past two years, and it is the most perfect in all its appointments of any hotel south of New York.

There is music and dancing every evening and all the pleasures of a fashionable watering place are to be enjoyed. The climate of Old Point Comfort is unequalled for salubrity and general healthfulness, material factors being absolutely unknown. The record of the Meteorological Observatory for the past ten years shows an average temperature of 74° in summer; 59° in autumn; 44° in winter, and 52° for spring; the invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. The whole region roundabout is filled with picturesque scenery, offering delightful drives by day and romantic strolls by night. Boating and fishing are especially attractive, and the surf bathing, which is good from May until November, is unsurpassed on the Atlantic seaboard. For sleeplessness and nervousness, the delicious tonic of the pure ocean air and the lullaby of the waves rolling upon the sandy beach, but a few feet from the bedroom windows, are most healthful soporifics of the Hygeia.

For further information address by mail or telegraph,

H. PHOEBUS, Prop.

### A TRIAL OF THE BALTIMORE JOBBER.

WILL CLEARLY SUBSTANTIATE SIX SPECIAL POINTS OF EXCELLENCE.

1st—It is the easiest running press made. 2nd—It is as strong as any press made. 3rd—It is the most durable press made. 4th—It will do as good work as any press made. 5th—It will take less to keep it in repair than any press made. 6th (Last but not least) It cost less than any first-class press made.

ALL SIZE PRESSES, TYPE AND PRINTERS' SUPPLIES.  
CATALOGUE FREE.

J. F. W. DORMAN, 21 GERMAN ST., Baltimore, Md.

JOB WORK, of every description, either Printing or Binding, neatly and cheaply executed at the Normal School Printing Office. Estimates made. Samples sent to any address.

THIS PAPER may be found on file at Geo. F. Rowell & Co., 112 N. 2nd St., New York, N.Y.

### THE DEPOT.

Having opened a Store in connection with my business, I am on hand at all times to furnish

### PURE PAINTS AND OILS.

PUTTY, GLASS, VARNISHES, ETC.

A good selection of

### BRUSHES

of all kinds,

Painters' Supplies & Artists' Materials.

AGENT FOR

JOHN'S ASBESTOS MIXED PAINTS  
SHEATHING PAPER, ROOFING PAPER &c.

## Manners.

BY ORRA LANGHORNE.

It is said that a back woods school-house once bore the inscription "Redin." "Redin" and "Rhymetic taught here for one penny a week—then as larns manners pass two pence."

This school of "manners" is apparently much neglected by the young colored people of to-day.

An old colored woman, who had been trained under the slave system, and developed therein a fine and useful character, said to me not long ago, "Dar aint no young niggers been brought up right since dis here freedom come in." Good old Aunt Hester was mistaken in part, and in part correct.

Some of our young colored people, the happy class, born of worthy parents, who train their children well, and give them every advantage in their power, have already attained the best culture our land affords. But another and far larger class are growing up in ignorance and outlavery.

These are but too often the offspring of immoral and reckless parents, suffering the reproach which the sins of the parents bring upon the children, under the third and the fourth generation. In very many cases the child is disowned by the worthless father, but ill cared for by his sinful mother in tender years, and then turned adrift to scuffle through life as best it may, without any of the good influences of family affection, religion and education.

Under the slave system, the colored children had some great advantages. It was well understood by the slave owners that to have good servants the training must begin in childhood.

The colored children were taken from the mother's cabin to the owner's house at a very early age, neatly dressed and carefully instructed in the duties required of them by the master, the mistress, and the other servants of the latter class being models of neatness. Scrupulous neatness, industrious habits and perfect sincerity of demeanor, was thus taught the slave children. Sometimes this result was reached by gentle kindness, sometimes by great harshness. I once heard of one unlucky urchin, who appearing in his master's presence with his locks in great disorder, had them combed by that august personage with a hot fork, kept for such purposes. It was never necessary for old master to play barber again. "Your dining-room servants have the finest manners I ever saw," said a visitor to a Virginia plantation. "Yes," was the reply, "and it has taken a thousand lashes to make them so."

Under the old system the white and colored children were loving playmates, the white child often teaching his dusky playfellow the "better learning" denied by the laws to the children of the slave.

On Sunday, in many localities, the colored children were taken to church and taught in Sunday-school by the white ladies. Bishop Meade, who set his own slaves free and provided for their support, always took great interest in the Negroes, and in his historical work, he dwells much upon the faithful training given the slaves by their owners. He describes a visit paid by a friend of his to Gen. Washington's wife, when the first lady in the land was found with four or five colored women around her, all of them engaged in household occupations under the supervision of their mistress. The Bishop, who was also of seeing Gen. Washington's nephew, Col. Lewis kneeling at the communion table beside an old and faithful colored servant, and mentions that he once stopped with his invalid wife at the home of a southern friend, when the white family were all absent, and he and his wife being too ill to continue the journey, they were most courteously and hospitably entertained for some days by the amiable and well trained servants of the establishment, who did everything in their power to render their master's guest comfortable. While freedom has been an inestimable blessing to the African race among us, it is greatly to be feared that many of the young people, growing up now in the South have failed to derive any benefit from it. This class of colored people are an element of danger in our land; coarse, rough, idle and vicious in their habits.

It is a common thing in the towns of Virginia for several Negro boys to lock their arms together and parade the streets, refusing to part, for whom they refuse to make way, and terrifying ladies and children. Such an incident happened to myself not long since as I walked with an old lady in feeble health, near the city reservoir. I was surprised to recognize in the group of boys, who had pushed us roughly from the side-walk, the son of one of our colored tenants, an amiable old man, with excellent manners, learned by life long association with his master's family. I promptly reported his son's misconduct to good old Uncle Ben, who has many friends among the white people, and within half an hour the young man was most powerfully and was brought to be did with a sheepish air and downcast

face, assuring me that he had not been drinking as I supposed, but "was only projecting." In one of the valley towns some weeks ago two young white men, one of them an Englishman well-trained in the art of boxing, were thrust from the side-walk by a party of Negro "roughs," and the Englishman instantly dealt the African nearest him a blow which made him measure his length on the ground, and perhaps taught him a lesson in manners.

"When the colored boys behave to you in this way," said a lady to her young nephew, who told her of some such rudeness, "do you not take off your hat, make your best bow, and say if you please permit me to pass. You have had many advantages over the colored boys, and should set them an example of good manners." The hot blood of a slaveholding ancestry flushed the boy's cheeks, as he answered with flashing eyes, "I would die, before I would speak so to a Negro." "And yet," said his aunt, "it is on record that President Jefferson once took off his hat, and made a low bow to a black man, and when some one expressed surprise, the author of the Declaration of Independence said: 'The man spoke to me first, and do as you think I would allow myself to be outdone by a Negro?'"

It is this coarse and rude conduct of the colored youth, with the fierce and arrogant behavior of the young white men, that in times of political excitement culminate in tragedies like the Danville riot, and brings shame and sorrow on our land.

I have nothing to say here of the cowardly brutality which would lead fifty or sixty white men armed with shot guns and pistols to fire into a crowd of unarmed Negroes. But I would urge the colored people not to forget the amiable and gentle manners which once distinguished the southern slaves.

"The meek shall inherit the earth," is one of the great truths taught by the divine teacher of mankind, as true now as in days of old. The colored people of America may well learn a lesson from the Jews, who have prospered in spite of prejudice and proscription among all the nations of earth. Inquiry will prove that the colored people of the South, a rapidly increasing class, are those who have not forgotten the lessons of courtesy, patience and consideration for others learned in the stern school of slavery, who in times of trial bend to the storm, instead of struggling against it, and breaking before it.

At the time of the agitation following the passage of the Civil Rights bill, old Aunt Hester, quoted above, who often made shrewd and impressive remarks, said severely to a young man who was talking in loud and rough tones on the subject, "Do you mind so much 'bout Civil Rights—Civil Rights is very good in dere place, but you try civil manners an' behavior an' you'll get along wid white folks." Was there not some force in Aunt Hester's opinion?

## Hampton Beauties of the Deep.

HARD CRABS.

Regarded from any point of view, a crab is a curious creature. If you look him in the face, you see that his mouth is between his shoulders, and that his claws or arms move in the same plane as his nostrils. If we look at him from behind, where we would expect to see a tail, we see a smooth surface, at either end of which is worked a flipper, that answers for both leg and tail. If we look at him sideways when in the water, he is either coming towards us or retreating from us; for in his native element, a crab is as perfect a double-end-er as a ferry-boat, and, anomalous as it seems, when he goes forward, he goes sideways. No one, at first glance, will acquire the personal appearance of a crab, but his lack of comeliness is largely due to his wearing most of his skeleton on the outside, which, it must be confessed, is a trying fashion to any animal, especially one with so many legs. Clams and oysters carry this fashion to extremes, and have all their skeleton on the outside, but they have no arms or legs to manage, and are permitted to be wrapt in a mud blanket and a sheet of water, they ask odds of no one.

Crabs, however, are nomads of the sea, and except when they have retired for their winter nap, or are gorged with food, they are in ever restless, darting or sauntering through the water, where business or pleasure leads. This restless spirit is easily shown, by confining some in a barrel with slats over one end, and sinking the barrel in the tide. The constant efforts of those inside to get out, and the side to get in. The parallel between the crab and a certain higher animal is too plain to need showing. It may be a prize to some, who are accustomed to think that crabs are "sea scavengers" and will eat everything, to learn that hardly any other creature is so particular in examining food before putting it into its mouth. Its olfactory organs are the most powerful kind, and are brought to bear on every bit of food before a bite is taken.

The delicate mechanism of a crab's nose is hardly surpassed in nature. It is an interesting sight to see a crab approach a piece of food, and note how dexterously it will brush away anything which its instinct or its nose says is unfit for food.

Crabs are as born warriors as clams are creatures of peace. Their weapons of both offense and defense are strangely powerful; no living man can hold open the jaws in the end of a crab's claw, if his crabship see fit to shut them. But even Achilles had to be wondrous somewhere, and a crab has his point of vulnerability. Grasped by the thigh, or rather where the hind flipper joins the body, a crab is harmless, and the most ferocious of the tribe may be held by a small boy, if only he have faith that the snapping jaws cannot reach him. With so perfect an armory of offensive and defensive weapons, it is not strange that crabs should be quarrelsome customers, and pass most of their time in duels and the like. It can hardly be said that there is any "softer sex" among crabs, for the lady crabs are quite as vicious as the gentlemen, and practice the arts of warfare as constantly. Indeed, if there be any difference between them, the lady crabs are the more vicious. If any one were called upon to excuse the crab for this snapping and sniping, the line of defense would not be difficult to select. The poor crab, since the year one, has been compelled to feel how differently it was constructed from all its neighbors, and how that every creature that can reach it, from men down to barnacles, lives with its hand raised against it, in a metaphorical sense at least. While other animals reach their growth by regular gradations, the crab is protected during that period with the greatest care, the wretched crab grows only by jerks, and has to lose all its skin to make that growth, and in making it, is exposed to the attacks of many enemies.

Crabs are not epicures as "soft shell crabs" is only the hard crab making one of his jerks of growth. A series of such hardships extending over countless generations, is enough to create the milk of any kindness. The strongest argument against this gradual sowing of the crab's disposition, however, is to be found in the fact that nature clearly recognizes the warfare tendency by making it dishonorable warfare, a new one grows in its place. Although the crab is to a certain extent amphibious, its behavior on land is almost the exact reverse of its behavior in the water. On land, if a man makes a motion toward a crab it will at once turn to flight, but in the water it will scuttle away. On the contrary, if a person stand perfectly still in the water, crabs will approach him, and nibble or bite his toes; while if one stand still on land amid a company of crabs, not one will attempt to injure him. In the water, if a crab seizes anything, it at once pulls it under its nose to see if it be good to eat; while on the land you may put its favorite food in its claws and it will not put it to its mouth. Another strange thing about crabs is that if you put a stick or something like it in a live crab's claw it will only hold on for a very few seconds, whereas if you seize it by the flipper and let it seize something, it will hold on while you lift it and its burden to any height. In other words it seems to dislike to support itself by its claws, but will, if it has a chance, hold up ten or a dozen times its weight. It is a common thing to see crabs unloading their boats by means of letting one crab, which they hold by the flipper, seize another crab, and this second crab a third, and so on, till sometimes a string of a dozen is tossed into the basket. There seems no limit to the number of crabs that may be thus hung on a string except the weight which is needed to pull out the hind flipper of crab number one. The number of eggs laid by a single crab, is marvellous—they are carried beneath the under shell, and in the spawning season these bunches of eggs look exactly like pieces of fine Turkish sponge. It would take too much time to describe in detail all the changes which occur in the development of the crab, but it is sufficient to say that a single egg is hardly to be seen with the naked eye, while crabs grow to weigh over a pound.

Crab catching as a matter of pleasure, and as a means of business, are two very different things—for the first a summer day on the sea shore, or better still, in some quiet bay, a string with a bit of red net, and a small hook, and a little patience, will bring in a fine catch. If the crab is to be caught for food, the bait is a small piece of meat, or over the side of a boat; in these waters the bait will have hardly reached the bottom when a vicious thrust of the line will indicate the presence of a crab; all to be done is to pull the line steadily, and the crab with the bait clutched in his claws will be drawn to the surface—then slip the net under him, and the crab is yours. If the crabcatcher has time, and an eye for the beautiful, by or she may study with delight the many exquisite colors with which the crustacean is marked. To the old crab catcher

these colors are as an open book, telling him the probable age of the crab, how long since its shell was shed, whether it has been a long time in the bay or whether it has just arrived from the sea, etc. etc. To the amateur, however, it will probably present only a curious blending of fresh tints, the most beautiful being the blue, with which parts of the arms are marked. Until one has been taught how to pick up a crab, it is well to admire him at a safe distance, for they have an enormous "reach," as the prize-fighters say, and strike with the rapidity of an arrow from a bow.

Catching crabs for the market requires quite extensive preparation. In the first place a boat has to be built on purpose for the business; it is flat-bottomed, very wide in proportion to its length, and contains but two seats: one near the centre for the crabber to use, when he rows to and from the fishing grounds, and the other, a small one in the bow, to use when fishing. There is no seat in the stern of the boat, the space there being used to coil up the line, between the two seats mentioned is placed a "dry goods" box, as a receptacle for the crabs caught. The line consists of a half-inch cotton or grass rope, varying in length from a hundred to a hundred and fifty fathoms. At intervals of eighteen inches or two feet, are hung bits of stout twine with loops on the end, into which the bait is fastened. These bits of twine are called "snoods," and the bait used is generally tripe. The line once baited, an anchor is securely fastened to each end, and to the anchors are made fast buoys, which enable the crabber to know where his line is. Reaching the grounds the anchor is thrown overboard, and the boat pulled away from it, causing the line to "pay out" over the stern. When it is all out, the second anchor with its buoy is dropped, and taking his seat in the bow, the crabber begins pulling his boat back hand over hand toward the first anchor, by means of his line. In this way every bait is brought to the surface, and the crabber, with his net, tosses over his shoulder the crabs caught investigating his bait. Over the box are strewn green bushes, sprinkled with salt, to prevent the crabs being sun-struck, for an amphibious animal is so sensitive to the sun's rays as the crab. When cooked, (boiled or steamed) the shell of the crab, no matter what may have been its color when it was taken, will be a bright red, and the shade of red developed, is a sure guide as to how thoroughly the crab is cooked.

The meat of the crab is the most delicate of all the crustaceans, but varies amazingly; if taken from a crab which has died a violent death, it is one thing; if taken from one which has been suffered "to drown in the air," it is another. The meat of the crabs cooked alive is firm and smooth, while that of a crab which died before it was cooked, is mealy or pasty, and unfit for human food. All death is a change, and the manner of the change has everything to do with the quality of the food furnished. If a crab die a lingering death from sunstroke, or unskillful amputation, its flesh is only fit for dogs, or fish bait. But let his death be sudden, as by turning fifty pounds of live steam upon him when full of fight, then the market affords no more delicious morsel.

The necessity of eating crabs freshly caught would seem to render it impossible for the majority of American people to indulge in these gastronomical tidbits; for the census of 1880 will surely show the centre of population to be far west of the Atlantic, north of the Gulf, and east of the Pacific. Modern Science, however, is a deadly foe to the word "impossible," and is daily narrowing its compass. By hermetically sealing in cans the choicest parts of the meat of the crab, those dwelling farthest from the sea are to-day enabled to enjoy the luxury of fresh crabs as thoroughly, if not more thoroughly, than those residing on the very shores of Old Ocean.

There are good crabs in many waters; better crabs in some waters than in others; but the best crabs in the world are those found beneath the bright blue waves of the Lower Chesapeake.

T. T. BRYCE.

## Frank Leslie's Sunday Magazine.

THE SUNDAY (T. D. WITTENBERG, D. D.) commences the fifteenth volume and the year very interesting in the January number, and contains a very interesting holiday copy, replete with delightful reading and artistic excellence. The contents are extremely varied; there are Christmas stories, and a variety of articles and poems; the editor has a characteristic "littérature." The "Coming Season," and there are contributions in prose and poetry from a mass of our most popular writers. A new series of "Christmas Stories," by the author of "Mr. Barker's Niece," is commencing; in fact the pages overflow with entertaining and edifying material and are illustrated. Now is the time to subscribe, not only to get the best of the year, but to get a year's subscription to the magazine. The price is 25 cents for a single number, or twelve numbers for \$3.00 postpaid. Give name to FRANK LESLIE'S, Publisher, 15, 17, and 57 Park Place, New York.

[Jan., 1884.]

NO YEAR without at least some effort for improvement is the *Southern Workman's* aim, and looking over its twelve volumes, we feel encouraged to hope for further success in attaining this purpose.

During the past year, the kindness of friends has enabled us to fulfil the hope then expressed, and make our New Year's bow at the beginning of our thirteenth year, in a new dress of beautiful type and paper whose quality shows to better advantage the fine engravings for which we are indebted to our friends among the Northern publishers.

The circulation of the paper is about the same as it has been for several years past; with a monthly issue of from twenty-five hundred to three thousand, about one half of which is paid for by subscribers, the rest returning indirect profits from interest thus awakened in the working and the causes for which it is working.

The paper is sent at reduced rates to our graduate teachers, who become to some extent its agents among the colored people of the South.

Arrangements have also been recently made with one of the graduates, Mr. Thomas P. Caton of Hampton, whose work as a teacher and hopes as a scholar have been brought to an end by serious trouble with his eyes, to act as agent for the *Southern Workman* in the North and to speak as he has opportunity to bring the work of the school as well as the paper before the public. He is the only accredited agent of both in the North and we be-speak for him the kindness of friends of education for the freedmen.

While the *Workman* represents the school, and aims at the improvement of the races here trained, the design has been from the first to make it no mere charity organ or class paper, but one of actual and permanent value in the information it gives and the light it throws on some of the most interest-

ing and important questions of the day. If the Hampton Industrial School presents, as Presidents and Secretaries in their messages, and many other leaders of public sentiment have declared, a successful solution of both the Negro and Indian problems there can be no question that the record of its work and results is worth study, and its opinions worth consideration. The letters from Hampton graduate teachers which appear monthly in our columns, and the reports from its Indian work and returned students, belong to this record.

The fact that both the school and the paper are free from political and sectarian control, gives these records a value not always to be found in the organs of any particular sect or party.

Another field, almost unworked, and in which our position gives us special opportunities is that of general Southern sentiment. While here and there, now and then, an extract from a Southern paper is made to point a moral or adorn a tale, by some Northern one, we know of no organized and persistent effort to collect and represent the various phases of Southern feeling, as expressed in the Southern press, white and colored. We have long desired to enter this field, believing that good is to be done in introducing North and South to each other, and that the more publicity is given to local expression, the more cautious and responsible it becomes.

We are very glad to be able, with additional editorial force, to make this the new departure for our thirteenth year. We call our readers' special attention to the broadside of selections on another page of this number. While, as might go without saying, we do not hold ourselves responsible for all or any of the curiously differing expressions, we believe they will be found both interesting and valuable.

The paper being largely distributed gratuitously to our donors, and others, has been thus far published at a direct loss to the school, though of great indirect benefit. We appeal to those who know it and believe in its value and mission to sustain it and increase its circulation by sending it advertisements and subscriptions.

**The Peabody Fund.**

The Trustees of the Peabody Education Fund held their annual meeting in New York in October last, and the printed report of their proceedings is before us. The introductory address of the Hon. R. C. Winthrop, Chairman of the Board, is very forcible. He states that after unexpected success in the encouragement and establishment of free common schools in the South, and in creating an intelligent and earnest interest in popular education in almost all the Southern States, the Trustees of the fund were "met by the ascertainment of a great want which our own work had developed, and without the supply of which all further efforts would have been comparatively fruitless. That want was the want of accomplished and capable teachers; and it could be supplied only by normal schools or colleges, in which suitable persons might be adequately trained to the work of teaching."

To that all-important object our means are now mainly directed.

We have also sanctioned the employment of a considerable sum annually, from the income of our Fund, for the holding of Teachers' Institutes in many convenient places, at which lectures and addresses are delivered, and other exercises conducted in the cause of Normal instruction.

Much has been accomplished in this line of our work, and we have every inducement to persevere in it, and to make it the principal aim and end of our efforts and expenditures for the future.

In despair of being able to grapple success-

fully with so great an exigency, we have already laid the matter before the General Government of the country, and have appealed to Congress in a memorial, drafted by our distinguished associate from Virginia, and sanctioned and signed by the Chief Justice of the United States and Mr. Evarts.

This memorial has been followed by one of great force and emphasis from our General Agent. I trust that these memorials will be presented again on the assembling of a new Congress, and that they will be pressed upon the consideration and action of the Government as long as the evil shall remain without ample provision for its remedy.

National aid is the only adequate provision for this crying necessity of our institutions, and the nation may reasonably and rightfully be invoked and expected to supply the means of educating the great mass of utterly illiterate and undisciplined voters to whom it has itself so suddenly committed the equal exercise of the elective franchise. As I have said elsewhere, 'Slavery is but half abolished, emancipation is but half completed, while millions of freemen with votes in their hands are left without education. Justice to them, the welfare of the States in which they live, the safety of the whole republic, the dignity of the elective franchise, alike demand that the still remaining bonds of ignorance shall be unloosed and broken, and the minds as well as the bodies of the emancipated go free!'

A great work evidently remains to be done. The nation alone can do it; and it is false to its own highest obligations and responsibilities in leaving it undone. It is a question of self-defence. Armies and navies are not more essential to our physical defence, from foreign or domestic foes, than Common Schools and the education of our children to the safety of our free institutions, and to the existence of intelligent self-government."

The Hon. J. L. M. Curry, Agent of the Peabody Fund, after some general account of operations, says:

"There is a growing recognition of the alliance between industrial and mental training. As the command and discipline of the mental faculties qualify for any avocation or profession, so the training of the hand and the eye is an auxiliary to mental development, and helpful in every sphere of life. For centuries, education was, in a broad sense, the exclusive possession, and was considered the exclusive privilege, of the elect few; now it is a universal right, and in the United States is a vital part of our social and national life. The masses, while fitting for citizenship, must earn their daily bread by manual labor, by the sweat of the brow. That education has much to commend it which, while making more rapid and thorough mental instruction and discipline, combines intelligence with knowledge, and gives aptitude for learning trades, or increases the power to make a living. Under the peculiar condition of the States which are the sole beneficiaries of the Fund, industrial schooling is a necessity. These considerations meet the obvious and earnestly pressed objections often urged against general taxation for school purposes, and show that material prosperity, social quiet, and individual thrift and probity are all promoted by education."

Dr. Curry points out the injury to the cause of education from the change of school officials with the varying fortunes of political parties. A public sentiment is needed that shall lift the free schools out of the arena and the fluctuations of political strife.

He further states that—

"In none of the States a new phase of

the free-school question is presenting itself. Kentucky has recently stricken from her statutes an 'unwise discrimination between the races, in the disbursement of school-funds; but in the flush of our rejoicings over such a triumph of patriotism and generous self-sacrifice, we find a disposition elsewhere to adopt what Kentucky, after trial, has cast aside.'

He thus urges national aid for schools:

"Public education at public cost has its best defence in the obligation to preserve national life. A State may well go to the extreme limit of taxing power to save its autonomy, to prevent dissolution, or to perpetuate the liberties of the people. Indispensable to these ends is the fitting of the people to fulfil intelligently the duties of citizenship. In the discharge of this duty, the State must act as a unit, irrespective of races, communities, and individual citizens. Among its citizens, in the bestowment of favors and the imposition of burdens, it must not be governed by fear or favor. Ignorance is not the less harmful, whether the tenebrous which the mind inhabits be of one color or of another. A citizen is a citizen. The expenditure of blood and treasure, as well as the organic law and authority of the Union, have settled this irrevocably."

The total distribution from the Peabody Fund for the year closing October 1st was \$71,175, of which about \$25,000 were expended for "Nashville Scholarships," through which students from twelve States are aided in obtaining normal training at Nashville, Tennessee.

The best summary of the educational sentiment of the South is found in the Annual Report of Dr. Curry, who visits every State and gives a brief account of the condition of each. While in places the movement is retrograde, it is generally forward, and on the whole encouraging.

We ask attention to a letter in another column from General Guy V. Henry, Commanding Fort Sill, Indian Territory, in response to an inquiry from this office.

He writes of the Negro soldier purely from a military standpoint, and gives valuable testimony to his success, based on a personal experience of two years. His statements are endorsed by Lieut. Brown, U. S. A., Commandant at Hampton, who has served four years with or near black troops.

Statements made to us personally by the officers at Fort Hale, Dakota, in 1881, concerning the colored garrison at that point, were to the same effect.

The Negro service has, we believe, proved an agreeable one to every good officer who has entered it, no matter with what dislike or prejudice.

The black soldier has held his own in the English and French as well as in the American armies. Negroes are not lacking in bravery; a regiment of them will be shot down in their tracks if their officers will stand.

In the civil war they showed soldierly qualities of a high order; but were at a disadvantage, in many ways, by reason of prejudice. A Confederate general on the return from Appomattox Court House, said to a Federal officer, "The Negro soldier was the winning card of the Union army."

In the spring of 1865, black troops were being drilled in Richmond to re-enforce the Confederates; but they were not ready for the field when the war closed.

Had the rulers of the Confederacy offered freedom for military duty, the course of events might have been different. Its military leaders were in favor of enlisting Negroes long before its political leaders would consent to it.

The success above referred to is due to the elements of manhood which the Negro possesses to a degree far beyond anything admitted from the standpoint of the slaveholder; is also due in part to the conditions of military life which

under good officers, not only develops manly qualities, but applies a discipline that is most wholesome to a people unused to self control.

The two hundred thousand Negro troops enlisted in the Federal army received a training that has had, we believe, much to do with the good conduct of the emancipated race. Their self respect was raised, tidiness was promoted by daily inspections of person and of clothing, neatly packed knapsacks being brought out for weekly inspection; schools were opened in many regiments; they learned to read and write by tens of thousands. Not a little force of character was created among the non-commissioned officers, by the responsibility put upon them, and when they were disbanded they left the service far better, stronger men than when they entered it. As a rule they were commanded by men who took an interest in their moral welfare, and vice was held in check.

The military system at Hampton in which students Courts martial are introduced seems indispensable to the best results. The majority of cases of wrong doing are tried by their peers; all proceedings being subject to revision by school authorities. In the past five years there has not been a single unworthy act by the student officers, who have "well and truly tried" each case before it, according to affirmation made by each one before each trial.

The Indian policeman or scout is raised by his position to better manhood. Some have recommended general enlistment of Indians in regiments to insure better control of them, and perhaps it would be the solution of the question of law for Indians, which so far has found no answer.

We do not believe in promoting a war spirit among these races. The spirit of the officer in command works down through his men, and if he is what he should be, his own type of manhood is impressed on those under him. There are soldiers and soldiers; they may be brutal and they may be noble and Christian men.

Whatever sectional feeling there may be in our land, the least is found among the old soldiers of both armies, who freely say that the fight is all out of them; they are the peace party of the country to-day; not peace-at-any-price men, but true men, in whose hearts there is no hatred or bitterness.

#### Editorial Correspondence.

PIMA AND MARICOPA AGENCIES,  
Arizona, Aug. 30, 1883.

I have been struck with the difference between the Indian question in the Northwest and in the Southwest. In the former, the great Sioux nation of 25,000 people is the centre of interest and of effort; the difficulty there is that there is provision for treaty for the entire support, with a few exceptions, of the Sioux, including food, clothing and many articles of furniture and house-building, and all the implements of agriculture, with plows, wagons, harness, and free repairs. The worthless far as well as the worthy. The smaller tribes are wholly or partly fed; few raise all their food.

Besides full rations and supplies to four thousand Apaches in Arizona, and the three hundred Mescalero Apaches in New Mexico, and less than half rations for a few hundred Mohaves on the Colorado river, there is no food issued in these territories. More exactly from the last official report: 5,750 receive full rations, 1,026 less than half rations, and 39,586, or about five-sixths, no food whatever.

All are under the care of agents, whose duties are to encourage education and industry, introduce better methods of farming, better tools and implements, to preserve order, administer justice, keep intruders and whiskey off their borders, and the Indian within, as far as possible. Schools are a special concern, and are making more headway than ever, though not nearly what they might be in the present favorable state of public sentiment, and with more energy at Washington.

I have visited the principal agencies, and have been surprised to find its men in

charge, nearly all appointed within a year, apparently men of capacity and character, and having genuine interest in their work, chafing generally at their want of facilities and efficient support for their leaders, but making the best of things, and well spoken of by the press and people of this region.

The Indian problem in the Southwest is, I think, simpler than that in the North, excepting in the case of the Apaches, of whom about four thousand are peaceful, disposed to industry, and with good care, capable of being brought within five years to entire self-support; the rest, composed of about three hundred Chiricahuas, besides Warm Spring and White Mountain Apaches and renegades from other tribes who have never been conquered, are likely to make some trouble. General Crook is confident that the fifty or sixty fighting "bucks," still in the Sierra Madre mountains in Mexico, will come in, as they agreed to, but many doubt it. If they do come, it may be only temporarily for rest, for they have long been between the press of two armies; and many are tired out.

Gen. Crook, with plenty of well posted cavalry, and a hundred and fifty active Indian scouts, with complete control and power to strike, when he chooses, will guard these and perhaps prevent future outbreaks of these flying Indians, who have prided themselves on fighting two nations for years without a defeat. If they do not come in, they can only defy the powers that be in their impregnable stronghold, but must come out for plunder, for they can get food in no other way. The way out of the Apache trouble does not yet seem clear. Citizens of Arizona are deeply exercised on the subject, as it seems to them to threaten their welfare. There is, however, the best of feeling towards the 15,000 Pimas, Papagos and other well behaved tribes, who supply a willing and considerable laboring class. Their good conduct has been rewarded with neglect. They should have liberal industrial education, good leadership, encouragement to become citizens, protection of their rights and defense from bad whiskey.

They are considered superior in many respects to the voting Mexican population. I cannot too strongly emphasize the need of caring for these people, who are as hopeful a class of Indians as can be found in the United States.

I have passed a busy day here looking into things. Dr. Jackson, agent in charge, is a recent appointee, and appears to be the right man in the right place; working with energy, but responsible for some thirteen thousand Indians scattered on three separate reservations, one of them ninety miles distant, which he is not allowed to visit, even in order to catch a thief, without special permission from Washington, which may be got in from two to four weeks. Far too much is placed upon him. The best man can do little when so spread out.

This reservation is a long, narrow strip on both sides of the Gila river, containing 30,000 acres, of which but twenty-five per cent is irrigable and useful; barely enough to maintain the 4,800 Pimas living upon it; not enough to support the scattered Papagos, who ought to be brought together. To this end Dr. Jackson desires an extension of the agency, north and south, over land not occupied and urgently needed, not only to accommodate more, but to keep whiskey-sellers further from his people.

The 578 Maricopas are off the reservation; squatters on good Government land for want of water on their own; farming, raising wheat and barley, but pressed by Mormons who would like their land and ditches. These and thousands of other Indians here might at once take up the lands they are on and become citizens, were there the men to help them. The Indian Agent has no time, and these people on the very edge of settlement are kept from it for want of advice and direction.

Self-supporting as they are, the way is clear; but they are too ignorant to secure permanent homes and settle their own future.

Of the 6,800 Papago Indians, there are 500 on each of the two widely separated reservations, the rest being scattered over southwestern Arizona, over a desert country two hundred by fifty miles in extent, supporting themselves by stock raising, on the natural production of the soil, such as the mesquite bean and agave plant, and on corn and vegetables which they raise when the water supply allows and by odd jobs for Mexicans and for other Indians; they work on the railroads, and compare well with the Irish. Many of them could homestead themselves where they are, were there any body to look after and help them.

All these reservations are "Executive," not made by act of Congress; hence a feeble tenure, and no little disadvantage to the Indian in his ineffectual struggle with the white man. One Papago reservation, were it their own, could yield in grass and timber \$2,000 a year, and support a school

where there is none; it is now anybody's property.

All these people live in "keys," huts made of mere brush in summer, mud-covered in winter; they scatter in warm weather to their fields, but in winter in villages of from fifty to three hundred people. They store their produce in better houses than they live in. This is a serious difficulty in religious work among them; white not nomads, they lead shifting lives. Their home life, like that of all Indians, is quiet and peaceable as a rule. Children are idolized and indulged to excess. They are generally adopting citizen's dress; the Papagos have done so invariably.

The Maricopas cremate their dead. The Pimas dig a hole and run from it a horizontal shaft several feet, and place the body there in a sitting posture, covering all up with brush to keep wolves away. The name of the dead is never mentioned after the period of mourning; every similar name in the family is changed, mourners go off alone, sometimes for a year for a lost husband or son.

The disposition to industry among the Southwestern Indians is most encouraging, and has not been nearly developed. It needs the constant care of a force of competent men—say one farmer to every hundred families, to improve their methods of irrigation, for water is wasted; many of them plow with sticks, but are eager for white men's tools, and ready to pay for them. The Agent regrets his inability to devote more time to them. The Pimas are agricultural; the Papagos are herdsmen; the former cultivate from ten to a hundred acres apiece, on both sides of the Gila river, for a distance of forty miles; and this year have raised one and a quarter million bushels of wheat, of excellent quality, sixteen thousand bushels of corn, ten thousand bushels of barley, and nine thousand of beans. Years ago they were the only wheat raisers in the country.

A consequence of being allowed to ride free on the cars is that often they will go to Tucson with a bag of wheat, and buy and bring back a supply of whiskey.

The Agent tried to induce the railroad authorities to give free rides only to those who shall have passes from him.

Education is pushed at this agency. The old adobe school building has been raised to two stories and greatly improved. A married couple and a lady assistant are on the ground as teachers. School is soon to open with about a hundred boarders of both sexes, who are put and clothed by Government. The only drawback being the need of some \$1,500 to put things in complete order, over \$4,500 having been expended during the summer.

The Agent has cleared and fenced in seventy acres, worked daily by the school boys, irrigated by a ditch four and a half feet deep by five in width, and eight miles in length, made entirely by Indian labor, including a substantial dam of over a hundred feet in length, across the Gila river; considered a good job.

This and other work at the Agency, costing over \$25,000, was paid for by the issue of Government supplies, clothing, tools, etc. It was wise in Dr. Jackson, the Agent, not to give these goods as had been done previously, but to issue them in return for an equivalent.

The Pimas are thrifty and in four or five years may be able to support their own teachers as well as buy their own tools. They need, unpeakingly, closer supervision than the better educated Agent can give them. There are now five boys apprenticed to the blacksmith's and carpenter's trades.

The total appropriation for the management and care of the fifteen hundred Indians included in the agency is \$13,700, or about \$1.10 apiece. The large majority must be neglected. It ought to be doubled. There is no better field for public or philanthropic effort.

The Presbyterians have a missionary stationed here, the Rev. Mr. Cook, who has labored long and faithfully among them, but with little apparent result. Their shifting life is an obstacle. Some are attentive; many are influenced by the opposition of the medicine men whose craft is in danger; but it will pay to keep on. The success of work with Indians in any direction is not so much a matter of superior knowledge as of knack and skill in getting at them.

White men's diseases prevail among these as among all peaceable Indians; they are, however, about holding their own in numbers. Special detectives could do much to break up the whiskey traffic that is so ruinous.

The Indian question in this remote region, excepting for the few Apaches and their allies, is, I believe, capable of being settled in a few years. The appalling food question, so serious in the Northwest, is not so much what they need is what all quiet and well-disposed people need—education in its broadest sense. S. C. A.

The surgeon-general's annual report compares the hospital records of white and colored troops. There are four colored regiments in the army. Rather surprising facts are produced, opposed to the common impression that black men are less healthy and efficient as soldiers than white men. Thirty-eight whites out of each thousand soldiers were constantly under treatment for disease, and only thirty colored men. The deaths were ten per thousand among the white soldiers and eleven among the blacks. Six colored men died of disease and seven white men. Five out of each thousand colored men died of wounds and only three white men. The report also says:—

"It is interesting to note that the colored troops make a particularly favorable showing in the small number of admissions for alcoholism and its results, exhibiting, as they do, a rate of only four per one thousand to a rate of seventy-six per one thousand of mean strength among the whites. In the other hand, in diseases of the nervous system they have an unexplained preponderance."

This exhibit has an important bearing on the military possibilities of colored men.—*Boston Advertiser.*

#### A Day in Athens with Socrates.

Translations from the *Protagoras* and the *Republic* of Plato. Chas. Scribner's Sons, New York.

Those who have read and enjoyed—and no one can have read without enjoying—the preface to this little book, which appeared last year—translations from the *Phaedrus*, *Crito* and *Apology* of Socrates,—will rejoice in this early gratification of their desire for "more," and this second treat, we venture to say, will only increase it.

It gives translations from two more of the most famous of the so-called "Dialogues" of Plato, selected because, as the translator well says, they embody one of the most vivid pictures which have come down to us of the age in which these men lived and taught. The vividness of the picture is not lost in its transfer to an English setting. As in the "Socrates," the translator admirably succeeds in inspiring the words with the spirit of life.

The "Protagoras," named like the "Phaedrus" and the "Crito" from one of the principal parties to the dialogue, is the account given by Socrates of a discussion between himself and the great "Sophist," Protagoras, upon the nature of virtue. It was held at the house of Callicles, a rich and powerful Athenian, who was fond of entertaining the literary "lions" of the day, and opened his doors at the early hour,—just after daybreak,—when the youthful enthusiast Hippocrates presented his friend Socrates, then still youthful himself but beginning to attract attention, to accompany him thither.

The translation from the "Republic" gives us but the prelude to the great description of an ideal commonwealth. We follow Socrates, with some of his youthful disciples, at the close of a festival day in Athens, down to the Piræus or seaport of the city, to the house of his old friend Cephalus. Here the party are easily persuaded to stay to see the torch light procession in honor of the goddess whose feast day is celebrated. Socrates, always ready for instructive discourse, questions their host upon his view of life, and the secret of his happy old age. The venerable man replies in beautiful and touching counsel to the youth around him, to devote their lives to justice. To him who is conscious of having done no wrong to others, sweet hope is ever present, and she is a good nurse of old age. To the all questioning Socrates, this gives opportunity for the inquiry what is justice, and Cephalus retiring to his evening sacrifice and peaceful slumbers, the discussion of the essential nature of justice and righteousness, and whether it is a good in itself or desirable only for its profitable results, is kept up late into the night. Socrates arguing for the inherent value of righteousness as the very food and happiness of the soul whatever external advantages or disadvantages it seems to bring, against the angry attacks of the rude and worldly minded scolder Thrasymachus, and the plausible arguing of the young Glaucon and his brother not as their own, but as representing the common view, and to draw out Socrates, who fearing that "it may be an impious act for a man who happens to be present when justice is evil, to entreat to yield to weakness and not come to her rescue so long as he has breath and power of utterance," throws his utmost strength into the illustration of the "beauty of holiness" by his immortal description of an ideal commonwealth founded and built upon justice. The translation stops with the "prelude" of this description, and we turn away with regret, leaving the Athenian youth to learn the "true glory of nations"—of theirs, and also of ours.

### The Southern Press. All Sides.

In the last number of the *Southern Workman* we endeavored, by means of quotations taken from Southern newspapers, to give as nearly as possible, a view for the moment, of the political situation from all sides, from the standpoint alike of Bourbon and Readjuster, Republican and Democrat, Liberal and Conservative.

The experiment having proved to be of some value, it has been decided to make such quotations a feature of our monthly issues, and to let our Southern friends speak for themselves directly to our Northern readers. That there is a strong feeling among the former in regard to what they consider the misrepresentations, intentional or otherwise, of Northern journals, is beyond question, and anything which tends in ever so small a degree, to lessen that feeling, will be of distinct advantage to both sections. No one resident in the South, who is not blinded by prejudice, can fail to sympathize with a people who have paid and are paying so dearly for the mistakes of their fathers, and the stronger our interest is in the colored race, the more clearly do we appreciate the necessity of understanding their attitude towards their white citizens.

It is not difficult to believe that one chief cause of the slow development of the material resources of the South, is to be found in the misapprehension existing in the minds of many Northerners in regard to the Southern people, and in any case, the present situation in the South is so worthy of study from a politico-economic point of view, and as an abstract problem, that it receives claims to more attention than it receives.

It does not need a pessimist to see that there are clouds on the horizon, nor a professional philanthropist to urge that the best means of averting the threatening danger lies in a broad and generous conception of our duties towards our fellow citizens.

The quotations which follow are taken from among many similar expressions of feeling and are given as "straws."

#### [From the Richmond State.] "Unfair Treatment."

"There is nothing so discouraging to the people of the South as the fact that however base they may be represented, and however cruelly they may be maltreated, they have no hearing among the people of the North, who see only the slanders printed in the blood-thirsty organs. Though innocent of any offence, and though the charges brought against them are false, and intended only to heap up ill-gotten political capital for the Radical party, yet they are convicted in public opinion by the malicious testimony of their enemies and without an opportunity to offer any defence.

This deplorable state of affairs is owing to the indifference of Democratic and so-called independent journals of the North. In the city of New York, to which we look in vain for any trace of national journalism, the papers give up a large part of the editorial space to assailing and defending JOHN KELLY, a man who has monopolized already so long the attention of the people of that State and city. Whenever the Radical journals take time to speak of the South it is only to print slanders upon our section. But the Democratic papers, on the other hand, are too unwilling to forsake their favorite theme of presentation of the true character of the Southern people; it is impossible, therefore, for the South to be heard at the North except through northern settlers in the South or residents of the North who visit this section. But, of course, this haphazard, word-of-mouth manner of reaching the northern people is by no means effective. The Lynchburg News, commenting upon this fact, well says:

"No doubt truth makes a slow and perhaps a sure progress among them, but it does so in spite of the *Tribune*, the *Press*, the *Herald*, and such one-sided and prejudiced journals. Nor do we acquire Democratic organs of responsibility. The most of them are but a timid and time-serving set. They seem to be more busy in general in debating and declaiming the division of the spoils and settling or aggravating their own unseemly local strifes and contentions, than in securing the great ends of justice, and in forwarding the great mission of intersectional peace. Some of them appear to be afraid to state an honest blow in answer to Radical slanders that assail the

South. Most of them are indifferent. Some—like the *New York World* under Pulitzer—seem to be really playing into the hands of the Radical party."

We long ago despaired of ever being fairly treated so long as it is necessary that a sectional war in politics should be waged and the bloody-shirt be flaunted in order to keep the Democratic and so-called independent newspapers at such a time as this sickening. Their indifference to the interests of our people and their inexcusable silence while the public journals unworthy of trust. We shall, nevertheless, take care of ourselves and do our duty as law-abiding citizens. We scorn unwilling aid.

#### [From the Charlottesville Chronicle.] Shameful.

"In view of the character of the people of Virginia, the most law-abiding and most law-loving on the face of the earth (we speak liberally), the comments of the rabid press of the North are shameful and slanderous to the last degree. Let us state one among many instances in the history of Virginia in answer to these outrageous calumnies. In 1868 (we believe) the "Pierpont" government was swept away by the Federal Congress, a military rule established, and Virginia became "District No. 1." After the edict or ukase or firman, or whatever it may be called, of Congress was promulgated and the civil government ceased to exist, an interim intervened before the military government could be put in operation of some ten days or two weeks or more, and for that space of time there did not exist in Virginia an official of any kind. For more than two weeks there was not a sheriff or constable to arrest a murderer or horse-thief; there was not a magistrate before whom he could be committed or sent to jail; whom he could not judge or jury before which he could be tried. We venture to assert that if this state of affairs could exist in New York or England for half that time, that not one of those would be left upon another in the city of London or New York. Why, upon the flight of James II. from England in 1688, London was left for one night without city government, and on the following morning, Macaulay says, the city presented the appearance of a "city which had been taken by storm or sacked." It may be answered that the disbanded Irish troops were marched to sack the city, but we reply that this rumor was put in circulation by the "dangerous classes" for purposes of plunder. In Virginia, on the other hand, during that long space in which we might be said to have been in a "state of nature," not one crime was committed as far as we ever heard, and it was so natural to our people to conduct themselves in an orderly manner without "the fear of the hangman's whip," that we do not believe this extraordinary state of affairs was even noticed at the time, and it will require an effort of memory for most of us to recollect it when reminded. And yet this people, so orderly and law-abiding as hardly to require law officers to keep the peace; this people that whom no more religious can be found on earth are held up to the world by some of our northern brethren as ruffians so unruly, as criminals so bloody, that it is dangerous to walk the streets of our towns and cities in broad daylight, or for strangers to come to settle among us. Shame!

#### [From the Virginia Star.] (Colored.)

"For the life of us we cannot see where the consistency of the *N. Y. Times* and other Northern papers like it, comes in at their opposition to General Mahone. The *Times* is said to be the champion of human rights and the advocate of the oppressed against the oppressor. Nearly, if not fully one half of the population of Virginia suffered untold oppression at the hands of the Bourbons. They were denied the commonest rights and privileges guaranteed them by the constitution and laws till General Mahone came forward as their deliverer. And yet the *Times* is against General Mahone and in favor of the Bourbons. We can no longer regard the *Times* as the friend of the colored people of the South.

If anything were needed to strengthen the point which we make as to the tendency among our political leaders and presumably among a large majority of our people, to shut their eyes to facts which must inevitably and powerfully affect the nation's future, it could be found in the President's message for the present year, wherein the Negro question, both in its political and educational aspect, goes unrecognized. The briefest and most indirect allusion is made to it, and discussion of, or suggestions as to the most vital question of the day are put aside in favor of matters which, in comparison, are of the

smallest importance. Furthermore, among all the numerous criticisms of this message, there has been, so far as we know, no allusion to this omission, which, it would seem, is too noticeable to be overlooked by any but the most superficial of critics.

It is idle to deny, that, as a nation, we are in a position which can be made safe and honorable only by the wisest statesmanship and most intelligent philanthropy, and in the world's history no nation has ever had such opportunity to show what these two in combination can accomplish.

Among the six and a half millions of the colored population there are some who show an intelligent appreciation of the situation and could probably be counted on to co-operate with the best of the whites, in any measure, legislative or otherwise, for their own improvement. Such examples as the following, for example, are hopeful.

#### [From the People's Defence, Augusta, Geo.] (Colored.)

"There are some people in these United States who are always talking about a war between the races. Every little disturbance they herald abroad as the initial step of the war. If these people were opened their eyes and their mind to reason they will see and know that there is nothing more foolish and nothing more improbable. The white and colored people are becoming more tolerant every year.

#### [From The Afro-Creole Presbyterian.] Room For Hope.

"Notwithstanding the dire predictions of many, the attitude of affairs between the races in the South has not undergone any perceptible change for the worse since the decision of the Supreme Court. It is well enough to remember, however, that sufficient time has not elapsed to determine with certainty what will be the effect of this decision.

What we would have our people do, is not give themselves to wailing forebodings as to what the future may develop, based upon the inconsiderate predictions of inexperienced and impulsive men. It will be well for us as a people to summon to our assistance common sense, and deliberately consider all the facts and circumstances of our environments.

Emigration in any considerable numbers will not help the matter. The colored man can never run away from himself, and if he cannot succeed in maintaining his liberty and rising to a high plane of success in the South, he will certainly fall far short of these things elsewhere in this country. The South is the citadel of the Negro race in the United States. The army which abandons its stronghold and takes its chances in the open field, with the odds against it, will not have long before reaping the fruits of its folly."

On the other hand these are offset among certain classes of colored people by a bitterness which is not unnatural, but in which there is an explosive element not to be disregarded. Because the animus of the following article has its origin in a misconception of the truth, it is none the less difficult to meet.

#### [From People's Advocate.] (Colored.) Protect Yourselves.

##### BE AROUS.

Last week Le Duke spoke of emigration. Emigration may be the surest remedy for the evils which are rank at the South, but it will take some time to awaken the people to a sense or proper appreciation of the idea. Until they are aroused, something must be done to ward off and retaliate upon the riot and bloodshed which is of common occurrence at the South. Emigration is a mild and peaceable solution of the vexed question; but while the reasons for it are being promulgated the colored people are being robbed, cheated, sold, bullied and murdered. What will remedy this? Should I believe that all remedies should be applied according to the complexity or severity of the case to be treated? The colored people perform a labor at the South, make all the corn, raise all the cotton and tobacco, the substance of immense revenue to the white tyrant. Notwithstanding this, the colored people are the "pauper class" and twitted by the whites as an improvident, shiftless and worthless class. They are reviled, spit upon, tyrannized over and persecuted. They are branded as cowards and petty thieves. They have borne with a "patient shrug" and humiliation which are disgusting and which outrages every instinct of true bravery and true manhood; which have been the cause of much

unfavorable comment from our friends and more ridiculous criticisms from our enemies.

We have increased the cotton crop steadily until the yield has reached prodigious figures and we deserve commendation. But what do we get? The blood of our fathers at the price we receive for our labor. Profaned thresholds we receive, for our fidelity and forbearance. Night is made hideous with the yells of denunciation and anathemas directed against us. Riot, racking in blood; mad rapine and organized bands of relentless murderers track us to our homes, our churches, our places of business and our public meetings, and there is no retreat, no savior, no commiseration for us. We must submit to this or take the only alternative—defend ourselves with our manhood, our valor and, if need be, with our blood. We are shot down like dogs, let us shoot back. We are cheated out of our earnings, let us demand remuneration and apply the torch when the demand is not acceded to as the means of removing the subject of contention. We can no longer afford to lie supinely upon our backs to be tread upon by ruthless robbers.

#### [From the Biblical Record, Raleigh, N. C.]

From a journal edited by the white Baptists of North Carolina, we take the following extracts, the sound sense of which should commend itself to all denominations and all political parties. Intelligent Southerners of both races, are becoming conscious that the education of the people must be provided for in one way or another. In the main, it is a matter not of opinion but of means.

"We REGRET to see in some of our State exchanges articles in favor of measures calculated to impede the educational interests of the people, and to array the poor against the rich.

To break up our common school system, poorly supported as it is, would damage every interest of the State and fix upon the people a degree of ignorance unattained by any State in the Union. There are now 145,000 voters among us who cannot read their ballots.

Of this number 58,128 are white! This, of itself is appalling, and enough to carry despair to the hearts of all those who are nobly striving to educate the people. While this number of our people remain in ignorance the best interests of the State remain in jeopardy. The ballot can never be taken from the people; vote they may, and vote they will, even if it be in solid masses at the bidding of unscrupulous and designing enemies of the State. Our only hope, as well as our safety and the safety of our children, depends on the education of the people. No State was ever safe without it, and no people ever prospered without it. We must educate the rising generation or perish. To this end every good citizen should readily and willingly contribute of his time and money.

To legislate that the colored people shall educate their children as best they can in their poverty, is to legislate that they shall not be educated at all. They are amongst us, not of their own choice, but of constraint. They have done nothing to cause us to feel any enmity against them or to lead us to wish them ill. Faithfully have they toiled, and humbly and peacefully have they accepted the changes of fortune. To them we owe both respect and sympathy. They are here to stay, and it is the interest of the State, and of every citizen who wishes well to himself and his fellow-men, to aid them in improving their condition.

If we can legislate to make the Negro educate the Negro, we can just as easily legislate to make the poor white men educate the poor white children of the State. It is in the interest of the children of the poor in the beginning of this discussion, to speak. The common schools of the State are the only schools these children can attend. Destroy the common schools of North Carolina—and the poor children of the State would be forced to grow up in abject ignorance. If miscegenation is ever brought about in North Carolina, ignorance will be the prime cause of it. Every instance which has occurred originated in abject ignorance of the parties to the marriage. There are in every State a few selfish rich men who, in the same boat and must survive or perish together, complain of being taxed to educate the poor children. And they would readily embrace the opportunity of relieving themselves of all such tax. This is the danger that now threatens the educational interests of North Carolina.

With great respect for our brethren of the press who differ from us in this matter, we still advise our readers to pay little attention to any one who advocates any measure calculated to destroy the hopes of the poor children of North Carolina. Educate your children. Work and vote for schools, and schools in reach of all people."

## Letters from Hampton Graduates.

WANDERING THE WILDS. PLUCK VS. LUCK. PLEASANT WORDS FROM WHITE NEIGHBORS. WORKING FOR THE GIRLS. FROM PETERSBURG.

## WANDERING THE WILDS.

The following humorous picture of her experience in search of a school is given by one of our young women.

—Co. Oct. 4th, 1883.

## My very dear friend:

Since I saw you last, I have wandered the wilds of — Co. I left home on Wednesday, 26th, of September and arrived at — about one the same day. I then had to get a conveyance from there to — which was twenty five miles distant. I very carefully placed myself in a neatly drawn carriage loaded with two oxen, and they pulled to suit themselves. We trudged on for nine long hours, now and then we could see a house but no people. When night came on and I had not yet reached my port of destination, many were my thoughts. All that I could hear was the swaying of the lofty pines and the mournful barking of the farmer's dog. Still I rode on; as the saying is "My heart was in my mouth." The oxen became so worn out with their long journey and rugged roads, they quietly folded their legs and laid down before the cart. I was sitting on the cart looking down on them, and wondering was life extinct. The driver persuaded me to get out and rest myself and assured me that no harm should befall me in that dark and lonely hour. After they were rested they concluded to start again, and in all jolting up and down, sideways and backward, I had it. I dare not talk while riding. If I had I would have bitten my tongue. At last I reached a house that was on the farm of the Superintendent, and there I reclined my weary head upon a downy pillow of old hair and my much worn body on a bed made of fodder. But sleep was impossible for me. The next morning came and the woman of the house received very bad news; that her son was killed by the falling of a tree. Here I might go and stay until I was examined and that was nine miles away. I started about nine o'clock in the morning and reached there about half after one. I stayed there all night the next morning came and I had to walk those nine miles to be examined. I got there (to the Sup't); about half after one and I had to wait until four o'clock before I was examined. At last he came; I was then examined and received a first grade certificate, which he said was the best he had given to any one this year and especially one who had never taught before. He marked on the scale of ten and my average grade was 9.00. I did not fall below eight in anything. My marks were 8.00 and 9.00.

I have an excellent boarding place, also school. My school is only 100 yards from my house. It is the school that I taught last year. I opened the first day with twenty and every day since I have more coming in. To-day I had thirty-eight pupils. The people around here say that it is one of the largest in the county. I am getting along nicely and pretty soon I am to commence my Sunday school in my school-house.

You have no idea how I miss you and the dear ones at Hampton. It seems so strange that I should be out here instead of at school. Instead of ironing tablecloths and waiters' aprons on Monday I am in the school-house imparting to them that which I have been so long in getting.

I hope you will excuse this lead pencil; my pen and ink are in my trunk and I have not gotten it yet. Please remember me to my friends at Hampton. I long to see you but I have a work before me that must be accomplished. It is quite a pretty sight to see both men, women, children and babies picking cotton. The fields are white with cotton and crowded with laborers. Who works with you on Mondays now? If you will give me \$35.00 per month I will come down and work for you. I guess you are tired reading this wearisome letter. I will close, hoping to hear from you soon.

I am yours truly,

PLUCK VS. LUCK.

A wise apothegm or brief sentiment has often been the inspiration of some young mind, and adopted as a motto, has directed and influenced the whole life. The teacher can often do no better work than to suggest one now and then, and store the minds of the young with the wit and wisdom of the fathers, in these small portions that they quickly take in, but can feed on for life. "A word fitly spoken is like apples of gold in pictures of silver." The one which

our young correspondent has adopted is an excellent one for any worker and we recommend it to all Hampton graduates; many of whom are already working out its truth.

—Co. Md., Nov. 17th, 1883.

## Miss A. E. C.

Respected Friend: I have already received two circulars from you, both requesting me to give you an account of my field of labor. I will briefly comply with your request. The above named place is a little town of about fifteen hundred (1500) inhabitants. I have just entered eleven years on my third year's work as a teacher in a school four miles distant from the said town, though I have been a teacher in this county six years. My former school having been closed on account of small attendance caused by the removal of patrons to other districts after which I was transferred to my present locality. I can not say my lines have fallen in the most pleasant places, yet after viewing all the odds which are decidedly against me, I yet think there are worst places than this. I was much inspired by the words of Hon. H. G. Eastman of Poughkeepsie to the students of Eastman College in which he asserted "Luck is a fool pluck is a hero." Inasmuch as I am not situated as I would like, I have the pluck to fight it through. I have had enough experience to teach me that a teacher's influence should go beyond the school-room, and this year I have made an attempt to follow my conviction to a greater extent than ever before. There is work here, and plenty of it.

The tints which sprang from slavery are too plainly seen here: the Colored people have not learned to respect themselves sufficiently to regard education as highly as they should; they do not know that "knowledge is power," yet they see that he who has it exerts a wider influence than he who has it not. He is taught by the white that it is an advantage to send his children to school, that it's a white man's country, that he'll be made a slave again; all such barriers I have to fight against. These people are hostile to the education of the Negro. Ignorance will beget prejudice, which abounds here in a very great measure. I find a very large per cent. of whites no better educated than the blacks, yet they claim a higher social position to confirm this I will relate a circumstance that came under my immediate notice last fall. A gentleman, a Scotchman by birth, full of Robert Burns's sentiment "A man's a man for a' that," taught school about one mile from me; having never been accustomed to caste he took me for an associate as "brother in cloth;" this so incensed his patrons, that some threatened to do us harm if we were seen together; regardless of this threat he followed his inclination, which resulted in his dismissal, as some put it for "associating with a nigger." This of course could only be imputed to down-right ignorance. But, however, as I am "laboring to keep a conscience void of offense toward God and man," I can only smile and pass on. My facilities for teaching are anything else but good. I hold my school sessions in an apartment of a dwelling house, a room about 16x18 feet, perforated so badly that during very cold weather we are compelled to cluster around the stove in order to keep ourselves comfortable. The people have frequently appealed to the board of School Commissioners to build them a school house, but they are told there is not sufficient funds in the treasury. One might think that the legislature did not legislate. After repeated rebuffs the people commenced to build one, and after getting it two-thirds built were compelled to stop for the want of means. They recently asked the Board for fifty dollars (\$50) and they would complete it, but have received as yet no reply. They are poor and cannot bear such responsibilities. They have just completed the building of a church at the cost of \$800, their former building having been burned down while in use as a school house; which I think should be sufficient inducement to render the needed assistance now. I tell the people not to be discouraged for industry and self reliance will insure them success. I opened school with an enrollment of twenty-five pupils which will be augmented to about 45 after Christmas. There are some very promising ones among them, who some day, I hope, will show the fruits of my labor, for "every lad of grass receives its drop of water." I am, very respectfully yours,

## PLEASANT WORDS FROM WHITE NEIGHBORS.

A more common experience than the above, and one nearly universal among our graduate teachers, is of peaceable and often pleasant relations with their white neighbors. One of the brightest of these is related by one of our young women who has been for some years a successful teacher, as follows:

—Virginia, Nov. 12th, 1883.

## Dear Friend:

Your circular is rec'd, and nothing gives me more pleasure than to send you some account of my work in the "South West." I am particularly glad to write at this time as I happen to be one of the fortunate workers who has been successful in securing a more comfortable state of affairs than we have had heretofore. For the past two years I have taught in the graded school here as first assistant, and find that with some experience of six years, in different parts of the State, I have never had a more successful and progressive work. I recall being sent home a great deal more than I had thought to; knowing that a prophet is not without honor save in his own land. I felt more inclined to work elsewhere; but now that I have succeeded so nicely, and have the confidence and esteem of friends, I feel no inclination whatever to change my field of labor. My Supt. and Board of Trustees are second to none and seem willing to do all in their power for the advancement of the school.

After spending a very pleasant vacation, I began a 7 months term Oct. 1st, with a more bright prospect than we have ever had, the school-building having been repaired and whitewashed, premises enclosed, coal-house built (and filled with coal) and new stoves put in each room. I have enrolled 68 pupils, with a regular attendance of 60, so you can imagine how busy I am kept to note any progress.

I manage to keep excellent order with so many little folks around, and was assured of the fact a few days since, when five or six of the most prominent ladies of the place visited us. After witnessing the order of exercises and hearing the classes recite, they expressed themselves as being highly pleased, and said that they had never seen a more orderly number of children. I was pleased to have them come and see how we conducted affairs. They wished me much success, and just here I will say that I could not wish any better treatment than that which I receive from the white people here. I am always pleasantly spoken to, and have no ill will manifested on any respect.

I have only to make our wants known to the school Board and every necessary arrangement is made. We are so well cared for that our Supt. is pleased to call the Board an indulgent one, so you can well see how they are pleased with my services.

Hoping that you will have many pleasant returns from my co-workers, and to hear from you at any time, I am very truly, yours

## WORKING FOR THE GIRLS.

The record of the young women graduates of Hampton has been, we believe, universally unexceptionable. They have held their own in their isolation and in the midst of surrounding darkness and proved for their race as well as themselves that working for the girls pays. One of them whose heart has been touched by the necessities of her sisters, writes thus feelingly of them:

—W. Va., Nov. 7, 1883.

## My Dear Miss C.

I was very glad to hear from you; I intended to write before this, but, owing to my many duties I have not. I reached home safely, and it caused no little rejoicing. I assure you, when I was once more restored to the loving embrace of my parents.

Such a cordial greeting quite repays one for the pains of parting. But how true that there is no good without a balancing evil. With all these pleasures I cannot ward off the sad feeling that presses upon me when I think of my dear school-home and those kind friends from whom I must now be separated. "Alma-mater" is a happy appellation for this endeared spot, and often I find myself there, absorbed in the memory of joys that are past, pleasant and mournful to the soul. It does seem too strange to be teaching, instead of being taught. To be obliged to plan business for each day seems really a good thing, this having been so long done for me. I think it is quite as true that there is no place like Hampton, as that there is "no place like home." I find it so, any way. In leaving dear Hampton, I find myself evering upon new and untried scenes; new duties open before me. Instead of following prescribed rules, I now find myself obliged to make rules for others.

It is my hardest task, for I am afraid of making an unwise one. I find it quite necessary to apply often to the "Fountain Head," for aid. I opened my school the 17th of Sept. with six, now I have enrolled seventeen.

The school is quite small; but there are only three more in the place to come, then my house and school will be filled. I teach in a small mining village three miles from home. I walk it every day.

The school-house is built of logs, and daubed with mud. Oh! It is very rude.

I have two imitations of black-boards. I cannot write a decent sentence on either.

I have none, or rather a very few of these things necessary to a comfortable school-house. But, I shall not despair, or fail to do my duty, because the Board of Education fails to do its duty. I have five months with \$32.50 per month. I know that my "Alma mater" expects her children to do their whole duty, and I expect to fill all her expectations. God helping me, I enjoy the work intensely, and am determined to devote my life to the interest of my people. The children take hold right willingly, and all seem to love me, and I am sure I love the little ones. Connected with my day school is a Sabbath school, of which I am superintendent. I also enjoy this, and take delight in leading the little ones to Christ. I do try to rule my school wisely, and I am doing everything that I think will promote the children. I would be ashamed to be called a daughter of Hampton, if I did not do all in my power to help my race.

I am trying to be a power for good among these poor ignorant people. There is one thing about this school that makes it so very pleasant to me, and that is, the most of my scholars are girls. I have only one boy, and the others are girls. Now, I am very much interested in the girls of my race, for I firmly believe that the advancement of the race depends almost wholly upon the women. Among our women there are few virtuous ones, and the few virtuous ones are afraid to speak of this, for fear that they will be ridiculed by the others. But, I intend to teach them the higher ways of life by living a higher life, simplicity of dress by dressing neatly but plainly. Dress I find is destroying most of our girls. I would gladly devote my life to a work among the women at half pay, if the doing so would help them in the least.

Hampton is fixing the sort of women the race needs. Those who will not give up a life of purrity, for one or two silk or satin dresses.

Miss C., you must not think I am writing in the tone of spirit of complaint, for I am not. I only mean to give you a faint idea of what we have to fight against.

I love my people, and I intend to do all I can to help them. But my heart goes out more to the girls.

I should enjoy working in a reform school. Oh! I do wish there was such a school for colored girls; especially in this State. I live in hopes of seeing my people raised to a higher plane.

When you think of me Miss C., just think that I am here in W. Va. fighting ignorance, intemperance, and impurity everywhere I find it. I will certainly try to perform my duties faithfully, and as well as lies in my power.

Thanks to you for those papers. You knew, it seems, my taste. "Mission Work in Africa." I am interested in that kind of work. Thanks to you for any advice, or aid in any way you can give.

Very truly yours,

FROM PETERSBURG.

We had a visit at Hampton from two of the teachers in the New Institute at Petersburg, and were glad to find them such intelligent and earnest men. The presence of the Institute will give an impetus to the other schools and the general intelligence of the place. Three of our Hampton graduates are teaching in the town, one of whom writes as follows:

Petersburg Va., Nov. 8, 1883.

## Dear Miss C.

I received your most interesting letter and would have answered it sooner, but I have been so very busy. Our school opened this term with 725 pupils, all in one building with Mr. W. L. Hamlin for our principal. We are getting along very nicely; 125 is what I have enrolled now. I have had as many as 140 but I promoted 15. We have over one hundred colored pupils going to school in this place, and we have 21 colored teachers, more schools and teachers than we have ever had before. The public schools have been in existence. Three out of the twenty-one teachers are students from Hampton. We expect to open another school this month and then the teaching in our building will be relieved of some of their pupils. Miss S. P. G. is boarding in the city and teaching out at the Institute about three miles from here; they have about one hundred students from different parts of this state.

I would like very much to visit Hampton again and see the many changes which have taken place since I was there in 1880. Will you please inform me where Miss H. is? She was the Matron then. Miss Lucy Moss is the Matron over at the Institute. I want to go to see her as soon as convenient, she was an old class mate of mine. I am, truly, your friend

### Incidents of Indian life at Hampton, AN INDIAN DEBATING SOCIETY.

The Indian boys and girls have started a debating society which meets once a month at Winona.

The two meetings which they have held have been very successful. Teachers are invited to be present and the debate opens the evening's entertainment, and is followed by recitations and music.

The first evening the discussion was on the question "Shall the white man be allowed on the Indian Reservation?" On the second evening "Ought Indians to be permitted to vote?" was debated with much earnestness.

Anyone who saw and heard the many boys and thoughtful maiden who spoke on the question, can have little doubt that before long the day will come when Indians may vote greatly to the benefit of themselves and the country.

#### "ENGLISH ALL THE TIME".

A paper has been circulated among the boys—with this heading—started by one of their number. The girls were not to be outdone and they too are making a great effort not to speak any Indian. It is hard work for them and particularly for those whose room-mates are new.

One little girl said that she repeated the ten commandments before going to bed, and the child who rooms with her and does not understand English, thought she was calling her names and began to cry.

#### A FLAG AT HALF MAST.

As the kind motherly friend of the little boys at the Wigwam looked out of her window one day not long ago, she saw the newest and smallest of the "Day-lilies" of the Pine Cloud by name, stretched out on the ground. She called to him to get up, and was not a little dismayed to receive the reply from the other boys who stood about, "He can't Mrs. S.—" He dead!" She hurried to the spot and on demanding an explanation was informed "Oh! we wanted the flag at half-mast, had to kill a man." Mrs. S. insisted on the resurrection of the dead man and was relieved to find that his wounds were not serious.

A few days later, coming towards the Wigwam she saw the boy's flag at half-mast again, and hurried on anxiously to discover the cause. Charlie Matthews, the leader of the small boys, in all existing exploits, stood at the foot of the flag-staff with an expression of great satisfaction and triumph on his face. Mrs. S.—"Charlie! I hope you have killed another man to-day?" "Rat" was the laconic reply, and there on the ground lay the dead hero.

It was a very satisfactory solution of the difficulty and we hope that the rats may rapidly disappear from the Normal School Buildings.

### Correspondence.

TESTIMONY TO COLORED TROOPS.  
OFFICE OF THE COMMANDING OFFICER,  
Fort Sill, Indian Territory, Nov. 23d, 1883.  
GEN. S. C. ARMSTRONG,  
Hampton, Va.

In reply to yours, I have found the colored troops, excellent as soldiers. In the field, they are patient, and cheerful; under hardships, or deprivations, never growling, or discontented. Arriving in camp, after hours of rain, or cold, they will sing and be happy. An enforced reduction of rations, is received with good nature. They are vigilant as sentinels. If properly led, they will fight without such, they have not the staying power of the white man, nor his individuality when thrown on his own resources. They go rather in crowds, the result of habit, and surroundings, and the former habit of dependence upon a leader, is a result of his slavery. In this particular, they are like children. They do not feel the importance of responsibility for property, and in this respect, are neglectful, causing loss to the Government, but this loss is more than compensated for by the much fewer desertions than in the white troops. The duty imposed on officers in looking after them, is on this account more complicated than with whites. In garrison, they are sober, clean, soldier-like, and respectful, and acquire, under good instructors, a ready knowledge of their duties. In over two years time, at my post, I have seen but one soldier under the influence of liquor. I believe the percentage of discharges for alcoholism, among the Blacks last year, was about 4 in 1000 and the whites 75 in 1000. These figures speak for themselves. I believe as a rule, they are better fitted for soldiers, in our service, in many things, and that their surroundings before entering the army are respectable and good. The prejudice against the Negro, makes it unpopular for duty with the men assiduous, but those who have them, have far less trouble than others, and find in the end an agreeable service. Cutters, the prejudice attending the same. They are inveterate

gamblers, a matter hard to stop, in fact I have never attempted to. Please let me have copy of your paper. Any thing I may add in favor of the "colored troops" possible I will do.

Yours very truly,

GUY V. HENRY.

My experience covering about four years in garrison and field service in Texas with colored and white troops leads me to endorse General Henry's statement concerning the character of the colored soldiers.

GEO. LEROY BROWN, *Comd.*

### STANDING ROCK AGENCY.

FORT YATES, D. T.

Dec 1st, 1883.

My dear Capt. Brown:

I should have written to you long before this to have acknowledged the receipt of your two kind and very interesting letters from Marshall, Mich. last autumn, and would have done so at once, but was expecting to see you here during your tour. I accompanied the senate committee as far as Pierre and expected to meet you at Cheyenne Agency as it was the end of August, but you did not arrive there until some time after my return up the river and I had hoped that you would visit Standing Rock before your departure for the east. Your letter notifying me that Louie Agard was being sent back home did not surprise me, as from information received from time to time I was aware of his continued bad behavior. Louie was comparatively a stranger and unknown to me when he left here and he had the reputation of being an unruly fellow, and a hard case, but I had hoped that at three years training with your school discipline would bring him out all straight, but it is undoubtedly better to dismiss him from the school as such repeated irregularities, persisted in by him, would be liable to produce a disaffection of others. I was expecting him home daily and was waiting for his return before writing to you so as to inform you of his arrival, but I have received a letter from Agent Gasman of Crow Creek informing me of Louie's arrival at Crow Creek Agency, via Chamberlain, without means of coming further. Upon receipt of Major Gasman's letter I sent for Louie's father, and although Louie Agard Sr. is uncouth with rough exterior, he is a good man at heart and he was deeply moved to learn that his son's conduct should be such as to cause his dismissal, and he told me to write to him not to come, he did not wish to see him under such circumstances, and also requested me to write to Agent Gasman to tell his son that when he was a young man without means and desired to go to any place, he walked if nothing better offered, and that if he wanted to come to Standing Rock he might walk through from where he was. On the following day, however, the father returned and gave me ten dollars to send him, which amount I sent to Major Gasman with the request that he use it in such manner as he might deem best and proper. The young man and to send him up with the first party of Indians coming through, of which there are frequent visitors, and I expect him home shortly and shall endeavor to keep him under surveillance to prevent his becoming too wild.

John Pleets is still employed at the agency as hostler and is the same quiet, steady person; he is living comfortably with his wife who is an excellent young Indian woman, and Rosa is living in the family of one of the Trader's clerks who occupies a portion of the same building in which John Pleets (her brother-in-law) still maintains the dress, customs and habits inculcated at Hampton. She attended the agency school for some months during the past year and is desirous of returning to Hampton or some other eastern school for another three years term. I have no uneasiness about Rosa in future, as John and his wife exert a wholesome influence over her and she of her own volition is particular in selecting her associates.

Thomas C. Fly has not been employed at the Agency since last July as he desired to assist his uncle "Keep the Eagle" in building a log house on Grand River. The house is now completed and I have leased him a wagon and harness to enable him to commence farming, which business he wishes to engage in, in connection with his trade. I have not offered any objection, I have advised him to do all odd jobs of carpenter work offering, such as putting in doors and windows for Indians, of which work he can find plenty to do and for which he will be well paid; this meets with his views and I am in hopes that he will enter into it with a determination, as such work is of an independent nature and more agreeable to him than the confinement of school work. I have no fears for John, Rosa, or Thomas, but Andrew Fox (although bright) is more careless and indolent; he clings to his white man's dress however and may come out all right yet, as he is not a bad young man but rather indolent and changeable.

Mrs. Mc. L. joins with me in kindest regards to Mrs. Brown, Let Roy and yourself; also to Gen. Armstrong and other friends we met at Hampton.

I am very sincerely yours,

JAMES MC. LUGGILL,  
(U. S. Ind. Agent.)

### General Terry on the Indian Question.

The following is an extract from a letter written in 1877 by Major General Alfred H. Terry to Senator Allison of Iowa, in reference to the sale of a number of ponies captured from Indians, with a view of converting into cattle the proceeds of the sale. General Terry's success in making an industrious, self-supporting people of the Cheyenne raiders under Chief Dull Knife, whom he captured, gives weight to his opinion. Turning their ponies into cattle, he placed the three hundred captives on the Rosebud river, in Montana, under the care of Capt. Ewer of his Staff, who made a complete success.

While herding creates the chief wealth of the Indian, it is most desirable that he shall have good land to cultivate for the sake of the better houses and better living that comes of it and the occupation that it gives to the entire family. The Shoshone Indians at Fort Hall reservation illustrate this combined cattle raising and farming, which is, we believe, better than a purely grazing life.

"It appears to me that most of the efforts to civilize Indians which are made by the government are infected with a fatal error, the error of passing over, or rather of attempting to pass over, one of the natural steps in the progress of civilization. Savage tribes whose nomadic habits and customs are such that they are supplied by the chase, never, of their own accord, suddenly abandon their nomadic habits and become cultivators of the soil. Uniformly they pass through an intermediate condition: the pastoral state. It can not be supposed that the savage forerunners, even of those nations which are now the very flower of civilization, could have overleaped this necessary step. It is, doubtless, true that such a change in mode of life can be brought about more easily when a savage tribe comes in contact with, and under the control of, a civilized people. In such case the savage has not to discover for himself the art of cultivating the soil; it is taught. But savage habits still remain: savage love of freedom to roam; savage impatience of constraint, savage hatred of persistent labor. These are obstacles difficult to overcome, and almost insurmountable. Why the first step in the progress of civilization should be to the pastoral state is readily discovered. It is the step which is most easily made, because it involves a comparatively slight change of habits. The new condition imposes but little restraint; it requires no constant labor. The Sioux treaty of 1868 fairly illustrates the course of thought which has generally controlled the government in its efforts to civilize Indians. The results obtained by action under it show what may be expected from such a policy. That treaty makes special provision for individuals of the tribe who shall cease to roam and hunt, and shall desire to commence farming."

### A PASTORAL PEOPLE.

The cultivation of the ground seems to have been considered the only alternative to roaming and hunting. In effect, many of the Sioux who were parties to that treaty have ceased to roam and hunt; but very few of them have commenced farming. Gathered around the national almshouses called agencies they are for the most part idle, listless, worthless, living simply to eat the food and wear the clothing provided for them by the government. Even if it were easy in ordinary circumstances to convert an adult savage into a civilized farmer, it would be almost impossible to accomplish this in the country reserved for the Sioux by the treaty of 1868. There, in three years out of four, droughts or grasshoppers seem to destroy whatever crops may be obtained. There, even a skilful husbandman would despair of obtaining a subsistence. It is to be supposed that a savage can be made to appreciate the superior advantages of a farmer's life where the cultivation of the ground consists almost exclusively of ploughing and planting, where a harvest is seldom known? Unless some change in the system of management be made, the hands will be a heavy burden on the government for many years to come. As you know, the popular belief that the Indians are diminishing in numbers is an error; at least it is an error so far as the Sioux are concerned; they are actually increasing. There is no prospect that the extinction of the race will soon relieve the government from its responsibility for them. I can discover no policy which will make these Indians self-supporting, except the cessation of efforts to confine them to fixed habitations and to

force them to perform manual labor, and the adoption of the natural process of civilization. Cease trying to make them farmers; make them shepherds or herdsmen. Make their first step easy instead of difficult. The Sioux reservation, though so ill adapted to agriculture, affords abundant pasturage for cattle, pasturage of almost unlimited extent and of excellent quality. I have never seen finer beef than that from cattle fed on the grasses of the Missouri valley. The present is a most favorable time for the change which I advocate. When the Indians were dismounted and disarmed, it was apparent that they were forcibly impressed by the proposition that the money obtained for their horses should be used to purchase cattle. Since then, reports from officers at the agencies show that the belief that the possession of herds will "make them rich" has become fixed in their minds. They eagerly look for cattle. Of their capacity to take care of herds there is no doubt; they are accustomed to the care of herds of horses. Should the policy which I propose be adopted, it would be absolutely necessary to provide for the next few years the usual supply of food for these people. This supply should not be diminished in order to provide for the purchase of cattle, without increasing the appropriation. The appropriations for them should be in addition to, as well as independent of, the ordinary appropriations.

### LOGICAL SEQUENCES.

If, while the experiment of raising cattle is making, there should be a deficiency of food, the cattle would be killed and eaten, and the experiment would fail. If the usual supplies should be furnished, it is my belief the experiment could not fail, and that in a few years the Indians would become self-sustaining—the government would be released from the burden of their support. Deprived of their horses, the Indians would be unable to carry on hostile operations. Possessed of herds of cattle, all their interests will be on the side of peace. Property is the great peacemaker. It is not the question of the horse, or of these particular bands which may be solved by the policy which I advocate. It may satisfactorily determine the course to be pursued in regard to all tribes similarly situated. To make this experiment cost less than 1400 cows should be sent to each agency, with, of course, a proper proportion of bulls. The cows should be of American not Texan breed, and the bulls should be carefully selected with reference to the best-producing rather than the milk-producing qualities of their offspring. I am told that two and three year old heifers and cows can be purchased in Iowa and Minnesota for about \$20 each. Cattle from these states, accustomed to a severe climate, and without doubt, would thrive in the Missouri valley. An appropriation of \$55,000 in addition to the money derived from the sale of horses would be sufficient to purchase the number required. Much more might be said on this subject; but I fear that I have already wearied you. Permit me however to express the hope that, if my suggestions commend themselves to your judgment, you will use the influence which you possess to secure the admission of the policy which I propose."

### We do Believe in Him.

In reply to a letter from a benevolent friend, inquiring as to our knowledge of the work of Mr. Wm. B. Weaver, of Gloucester Co. Va. a Hampton graduate teacher, we are happy to say that we believe he is doing excellent work in an enterprising and missionary spirit. With much enterprise, under much disadvantage, he has succeeded in raising a comfortable school house in the place of the breezy log cabin he found there, and it is now the graded school of the county. He deserves credit and encouragement and success.

### Horsford's Acid Phosphate.

Beware of Imitations.

Imitations and counterfeits have again appeared. Be sure that the word "HORSFORD'S" is on the wrapper. None genuine without it.

**GOLD** for the working class. Send 10 cents for postage, and we will mail you free, a small, valuable box of sample goods that will put you in the way of making more money than you ever thought possible in any business. Capital not required. We will sell you goods all the time or in spare time only. The work item can be made in 10 to 15 minutes. You can make nearly every cent from 50 cents to \$5 every evening. That all who want work may test the value of this unparalleled offer, we will send you a sample of the goods we sell, and we will send you the full particulars, directions, etc., sent free. Satisfaction will be made by those who give their whole time to it. Great success is guaranteed. Don't delay. Start now. Address STANSON & CO., Portland, Maine.

The Horsford Almanac and Cook Book mailed free on application to the Rumford Chemical Works, Providence, R. I.

## ITEMS FROM SOUTHERN JOURNALS.

## All Leaders.

There is no race under the sun burdened with so many leaders as the Negro. Every year, every month, every day, some new star appears to guide the race, and each one has friends who claim that their own particular favorite is the modern Moses. It is the same in all causes—religious, educational, political and business. The result is that there is an "innumerable caravan" of leaders—all leaders of the race, of course. In consequence of this, in every convention there is generally a split or wrangle. The way things have been going on, pretty soon there will be no followers. This should not be, as it is well known that all cannot be in the front. As to the choosing of delegates to the various conventions, the people should select the men they want, regardless of all the advice of the leaders. There was a time when they couldn't do this, but things have changed. Of course, there must be organization, but because a convention is called by one man, or a set of men, is no reason that he or they should have more voice in a convention than anybody else. If we have impressed anything upon the minds of our readers, that thing is that the people should rule.—*The People's Defence* (col'd) Augusta, Geo.

Will the Democrats keep their pledge made at Lynchburg last summer, to give colored persons position in institutions established for the sole benefit of their own race? The Central Lunatic Asylum is such an institution, and there are two worthy colored physicians employed there as assistant superintendents; will they be permitted to retain their positions? We shall see. Will the colored men who have been appointed principals of our school in this city, and the teachers under the pledges of the Democrats mean anything, they will not. Whether or not the Democrats will keep a promise made voluntarily to the colored people will be made manifest.—*Star* (colored) Virginia.

Just think of it! During a late meeting of the Chester Presbytery at Lincoln University, after examination, eighteen young men belonging to the University, and in various stages of their education, were taken under care of Presbytery. The colored Presbyterian ministerial force is rapidly increasing in numbers and will play a most important part in solving the Negro problem.—*Africa, American Presbyterian*.

Another indication of the growth of the South is the increase in post offices. The gain for the southern States, and Indian Territory for the past year was 745; for the western States, 580; for the Pacific slope, 68. The middle and eastern States have had very few gains, while Connecticut loses one.—*Independent South*.

The southern Negro has three alternatives: (1) he must abstain from asserting himself in politics against the will and pleasure of the Southern whites and bide his time; (2) he must be prepared to fight for his rights; or (3) he must resort to the expedient of emigration. Between these he must choose the path of duty.

A SOLD South is a stupid and wicked South—especially in the renewal of the issue and the strife over the Negro, in any form, which, in the last resort, were decided at Apomattox.—*Richmond Whig*.

AFTER ALL, the money made by farming is the cleanest, best money in the world. It is made in accordance with God's first law, under honest, genial influences, away from the taint of trade or the fierce heat of speculation. It fills the pocket of the farmer at the expense of no other man. His gain is no man's loss, but the more he makes the better for the world at large. Prosperous farmers make prosperous people. What ever benefits our agriculture benefits the commonwealth.—*Atlanta Constitution*.

## For Hampton and Tuskegee.

Meetings were held last month in New York and Brooklyn, Boston, Providence and Norwich, Newark and Bloomfield, in the interest of Hampton and her child, Tuskegee. The history and needs of the latter were related by its Principal, Mr. Booker Washington. An Indian student of Hampton, and four of its graduates were present, and spoke and sang, interesting the audiences. Addresses were made by the Principal of Hampton, and prominent citizens of the several cities. We are happy to say that through these and the previous efforts of Miss Olivia Davidson, Assistant Principal at Tuskegee, half of the funds desired for the new building at that school, or \$5,000, has been secured.

## ITEMS FROM THE INDIAN COUNTRY.

The Cherokees and other tribes who have made, or contemplate making leases of their lands for grazing purposes to wealthy corporations in the States, should have intelligence enough to know that they themselves are aiding in bringing about a state of affairs that will necessitate legislation by Congress, which will not be favorable to the preservation of their rights. Nothing more than pretense is wanted to bring about this result, and if these leases are approved by the department of the Interior, it will be furnished by the herders, the horses, the interminable miles of wire fencing and other property of citizens of the United States that will become fixture in the Territory, without law, without order and without organization. If the voice of reason, of patriotism and even of self interest could be heeded in the haste to grab the mess of pottage tendered them for their birth-right they would see that this valuable trust could and should be kept within their own hands and under their immediate control. If cattle and sheep and horses and goats must be introduced into the country to graze on our native grasses let it be done by those amenable to our laws, under well-matured restrictions and regulations devised and adopted by our National Council.—*Indian Chieftain*.

Why cannot Congress live up to the spirit of the ordinance of 1787? "The utmost good faith shall always be observed toward the Indian; their lands and property shall never be taken from them without their consent; and in their property, rights and liberty they never shall be invaded or disturbed unless in just and lawful wars authorized by Congress; but laws founded in justice and humanity shall from time to time be made for preventing wrongs being done to them and for preserving peace and friendship with them."—*War-Carrier, Dakota Mission*.

## Cheyennes.

CHICAGO, Ill., Sept. 15.—Mr. William S. Dyer, special agent in the Indian service, is at the Leland on his way to Montana to take charge of and locate some Cheyenne Indians on Tongue River. There were about 550 in all, and he has since heard that there will be 400 more. The Indians have been wandering about and have lived by hunting, but now wish to settle on farms. Each Indian will be given 160 acres under the Homestead law. Mr. Dyer will distribute agricultural implements among them and superintend the building of houses. They will be given rations until they become self-sustaining. Mr. Dyer has heretofore been in charge of the Yankton Sioux Indians at the Cheyenne Creek Agency in Dakota. He says they are becoming excellent farmers. Last year they put in 250 acres of wheat, 1,000 acres of oats, and raised 400 bushels of potatoes. He thinks it is entirely practicable to make farmers of the Indians, and in the long run they would be better satisfied.

It is said that in his annual report Secretary Teller has undertaken to find out the exact financial standing of all Indian tribes in the United States, and the result does not look very well for the government. He says a perfect indifference has been maintained about paying debts under Indian treaties, and altogether the debts on that score will aggregate \$5,000,000, over \$1,000,000 of that amount being owed to the Sioux. The government agreed to support a school for every thirty children, to give every family a yoke of oxen, a cow and \$100 worth of tools, all of which has been neglected though they are clearly entitled to it. All this will be laid before Congress there will be no excuse for neglecting these obligations longer.—*Indian Journal*.

At the Crow Agency a few days ago peace was concluded between the Crows and Sioux. The two tribes have been at war for many years. The Crows have always been friends of the whites, and some of them were out with Custer in the campaign which ended in the death of that General and most of his army. The treaty proceedings were peculiar. A band of Sioux warriors first advanced, knelt on one knee on the ground, and cocked their guns. An old Crow brave advanced, accused the Sioux of killing his son, and raised his gun as if to fire. Other Crow warriors rushed in, disarmed the old man, and, coming to the Sioux, presented them with bits of wood. Each twig presented represented a pony, and these wooden promissory notes were accepted by giving the Sioux 183 ponies. Thus was peace concluded between the two nations.—*Indian Journal*.

## A Greeting From the Blind.

The following pleasant letter was recently received and speaks for itself. The package alluded to soon followed it, and its contents excited very great interest among all at Hampton, being shown to the students with interesting explanations and accounts of what has been done for and by those who, deprived of outward vision, seem often to grow the keener in mental sight.

Philadelphia, Dec. 10, 1883.

GEN. S. C. ARMSTRONG, Supt.

My Dear Sir:—

Upon my recent visit to your institution, I was much pleased at the results that you are accomplishing and impressed with the fact that it is the solution of two of the most important questions with which our government must deal.

On my return I gave my pupils an account of my trip and of all I saw and learned at Hampton. They became interested and upon my suggestion that we should send some specimens of our handiwork to show to your pupils what can be accomplished without sight, all were anxious that their work should be sent. I was compelled to make a selection. The brooms were made by a colored man only five months under instruction; the bead work was done by a colored girl, who was so anxious that there should be no flaw, that she took out portions of her work several times. All of the work was done by pupils entirely blind.

I trust that there will be an opportunity for as many of your pupils to examine them as possible. They seem to be so much in earnest and so pains-taking that it may encourage them to renewed efforts, when they see what can be accomplished by the blind brethren.

Thanking you, sir, for your courtesy while at Hampton, and trusting to be able at some time to reciprocate.

I remain very truly yours,

FRANK BATTLES, Asst. Supt.

## The Late Dr. Wm. G. Sample.

In the death of Dr. Wm. G. Sample, of Hampton, in November, the community has lost an honored and venerable citizen. At the time of his death he was one of the most eminent as well as one of the oldest physicians in the State, and had been President of the State Medical Association, and a contributor to various medical journals. He had for many years been Senior Warden of St. John's Episcopal Church in Hampton, and an active and honored member of it. He was a man of liberal mind and kindly heart. A Southern man of "Southern principles" during the war, when a few years prior to the kind physician of Hampton Institute. Dr. Seymour, a Union army surgeon, was removed by death, Dr. Sample came promptly to offer his own medical services to the school gratuitously, saying that he desired thus to show his appreciation of a work which he would be glad to help in other ways if he were able. The School's officers feel that it has lost a friend, and earnestly sympathize with the bereaved family in their deeper sorrow.

## Progress in China.

[London Times].—Like snakes in Ireland, progress in China is generally supposed to be non-existent, immobility in the Celestial being considered equally ineradicably with the leopard's spots and the Ethiopian's skin. This, however, is not the opinion of those best acquainted with the past history and present doings of the Chinese. Their rate of progress is not ours, they move more slowly; but then the vastness of the body to be moved must be taken into account. China is nearly as large as Europe, and contains a much larger population, every third man in the world being, it is calculated, a Chinaman. Their progress in the past has been most marked; thus the Chinese appear to have earliest of the human race to emerge from barbarism. They have a literature older than the days of Moses, and astronomical observations that go back at least to the days of Abraham. Comparing their early progress with that of European nations, they were clothed in silk robes when our savage ancestors still painted their naked bodies. They invented printing and had printed books about the middle of the tenth century, 500 years before the time of Caxton. Gunpowder and the mariner's compass were Chinese inventions long before they were known to Europeans. Lieut. H. N. Shore pointed out, in a recent paper read before the Society of Arts, that in the matter of carriages, the utilization of carrier pigeons, the artificial culture of oysters, fish, and poultry, and in the satisfactory solution of the great ewage question, the Chinese have been

before us in time, and, in some of these at least, are still ahead of us in results. Their progress in the past cannot be gainsaid; it may, however, be contended that they have now reached the limit of their capacity, and that no further progress need be anticipated. This to say the least of it, is exceedingly unlikely in a people acknowledged by anthropologists to be the biggest-brained race in the world, while facts are against it, for signs of progress are not wanting among the Celestials of the present day.

## Life amongst the Plutes.

By Sarah Winnemucca Hopkins. G. P. Putnam's Sons, New York.

This is a deeply interesting recital, by the daughter of a chief, of the wrongs and claims of her people. If the half of it were but half true, it would deserve the sad and serious attention of all who feel any anxiety to wipe out our national history some of the stains of a "Century of Dishonor." She has been employed as a teacher, interpreter, U. S. scout and guide, and she is endorsed by Gen. Howard and other officers and prominent citizens of Nevada. There are, however, serious charges against her now on file at the Indian Department. She makes an unsparing and scathing exposure of the mischief done by bad agents, and desires to see the care of the Indians turned over to the army. One cannot wonder that judging from the stand point of her own experience, she should want some change, though what that should be may be an open question. Her story demonstrates the fact that the character of the Indian agent is the vital point of the Indian question. A man like her one good agent Parrish, Agent John D. Miles of Indian Territory, McGoughlin and Grassman of Dakota and others of like character, can do more to settle the Indian question than any number of theoretizers thousands of miles away from the scene of action, if they can only be secured and sustained.

Of course not all army officers are fit for the trust any more than are all civilians. There are those admirably adapted to it by experience, character and training, and while good agents are so necessary and so hard to secure, it would be well if they could be taken from wherever they can be found, whether in military or civil life.

## "Harper's Achievement."

For many of the beautiful pictures with which we are enabled to adorn our first page and interest our readers, we and they are indebted to our generous friends the Messrs Harper Brothers, who for the period of a generation have not ceased to contribute to the pleasure and progress of society by their excellent, high toned and delightful books and periodicals. Harper's Monthly, Harper's Weekly, Harper's Bazar, and Harper's Young Folks have world-wide reputation and popularity. These genial and enterprising publishers have established a name which is represented by three generations and will be handed down to a fourth; and we trust to many more. They have been always generous friends to authors as well as to the public. At the beginning of a new year of the Monthly, the New York Times gives an interesting sketch of its history, which we are glad to give our readers.

"The approach of a new year and the consummate excellence of this month's issue make proper and agreeable at this time a few words concerning Harper's Magazine, the prospectus of which for 1884 lies before us. Harper is now somewhat more than 30 years of age, and its career as more than a history has become of the first importance to American art as represented in wood engraving. Scarcely any progress that has been made in these 30 years in any department of human endeavor is more striking, or rightly viewed, perhaps more really important, at least to the intellectual and artistic side of American life, than the progress represented in these Harper pages. And this fact, apparent as it is to all men who ever indulge in thought, needs to be insisted on before the public at large, usually slow to take full cognizance of such facts and their meaning. But for the true importance of Harper's art history, it of course is not necessary to go so far back as 30 years, since within very recent times, within 10 or even 5 years

the same methods that have proved so successful in the management of the freedmen of the south. Unlike the Negro, the Indian cannot speak our language, has never been domesticated among us, and is consequently ignorant of our manner of life. Therefore Indians must be segregated, until they learn the way of the whites, and until mutual interests spring up between them.

white soldiers to subdue the Chiricahua in their own haunts. Their country they inhabit is larger than New England, the roughest on the continent, and though abundant in food upon which soldiers can subsist, provides the Indian with everything necessary for sustaining his life indefinitely. The agave grows luxuriantly in all their mountainous regions, and this plant affords the Indians can live. They are so poor, however, that they cannot carry with them in their most rapid marches. No settled habitations of any kind, but roam about like coyotes, and their temporary resting places are chosen with all the care which the chase affords. The Indians have gained by generation of warfare, the Indians know every foot of his territory; can endure fatigue and fasting, and can live without food or water for periods that would kill the hardest mountaineer. In fighting

them we must of necessity be the pursuers, and unless surprised by sudden attack, we are expected attack the enemy. It should be remembered that the Indians combats you rarely see an Indian who you see the puff of smoke and hear the whistle of his bullets, but the Indian is thorough and is hidden. The soldier on the attacking party, exposed himself, and fighting against them the only way of success lies in using their own network of roads, and their own people with a mixed command. The first great difficulty to be overcome is to locate them, and this can only be done by the Indians, in such manner that the Indians must not discover your movement. The march must be by stealth, and at night. Indian scouts must be kept sufficiently in advance of the main troops to enable them to detect the enemy with their own eyes, and to this end they must be scattered in front and on the flanks. They must leave absolutely no tracks, but must travel over rocks, and keep

stantly under cover. The night runners are sent to the command which is to force night marches. The attack by surprise: the scouts meet if possible surround the hostile camp and keep constantly concealed, should be able to give all possible information reference to the situation of the enemy of Indians, and of everything which it is desired that the commanding officer should know. The Indian's eyes are as keen as eagle's, and his natural instincts develop to the highest degree. The unusual movement of a bush, the falling of a rock, the glint of the sun from the forest, the scouts, will immerse in them and their scud like a hawk, the frightened quail. The Indians, the Indians who escape are secreted; it is impossible in a country where

[illegible]

With all the interests at stake we cannot afford to fight them; we are too culpable a nation, for the existing condition of affairs. It follows that we must satisfy them hereafter they shall be treated with justice and protected from the inroads of white men.

The reservation system under the easiest way to this end. Settle the Indians on reservations, and teach them they do not know of the methods of agriculture, stimulate them to industry by providing a market for their crops, supply them with such food as is necessary for their subsistence until they learn how to live in the new scheme of self-supporting.

The reasoning power of the Indian is his own standpoint is unequalled. The Indian just brought on a reservation understand that the person in charge of is absolute, and that he has the power

The invention of breech loading guns and metallic cartridges has changed the nature of Indian warfare. The Indians now no longer, our inferiors in equipment, their weapons of even ten years ago given place to, breech loading arms of the best makers. An Indian in his modern warfare is more than the equal of the white man and is would be practically impossible to

Contrary to what may be the general impression there is no people who have stronger affection for children than the Indians. The mother who loses her child in the Indian dies. The main reason for the tribal burial of Indians is that their families are cared for and their graves are visited long after they are dead. Giving the Indian a patent for his land, under such conditions preventing alienation as may be deemed advisable, and let him do as he wishes with his land, is not for him. It comes not only conservative, for his property to lose by misconduct, but, when he surrounds himself with pigs and cows, etc., he finds that he is independent, and that he realizes that he is independent, and that his family is provided for at the event of his death, and there is no further need of the tribal organization. In their my judgment, disappear, and not to be

So soon as the Indian gets his land  
severity he should have the ballot. No  
ing can be of great value in the settle-  
of the Indian question than a community  
interests between the Indian and the  
settler in his vicinity, and no other way  
this is so easily attained than about as by mak-  
the Indian politically the white man's equal  
class, certainly the equal mentally, of a  
class who now have the franchise, and who  
the right to vote, he would soon find  
the white communities living nearest  
would take an interest in his concerns.  
people or race can live in our country de-  
ed of full political powers without becom-  
more and more degraded without the  
people be long and exposed to mistre-  
in vote apportion them.

The disarming of Indians is very general, I believe to be the first step in solving the Indian problem, and it is often insisted as the one condition precedent to placing the Indians on a basis of equality with the white man. In my judgment, there is no error. In the first place it is impossible to disarm Indians. Individuals may be taken in certain instances at such disadvantage as to make them surrender their arms, but the great mass of the Indians, of all bands or tribes this is hardly possible. I knew that the Chiricahuas had an abundance of the best arms, and when they came into our camp, they were very likely that they would be disarmed. I have seen the arms of many of them were all with lances, and others with very different guns, which would have been up had I demanded them. I have seen many of them would have considered the arms as a part of them, their arms have still been in their possession, and they would have lost their confidence, which could only be secured by showing them that their best hope was in them. I have seen them at all circumstances to punish them. Neither is it possible to disarm Indians from obtaining arms and munitions in this country, and to have any thing. I have seen the Indians, in the war-path, is to obtain arms, and the means to purchase them. As I have already stated, this was the reason for *Chato's* raid, in which I know is another example of the same kind. As I have already said, how necessary arms for the protection. He has discovered that the Government does not prevent the purchase of class of weapons, which is a sure way of committing depredations on their reservation, or punish them for their acts. He concludes that he must take himself.

**Horsford's Acid Phosphate.**  
Very Satisfactory in Prostration.

Dr. P. P. GILMARTIN, Detroit, Mich., says "I have found it very satisfactory in its effects notably in the prostration attendant upon alcoholism."

**\$66** a week at home. \$5.00 outfit free. Pay absolutely sure. No risk. Capital not required. Reader, if you want business, which persons of either sex, young or old can make great pay all the time they work with absolute certainty, write for particulars to H. HALLETT & Co., Portland, Maine.

## At Home.

### The Children's Church.

CONTRIBUTED BY REV. DR. FURNESS.

On Sunday, The Church bells are ringing,  
And calling the children to come,  
But three little girls and four children  
Are left to keep quiet at home.

To be taken to church quite too little,  
And given to mischief and play,  
Yet they would like their elders be pious,  
And hallow the Lord's holy day.  
So each one a big book has taken;  
It is held to be sure, upside down,  
Yet from it—the dear little wishest  
The singing goes lustily on.

They know not what they are singing,  
Each sings in a different tone;  
Sing on, little ones, for it reaches  
Even thus to the heavenly Throne.  
There stand the pure ones, your angels,  
They sing to the Father above,  
But praise from the mouth of your children,  
He doth most especially love.

Sing on—out there, in the garden  
There is music that rivaleth yours,  
The dear little birds—how they twitter  
As they fit among the bushes and flowers!

Sing on, for with faith you are singing,  
And that will the Saviour suffice,  
The heart that is guileless as do  
To Heaven—how quickly it flies!

Sing on—sing to your elders,  
We read, and we understand—  
But ah, the little ones hold it  
How oft up-side-down in their hands!

Sing on, we sing by note too  
So we do not the lower annoy,  
But ah! the strife of the brethren,  
The harmony often destroys.

Sing on, for the grandest church music  
That ever on earth we hear,  
What is it? The prattle of children,  
A breath in the Eternal's ear!

—After the German of Pastor Gerock.

## Agriculture.

### What can be done with an Acre.

One acre of ground in lawn and garden is sufficient to maintain a family cow in any village or rural locality. One who knows how it is done, and has done it for several years, describes the method by which it is accomplished: "A quarter of an acre is in garden—strawberries, currants, grapes, raspberries, blackberries and gooseberries. There are six apple trees, and fourteen pear trees. All but the garden is in grass, chiefly orchard grass. I am already feeding down a small piece of orchard grass under some apple trees the third time by tethering the cows upon it. Some of the grass I have just cut the second time, and some give a third cutting. Fifty rows of sweet corn for table use are now being tilled by boiling ears, and the stalks and husks go to the cow. There are pea vines, bean vines, beet tops and small potatoes, and other wastes to help feed the cow luxuriously, and in this way the family cow may be kept in abundance throughout the year upon one acre, while her manure will keep the whole acre growing richer every year, and will provide a liberal quantity for flower beds and the shrubs, and dwarf pears on the lawn. A very large quantity of the best manure is made by throwing the weeds with all the soil attached to them, leaves from the house, together with as much soil as may be needed, into a shallow pit in the cowyard, and leading the drainage from the manure gutter into it. If a farm were only managed as one manages the garden, every acre might easily pay a hundred dollars; but the labor is not to be had, and one pair of hands cannot do it for more than five or six acres. But the time will come when it must be done, when the land becomes fully occupied, and when this great country has its 500,000,000 of inhabitants, a number which it can sustain with the greatest ease, with a thorough system of cultivation."—*The Dairy.*

### Skimmed Milk for feeding Stock.

How much is skimmed milk worth for feeding purposes? This is an important question in butter-making districts, and quite often the possible use of skimmed milk determines the profit or loss of the dairy. With young growing pigs, an addition of the skimmed milk from a cow in full flow of milk for each pig will keep them growing with very little corn. It is quite as well, however, to have two or three pigs to every cow, and supplement the feed with a greater proportion of grain. For the amount that they will eat, no kind of stock will make so profitable use of milk as laying hens. —*The Southern Planter.*

## Teachers' Table.

### "Sentiments" for Memorizing and Recitations.

The value of brief and pithy extracts stored up in the memory cannot be estimated. A text of Scripture, a simple verse learned in childhood, a proverb, a brief utterance of some great soul, has often flashed into the mind, a light in darkness, a comfort in sorrow, a stay in times of bewildering temptation. Youth is the time to fill the memory with these treasures, the ammunition for future need.

For a year or two we have followed the practice at Hampton, of having our students learn daily some such "Sentiment." Some of these are recited before the school. Some are learned to be sung as the grace before meals, or at the close of the silent prayer in the church service. We cannot too strongly recommend a similar practice to our graduate teachers or any others.

The following are some of the "sentiments," recited this year at Hampton:—

#### THRIFT.

Spend your money to feed and clothe the mind rather than the body; for culture rather than for amusement. The very secret and essence of thrift consists in getting things into a flower, and the flower inspires a poet; as bread becomes vital force and vital force feeds moral purpose and aspiration; so should all our saving and out-go have regard to the higher ranges and appetites of our nature. If you have a dollar or a hundred to spend, put it into something above the average of your nature that you may be attracted to it. Beyond what is necessary for your bodily wants and well-being, every dollar spent for the body is a derogation of manhood. Get the better thing, never the inferior. The night supper, the ball, the drink, the billiard table, the minstrel—enough calls of this sort—are there, and in no wise modest in their demands, but they issue from below you. Go buy a book instead, or take a journey, or bestow a gift. Thrift is the conserving and protecting virtue. It makes soil and atmosphere for all healthy growths. It favors a full manhood. It becomes the reason and inspiration of generosity.

##### PURPOSE AND TRAINING.

A purpose, steadily held, trains the faculties into strength, habit and aptness. The first main thing a man has to do in this world is to turn his possibilities into power, or to get the use of himself. Man is packed full of faculties, physical, mental, moral, social; a veritable box of tools, ready for use. How to use these tools is the main question. The answer is the main purpose.

The call to-day is not only for educated men, but for trained men. The next mightiest event that happens in this world of ours, at least to the masses, is that "daily miracle" as Edwin Lynd calls it,—the publication of such a newspaper as the "New York Herald" or "London Times." If it were possible to send to Mars or Jupiter a single illustration of our highest achievements, it should be a copy of a great Daily. I think nothing greater could be brought back. But what produces this superb and gigantic achievement? Not learning, talent, energy nor money, but training. The work throughout is done by men trained to their specific tasks by steady and sympathetic habit.

Every man's work should be both an inspiration and a trade. It is said that Napoleon could go through the manual of the common soldier better than any man in his army. He could not have been the greatest general had he not been the best soldier; so in all lines of business, the demand is for in almost any occupation, and nearly without exception, it will be found he has been trained to it.

##### MANNERS.

Every young man desires, above all else, to be regarded as a gentleman. None of us can bear any other imputation. You may accept of one violating the entire decalogue with less offence than if you tell him he is not a gentleman. What is this thing that outweighs every other good word and estimate? So fine a thing necessarily has many counter-weights, and so we will search it with definitions.

The word undoubtedly comes from the Latin *gens*, meaning tribe or family. Hence all the one-sided and incomplete notions that a gentleman is a man of family. It may do much to make the gentleman. Julius Hare, himself a fine illustration of his definition, says: "A gentleman should be gentle in everything; in carriage, temper, action, desire. He ought therefore, to be mild, calm, quiet, temperate; not hasty in judgment, not overbearing, not proud, not rapacious, not oppressive."

Ruskin makes the leading traits of a gentleman lose, or his relation to the farthest. Prof. Lieber, who has written on the subject in a many way, says: "The word gentleman signifies that character which is distinguished by strict honor, self-possession, forbearance, generous as well as refined feelings, and polished deportment. The gentleman is never unduly familiar; takes no liberties; is neither artificial nor affected; bears himself modestly toward the weak and imprudent; he can be self-denying without strutting; subordinate his lower to his higher self. He is electric with truth, buoyant with vivacity, glowing with honor, mighty in manliness."

Who misses or who wins the prize?

But if you fail or if you rise.

Be each, pray God, a gentleman.

### Health and Humanity.

#### The Collie Dog.

WHATEVER may be said about the canine race in general, their relation to the farmer's life is of the highest importance. I make assertion that for intelligence and for susceptibility to being educated with an instinct akin to reason in the child, the Scotch collie dog stands at the head. Like children of the human family, the collies become valuable in proportion as they are educated while young. No dog can be made so serviceable to the farmer or the shepherd as the collie. In the care of the dog, if the brain be cultivated while young, the animal is fitted to adapt himself to surrounding circumstances, and, in consequence, to become valuable to his master in the various occupations of life. It matters very little what you teach your dog to do. The fact that you keep his brain in active employment some part of each day soon makes him intelligent and becomes more attached to you, and, as I attempt herewith to relate the circumstances of the education and life of "Old Sweep," I will say a good word for all the well-bred collies and heritors. It is the farm of every intelligent farmer an asset in the form of a first-class collie dog.

A somewhat famous collie dog, named "Old Sweep," is the subject of my sketch. At four months old he became a member of a village household whose master loved a dog and whose pets were treated almost as members of the family. Obedience, however, was a law not to be broken. He demanded of all, according to age, intelligence, and accountability. Puppy Sweep was first taught to come promptly when called, by the use of a black cord line attached to his collar. The master called out "Sweep, come to me," and at the same time pulled the dog gently to him. When at his feet, the dog was told to "whom," thus teaching him to stop or stand still at the word "whom." The word of command to sit down was first taught by placing one hand on his loin and one under his throat, often repeating the pulling of the cord, to bring the dog, then setting him down, using the above commands until it was apparent that Sweep knew what they meant. The next step was to have all done quickly.

When called to come in, if Sweep did not obey instantly, he was drawn to his master's feet at once in a forcible manner; and this seldom had to be done twice in correction of any dilatoriness. Next Sweep was taught to carry things; and his playful instincts were cultivated at the commencement by the use of a rubber ball, which was thrown across the room, the dog getting the ball and bringing it to his master, from which exercise he soon learned to bring the newspaper home from the office. At first, whenever he brought anything home, it was given to the housewife, who rewarded him with a lump of sugar, and before Sweep was six months old he would go into the periodical store, get his paper, and go to the office of his master with it, then take it home when directed.

In performing all these acts, everything was carefully called by his right name. If a paper was given him to carry home his master said: "Sweep, take this paper home." If a letter was offered, he was particularly cautioned. Again he was particularly cautioned to go straight home with a parcel, whatever it might be. Thus he soon became an errand-boy of the very best kind, taking every kind

of bundle or note to or from the office or to or from any of the family by name. For instance, the slippers of the family (four persons) were all kept in one closet and were of different sizes. If the dog was commanded to "go get my slippers," of the four pair he would bring those belonging to the person who sent him on the errand. The ordinary tricks of jumping through the hands or a hoop, sitting up, standing on his head, kneeling down to a chair at family devotions, and coming rising till the word "Amen" was uttered, came one after the other and were more easily learned by reason of previous practice. Each day the dog learned something new. To open or shut the door was added to his accomplishments. In walking in the street, he was taught to walk ahead, to the side, or at the heels of his master. The hydrants on the street were pointed out to him, and he soon learned the names, and was soon taught to go into the street and get upon them and sit down. The wheelbarrow he soon learned to know by name, and, if told to go find a wheelbarrow to stay there till his master came, he would do it, if forgotten a whole day. It did not take any longer to teach Old Sweep all this than one after the other and were more easily learned by reason of previous practice. Each day the dog learned something new. A NAVAL REVIEW AT FORTRESS MONROE—CEREMONIES DURING THE PRESIDENT'S VISIT TO THE FLAG-SHIP.—[From Harpers' Weekly]

## White and Colored People in Virginia.

BY ORRA LANGHORNF.

There was so much excitement and vituperation in the papers for some weeks following the election, that one was tempted to wish that elections would only come once in a life-time. It has been especially sad to me to read the expression of bitter feeling in the colored papers. Perhaps it was natural for the Negroes, as they "are intensely human," that they should wish to retaliate upon the white people, and counsel a resort to violent measures as remedy for their grievances. I think, however, that as the colored people have borne two centuries of slavery, and the white people have somehow struggled through two decades of reconstruction, and in spite of some friction both races have managed to live together so far, it is more than probable that they will be able to jog along peacefully for the rest of the time.

"The school master is abroad in the land," and with the better influences of education we may reasonably hope for the gradual improvement of our beautiful South land. Although politics are very exciting, and elections as yet rather too much for our equilibrium, the relations of the two races are in general very kindly, and the history of the colored people shows a steady advance since freedom came to them.

In regarding the South, it must always be remembered that for many generations the white race had been governed by a singularly absorbing idea. It had been taught by pulpit, press and public speakers, in hall and court, everywhere and at all times, that whenever the two races come into contact, the white man must rule, and the black man must serve. Having fully adopted this idea, a theory in conflict with the progress of the age, it has cost countless treasure in blood and gold to prove that the lesson must be unlearned.

In what Southern white people deem the "natural relations" of the two races, and for his material interests, the Negro has here a great advantage, as he finds that the white man of the South prefers employing colored laborers.

The Northern philanthropist who will risk his life and give his money freely to aid the black man to rise in the social scale, very often shrinks from coming into contact with him. The Southern white man, under the influence of the old ideas, demands that the Negro must "keep his place," (a place he has selected for him), but feels that he cannot live without the dark folks that have surrounded him from his birth.

"I must have niggers to work for me," said a Virginia planter, hot-headed and ignorant after his kind, "I can't do factory work, my place without 'em. If they send all the niggers to Africa, I'll have to go, too."

Thus in many lines of industry in the South the Negro has a monopoly, which insures him a living, and is bitterly resented by his poor white competitor and competitor. In domestic service, the white people want Negroes, "first, last and all the time." It is common to hear ladies declare they would not trust their babies to white nurses. We all have kindly memories of the dusky faces that looked tenderly upon us in our cradles, and naturally want our children to have the same loving care that nurtured us. I have had a poor white woman rail fiercely at me, for "hiring a nigger," when people of my own race were starving for lack of employment, and though I felt very sorry for a white woman in such circumstances, I could but realize that it would be impossible for me to employ a white woman, when a black one could be had.

In Lynchburg and other "Tobacco towns," the colored people do all the factory work, and it is common to see one white man acting as "boss," with a hundred colored laborers.

The thirty ones among the factory hands have fine chances to make money, and the "filthy weed" in the hands of a sensible and industrious man, not seldom expands into the sheltering roof-tree. There are various other trades among us almost exclusively filled by Negroes. The wagon and hack drivers, and porters in stores are nearly all colored men. At the funeral furnished by the city for the five firemen killed in the great fire which occurred here last spring, an impressive feature of the immense procession which included all the civic and military organizations of the town, was the mounted array of colored porters, all stalwart men, who had been employed in the burned warehouses and stores.

In a place where the snack-seller is seen at every turn and is freely patronized by citizens and strangers of all classes, that functionary is usually a colored man or woman, more often the latter.

As small grocers, hucksters and saloon-keepers, the colored people are found everywhere and begin to compete successfully

with the white dealers in those lines. The barbers of the town, with one exception, are colored, and as their best customers are white men, nowhere is the color-line drawn more severely than by the colored barbers.

In the trades requiring skilled workers, the colored people have some difficulties to contend with, as the white master-mechanics refuse to take them for apprentices. When they manage to pick up some mechanical skill, they have the advantage over white laborers, as they usually underbid them, and a white contractor will sometimes work all colored hands because as one of them told me, he "could hire niggers cheaper and manage them easier than white hands."

It is common now for contractors to put white and colored hands together on a job, though at first the white men were disposed to make trouble by refusing to work with Negroes.

Sometimes the old relations of the races seem strangely changed by "the whirligig of time," as when a well-to-do colored man will employ poor whites to do his work.

In one case which came to my knowledge, a Negro carpenter, who had learned his trade as a slave and become independent as a freedman, hired a white man who had once been a rich Negro-trader to work for him. It gave me a curious sensation to see the thrifty African come into our little store, and bid the clerk give provisions "on his account" to the dejected looking white man following him, who must have had bitter reflections in regard to "the Institution" once the idol of the South, which had resulted in the chattels becoming a power in the land, whilst they who had put their faith in it, had found but dust and ashes for their fortune.

There are now two or three colored builders in the city, who, by improving scant opportunities, have found abundant employment, and gained good reputations in the community. One of these is now putting up a handsome two-story frame house on a lot near us.

The owner of the property, a white gentleman, says the house will cost him \$16,000, and the contractor has promised him a "turn-key job." He added that the carpenter was a reliable man, and he had left all the details to him.

The avocations of which I have spoken, as filled by colored people, who conduct such lines of business among us, with general kindly relations for both races, are such as can usually be performed by an illiterate people trained to labor. Many of them, indeed, were filled in antebellum days by slaves, whose masters found such occupations for their chattels profitable to themselves.

As the colored people advance in property and education, which they are doing very rapidly, it is natural but essential that they should seek avocations better suited to a class possessing those advantages.

In my next article I will try to tell something of the condition of the colored people, growing up under the new regime and the investments they are making of their newly acquired wealth.

## A Naval Review in Hampton Roads.

The outlook from Old Point Comfort or Fort Monroe, has a charm beyond that of most sea coast watering places in the extreme variety and animation of the scene. It is not a lonely stretch of water broken only by screaming sea gulls, and occasional passing of some distant sail or steamer. Ships from all parts of the world, merchant vessels and sloops of war flying the colors of every nation, gather in this magnificent harbor of the Roads, coming and going, while flocks of smaller craft seek its shelter from outside storms; at night their lights look like a vision of Venice; next morning the white sails are spread to the favoring breeze, and they are off and away-like the white clouds scattered by the returning sun.

One of the most brilliant occasional attractions of the place is a grand Naval Review of the North Atlantic Squadron or the school ships on which boys are educated and trained for the service.

An eye witness of such a beautiful spectacle, during the administration of President Hayes, gives the following graphic description of it, which we take from Harper's Weekly, to which we are also indebted for the spirited illustration of the scene.

"As one glances along the fleet of anchored war ships, extending from the Rip Raps in the roadstead on the left to the jetty then ships on the far right, memory naturally reverted to that bright morning not quite twenty years ago when the gallant Cumberland and Congress went down in flame and smoke beneath the green waters off there to the right."

The gallant duel of the Monitor with the Virginia occurred but a little beyond where the Minnesota now lies at anchor, and the fine old ship which so narrowly escaped destruction then is here again on the same historic ground.

A salute of guns from the water battery announced the arrival of President HAYES and cabinet; and amid the thunder of salutes, numbering yards, and explosion of submarine torpedoes, they made their round of visits to the different ships.

On the flag ship Tennessee, the crew man, clear ship for action, and load and fire the great guns. Mrs. Hayes touches a button, and the hundred pound torpedo explodes alongside, shooting a column of water as high as the mast, to fall in showers of spray on deck. A steam-launch hurries by with a long spar torpedo extended in front; she makes a rush for a floating mark, and it is blown to atoms by another torpedo. Twenty-one torpedoes of smaller size are exploded along the shore. The repeating cannon, throwing fifty balls a minute, strikes up its terrible music, while the bullets strike whiffs of spray from the water's surface a half-mile seaward.

The signal flags run up and down, the band plays, marines salute, and the President and party pass to the Minnesota, where more guns salute, and the great gun on the shore entertains them; and so they pass from ship to ship of the fleet.

At a signal, all the ships' boats loaded with sailors put for the shore, towed by launches, which cast off their lines near shore, and the men dash through the surf, forming a line 2000 strong on the beach. They then form "column of fours," and with bands playing and colors flying, march into the Fort, where, with the military, they pass in review before the President.

The beauty of Washington and Baltimore, the fleet officers in uniform, and the Marine Band render the ball at the Hygeia a scene of light and life long to be remembered.

Next morning the naval apprentices from the school ships, Minnesota, Constitution, Monitor, and others, in a grand review, solid body on the star-board side of the Tennessee's deck. President HAYES makes a brief address. Captain HARMONY calls their names, while a thousand heads "uncover." Mrs. HAYES pins the medal to their white jackets, speaks a few pleasant words, and shakes the hand of each blushing graduate.

On signal, the Constitution and Saratoga make a dash in. A grand review of the boats passes in review, and forming in line, a grand race of seventy boats against tide and wind takes place through the fleet, which is won by the Tennessee's boat.

At 2 P. M., the President's ship leaves her anchorage, homeward bound. Two rockets leave the flag-ship, and ere they break in stars, all the ships are ablaze with a splendor of red, blue, and gold fires, rockets course higher and thither through the heavens, the bands strike up, a grand salute of cannon flashes from the fort, and a pyrotechnic display from the beach strews the moonlit heavens with a glory of dropping fire. As the last gun booms over the bay, the Dispatch turns the "Point," and the review is over.

As a display the review was a success, and if many hearing, clean faces, neat dress, and general appearance of proficiency of the apprentices (who were drafted to various ships the next day) be any guarantee of the good of the school-ship system, that certainly is a success also.

## Speech by Hon. Frederick Douglass at Hampton Institute.

As our last number was going to press, we could make only brief mention of the visit the school was then receiving from this distinguished representative of the colored race, and promise some future report of his eloquent address to the students; which promise we are happy now to fulfil.

"My friends: it has been my good, or ill, fortune to be called upon almost every day to undertake some duty for which I have had no previous qualification or education; and I am before you to day in just such a position. I am speaking to a body of college students, and have myself never had a day's schooling in my life. I never attended school; I never was in a college, except to look at it, or to sweep it out; and I find myself called upon to make some laudatory remarks in my introduction—to speak to you, students of Hampton Institute. I hardly know what to say to you. I ought to have monitions to prepare a paper report of this school is too vast, too multifarious, too common, to be grasped in a single hour. I have seen London, I have seen Edinburgh, I have seen Rome, I have seen the Coliseum, I have seen the British Museum,—but I should not have seen the world if I had not seen Hampton Institute. I have seen more to day of what touches my feelings, more of prospect of what is to be more of contrast with what has been, than I have ever seen before."

The difference between the Now and Then, the contrast between my childhood, my youthful days, and the youthful days through which you are passing is so vast—so amazing, that I have no words to express it. I sometimes say to the American people:

You are not to measure these freed people by the heights to which we are yet to attain, but by the depths—the depths—THE DEPTHS—from which we have come. And when I see the heights to which we have already attained through the efforts of this Institution, through this and other efforts of the Teutonic race—my heart is melted, and fired with hopes of what is yet to come.

Only fifty years ago, I was living down here in Maryland near you, a slave.

A gentleman once asked me, "Mr. Douglass, at what College—or Institution—did you graduate?"

I answered, "From the peculiar institution, and my diploma was printed not on sheep-skin, but on my own skin."

For before I made part of this breathing world, the chains were forged for my limbs, the whip braced for my back, the scourge for my back. And this name, which, through the mercy of God, our Father, may yet be found inscribed in the Lamb's book of life, made part of my master's register with his name and his name.

When slavery yet existed, with its rack and thumb screws and scourge, I could speak, I could denounce. I could appeal; but how that freedom has come to our people, and our country is delivered from that damnable curse, I cannot speak—I don't feel like talking. I feel like feeling—thinking.

I feel profound pleasure, my young friends, in looking out upon this glorious world, looking up to this beaming sky, and thinking of the benevolent kindness, the disinterested, lofty, religious sentiment out of which these buildings have sprung; out of which Huntington Hall has sprung, and all these work shops for your training in useful arts—the joiner shop, the shoemaker for the workers of wood, the workers of leather, the printing office, I can't talk—I can only say, I am glad—glad—glad—deep down in my heart, with what I set.

And I am not much more glad to see our own race—or rather, I know of no race but the Human Race—than I am to see my brethren from the West, my Indian brethren, here to day.

It has been my belief all along that there must be something wrong in American civilization, to account for the condition of our Western tribes. I see on the north of us, British civilization meeting Indian nations, and no war; on the south of us, Latin civilization meeting Indian nations, and no war. Why is it not so with us?

I believe that Hampton will do much to bring the time when all shall say, "To live under the wings of the American eagle is to live in peace."

I don't say what I say of slavery in a censorious spirit against our white friends, who have always seen slavery as a great organic evil, and I saw the difficulty of removing it. I think the masters were almost as great sufferers as the slaves. In Virginia, the state suffered as much from the evils of slavery as the slaves did. And I agree with Cowper that I had

"Rather be the slave than him who chains him."

I am glad for the blacks that they are out of slavery; for the whites, that they are no longer slave holders. I believe the time will come that every descendant of slaveholders will be glad that slavery is no more.

If the white people want to know what is best for them to do in the present condition of things, I can tell them. Find out just what was necessary for safety in slavery times, and do just the reverse. In slavery times, it would not have done for slaves to know much about reading and writing, or arithmetic, or about geography and the north star—even about the Golden Rule—it would have created confusion and loss of property. It wouldn't have done to have freedom of speech—to have old Fred. Douglass come down into old Virginia and denounce the curse of slavery—to have school mistresses from New England come down here with the light of civilization and refinement. All that would have been necessary to society, when slavery was the base line of society. It would have disturbed things.

But now, the very things that I would have most endangered society here, you need for the security of society. You need freedom of speech. Let us all speak out. No secrets, no dynamite, no revolutions, but a quiet pervading of society with the sentiments of intelligence and cleanliness. Let these go forth, and they will be the safety of society.

I am not here to make a long speech. I told General Marshall I could rise and make my bow but had no speech to make. But I have been tempted to say these few words. Perhaps you will remember, when you hear that I no longer live, that Frederick Douglass once appeared before you to make his bow, as with you peace, happiness, prosperity, success, and a glorious career of usefulness to you one and all."

## Hampton Tracts for the People.

**SANITARY SERIES.** Ten numbers published  
1—Health Laws of Moses. by E. W. Collingwood  
2—Duty of Teachers. by E. W. Armstrong  
3—Preventable Diseases. by M. F. Armstrong  
4—How to Found a School. by H. W. Ludlow  
5—A Haunted House. by M. F. Armstrong  
6—Woman's Work in Sanitary Reform. (English)  
7—The Rights of the Body. by S. R. Callirop  
8—The Two Breaths. by Rev. Charles Kingsley  
9—Cleanliness and Disinfection. by E. Harris, M. D.  
10—Our Jovels. by F. Armstrong  
Published by Putnam's Sons, New York  
Edited and printed at Hampton Institute.  
For sale at both places. Specimens sent from Ham-  
pton at 6 cts. a number, or 50 cts. a set.

An English friend writes to inquire if a good colored teacher can be secured to take charge of a school on one of the West India Islands. He would prefer an American colored man for the sake of his greater "push," but has some anxiety as to his possible character, and encloses a slip from Dr. Tucker's pamphlet, and also a letter he has received from his partner at the Islands, who remonstrates against the employment of an American, thinking that while the condition of morals is "bad enough" at the Islands, it is "much worse in the States," where "every decently educated colored man who goes from the Islands easily gets a good school," though he may have left home in disgrace, as happened in three aggravated cases which have come under his own observation.

The English gentleman, a man of active philanthropy in the cause of the colored race, inquires with concern whether this and Dr. Tucker's statements give a true picture of the American Negro.

No one-sided picture is a true one, however correct its details, and this is no truer than the rose colored visions of an enthusiast on the opposite side. Three or four cases are rather few to found such broad generalization on. All they suggest to our mind is that there is, as we all know, a great demand for teachers among our colored people, and it would seem, a disposition here to accept a decently appearing English stranger on his appearance till he has belied it. We do not question the veracity of Dr. Tucker's statements in regard to the condition of things around him, which, we believe, he is faithfully laboring to improve. What we do deny, as we have heretofore said in reviewing his pamphlet, is the justice and accuracy of making sweeping denunciations of a whole race, because of a personal experience of its worst portions, utterly ignoring as well established facts on the other side. Experience for experience.

We can point to the five hundred graduates, both young men and young women, who have gone out from Hampton during the last twelve years, kept continuously in view by the school, and known to be, with few exceptions, and in spite of imperfections of partial education and development, an honor to it and to their race; working faithfully and with true missionary spirit, often on meagre or ill paid salaries, in isolated stations and under every disadvantage; centres of light and civilization to their people, fitting scores of their pupils for Hampton, commanding the respect of their white neighbors, and a good report from the county superintendents, often ex-confederate officers, who employ them. Their race has a right to their record, and to that of the thousands sent out by other educational institutions; notably, Fisk and Atlanta and Lincoln Universities, and Berea College; and to that of all other evidences of improvement which are conspicuous in its history since emancipation. The Black Belt of Louisiana and Mississippi does not spread over all the states. Sixteen years' work in Virginia, gives us good cause for hopefulness. At the same time, we by no means ignore the fact of the vast amount of work to be done and the imperative necessity for it, especially in those sections where the blacks have always far outnumbered the whites; where slavery struck its fangs deepest, and the environment of climatic conditions and general state of civilization are least favorable. This is no time for suppressing the facts. Every one who tells them boldly deserves the thanks of every intelligent thinker. But tell both sides. The near and small is likely to obscure the large but distant; an illusion which must be constantly corrected if we are to see things in their true proportion.

The following from the *Commercial Bulletin* of New York is food for thought. The drift of it seems to be that white labor must ultimately displace the alleged unsatisfactory Negro workman of our Southern States.

The *Bulletin* reports, however, the dark side of the picture. Negro homesteads and small farms are multiplying in many localities; the movement is in two directions; one forward and the other backward; the latter is chiefly among the blacks of the Gulf States where they far outnumber the whites, the former among those in the northern belt of States, including Georgia, where there are far better conditions of progress by way of a better climate, compelling activity to supply physical needs; more business enterprise, more educational advantages, and stronger civilization from the predominance of whites. These make a majority of the race, and have a somewhat hopeful future.

We doubt the success of white labor generally in the Gulf States, and believe that the Chinese only could supplant the Negro; but that would hardly be attempted.

There is no doubt danger that many plantations in and around Louisiana will, as things are going, sink into decay, and result in a barbarian displacement to the country—not alone from the condition of the blacks.

A moral to be drawn from these facts is the importance of labor training and moral instruction for the colored race in schools and institutions devoted to them.

The nation has, in the Negro problem of the South, a work before it, the magnitude and importance of which it little realizes. In comparative importance, the Indian question is insignificant. We do not stand or fall on the tariff or civil service questions; they are interwoven with our life, and will not fail of attention. But comparatively few to-day think seriously of or work earnestly for the moral foundation on which we rest: an important concern in every part of the land, but a supreme concern in the South, where the balance of power is held by people

steeped in ignorance and immorality.

"A great deal has been said and written in the past ten years about the improved condition of labor in the South since slavery has been abolished. It was certainly natural to expect that the Negro would be more industrious and be a better citizen under the system of getting the wages he earned, with the privilege of spending it as he pleased, than under the compulsory labor of former years, and it is natural also to refer the acknowledged prosperity of the South since that change in no small degree to this cause. But there are abundant reasons for believing that, in some of the Gulf States at least, Negro labor is not any more reliable or better than it was formerly. In point of fact, as regards Louisiana, recent investigations show that this labor has deteriorated, and is becoming so irregular and unreliable that it is a question whether, unless white immigration can be tempted thither, the plantations will not sink into absolute decay."

It used to be thought, and especially by the Southerners, that the white man could not maintain continuous labor under the hot suns of that climate; but necessity has driven the whites into the field, and it has been proven that the supposition was a fallacy. The prosperity of the South in the last decade has been due to the fact that the Southerners themselves have gone to work. There can be no regrets that slavery has been abolished, nor that the colored man has a right to the fruits of his toil. The people of the South not only do not now regret this, but rejoice that it has been accomplished. At the same time, they cannot shut their eyes to the fact that the colored people, as a class, are not turning their privileges to the best advantage. All the States of Mississippi, Alabama and Louisiana the complaint is that they are shrinking more and more from engagements by the year or by the month, or by the week even, and are being largely day laborers and job workers.

Planters find themselves more and more at the mercy of capricious colored laborers. They can no longer rely on them for a definite period. They like to move about in gangs, working by the day, and rarely more than four days in the week, taking Saturday, Sunday and Monday for a season of frolic, in which they spend all their earnings. This would not, perhaps, make so much difference to the planter if labor was more abundant than it is. Because labor is really scarce everywhere in the South, these gangs are very independent and will altogether leave a plantation suddenly for slight causes. This is the situation as it exists to-day along the once flourishing Teche and throughout the Red River country, which in former years were known as the Arcadia of the Gulf.

What the South really needs and earnestly desires now is a large importation of reliable white labor. Any number of such, without families, would meet with a favorable reception in any part of that section. Good farmers can have cottages furnished them, and teams, and work the crops on liberal shares, or receive wages. If they have teams themselves, they can secure a much better share of crops or better wages. One dollar a day is now paid to the colored laborer in many localities, and much of this could be saved in that climate, where it costs very little to live.

Among the sugar plantations of Louisiana the condition of colored labor, we are told, is very bad. The dollar a day does not give the Negro any new interest in his industry, he works more reluctantly than he did at \$15 a month and rations. An old resident of that State writes to the *New Orleans Picayune* that "higher wages give the colored man more money for dissipation, gambling and other vices, which keep him out of the field for two or three days in each week; that the labor performed the other days is not two-thirds the value of labor formerly; that he does not regard either his verbal or his written contract, and that confidence and good feeling have been weakened between planters themselves through such a system of labor, while confidence in the laborer itself is almost utterly destroyed."

It is easier, however, to point out a grievance than to indicate the remedy. An infusion of white immigration, no doubt, would provide a satisfactory solution of this labor problem; but is the infusion practicable? We cannot forget that just after the civil war there was no inconsiderable emigration of industrious white labor to that part of the country, not only from the Northern and Western States, but also from Europe; but the experiment, for various reasons which are too familiar to need recapitulation here, did not work well and it had to be abandoned.

In Louisiana and the Gulf States, a renewed endeavor is making by the planters on the Atlantic to substitute, as far as it is possible, white for colored labor. The South American Bureau of Immigration is particularly energetic in the work, and the advantages which the State holds out to new settlers are widely advertised, not only at the North, but

also in the principal seaports in Europe; and the work has not been altogether in vain. Within the past season or two there has been a considerable addition to the agricultural population from this source. Colonel Butler, to whom the management of the Bureau is entrusted, says, thus far the Bohemians have been more successful and given better satisfaction than any other foreigners brought into the State. As compared with Negro labor, white laborers require better wages and better rations, but he thinks they will do more work; not more than the Negro might, but more than he is willing to do. The policy of selling large tracts of land to speculating companies is discouraged. It is deemed better for the State to encourage an immigration which will ultimately occupy small farms earned by the labor of the owners. No doubt that is the sounder policy; albeit it restarts the vexed and still unsolved, if not insoluble question, what is to become of the Negro whom the white immigrant must ultimately displace?

## Southern Women in the War.

The *Charleston News and Courier* requests us to help make known its purpose to publish a series of sketches by Southern women of their experiences during the civil war. It strikes us as an excellent idea, and we hope it may be well carried out. The record of the war would not be complete without it, as the *Courier* justly remarks. There was doubtless "some comedy," and much of pathos and "tragedy" in their lives, whose story, simply told, will not fail to excite the interest and sympathy which was always felt in all sections of the country for those who bore the saddest burdens of the war born of slavery. We hope that our own regular contributor, Mrs. Orra Langhorne, may be represented in the sketches. A Southern woman who passed through the ordeal with the rest, her broad views would give special interest to her narrations. The conditions of the *Courier's* plan are as follows:

"The sketches in question will be published in the *Weekly News*, Charleston, S. C., under the general title of 'Our Women in the War.' The conditions are as follows:

1. The sketches must be written by Southern women who were in the South during the war, and shall be confined to a description of events and circumstances of which the writers have personal knowledge, and with which they or their families were connected.
2. Each sketch shall fill not less than fifteen nor more than thirty pages of foolscap, written on one side.
3. The sketches shall be sent, with the real name of the writer, to *The News and Courier*, S. C., not later than March 1st, 1884.
4. Every sketch that is accepted will be promptly paid for, and any Southern woman who desires to do so can send in two or more sketches."

The "Globe" of New York, the ablest of the Negro periodicals of the country, takes up vigorously the cause of national aid for education.

This is timely, and if seconded by the dozen steadily improving newspapers which shape the course of colored voters, will help to secure the desired legislation.

In the past, the Negro sentiment of the country has been felt chiefly in claims for civil and political rights. Their many representatives from the South, during the period of reconstruction, did not make one notable effort for the real improvement of their constituents; but rather, united with their white allies in efforts to secure party control rather than the progress of their people.

The efforts of Representative Eliot and Senator Hoar of Massachusetts, in the past, and of Senator Blair and others recently, have been in contrast with the general course of the Republican party in respect to fitting the ex-slave for citizenship.

The better and fast increasing class of Negroes realize that there is now nothing to be gained by special legislation. The country has, by the constitutional amendments, given them ground to stand on; other measures have amounted to little.

What they now need and ask for is not in the name of their color, but in the name of facts; of an illiteracy for which they are not responsible, and

The Christian Union, referring to the subject which its name suggests, says: "The word *Christian* is based upon formulae of doctrine which are not authoritative, which have no value only or chiefly as historical landmarks, and going back to the apostles, which is a unifier because it is a reminder of his teaching." The same sentiment of historicism pervades the entire philosophy of the universe. If there ever is a church universal, with a common faith, the symbol of that faith will be found in exact phraseology, at least in the spirit, of the words of Christ, as they appear in essence, the Apostles' Creed, as it is earliest; the nearest approach to the simplest and purest understood by all peoples and people of smoke of battle; the unquestioned basis of the Christian Church universal.

## The Southern Press.

ALL SIDES.

The impossibility of doing any permanently good work in the South until the facts in regard to the Negro and his relations to the white man are understood, is day by day increasing the complications which surround this vexed question. An article in the *N. Y. Independent* of Dec. 27th, written by a Southern lady and ex-slaveholder, Miss Porter of Louisiana, gives a startling view of at least one side of the situation, and she speaks, to use her own words, "of the extraordinary relapse into barbarism which is going on among the Negroes" as one who "can realize and understand the causes of it as no outsider can possibly succeed in doing." There is no reason to doubt the accuracy of Miss Porter's observations in the locality of which she writes, and that such degradation as she describes should be permitted to exist in a civilized land is certainly a national disgrace; not merely a disgrace to one state or another, to this section or that, but to the whole country. Fortunately the time has come when those who know can dare to speak the truth; there is no longer any personal risk to either Northerners or Southerners in publishing the facts that come within their cognizance, and the collection and careful sifting of such evidence is of the first importance.

Miss Porter's statements in regard to the condition of the Louisiana Negroes are only a corroboration of Dr. Tucker's account of his experience in Georgia and Mississippi, and fully bear out her declaration that they are approaching a state of barbarism, and the alarm has been sounded in more quarters than one. The *N. O. Picayune* considers that Miss Porter's colors are none too vivid, and while holding that to the premature emancipation of the Negro is due the present condition, says:

"Without repeating instances we will merely state the conclusions to which they point, viz: ignorance, superstition, idleness, gross immorality and race prejudice."

In the *Church Review* for December the Rev. S. D. McDonnell writes:

"For us the Negro is not in Africa, he is in the United States. He is here nearly seven millions strong, more than twice as many Negroes as there were white people at the time our government was established. They are practically pagans. Christianity has but slightly affected either their understanding or their morals. The awful picture drawn by Dr. Tucker of Mississippi at the last Church Congress has never been gainsaid. It is substantially true. Here and there is an Uncle Tom, but for one such there are a hundred thousand savages."

A correspondent of the *St. Louis Christian Advocate* writing from Mississippi, gives the following testimony:

"With the exception of a flying trip to New Orleans in 1877, it has been twelve years since I was in the South, and I have found much to sadden me and impress me with the conviction that it will be a long while before prosperity returns to those portions of Mississippi and Louisiana which I have visited. To one accustomed to Western enterprise and 'push' there is an utter absence of every element of prosperity. With the large majority of the people it seems to be a struggle for existence, and they are well content to secure the bare necessities of life, and think they are fortunate if they are 'making a living.' There are absolutely no improvements going on, and no indications of thrift or progress. The whole country seems to be under a terrible nightmare, from which there is little prospect of awakening for a long time. The towns wear a deserted, sleepy appearance, while the farms are dilapidated and look very much as if they were only half cared for. The explanation for all this, to my mind, is to be found in the swarming population of idle Negroes, which is maintained at the expense of everything else."

.....  
The towns are the earthly Edens of the Negroes. While at Vicksburg we drove out to the National Cemetery, where 16,000 Federal soldiers are buried; in the middle of the afternoon. The whole road was lined with Negro cabins, before every door the inmates swarmed, basking in the warm sun of this genial climate, and seemingly as happy and contented as the day is long. The Negro's ideal of happiness is to have nothing to do, and his highest conception of freedom is to be his own master, so that he can be perfectly

ly idle. The Negro rarely works from choice, and has little idea of accumulation. They are all philosophers after the Diogenes school."

In offering our readers such statements as the above, as editors of the *Southern Workman*, we desire to make two points, the first of which ought to be, and we believe can be, supported by direct and positive proof.

While all that is said of the far South, especially of the Gulf states, is, if anything, less than the truth, the conditions which prevail in the states lying to the north of them, in part of the Carolinas and in Virginia and in portions of Tennessee and Georgia, is different and far more hopeful. There is not wanting evidence of the prosperity, industry and increasing morality of the ex-slaves in these sections, and the record and experience of the Hampton and other Schools, gained largely from the young men and women who have come from these localities as pupils and gone back to them as teachers, are full of promise for the future of the race, under even moderately favorable conditions. Without enlarging at present upon this, we do not hesitate to say, and this is the second point to which we are anxious to draw attention, that it is not the actual degradation, or retrogression of the Negro that is the alarming feature in the picture given us by the writers from which we have quoted, but the fact which they one and all admit, that nothing like an organized attempt is being anywhere made to change the conditions. Miss Porter says:

"Upon the top of all these facts, what is the first question to be naturally asked? Why, of course, what is being done for the reclamation of these people? And to this can merely say that in the parts of Louisiana which I know, nothing is being done. There are no schools, no missionaries, no efforts made of any kind. I believe there was a public school in F— at one time; and there may be one in name now. But when I say that when I did know of one there, it was taught by one of my own old slaves—a quadroon girl, born just before the emancipation, and as ignorant as any of the others—it will be seen what I mean by saying there are no schools. But even if there were, schools do little or no good. The half education they give, combined with total want of all habits of training, only adds to the confusion and general distress of the poor people, who seem so hopelessly adrift."

The *N. O. Picayune* admits all this, and comments upon it as follows:

"Fortunately or unfortunately, we have now to deal not with the enslaved but with the emancipated Negro. Men may differ as to whether his emancipation was premature, but he has been emancipated, and he is neither rich nor wise nor virtuous. Miss Porter tells us that he is relapsing—going back to barbarism, and the problem now is how his retrogression may best be stayed. This is not a question which effects the welfare of the Negro only. Barbarism upon an extended scale in any nation is a poisonous element which sooner or later must affect the whole body politic. What then, is to be done?"

Rev. Mr. McDonnell, speaking for the Episcopal Church, which it must be remembered includes many earnest workers, says:

"The Negro race in this country, our Church, as such, has not touched. We have not reached the Negroes yet. The Church in the various localities where they are, has had opportunity for more than a hundred years to reach them as individuals—and has not done it. The Church people in the South, did not do it in the past, and can not do it now. The simple truth is, they are too poor. Whatever may be their good will—and with a few conspicuous exceptions their will is good—they are not able. No one will ever know the straits to which the southern people have been reduced since the war. They have never told it themselves. They are proud, reticent race. After the surrender, the Chaplain and his flock—what was left of it—went home together, and found their Church tumbling into ruin—may be torn with a shell—maybe the ordure of cavalry horses in it. For nearly twenty years they have been trying to rebuild their waste places. They have all they can do to feed their own sheep. During all these years, also, they have been compelled, by no fault of their own, to regard the Negroes as their political opponents."

The co-respondent of the *St. Louis Advocate* says of the people of whom he writes, "Literally, they take no thought for the morrow" finding that "sufficient for the day is the evil thereof," while adding with a hopelessness which we trust is exaggerated:

"It is little wonder that this country is in its present condition. The fact is it is impossible for it to be otherwise, and what lies in the future for it, no one can tell."

I feel a profound sympathy for the people thus burdened and the more so that it is through no fault of theirs, and that there is no solution of the question save in the abandonment of their homes."

The acknowledgment of the Episcopal church that it has accomplished nothing among the Negroes, naturally leads to a comparison between it and other religious denominations; though, of course, it is hardly possible to make such comparison perfectly fair, or to judge, other than in a general way, of results. The Presbyterian church stands in much the same position as the Episcopal; that is, it has made no general effort in the line of mission work among the Negroes. The Congregational church—through the American Missionary Association—has, since the year 1861, made the South its special field, and has spent some \$5,000,000 (about \$300,000 a year) in the establishment of schools, churches, and several large chartered institutions, doing thoroughly good and telling work. The Methodist and Baptist denominations have by far the largest enrolment of members among the Southern Negroes, but they have done comparatively little for their education outside the churches and theological schools, and the demand is for something more than this.

The tendency of modern mission work is to broaden the foundations, to include the whole man in its scheme, and to recognize the absolute necessity of a sturdy, practical training, which shall supplement or even precede any attempt to stimulate the spiritual nature. The industrial or manual labor schools which have been established in the South have demonstrated what is needed, and their success indicates the direction in which all practical work for the colored people is gradually tending. The American Missionary Association has led the way in this new departure, and has done much for the South by proving the value of a training which recognizes all the demands of the situation. Miss Porter says, "schools do little or no good;" but there are schools and schools, and a system of industrial education for those young enough to receive it, is exactly in the line of her own convictions when she recommends that they should have

"Industrial centres, where they can be taught to work and to save, to live together in communities and grow into civilization. A few well governed Negro villages, with some common or universal industry, a local savings bank which they could trust and whose good influence they could feel, a mayor and officers, a courthouse and judge of their own, some better and higher civic training than this miserable scramble for votes—these are the things the Negroes want. At present they are a burden to themselves. Without self-respect, wrenched from their old habits, kept down by their new ones, feeling more keenly than is generally supposed their false relation to the white race, they are in a condition to excite the pity and compassion of the most thoughtful. Churches and schools are excellent things; but before they can be brought to bear with any effect there must be a great deal of other work done first; and it is in the earnest hope of calling the attention of thoughtful persons to the condition of these strangers in our midst that I venture once again to say it is no slight matter to allow a race of savages to grow into terrible reality within our borders, and even the most remote of us will, sooner or later find this out."

That anything like this suggestion of Miss Porter's, on a scale sufficient for the emergency, can be carried out, is not at present to be expected; it is simply impossible. But, surely the demand made in the following article—a leader taken from the *Richmond Planet*, (colored), is neither extravagant nor impracticable:

## "National Aid to Education.

"The popular pulse beats strongly in favor of aid to the schools by the national government. The sentiment has grown so strong that ere long it must ripen into maturity. This question is of vital import, and is one in which the rich and the poor, the white and the black—men, women and children—are all concerned. This is no party measure, but one which will result beneficially to the whole country. Illiteracy exists to a greater or less extent in every part of this country. It is a fact that there are illiterate whites as well as blacks. It is no fault of the colored people that there are so many illiterate ones in their race. Since their emancipation they have shown great eagerness and thirst for knowledge. Whilst those who wore the yoke of bondage were deprived of the advantages of education, they are not insensible to the importance of educating their children, thereby fitting them to become intelligent citizens. Between intelligence and ignorance the former must and always will predominate. With universal suffrage, universal education ought to have come."

We believe that it is a duty that the national government owes to the people to help in the removal of illiteracy. Especially does it owe this duty to the colored people, since they were emancipated by the act of government. With education they are prepared to discharge the duties of a citizen intelligently and faithfully. Congress has power to make an appropriation to aid the common schools of this country, and it ought to do so, and not stingily."

The States bear their part of the burden in educating the people, and the national government ought to lend a helping hand in fostering the public schools of this country. The public schools have done excellent work since their establishment in the South. But the ability to carry on this great work of educating the masses has decreased, whilst the demand of those to be educated has increased. In our own State, the majority of the schools in the rural districts are only open five months in the year. Our teachers are paid low wages. Our school-houses are few and, in a number of cases, our little children have to walk in some instances five miles to school. With aid from the national government, our schools could hold longer; our teachers be paid better salaries; there would be more schools. Do not bring sectionalism and prejudice into this vital question, but let our representatives in Congress unite upon the measure to aid the common schools of this country. Presidents Grant, Hayes, Garfield and Arthur, in their messages to Congress, have urged federal aid in behalf of the education of the rising generation. If Congress grants an appropriation as it earnestly desired that it should do, the people will see that this gift is honestly and wisely used."

The "Big Morning Star" is the title of an always interesting little paper published at the Carlisle Indian School, patented by Indians, and inspired by Capt. Pratt. Price 25 cents per annum. We commend it to any one who wishes to know vital facts about the Indian question, and especially concerning the Carlisle School, upon which the hope of the Indian race is concentrated more than upon any one point in the country.

The December number contains encouraging reports from the many score of Indian youths who are scattered among the farmers of Cumberland Valley, Penna.; an admirable plan that ought to command not only the hearty support of the Interior Indian Department, which it has, but also of Congress, which it has not in any intelligent way.

## Another Negro Exodus.

The Newberry N. C. *Observer* of January 3d, says: "Between one hundred and one hundred and twenty-five negroes will leave Newberry tomorrow or next day for Texas. These go to Col. H. R. Hearne, of Robertson County, Texas, one of the solid men of that section, being worth \$75,000 or \$100,000. This lot will make about two hundred and seventy-five from this county. The colored majority is being gradually reduced."

The Newberry Herald says: "The Texas fever has laid a strong hold upon the Newberry Negroes. The week before last one hundred and fifty left this place for Texas; we learn that a large party are to-morrow, and another party on the following Friday. Some of these emigrants are well-to-do Negroes, but they say that labor is too cheap here and their wages too hard to collect after they have been earned."

### Incidents of Indian Life at Hampton AN INDIAN GIRL'S COMPOSITION ABOUT CHRISTMAS

I will tell you about the Christmas day. We had a nice dinner at that time, the boys and girls are come to Winona. Miss call the name and girls take the boys arm and went over to Virginia Hall, to they going to have a good dinner. When the morning after the dinner the girls and boys both have washing dishes, the girls washed and boys are wiping. And we had enjoy time. In the Christmas morning we went to breakfast and we come in our room to see nice things on the bed, dolls, cards, little books, every nice things but I could not write all those because I don't know how write in English. When the night come we went over to supper and we come back to Winona, boys come over and play the games marching the boys and girls. Some of them played the dominoes and have a very good time indeed. When the morning come the girls nobody go to breakfast because they are tired out, that is why. And after about one week on Tuesday we had a Happy New Year again, it is 1884!

FRANCES PIESAN (WHITE COW).  
A Sioux Girl.

### AN INDIAN BOY'S SPEECH.

The following speech was made by a Sioux Indian boy of the middle class, at Hampton, before the Indian boy's debating society. He prepared it himself, making some use of what he had read, and it is given without correction.

#### CAN THE INDIAN BE CIVILIZED?

It is related as a fact in the natural history of an eagle, when the proper time has arrived for the young eagle to leave their nest, the parent eagle so stirs it up that they cannot stay in it longer and they are obliged to find some other spot in which to live. They make their first attempt to use their wings, in this they are assisted by the parent bird, who flutters over and about, spreads out her own wings, so that when the efforts of her young fail, she hears them and complains to a place of shelter and safety, by this means they are taught to fly and provide for themselves. It is so with our people, my friends, the white men colonized America. They were just like the young eaglets before the white men colonized America. They were so ignorant and superstitious, they know not what is good. This country where we are now used to be occupied by Indians; but what became of these Indians? When the white men came over they saw that the Indians were ignorant, that they cannot do anything with their ground but just to hunt on, they took away their fertile lands, drove to the western Rocky Mountains, made towns, cities and cultivated the soil, established manufactories, steamboats, railroads and telegraphs are employed in promoting God's glory and benefitting mankind. Now to-day they are a great powerful nation in the world but we are crushed and degraded. We are almost the lowest in the human nature. The white men saw that the Indians were in a state of darkness, never try to make any advance and helpless and they are trying hard to raise them up. Now it is the proper time for us to rise and to leave our ignorance and superstitions. The missionaries and government are trying to stir up our old Indian ways and they show us another way we ought to be obliged to take that is good, but our old Indians loudly murmur and complained at this good. Why? because they did not know that was good for them, but now the good people out there are succeeding in stirring up our old Indian ways from our people. Now they attempting to till ground by the government so that when they stop supporting us we can provide for ourselves. Now it is the time to lift our people while we are here; if we cannot get intellectual education, let us try hard to get the physical education. The good missionaries and government succeeded in converting many of our people, and the churches and schools are in people, and the churches all right. The situated and we are starting all right. The great question among the white men is: "Can the Indians be civilized?" Why, my friends if we are not wild animals we can be civilized as well as any other nations; even the wild animals when they are taught to do anything they can do it. The savage has a soul, a mind and a heart, therefore if we belong to the humankind we must look at the future and not the past. The bad white said that the Indians will never be civilized. They said this because they need ground, but our poor Indians do not know anything about these things, they do not look around; about these things, if they cover their heads with blankets and singing and dancing, they do not know that every steamship arrived from Europe brings hundreds of men nearly equal in size as a tribe; little they knew when farmers settled around their reservation. This en-

couraged them and since eight or ten years ago they commenced working. You all know when they commenced work how poor the houses were, but since that time great improvements have been made and I say we are advancing very slowly, we will rise from the lowest to the highest civilization. It seems to me the white men will die out if they did not make stories about Indians. Nearly every reader or some other kinds of books when I opened and look at it, while I found something about Indians, nearly all the stories are true stories but some of them are not true. I don't know whether it is true for my tribe, if the Indians have same character or reputation then it will not be true for all tribes. Some of the stories are true kinds about Indians and I say my friends some of the stories pull the Indians down. Why? because when the missionaries come East and asked some white men to go and teach the poor Indians they are afraid; they think if they go out there they will be killed and be eaten up. Some times they wrote the history never saw an Indian, but they collected from other books, and I say my friends some of the untrue stories degraded the Indians or injured our character, that makes the white men think that Indians are nearly like wild animals. I read once in a book and I found these words: "The good Indians are not live Indians but dead Indians," but it is a great mistake then to think of the Indians as a strange people, that way of thinking of them has been the source of a vast deal of errors in dealing with them. The Indians have some life in them. They were born in ignorance and how can they find out for themselves if they were born in darkness and never saw any house built of woods or stones or any other kind that will convert them from ignorance. Long time ago the white men or Saxons were savages themselves. How did they get their civilization? They got them from other civilized nations and they learned by themselves but they did not because they were no civilized nations before the white men came over. Many white men said to me: "If I go to your home would they kill me at once?" I was born among darkness before my people came to advance but I never saw an Indian kill a white man for nothing. When the Indians killed some white men whose fault is it? It is the white men's fault. If they let the poor Indians alone and not to steal their ponies, corn and land they will never kill a white man. The bad white men gave the poor Indians trouble all the time. We can have this by looking at the Indians of Canada. The white men over there are never trouble the poor Indians and they do not war with them, but in United States we bad white men trouble the Indians and we have been to war with them many times. We are getting civilized and the bad white men out in the West are jealous; they afraid we will be civilized and hold our ground. Now some of the white men are trying hard to make the poor, helpless Indians down, therefore my friends we must hurry in getting our education and go back and teach our people and stand like a man. We must not let the white men say that the Hampton boys are going back to their Indian ways &c. It is God's work, all these good work have done to Indians, therefore if it is God's work then it will never stop. The Indians are now civilized in some of these days, therefore my friends the future is ours and not the past. T. W. TUTTLE.

### From Our Berkshire Colony.

As many of our readers know, nineteen of the Indian boys and girls who went to Massachusetts last summer have been left there to complete a year, this seeming, in their case, a better arrangement than to bring them back to Hampton at present. They are in kind families, learning trades or other industries and also studying more or less, while improving in English and absorbing ideas of New England civilization. A constant communication is kept up with them, and they are not regarded as disseminated from the School but as one of its outlying departments, our Massachusetts colony. From one of the girls and one of the boys, the following letters have been recently received.

NORTH EGREMONT, MASS., Jan. 6th, 1884.

DEAR MISS—

My kind and loving teacher:

I thought I would write to you as I like to hear from you. I am well and enjoying myself. I weigh 146 lbs. I help Mrs. Loomis in the house work. I make breads and Mrs. Loomis is going to teach me to make pie and cake. I study arithmetic, geography, reading and spelling and I recite to Mrs. Loomis last night. I done seven examples and all perfect. Mary King lives in the house below me. She called on me yesterday and we went and called on Emma. Last week I went sleigh riding to see Ida Rencontre. I had a nice Christmas. I made a chicken pie. We had a nice pudding full of raisins. I got nice presents from Mrs. Loomis and from Miss Wadhams, paper and envelopes, band-

kerchiefs and ribbon for my neck, thimble and box of candy; a nice card from Mrs. Loomis; a nice handkerchief box from Miss Wadhams. Mrs. Loomis knit me a pair of handsome mittens for a New Years present. I have the cloth for a flannel dress and this is a piece of it. Mrs. Loomis is going to make it this week. I have very nice buttons, hood and shawl. One of our neighbors got killed in woods, a tree fell on him and broke his back. He was buried last Sunday. Mrs. Loomis and I went to the funeral, when he was buried. Yesterday was very cold day, the mercury was six above zero. I read in the testament with Mrs. Loomis at night before 1 o'clock. We are going to read the New Testament through. Last night we read the 10th chapter of Mark. Thanksgiving day we had very nice dinner and turkey weigh 16 lbs and oysters, nice pie and cake. I wish you had been with us to dinner. I have had four pictures taken. I send one to one of my teachers at home, gave one to Mrs. Loomis. I am going to send one to mother.

Give my love to all the girls. I must close for I have another letter to write. I am going to write to Mr. J. Wanamaker. Please let me hear from you soon. Love to you. One of your girls, JENNIE M. NO EARS.

MONTREY, MASS., Nov. 24th, 1883.

My dear friend:

I am going to write you a few lines this evening. I am thinking about book and you told us when we want book a write to me you said and I did now and I want book now and I think you will send me book. I don't know what kind book I want. I think Miss E. she know what book I want. I had book last year but I been through that book long ago. I got nothing to study, that reason I want book to study and arithmetic. I like to reading. I have reading news papers sometime and I like to reading some more very much indeed. I think that very good for me to learn too. I like that better in the book and the words tell anything because tell some about Indian too. I help Mr. Townsend a great deal, we are chopping woods all this month. We have almost through chopping woods I think. We have very cold here in Mass. we have warm only this week now. I working in the woods great deal and the chopping. We had little snow last week not very much. I milk five cows and Mr. Townsend he milk three cows. Mr. Townsend he gets up very early in the morning and I get up behind him. I like to work with him very much indeed. I am a good boy now and I have been home Indian boys and girls Hampton now. In Monterey boys very well. I think we have Thanksgiving next week. I like to stay with Mr. Townsend very well. I been church every Sunday and to Sunday School too and I learn about Samuel and Saul in Sunday school, I like too. We Indian summer that reason and laughed at me. I been talk only English every week now, but I can spell not very well, but sometime I spell very good but I cant remember and I forget some words. My toughest Mr. Townsend he help me to spell and I did spell very much too. I have very good room. It better Normal School room. I am think to go to school first December don't know yet, if I study hard I can. I take care of myself, I can in Mass. Girls very well and boys too, but no girl Monterey except five boys and we go to school then. I think I like to go school with white boys and sometime I have very good time too. Please write me soon and send me book soon you can. That all I say. Good-by. Your friend, OLIVER EATON.

### From a Returned Indian Student.

STANDING ROCK AGENCY, D. T.

Dec. 16, 1883.

My Dear—

I was glad to hear from you and was glad to hear from all the dear friends. I would like to see all their pictures some times. I have to work at the Agency since I came home and always take care of the agent's stable, but now I work outside. I think I am going to work six months more, and I will going to take a piece of land. Dear E. you is glad to know you. She is glad and happy because you said you shake hands with her, and she says give my love to your teacher when you write to her, and I said all right. We are very well, I hope you the same. My wife is her name Mary. She is a very nice woman. She has been here school six years at the Agency school.

According to tell you something about Unakump. He was married last two weeks ago. He got from Sitting Bull's daughter. And Andrew is not married yet. Now I will close and say good by. Please give my best regard to Gen. Armstrong. From your truly friend, J. P. PLEETS.

### Indian Education and Its Results.

No one is better qualified to speak on the practical results of Indian education than Mr. J. M. Haworth, Superintendent of United States Indian Schools. We quote from an address recently delivered by him, published in the "Big Morning Star."

"There are now 75 boarding-schools and 72 day-schools at agencies, the former with capacity for about 5,000 pupils, and the latter about 4,600, making a total agency capacity of 9,600. Carlisle and Forest Grove and Hampton Institute will accommodate about 650 more, making the present capacity equal to about 10,250 pupils.

One hundred children have been put in industrial schools in several different States during the past year, and more are arranged for this year, and we hope to increase the number to 400.

Besides these government arrangements there are some missionary schools, which may have some 350 more children provided for, making a grand total of 10,950 Indian children provided with school privileges, out of a school population of over 400,000.

Additional facilities will be added this fall and winter by the completion of a building in the Indian Territory near Arkansas City, Kansas, with capacity for 150 children; one at Lawrence, Kansas, for 300 children, and one at Genoa, Nebraska, for 150 more, to which we hope during the coming year to add accommodations for several hundred additional pupils. Most of this is the work, or rather the result of the work, of the last twelve years, under the embarrassing circumstances of small appropriations and, generally speaking, less sympathy. One of the greatest obstacles to our cause has been the opposition of the wild tribes. This had to be overcome before they would surrender their children for school.

With most of the wild tribes the feeling of opposition to schools has passed away, and they willingly give up their children, not only to the day-schools, but to the more important ones, situated entirely outside their own country.

The interest of the Indians having become aroused, and with it a willingness to allow their children to attend school, makes the educational the important matter in Indian affairs of to-day, and the duty of the government to provide the ways and means for them.

Our system of setting up the country is rapidly cutting off the Indians' opportunities to live as Indians do. Frontier lines can hardly be said to exist; or, if they do, it is between two advancing columns of civilization, which must soon meet. And then our country's flag will float over a country dedicated to civilized industry and human elevation. The Indian cannot be educated and remain an Indian, and he cannot longer resist some kind of education. The once almost impassable reservation line is found to be that of imaginary character which by many is easily passed, and especially is this true of many whose influence is for evil; and while they are teaching the kind of tutorage which comes from association and example, and intuitively enters into one's being.

An Indian is as ambitious for fame and glory as his pale-faced brother; a chief, however humble, is always flattered and proud to have his speech written down, and enjoys as much baying his name in the papers.

This ambition exerts over him a wonderfully controlling interest. In his natural state the profession of arms holds out to him the only road to the temple of fame. To show himself worthy as a leader in this, he endures the severest tortures without exhibiting any emotion of pain. Death has no terror for him, and cowardice is despised.

The Sioux young man, bearing his breast, cuts two gashes, and lifting the flesh between them, passes a lariat through it, which he makes last to a post or two, and then, with his weight thrown against it, dances until the flesh is broken loose and he is free to become a leading warrior. It is said of Little Big Man, a Sioux war chief, that while he was thus dedicating himself—being as his name indicates, a small man—his weight was not sufficient to tear loose the flesh, and, moving the post to which his lariat was attached, he made a bout, and turning a somersault, freed himself, much to the own satisfaction and the admiration of the spectators.

The Kiowa young man shows his ability by dancing three days and nights without food, with his eyes at all times fixed steadily upon the sun, while it shines, and not ceasing the dance when night hides the light from his view.

The per cent. who are able to successfully endure this severe test is said to be quite small. All wild tribes have some ceremony

or test to which the young and ambitious are subjected, all requiring great will power which only needs to be directed in the proper channel to show itself capable of good ends. Education is new avenues to fame, and does away with these barbaric customs.

But the education and civilization of the Indian is no new problem; it has been successfully carried out already as respects a portion of the six nations and many of the five civilized tribes of the Indian Territory.

And daily evidence is added to the testimony in the results, not only at Carlisle, Hampton, and Forest Grove, but at some of the agency schools. If any one has doubts on this point let him visit either of the leading institutions; a day there will dispel his doubts.

Hampton and Carlisle furnish most of the shoes, harness, tinware, and part of the wagons used at many of the agencies. It is interesting to remember that these are made by boys who but a few years ago were as wild as the chickens on the prairie. Indian teachers generally agree that Indian children are much like white children in their learning and school days. The boys soon learn to amuse themselves with marbles, tops, and hoops, as well as bows and arrows, while the girls as naturally take to the jumping-rope, play house and doll-baby.

In school hours when the teacher's back is turned, paper wads fly at random, and the ceiling shows the effects of good marksmanship; a change of position of the teacher finds each one intensely interested in his lesson. Pillow battles often furnish amusement for the night, and rarely is a teacher able to find them not asleep. Teachers whose hearts are in the work enjoy it and rejoice in being able to see the fruits of their labors growing up; but their labors are necessarily more arduous than if in a white school, from the fact that they must not only start an idea, but cultivate it too, as the Indian child cannot, as the white one, go home and have that idea developed, as his people know even less than he does; hence an Indian teacher's work is not done when the school hours close; he must be instant in season and out of season. It may truthfully be said that the Indian child comes to his teacher with a mind as susceptible of molding as pottery. How important and responsible, then, the position of that teacher. I call to mind a circumstance bearing upon this point.

A little Caddo boy, who for two years and a half attended school at the Kiowa Agency, after leaving school was taken sick and died. His teachers had not only taught him how to read in his week day lesson books, but, also in the Bible, to some degree to understand its beautiful precepts and promises, and had given him a Testament to take home. While confined to his sick bed he talked to his family of what he had learned of that beautiful world beyond, and what the Good Book said about it. His own eyes had grown too dim to read it, and none of the family to which he belonged could read it for him, and his mother placed it gently on his bed, and there it lay when the curtain of life was lifted, revealing to him the better world. His mother brought me the message to send to his teachers—that the lessons they had taught him had not been forgotten, and he had gone to live forever.

It is impossible for those of you who have not visited the homes of the blanket Indians to fully realize the wonderful transformation a few years of education has made in these young men, and can make in the Indian child.

These may not be classed as exceptions, but representatives of their tribes.

The Modocs were brought as prisoners of war, only a few years ago, from the lava beds of Oregon to the Indian Territory. I need not stop to describe or more than refer to the terrible scenes enacted by them, in which two of the commissioners, General Canby and Dr. Thomas, appointed to treat with them, were killed, and the life of the other member, Col. Meacham, miraculously saved. They believed they were doing as they had been done by. It is impossible to imagine a more uninviting appearing mass of humanity than they were when they reached the Indian Territory.

Christian hearts opened for them and Christian hands took hold of them, with day-schools for the children, and night-school part of the time, for all. They have been wonderfully changed to an industrious, well-dressed community of farmers, living in good, comfortable houses of their own building, their children averaging as well as farmers' children usually do in learning. Of only about one hundred souls in the tribe, over fifty of them are professed Christians, with Steamboat Frank a minister and Scar-faced Charley an elder in the Society of Friends.

In 1877, Joseph's band of Nez Percés were upon the war-path, and made one of the most wonderful fighting marches of which history gives us any account—successfully crossing over almost fifteen hundred miles of country, with an army in the front and rear, with but

a small loss of either people or property, finally voluntarily surrendering at Bear-Paw Mountain, Montana, from where they were brought, prisoners of war, to the Indian Territory, in 1878. In 1879, two young men of the same tribe, who had been educated by Miss M'Beth at their Idaho home, came to work with them as teacher and missionary. One of them, Archie Lawyer, after a few months' faithful service, was taken sick and returned home, remaining there over two years; the other, James Reuben, remained, and fitting up a carpenter-shop for a school-house, commenced a school for their children through the week, and preached to them all on Sundays. Out of a school population of sixty-five the average attendance was sixty-two. The influence of the school was felt, and exercised strong control over the entire band, until all have cast aside the Indian customs, and dress as white people. One hundred and seventy-two have been admitted as members of the Presbyterian Church, of which they have an organization and of which Archie Lawyer is now their pastor, and the officers are chosen from their own number. The service is conducted in the Nez Percé language and entered into heartily by all those attending.

Another very notable example of the civilizing effects of education is found in the Flathead Colony of Sioux, in Moody County, Dakota. Under the provisions of their treaty of 1868, the Sioux can absorb themselves from the tribal relationship, enter upon government land, just as white people do, and become citizens of the United States. Taking advantage of this provision, a number of Santees gave up agency rations and annuities, and selecting homesteads in the valley of the Sisseton River, in Dakota, have made themselves homes. When I visited them they numbered over four hundred souls, and were getting along as well as their white neighbors. Most of them had good, comfortable houses, and well selected farms; their crops were good. I found them thrashing wheat with two eight-horse-power machines, managing the machinery and business themselves. They had two churches, Presbyterian and Episcopal, a good school, taught by one of their own people, a graduate of the training school under the care of the Rev. A. L. Riggs, at Santee, and the general tone of their life was favorable. They had paid their taxes and kept their credits good in bank and store. Another similar neighborhood is located in the Peoria bottom in middle Minnesota. These are both the results of the missionary and educational labors of two noble and devoted families—the Riggs and Williams—the younger generations of whom were missionaries by inheritance, and have grown up in the work, the good fruits of whose labors are found in all the branches of the large tribe of Sioux.

The results of education are very noticeable in the agencies where boarding-schools have been well conducted; the influence is reflected upon the adults in many ways. If the school is industrial, as all should be, the opposition to labor, on account of its being profitable, is overcome; in fact, it may be said that the advance in civilization at agencies of equal possible opportunities is much greater at the one where a good boarding-school is conducted; it educates those outside the buildings as well as those in, and demonstrates the fact that education is the greatest civilizing agent we can employ in lifting up the old as well as the young from barbarism. While the well-conducted agency schools have been educating those in and near them, and overcoming the superstitious opposition to schools, and making possible the more important ones away from the Agencies, such as Carlisle, Hampton, Forest Grove, and I may add, that of Albuquerque, N. M., they too have been doing a grand work, not only in educating the Indian youth sent to them, and through them the Indians at the agencies, but the country in general. They have more effectively advertised to the world that the Indian is a man, susceptible and capable of intellectual and heart culture, as well as the mechanical arts; that beneath the paint which in his wild state spoils his face there is true manhood and a heart which may be made a fit temple for the Most High.

But some are discouraged because a few who return home from these institutions go back again to Indian ways. This is to be expected, and until a larger number are educated, and a stronger sentiment created in the tribes against it, it will continue; but even now the per cent. is very small, and while the number of those educated is increased, as it will be very materially in a few years, the number going back to Indian ways will grow less and less.

The influence of the Indian girl, educated and trained at any of these schools, is not lost, even if upon returning home she has to submit to the laws of the tribe and be sold as a wife by her uncivilized father to some wild and uncivilized young man for a few pennies, and for a time bury her light under a bushel; her own home, if only a tent or a tepee, will soon begin to bear evidence of

knowledge received elsewhere than from her own people. And when a number from the same tribe get together, it cannot be otherwise than an influence for good upon the whole tribe. Many of the boys go to school and find work, and this will increase as the number increases, until the tribes becoming educated, new avenues for business will naturally present themselves.

Indian education means a great deal. It means broken up tribal relationship, individual ownership of property, severity in lands, farms and settled homes. In a word, the acceptance of the white man's civilization, to become an integral and homogeneous part of this great nation—not simply a receiver of its bounties, but a sharer of its responsibilities and a supporter of its laws.

#### A Problem in Civilization.

The Rev. M. J. Savage of Boston, has recently preached and published a sermon on the Indian question under the above heading, which deserves the widest circulation. Wishing we could give it entire, we must content ourselves with the following extracts, remarking however, that the missionary work referred to, has been directed to simple general ideas of God and of religion; and to inculcating morality and industry rather than to "special tenets and beliefs;" of this we could give many illustrations. Missionary work has created the few bright spots in Indian life: enough to justify high hopes for the race.

"When we have ceased to fight the Indians, what then? Is the question of justice and civilization settled?"

Instead of that, it is literally true that, after two hundred and fifty years of our dealing with these people, we have not as yet taken the first intelligent, persistent, serious step toward solving the Indian question. When will it be solved? When they have permanent and peaceful homes; when they are self-supporting; when they have least the rudiments of a common education, when they can read and thus come into sympathy with the common life of our country; when they have the opportunity held out before them, on certain terms that are fair and just, of attaining the position of citizens. It will be settled when these things are done.

What have we done with the Indian? You know in a general way, that there are a certain number of Indians scattered over the plains, although you do not know exactly where. You know that the army has fought them, that the United States agents now and again have plundered them, that certain spasmodic efforts have been made to educate them, that missionaries of different denominations have been sent to them, who have endeavored to convert them to their own special tenets and beliefs.

The Indians possessed this country by right, when our fore-fathers came here. What have we done with them? We fought them; we drove them from their homes, from one home to another, pushing them west and still west, until suddenly, by a flank movement, our civilization took possession of the Pacific Coast; and, since then, we have been grinding them between the two movements at the centre of our country. We have made treaties with them over and over again; and perhaps it is literally true that not one single treaty has ever been made that has not been broken. We have solemnly appropriated money to build them school-houses and to educate them, but we have not done it. We have made them sacred promises time after time, but have broken those promises. We have done everything except, like an independent, free, strong, manly nation, keep our word, and deal justly and fairly with these people. I think I shall not be overstepping the limits of sober history,—and I challenge contradiction of the statement,—when I say that, of the long series of bloody, merciless, cruel wars that have been fought, nine out of ten have been caused by our own perfidy, our own treachery, our own aggression; and that, in almost every case, the Indians have shown a remarkable disposition, considering the stage of civilization that they have attained, to be true to their treaties to keep faith with us. They have borne with us patiently, much more patiently than we should have borne with them. From their standpoint they have nobly attempted, in the main, to be true to the solemn treaties into which they have entered.

An army officer said on one occasion, It is hard enough for our soldiers to be compelled to go and kill these people, but it is still harder when they have to go with the consciousness that the Indians are in the right.

Let me give you an instance. A white man—of that type of low-lived villains that makes forever the dirty, half-ravaged-out fringe of our frontier—assaults and outrages

an Indian wife. The husband does what we would honor anyone here for doing,—kills him like a dog. Then he flees. The United States, thereupon, makes a demand upon the tribe to which the Indian belongs, that he be given up for punishment. The chief of the tribe replies that they would gladly give him up, although they think he did right, if they could find him; but they do not know where he is. And because they do not carry out an impossibility, war is declared and the whole tribe is made to suffer. Its goods are confiscated, its dwellings burned, its people put to death, because they tried to stand up for something that, in their rough way at least, they consider justice.

I do not deny that the Indians are barbarous, cruel, uneducated, uncivilized. I simply say that, in spite of this, the facts are essentially as I lay them before you this morning.

Now, what is to be done with these people? There is a general impression, and I find it almost everywhere, when I speak of the matter—that the Indians are only few in numbers. This is true. People think that they are gradually dying out,—fading, as we say, before the advance of the higher type of civilization,—and that all we need to do is to wait and let things alone, and the matter will settle itself. Unless you have studied the matter more deeply than most people have, I shall perhaps surprise you by making the statement that the Indians are not dying out. I had a conversation on this subject two or three years ago with Major J. A. Powell, of the Smithsonian Institute, probably the best authority on the Indian question we have today in America. He certainly surprised me, when he told me that there was probably about the same number of Indians in America to-day that there was when the country was discovered.

If we remember that the Indians are some ten or twenty thousand years possibly behind us on the road toward civilization, and if we remember that within five hundred years the highest Christianity of Europe has persistently handled the inquisition, the rack, the thumbscrew, and all the most ingenious methods of torture in trying to persuade those of their own kindred and blood,—if we remember these facts,—we should not be too much horrified at tales of Indian cruelty. And we should remember also what is true, that every deed of barbaric cruelty on the part of the Indians you can match with one on the part of the whites. We ought still less to call up their cruelty as a reason for the method with which we have dealt with them.

The Indians had a certain rough, brave manly virtue, when they were discovered. We learned nothing in the way of vice from them, when we came here. We could match them at every point, and teach them something new. And the very worst vices that the Indians are cultivating to-day are those that we have taught them, and that did not exist here when this country was discovered.

I have no sentiment concerning this matter. I do not plead for benevolence. I do not appeal for humanity. I believe that we had a right to come here; we had the right of conquest. We had the right of the higher type of civilization to supersede the lower; and along with that right,—and this is my one plea,—went the duty of justice. The United States from the very first conceded that the Indians had the right of occupancy of the soil.

They are not such outright hopeless savages as we are accustomed to suppose. This human race, of which we are a part, started perhaps a hundred thousand years farther down the road of barbarism than the position the Indians occupy to-day. We all started there. Age after age, through blood and tears and difficulty and struggle, we have been toiling up toward the place we occupy to-day. What are these Indians? They are simply laggards in the race, they are fractions of humanity that have not as yet advanced along this common road so far as we have; but they have advanced a great deal farther than many are aware.

Let me give you an illustration. We delight to read Homer's description of the life of the Greeks at the time of the Trojan War. We talk of their kings, and think of them as wonderful men, as possessing many of the arts of life. And yet, when this country was discovered, the Iroquois tribe of Indians, that went by the name of the Six Nations, had reached politically almost precisely the same point of development that was occupied by Agamemnon and his companions, when they banded together to fight against the city of Troy. What were these Greeks? They were separate tribes, each tribe under the command of its *basileus*, or king, as we translate it. It would be a great deal nearer the truth, if we called him war-chief; for that is what he was. These Greek tribes banded together under different chiefs to fight Troy. The Six Nations were six different people, each banded together under the government of its own chieftain, and these federated into one common people. They had reached relatively the same position as that occupied by the Grecian kings and people at the time of

## ITEMS FROM SOUTHERN JOURNALS.

It is a poor defense of the "Solid South" that it is solid to confront a "Solid North." Better would it have been for us twenty-three years ago if there had been no "Solid South." In that event, there would have been no "Solid North," and no war, coupled with complete Southern subjugation. And now, after our solidity has resulted in war and subjugation, to continue this sullen solidarity is to invoke adverse passions and prejudices at the North—to repel the very sentiments and impulses of friendship and favor that we chiefly need—upon the absurd plea that our solidity is necessary to defend us from the consequences of that solidarity! The very cause of our greatest troubles is urged as our remedy for them! Not only is this ridiculous and silly in the extreme, but experience has taught us (when we were stronger and the North weaker) that Southern Solidity has been a mistake, a delusion and a snare, born in peace and in war.

We cannot afford to be solid, even if we really agree in principle and policy upon all public issues; but to insist that we shall not divide—that we shall still remain solid—when we differ among ourselves upon the gravest questions of public interest, is the part of folly gone mad.

The North has nothing to lose by solidity and everything to gain, for its solid strength is irresistible. The South, on the contrary, has everything to lose and nothing to gain by a solidity which, at best is comparative impotence, and which inevitably raises up against it a Northern solidity which is sure to overwhelm us, not only on the sectional issue, but upon every other.—*Richmond Whig.*

## Virginia Coal.

Under the above caption, we find that many of our Northern exchanges are speaking of the great mineral resources of this State, and especially of the coal fields recently opened to the outside world by the Norfolk and Western Railway. Many of our contemporaries write in a tone of surprise; but this is not singular, for both Virginia and North Carolina have been systematically undervalued or ignored by our Northern exchanges. But as capital from that section comes into this, the papers north of the Potomac become more enlightened. Between the coal deliveries of Lambert's Point and Newport's News this "Virginia coal" is destined to be known all over the world, and this harbor (speaking in the large sense), is certain to become one of the greatest coal stations in the world, as will be abundantly manifest when the Panama Canal is finished, as it will be in a reasonable time.—*Norfolk Landmark.*

The colored press is almost unanimously in favor of a high protective tariff, because we think that it is the doctrine of the Republican party. If our contemporaries will reflect a moment, they will see that a protective tariff always bears most heavily upon the agricultural population, and if the colored man is not an agriculturist they are nothing. If this is true, and it is generally conceded, do our contemporaries espouse the cause of the people or pursue the path of duty in advocating a tariff system which feeds the manufacturing interests at the expense of the agricultural interests? We think not. Colored men are generally farmers, consequently they are free traders, or should be. Let our colored contemporaries give a reason for the faith that they profess.—*N. Y. Globe.*

## A Good Example.

The Atlanta Constitution, which truly deserves the name of a great paper, showed a few days ago the best and noblest quality of all greatness—charity. The sudden change in the weather brought to Atlanta an unaccustomed severity of cold. The poor, unexpecting, had made no provisions for such a calamity, and they were suffering on every side. The Constitution, with its wonted enterprise, took the work of benevolence in hand at once, and a few hours fires were burning brightly in many humble houses. Rich men helped not only by purse but by hand, and gave their best efforts to the noble cause. The time was short till the warm glow of comfort drove out suffering from the quivering hearts and trembling limbs of the bonest poor. Let the good work go on everywhere till out of the abundance of the fortunate there shall be found comfort for all the needy.

The Negroes of Virginia are talking of holding an Industrial Fair. This is far better than holding political conventions for airing pique "eloquence."—*The Era, Charleston, N. C.*

## ITEMS FROM THE INDIAN COUNTRY.

## The Indian Question.

The idea is just gaining ground that it is better to give these Indians lands than tribal reservations; that it would be a mercy to them to compel them to make their own living rather than to support them in idleness, and that they would be more effectually and honestly governed by the war than the interior department of the government. There are many who have made a study of the Indian question who believe that we shall never have any power with the Indians until we cease recognizing them as tribes, and deal with them in their individual capacity. So long as they are governed by chiefs and supported in laziness, so long will the war-path be their real or fancied grievances. The present methods of dealing with them have failed, and it is worth while to try something else. Placed upon farms, and each one compelled to support himself and those dependent upon him, and the business of living will appear to be a more serious business than it does now. Let the Indians be made individually amenable to the laws of the country like other tillers of the soil, and lawlessness and war will not be so fanciful a thing to them as it is now.—*Chicago News.*

## Red Landholders.

Few people reflect upon the fact that the Indians are the richest landholders in the United States. We have 237,666 of them, exclusive of the Alaska Indians, holding 1,319,768 acres of land. Some of the tribes own 2000 acres per Indian. The average is about one square mile to each Indian, while a white man is not allowed to pre-empt more than 160 acres of the public land.

Secretary Teller advises the cutting down of these vast reservations and the payment of the value of the land taken to the Indians. Of course the Indians have a good and square title to the land, and it is not to be transferred to the public land, save through the most honest negotiations with the Indians and their full understanding of what they are doing. This is a large amount of land to be occupied by Indians, many of whom are not utilizing it, but let us remember that millions of acres have been deliberately stolen from them, or obtained by the Government through the most despicable swindling processes. The only thing which can be done is for the Government to acquire a large portion of the reservations by fair purchase, and to use the proceeds of the sale of such lands for the establishment of Indian schools and for making the adults either farmers or herdsmen. Three fourths of the 75,000 Indian Territory Indians are civilized Indians, wearing citizens' dress, cultivating fields and herding cattle, providing good schools for their children, and having about 140 churches and 200 schools. Outside of Indian Territory, which is a favored spot, the "wards" of the Government depressingly exhibit the emasculating effects of the wretched Indian policy of the Government. A very large proportion of the Indians are fed by the Government and live in demoralizing idleness. Upon the children of all these Indians can be wrought a saving work, and it is through the education of the Indian children that the Indian problem must be solved. The Indian schools at Carlisle, Pa., at Hampton, Va., at Forest Grove, at Lawrence, at Genoa, at Chillicothe, are doing a good work, but there should be four or five times as many schools. The Federal Government has undertaken to succor the Indian, and it is about time he was treated as a human being. Before our laws the Indian is not really a man. It would be well therefore for the Government to use some of the money it has stolen from the "wards" in educating the papooses. Uncle Sam has fastened the Indian responsibility and he must live up to it.—*Courier Journal.*

"Our Brother in Red," published at Muskogee, Indian Territory, by Revs. J. F. Thompson and T. F. Brewer, has improved and increased in matter, and is a very important and useful paper, instructive about church and Indian affairs and well gotten up. In making up your list of papers, do not forget "Our Brother in Red."—*St. Louis Christian Advocate.*

## DAMON &amp; PEETS, 44 Beekman Street, N.Y.

dealers in Type, Presses, Paper Cutters, and all kinds of Printing Materials, both New and Second-hand. A restricted list of prices issued weekly, of all material on hand, and (much of which are genuine bargains) will be mailed free on application.

We can furnish anything from a Bodkin to a Cylinder Press.

## Negroes in the Indian Territory.

The following from the "Chieftain," edited by William P. Ross, is an interesting statement. From personal observation last fall, we endorse the concluding sentences that "their (the freedmen's) condition is far in advance of that of any portion of that race on the face of the globe." For all that, they should have shared in the 15-50 *per capita* recently paid to all but colored citizens.

As to numbers, the Negro population of the five "civilized" nations is about twenty thousand; the Indians number about sixty-five thousand; both are increasing, but the blacks with far greater rapidity. Already they are almost as numerous as the pure blood Indians, who are hardly holding their own; the increase being with the mixed class created by the presence of nearly twenty thousand white men in their midst, with whom the Indians affiliate.

In the Creek nation only, Indian and Negro blood commingle to a considerable extent.

The blacks are destined to an important part in the future of that region. They have, however, but scant chances for education; the primary schools referred to below amount to little, while they have no chance whatever for a more advanced education, being not only excluded from the public high schools, but, we understand, also from the missionary institutions established by the Methodists, Baptists, Presbyterians and Congregationalists. From the Hampton stand-point, this seems rather strange.

That the Negro of the Indian Territory has no share in the charities established by the Christian philanthropy of the East, is a serious fact. A few have found their way to Hampton and are doing well.

"A valued friend, writing from the Choctaw Nation, after expressing the opinion that the freedmen of that Nation will be adopted as citizens in a few months, desires information in regard to the status of freedmen in the Cherokee Nation. As the subject is one of general interest, we have thought it not out of place to repeat and answer the questions he propounds, in the columns of the CHIEFTAIN as follows:

1. Are they citizens, entitled to all the rights and privileges of Cherokees?

At the beginning of the late civil war in the United States, there were about 2,000 colored people who were, with but few exceptions, owned and held as slaves by native and adopted white citizens of the Nation. During the war the Cherokee National Council passed an Act emancipating all these slaves. At the close of the war, in the treaty negotiated between the United States and the Cherokee Nation in the City of Washington in 1866, it was agreed "that all freedmen who had been liberated by voluntary act of their former owners or by law, as well as all free colored persons who were in the country at the commencement of the rebellion, and are now residents therein, or who may return within six months, and their descendants, shall have all the rights of native Cherokees." The date of the treaty was the 19th of July, and the six months' limitation expired in January, 1867. The rights of those who fall within the terms of the treaty are all the rights of native Cherokees.

2. How many are there in the Cherokee Nation?

According to the census taken by the authorities of the Nation in 1880, there were 1,976 recognized as citizens, 249 claimants to citizenship, and 758 non-citizens within the limits of the Nation. The claimants and non-citizens were composed chiefly of those who were barred by the limitations of the treaty above given. Whatever may be the humanity of their case, the law is against them, as declared by the Department of the Interior.

3. Do they have equal educational privileges? Do they have separate schools, or do they attend the same school that the Cherokee children do? Can they send their children to the seminaries?

They have equal educational privileges, so far as primary or neighborhood schools are concerned. Some of these schools established for their benefit are taught by teachers of their own race—others by white or native teachers. Their schools are separate, and it rarely happens that the two classes of children attend the same school. Their children are not admitted to the seminaries or the orphan school.

4. What churches are there among them, and what is their moral and religious condition?

The churches among them are Baptist and Methodist, the latter, we believe, chiefly under the A. M. E. Conference. The preachers who labor among them are generally of their own race and possess different degrees of qualification. Their moral and religious condition taken as a whole, is good. As a class they give our courts but little trouble, and are generally self-sustaining. Of course there are exceptions among them, as among other races of citizens. These exceptions are found more generally in the ranks of the younger persons among them, and in localities where their numbers are greatest, and where temptations to dissipation, gambling and idleness exist. Their exclusion, in common with adopted whites and Indians, from all participation in the fund paid recently *per capita* among the native Cherokees, which amounted to only \$15.50 per head, gave rise to some dissatisfaction among them, but when contrasted with the other privileges they enjoy, if not so full in some few respects as they should be, is of minor importance. With all the land, timber and water they can use, with range for their cattle, horses and hogs, with the enjoyment of the elective franchise and equal protection under the law, their condition is far in advance of that of any portion of the race on the face of the globe.—*The Chieftain.*

## The Continent.

The Continent Magazine has been signaling its removal to New York by the issue of several unusually attractive numbers, in every way worthy of emanating from the metropolis—no longer of commerce alone, but of art and literature as well. The first number bearing the new imprint offers some amendments to the Philadelphia home of the Continent. In an appreciative article on "The Mission of Great Art Schools," in which the career of the Philadelphia Academy is sketched, the illustrations being reproductions of paintings by Philadelphia artists abroad. A wonderfully illustrated article on Tennyson, entitled "The Poet's Poem," and its Author, derives interest from the recent elevation of the poet to his Baronial dignity. The career of "Robin Hood," is handsomely illustrated by Howard Pyle, and other illustrations maintain the Continent's favorable reputation. For the Christmas number, just out, there are Christmas Poems by Mary D. Brine, and the author of "Arius, the Lybian," Christmas stories, and other seasonable matter in abundance. The Continent seems to have struck a new vein of prosperity, to which its labors in behalf of good reading antedate it.

## The Youth's Companion.

As a source of profitable entertainment for the family, no paper exceeds in interest the YOUTH'S COMPANION. Its list of writers embraces the best names in periodical literature, and it is evidently the aim of its editors to secure not only the best writers, but the best articles from these pens. A remarkable thing for a single paper to obtain such a succession of lively and brilliant stories and illustrated articles. While the COMPANION is in the main a story paper, the mental, moral and religious training of young people is an end kept steadily in view. Its articles on current topics are written by the most qualified pens, and present, in a clear, vivid, direct way, the fundamental facts of home and foreign politics, and all public questions. Its original anecdotes of public men are valuable in their influence in stimulating right ambition and a high purpose in life. It is published by PERCY MASON & Co., of Boston, who send specimen copies upon application.

## Washington Irving.

The writings of the most honored of American authors are at last made accessible to all readers, and in such varied and beautiful forms as to delight the most fastidious taste, and at prices so low as to be an astonishment to book-buyers, and a contribution to book-sellers, of whom the "Literary Revolution" makes no account. As examples, we have "The Legend of Sleepy Hollow" for three cents, "Wolfert's Roost" ten cents, "The Sketch Book" 20 cents—these in paper binding but large type in neat or elegant cloth or half Russia bindings, his "Choice Works" are published at prices varying from 30 to 45 cents, and his complete works (excepting "The Life of Washington") in the superb CAXTON EDITION, six volumes, over 5,000 pages, choice typography, elegant binding, for only \$4. Specimen pages or large descriptive catalogue are sent to any applicant on receipt of one cent, or a note, or a check filled to be paid for after arrival and examination, on reasonable evidence of good faith, being given. Address John B. Alden, Publisher, 18 Vesey Street, New York.

## At Home.

## Hymn to the Seasons.

When Spring unlocks the flowers, to paint the laugh-  
ing soil!  
When Summer's balmy showers refresh the mower's  
toll!  
When Winter binds in frosty chains the fallow and the  
flood!  
In God the earth rejoiceth still, and owns her Maker  
good.  
The birds that wake the morning, and those that love  
the shade!  
The winds that sweep the mountain, or hush the drow-  
sy glade!  
The sun that from his amber bowers rejoiceth on his way!  
The moon, and stars, their Maker's name in silent  
pomp display.  
Shall man, the lord of nature, expectant of the sky,  
Shall man lose unthankful, his little praise deny?  
No,—let the year forsake his course, the seasons cease  
to be.  
Thee, Master, must we always love; and, Savior, honor  
or Thee.  
The flowers of Spring may wither,—the hope of Sum-  
mer fade—  
The Autumn droop in Winter,—the birds forsake the  
shade—  
The wind be lulled,—the sun and moon forget their old  
deceit—  
But we, in nature's latest hour, O Lord, will cling to  
Thee!

—Bishop Heber.

## Care of the Baby.

A traveling companion remarked that "there needs to be about one child killed on every train to make people take proper care of their children." While strongly tempted to ask "Attie," Miss Peaslee's question, "the you a parent she was not; knew it by the way she started every time a perverse but attractive little fellow in the forward end of the car climbed on the back of a seat, and balanced there; knew it by the way she held her breath when he approached the car door. Later in the day her words took on new meaning, and seemed to have a good deal of force. A young woman, and one who was evidently her mother, were traveling with a baby—a little creature in a long white dress, but with no wraps whatever over it, though the mother and grandmother both had on winter cloaks and hats. The baby was fed from a bottle, and at different times during the day the mother had gone out to the lunch-room by the way and had the bottle filled. About four o'clock in the afternoon, the interest I had felt all along in the trio deepened; the baby, who had mildly resented its treatment at various times during the day, became more energetic—in fact, it cried as hard as it could cry. When it had cried for twenty-five or thirty miles, the mother was so overcome that she cried, too, and gave the baby to the grandmother, who danced it up and down, till my head grew dizzy and ached for sympathy. The mother took it and tossed it still, up and down, and grandmother tried dexterously to insert the drinking apparatus into its mouth. An accomplished acrobat could not have swallowed a mouthful at the rate of speed the boy was going up and down. Probably at this stage of proceedings, there was not a woman in the car, who did not believe that she could quiet that baby by loosening the clothing over its aching stomach, wrapping it up in a warm blanket, and cuddling it at her side. A motherly-looking woman came to them and said, "Let me take the baby;" but she was glad to return it soon, saying, "This boy is cold; that is one reason why it cries; its hands are like ice, and its head, too." "I should like," said a gentleman behind me, "to get a kind of a cheap child, not one of my own, and see if it could not be brought up as it ought to be; do you suppose that is necessary over there?" Night came on, and as the call to "change cars" rang out, above this and the noise of moving feet the continued protest of that poor ill-treated babe sounded in our ears. "Who didn't suppose," said the motherly-looking woman, "that everybody knew that a baby's hands should be kept warm, and its clothes loose, and that two or three kinds of milk meant cold and distress to a child of that age?" The enlightenment of the masses, even yet incomplete, I thought, when the woman at my side said, as she disappeared in the darkness: "Why didn't that mother, instead of crying, try to think out what a simple story but involving profound question—Why was it safer for shipwrecked men to go where a church upreared its cross beavenward than where there was no church? Was it not because it is the symbol of that religion which brought 'Peace on earth, Good will to men?'" E. W. B., in N. Y. Post.

ESSAY ON PURPOSE.

A purpose is the eternal condition of success. Nothing will take its place. Talent will not; nothing is more common than unsuccessful men of talent; Genius will not; unrewarded genius is a proverb; the "mute inglorious Milton" is not a poetic creation. The chance of events, the push of circumstances will not. The natural unfolding of faculties will not. Education will not; the country is full of unsuccessful educated men; indeed it is a problem of society what to do with the young men who are turning out of its colleges and professional schools. There is no road to success but through a clear strong purpose. A purpose underlies character, culture, position, attainment of what ever sort. Shakespeare says: "Some achieve greatness, and some have greatness thrust upon them," but the latter is external, and not to be accounted as success.

It is one of the gracious features of our nature that we are capable of forming high and noble purposes. The career of Beaconsfield, the most brilliant figure amongst modern English statesmen, is an illustration of how a definite purpose carries a man on to its fulfilment. When the young Jew was laughed and jeered into silence in his first attempt to address the House of Commons, he remarked: "The time will come when you shall hear me," speaking not out of any pettishness of the moment, but from a settled purpose to lead his competers. The rebuttal but whetted the edge of his grand ambition.

It is the character of the purpose that determines the character of the man, for a purpose may be good or bad high or low. It is the strength and definiteness of the purpose that determines the measure of success.

## From On the Threshold.

## FAITH.

"If you travel through the world, you will find cities without walls, without literature, without kings; cities which owe not what they are to their walls or their literature, but to their faith; but there never was nor ever shall be, any one city seen without temple, church or chapel. Nay, methinks a man would sooner find a city built in the air than one in which there was no form or place of worship. For this it is which contains and holds all human society, this is the foundation, stay and prop of all."

It is well to remember these words of the great Plutarch, that nothing so universally engages the attention of men as religion, hence nothing will bear so long study. The experience of life generally tends towards the confirmation of faith. A young man pronounced in unbelief is premature. He has decided that Jupiter has no more to say looking through a telescope, ask young men to wait and hear what life has to say before they formulate their doubts. The years have a message for you which you must not fail to hear.

An eminent American statesman, though an unbeliever, daily read the Bible on the ground that every citizen should be familiar with the religion of his country. Had he gone a step farther and read it because it contained the religion of the civilized world, he would have read it from a higher consideration and perhaps to a better purpose. For this faith marches at the head of the army of progress. It is found beside all the most refined life, the freest governments, the profoundest philosophy, the noblest poetry, the purest humanity. I do not think it too much to expect of young men that they shall know its external history, and from that go on to raise the question. What is the secret of the power of Christianity? Why does it lay strongest hold of the best races? Why does it have the way to freedom and social elevation? Why does it make a man better? Why does it have the peculiar effect of ennobling and dignifying character? Why does it make a man more powerful by which it breathes upon troubled hearts? Why does it make the path of daily duty an easy one to tread? Not long ago a ship was wrecked upon the reefs of an island in the Pacific. The sailors, escaping to the land, feared lest they might fall into the hands of savages. One climbed a bluff to reconnoitre;—turning to his mates he shouted: "Come on, here's a church!" A simple story but involving profound question. Why was it safer for shipwrecked men to go where a church upreared its cross beavenward than where there was no church? Was it not because it is the symbol of that religion which brought "Peace on earth, Good will to men?"

THEO. MUNGER.

From On the Threshold.

## Agriculture.

## Posts that will last.

The decay of wood imbedded in the earth is difficult to guard against; but, according to the British Farmers' Gazette, a simple precaution, costing neither money nor labor, will increase the durability of posts put in the ground by fifty per cent. This is simply by taking care that the wood is inverted—i. e., placed in the opposite direction to that in which it grew. Experiments have proved that oak posts put in the ground in the same position in which they grew, and placed top downward in twelve years, while their neighbors, cut from the same tree, and placed top downward, showed no signs of decay for several years afterward. The theory is that the capillary tubes in the tree are so adjusted as to oppose the rising moisture when the wood is inverted.

## Onions for Fowls.

Give the young chickens a weekly feed of chopped onions. It helps to keep them healthy. A medium sized onion minced and mixed with enough of a brood, if you have been enterprising enough to get early chickens, don't let them die for want of a little extra care. Give them one feed daily of rice and another of oatmeal. You can get cheap quantities of other meals be any sort of kitchen scraps, occasionally a little cracked corn. Twice a week give some raw meat very small. At the first sign of gapes, treat the patient to a bread pill, thickly coated with red pepper or a small lump of camphor. It may be necessary to repeat the dose. We have never known a second dose to fail of effecting a sure cure.—Toronto Globe.

## The Destruction of Our Forests.

Of a desolation which is recorded in history far back of the days of Roman or even of Grecian glory, we read that "a man was faithful according as he had lifted up axes upon the thick trees." In the days when American forests were considered practically limitless, our fathers were far too famous for lifting up axes upon the thick trees, and the resultant destruction is even now upon us, like the Philistines upon Sampson. This destruction comes upon us in many forms, most of which are, in fact, rapidly and terra cotta, for example, here is a beautiful stream of water, for example, which was a great element of wealth to the region through which it flowed. It might not only have continued to be so, but to have gained in usefulness instead of being either destroyed or swiftly passing away. The numberless little hollows on the hills where were the springs which grew into rivulets to feed the vine, and so the springs are dry, and the rills no longer murmur their once glad songs of labor as they hastened down the valleys to turn the mill-wheels of mechanical industry.

## Fruit Trees for Ornament.

Can any one tell me why a grapevine is not a suitable ornament for a front porch, or what would be the objection to a fine standard pear or grand wide spreading apple tree in the lawn? Was ever a blossoming apple tree more beautiful than either of these when the flowers come out? And is not the rich green of the leaves a thing of beauty all the season? When the purple clusters hang thick on the vine, and the red apples and juicy pears shine through the leaves in autumn, it certainly could not take anything from the beauty of the scene. When one has but little space, as in a village lot, could not the useful and ornamental be profitably combined by putting in handsome fruit trees in the place of those designed only for shade? And a pretty dwarf berry. A row of young cherries before a fine house with a many pillared porch is one of the pleasant memories of my early walks to school. The old doctor who owned the property gave those trees as much care and attention as he ever did a rich patient. He was almost daily doing something for them, if it was only to pour a bucket of suds about their roots, loosen the ground a little or bury a dish of bones under the soil. But their marvelous growth was the wonder of the village, and in a very few years they cast a deep shade over the whole sidewalk, and yielded a bountiful supply of great ox-heart cherries. Let us give our children all such memories we can, for they are healthful for mind and body both. Fruit, or no fruit, means riches or poverty in the minds of our little children, and there is certainly a thriftiness about a home well supplied with this luxury which is better than an old stocking full of hard dollars in the strong chest, but one old crab apple tree in the pasture lot.—Correspondence Indiana Farmer.

## Health and Humanity.

## HOE HANDLE MEDICINE.

On a bright pleasant summer morning, a young man with a silk muffler around his throat, and a woe-begone look in his pale face plied the big knocker upon the doctor's dwelling. A lady answered the summons, and informed the applicant that the doctor was in the garden at work. To the garden the young man went, where he found the man of medicine engaged in hoeing his sweet corn. "Well, sir, and what is the matter?" the doctor asked, when the applicant had stated that he had come for medical advice and assistance.

"Well, doctor," with a lugubrious face; and whining, moaning tone, "I feel poorly all through. My head has spells of aching; my appetite is poor; my food does not set well; and I am very weak. Really, I need help."

"Yes, I see. Let me look at your tongue. Ah! Yes. Now—your pulse."

The pulse was felt, and, after due deliberation, said the doctor:

"Look you, young man, you do certainly need help. Now, see, I must attend an important case at 10 o'clock, and I must have this corn hoed before I go. So while I am gone, you take my hoe, and go on with my work here. You know how to use a hoe?"

"Yes, my father was a farmer, but I haven't worked on a farm since he died."

"And you haven't worked much anywhere else. I take it—the doctor threw in pleasantly."

"No, I am not obliged to."

"Very well. I'll warrant you the work here won't hurt you; so go on with it until I come back."

With that the doctor trudged off, and the young man went at the work of hoeing. He hoed to the end of the row, and then removed the light huffer from his neck. There was but one more row after this, and the young man hoed it, and looked up, but no doctor was in sight. At the end of that row, as the absent one had just yet appeared, he pulled off his coat.

The third row he hoed more slowly, stopping several times before the end was reached; but he finished it, and after a good rest, attacked the fourth row. There was but one more row after this, and the young man hoed it, and looked up, but no doctor was in sight. At the end of that row, as the absent one had just yet appeared, he pulled off his coat.

"Well, well, my young friend, how are you feeling now?"

"The patient really had to consider. He had been looking to see what the physician had brought with him of medicine, but he had brought nothing. His hands were empty. "The work hasn't hurt you, has it?"

"Oh, no," his face glowing with the exercise.

"I thought not. Let me feel your pulse again." He held the young man's wrist for a brief space, and then—

"It has worked to a charm. Now do you go home, and repeat the dose twice a day, every morning and afternoon; do it faithfully, and be honest with your diet; don't use tobacco; and if that doesn't work a cure, come and let me know. My fee is one dollar."

"One-dollar?" gasped the astonished youth.

"That is all I charge when patients call at my door."

"But in mercy's name! what is it for. Where is your prescription? What have I taken of yours?"

"My prescription, my dear young friend, I gave you before I left you here with my hoe; the medicine you have been taking in my place—a health-portion which I should have enjoyed had I not given it up to you. And now I will tell you frankly, you are rusting out, literally tumbling to pieces for want of exercise of both body and mind. That is all. You can follow my prescription and be cured, or you can take your own way."

The young man paid the dollar, and went his way. Not then could he be cheerful; but afterwards when he had allowed reason fair play, and had come to prove the life-saving prescription he came and thanked him.—Banner.

## A Conscientious Dog.

I HAD had this dog for several years, and had never—even in his puppyhood—known him to steal. On the contrary, he used to make an excellent guard to protect property from other animals, servants, &c., even though these were his best friends. [Mr. Reeman here adds in a note: "I have seen this dog escort a donkey which had baskets on its back filled with apples. Although the dog did not know that he was being observed by anybody, he did his duty with the utmost

## The Future of the Colored People.

BY ORRA LANGHORNE.

As the colored people of the South acquire education and property, exercise the rights of citizenship and travel about the country, it is evident that they cannot all continue to be the hewers of wood and drawers of water for the land.

The young colored man who may have inherited property, who has spent several years at school in Virginia and then graduated at a northern college which made no distinctions on account of race or color among its students, cannot, from the very nature of things, follow the callings of the servile class to which his parents belonged.

The young colored girl, whose parents have tenderly shielded her from the trials that beset their early years, have given her all the advantages in education they can afford, and on her return from Hampton, Howard or some institution in the North, furnished a parlor with rich instruments, books and pictures, bidding her occupy herself therein, whilst they continue to provide her with all the comforts of life, cannot possibly be a cook, housemaid or laundress as her mother was before her. It is quite natural that for a time most persons of this rising class should find employment as preachers and teachers for their own race, but every colored youth does not wish to preach and teach, any more than all young white people desire to enter those honorable avocations.

An instance of the difficulties encountered by a colored man who desired to secure a living in an occupation hitherto confined entirely to white people among us, came to my knowledge recently, and I give the story as I heard it, thinking it will interest those who watch the progress of the black man with hope.

One of the teachers of the Richmond Institute, a school established by Northern philanthropists, which has done much good among the colored people of Virginia and the neighboring States, told me last summer that one of his late pupils of the name of Hill had lately opened a book-store in Richmond.

Mr. Hill was a very poor boy, with no influential friends to assist him in his struggle for the education he was bent on acquiring. It was hard for the boy to pay the very moderate sum required of pupils at the Institute, and for several years he had to work as a hotel waiter to earn funds to support him during the school term.

To suit the wishes of his friends at the Institute, he studied the theological course, but felt no call to the ministry, or to teach, and when he had graduated, he was somewhat at a loss as to his future course. After consultation with his teachers, he decided to open a book store, as his friends thought they could best aid him in that occupation. The Institute usually ordered its books and stationery from the North and West, but frequently bought small amounts of such things of whom were white men, and this amount of patronage was promised to Mr. Hill, Richmond dealers were one and all deeply

grieved at the proposed intrusion upon their business, and he was now trade by the young African, and he was now made to feel severely the competition of labor, supplemented by the prejudice of color. For some time, he found it impossible to rent a store room in any locality which would be suitable for his business. After many efforts, he learned by chance, that a desirable store occupied by a white man, but owned by a Negro, was about to be vacated, and found his fellow African willing to rent to him. This important point gained, he next set about buying his stock of goods. Having very little capital, he proposed to make his purchases on the terms common among merchants, giving his note for 60 or 90 days.

Greatly to the surprise of the Institute teachers, who were doing all they could to aid him, every application of this kind made by young Hill was refused. After many dis-appointments in his efforts to buy goods, the would-be stationer applied to a large western house, and the firm returned the usual discouraging answer, adding that they had been warned by certain southern customers not to trust Mr. Hill, if he applied to them, as he was an unworthy person, devoid of character, means, etc. Further correspondence produced the letter of a white book-seller in Richmond, and Mr. Hill's difficulty in obtaining credit was explained. The officers of the Institute, who had at times dealt largely with the western publishers, now came to the aid of their ex-pupil and furnished testimonials of character based on long acquaintance, and the stock of goods was secured without further trouble. As last the store-house was rented, a good supply of books, stationery and sheet music was neatly arranged within its walls, and the much-tried colored bookseller modestly invited the patronage of the public. For a time he was loudly denounced by the prejudiced among his white compatriots, especially by his fel-

lows in the craft, but fortune has nevertheless favored his undertaking. His stand proved to be a very good one, with numerous schools in the vicinity, and the young merchant, by moderate prices and accommodating manners, has made every effort to gain custom.

His well-selected stock of music soon attracted attention, and the white ladies of the neighborhood, many of whom regarded the colored dealer with kindly sympathy, patronized him liberally. His school friends aided him by sending their pupils to his store for textbooks, and his business is steadily prospering. He has been able to meet every obligation as it fell due, and his credit is now so well established, that he can purchase goods anywhere on equal terms with others in his line.

Instances might be multiplied in which colored people are trying in various pursuits to get a footing, and enough has been accomplished to encourage every effort that may be made. Colored lawyers have appeared here and there in the South, and colored doctors are beginning to gain practice among us. The Rev. Atticus G. Haygood says a thousand colored physicians are needed in the South.

The government has materially aided the colored people by employing them in the Post-offices and on mail-routes. There are several colored mail-carriers in Lynchburg, the very respectable looking young men, in the uniform of the mail service, and so far as I am informed, no complaint has been made of them since they began their duties, although there was some opposition to the appointment of Negroes to such places, as might have been expected.

Such colored people as had the advantage of learning a trade during slavery have found it a great help to the point of securing a home of their own, the colored contractors of the city, owe their success to their early training and are doing well in spite of the prejudices of their white competitors, who might doubtless like to force them from the field.

I am often interested to know what investments will be made by the colored people as they make money, which not a few of them, both of the educated and uneducated class are doing.

Very naturally, their first idea is to buy a home of their own, but a great many have gone beyond the point of securing a dwelling and have funds for investment, to which they add from time to time.

The failure of the Freedmen's Bank was a heavy blow to the colored people, and that, with their general ignorance of investments represented on paper, inclines them to seek real estate. It seems likely that before many years have passed a very large amount of the property will be owned by the Negroes of the South. Already there may be found a number of them in the landlord class.

A colored builder here some years since put up a large brick building known as "Wilson's Hall," which is used as an Assembly room by the colored people, who hold their fairs, balls, etc., in it, and I am told the owner has found his investment such a good one that he will soon erect another building to be rented as a store, with the upper stories for lodgers, etc.

Sometimes a colored man will own property occupied by white people, and in one case I knew of a white lady, whose father once counted his slaves by hundreds and his acres by thousands, who was living in a house owned by a black man.

"My landlord is a jet-black Negro" said the refined and cultivated lady to whom the life had brought such strange vicissitudes, and at first it seemed very strange to have him come to me to collect the rent. But it would be impossible for any one to be more gentlemanly and considerate than he is, and I feel under many obligations to him.

A story is told of one of the Rothschilds, in the days when Jews were cruelly oppressed in Europe, so chanced that a heavy fine was levied upon the city, where the ancestor of the great bankers of to-day then lived. The conquering army, whose leader exacted the fine, waited impatiently at the gates of the city by night, and threatened, if the money were not forthcoming before dawn, to give the town over to pillage. The terrified council soon realized that their only recourse lay in recourse to the Rothschild, already famous for his wealth, but he, according to the oppressive custom of the Christians, was locked up with other Hebrews in the quarters assigned to the Jews.

In all haste, the keys were brought, the bars let down and the Jew, who was treated as an outlaw and public enemy, entreated to open his coffers and deliver the citizens from the peril which menaced them.

The Hebrew banker at once appeared with the requisite funds, the rapacious soldiers were satisfied and went on their way, the citizens once more breathed freely, and when time for reflection came, it occurred to the city fathers that there was an absurdity in treating the benefactor of the community like a malefactor.

In the more enlightened countries of Europe the restrictions against the Jews have gradually disappeared, and many lands now boast themselves upon the genius and wealth of their Hebrew citizens.

If the colored people of America will persevere as the Jews have done in acquiring knowledge and property, and will impress the conviction of their usefulness upon their fellow-citizens, as the children of Israel have done in every land where their lot has been cast, they too, like the oppressed Hebrews, will rise to power and influence, and conquer a full appreciation from their compatriots.

"Prejudice is the voice of a multitude, which can only be put down by a long and faithful struggle."

## How Success is Won.

AN INTERESTING SKETCH OF JOHN WANAMAKER—HIS LEADERSHIP IN GOOD WORKS.

Miss Sarah K. Belton contributes the following to the juvenile magazine called *Walt Awaits*.

It was about twenty years ago that a poor young man in Philadelphia started, in the southwest part of the city, a Sunday-school in a shoemaker's shop. Saloons were on every corner round about. Rough men fought and stoned each other in the streets, and murders were not uncommon.

"You will probably lose your life," said his friends, trying to dissuade him. But that young man had become a Christian. The highest love always renders us heroic and forgetful of self. Young Wanamaker's shop, his warm grasp of the maker's sunny face, his warm grasp of the moment of Negroes to such places, as might have been expected.

His school grew in numbers and was moved into a tent. While the young men of his time enjoyed their leisure, the encouraged superintendent labored all day to earn his bread, went on gladly giving his evenings and his Sabbaths to lifting the lowly; year by year his hope, and his faith, and the school grew. One, after another, the saloons disappeared. Pleasant homes were built in their places. The years still went on. By and by a beautiful stone structure arose, with these words carved on its front: "The Little Child Shall Lead." On Sundays 3,000 scholars gathered in the spacious assembly room. This room was of itself attractive, with its frescoes of blue and gold, and its cool, verdant fountain in the centre.

Such was built for the twelve hundred members which had grown up from the Sabbath-school, the poor young man, now a millionaire, still labored for God's blessing on his work. The last time I stood in Bethany Sunday-school and heard the exquisite music, and listened to the dying message of one of the boys, I thought of the superintendent for the help he had been to me. I bowed my head in gratitude that here and there, like a beacon light, there shines out an ideal life like that of the young man, to inspire noble aspirations in the hearts of the people.

John Wanamaker was born in 1838. His parents were Christian people, but they were poor, and all his early life was a struggle with poverty. On a summer morning, before school-time, little John turned five hundred bricks for his father, that he might try to earn each day. When a thus earning two cents each day, at a men's boy, he worked in a bookstore at a dollar and quarter a week, walking four miles each morning and evening to do it, often buying a two-cent dinner—a cup of milk and a biscuit, that he might save the more money for his mother. A good boy he, be sure, who would undertake four-mile walks and two-cent dinners to earn money for his mother! "Her smile was like a bit of heaven," he once said to me, "and it never faded out of her face to her dying day." If a kiss from Benjamin West's mother made him a painter, the smile of John Wanamaker's mother gave him the inspiration and cheer which made him the warm-souled "Merchant Prince."

By and by the cheerful lad obtained a place in a clothing store at a dollar, and a half a week. There he soon won the approval of his employer, because he determined to be "the best in whatever he had in hand." This sort of ambition has been the keystone of many a bridge over which boys have passed from penury to plenty.

Balthaz, the French author, when urged by his father to enter law, because in literature one must be either king or hodman, replied, "Very well, I will be king."

From hearing a sermon which he did not understand. Writing down all the difficult words, he looked up the meaning of each in the dictionary as soon as opportunity offered. Not content simply to sell goods, at eighteen, with another lad, he published a paper called *Everybody's Journal*, he solicited the advertisements and serving the subscribers. Partnership cost not be other than harmonious, as he did all the labor. Until he was nearly twenty-three years of age, he worked in the store, every week carrying his money

to his parents. Does this seem business folly and weakness to any of you? Well, I have never known son or daughter who obeyed the fifth commandment to go unrewarded.

## THE SUNDAY-SCHOOL.

And now the work of the Bethany Sunday-school was begun. There was but one life to live, and how could he make the most of it? Full of the reaching, leaping strength and the unlimited enthusiasms of youth, he gave deeply meditative and reflective. Should he study for the ministry? He pondered the subject. Then, instead, he considered men like George H. Stuart and William E. Dodge, prominent business men who had done honor to Christianity in their daily deeds, preaching a noble and very convincing gospel in all their dealings, great and small. Surely there was as sore need for consecrated business men, or "Change and in the counting-room, in these days of marvellous commerce with the ends of the earth, as in the pulpit."

On his twenty-third birthday, he had decided. It was then, I think, that he wrote over his name the resolutions which have governed his life. He said: "I will embark in the clothing business, because I understand it, and I will let nobody dissuade me from my purpose." Two of his mottoes were these: "He is a rewarder of them that diligently seek him."

"No man is ever lost on a straight road." And now his life was well ballasted with a purpose. That grand old Scotchman, Carlyle, once said: "The man without a purpose is like a ship without a rudder—a waif, a nothing, a no-man. Have a purpose in life, and you will kill and divide and sell your self, but have a purpose; and having it, throw such strength of mind and muscle into your work as God has given you."

Young Wanamaker now began to show his business sagacity. He invested the first one hundred dollars which he was able to save in an undivided interest in an estate, bought two more shares on credit, settled the matter to the satisfaction of all parties, and cleared for himself a little less than two thousand dollars. With this money he began active business. Presently, too, he married a Christian girl, who had faith in his future and confidence in him. She might well argue in heart that a dutiful son would make a devoted husband.

The civil war had just begun. Many discouraged his enterprise and prophesied failure, but the self-reliant, straightforward young man had no expectation of defeat. He possessed will-power to the degree which Victor Hugo calls genius. He had also the habit of hard work. He swept his store and kept his account books. When a bill of goods was to be delivered, and no one was at hand to do it, he was not too proud to trundle the wheelbarrow along the street. Did he dream, then, that some day Philadelphia would ask him to represent her in congress? Emerson once said, "The man that stands by himself, the universe stands by him also." Calvin Fairair well calls labor "the girdle of manliness."

Fifteen years passed on. The young merchant had

## ATTENDED CLOSELY TO BUSINESS.

advertised largely and judiciously, held strictly to one price, giving no discount, best for their money, chosen men enterprising and sagacious for the heads of his departments, and now, at the end of these years, found himself the owner of three stores, covering nearly seven acres, one of them, the last retail dry goods store in America, with three thousand employees!

Was this chance? Was this luck? It was consummate ability. It was the work of a mind that thought out large plans and original methods. It was the logical fortune of a man that with quickness of perception knew how to seize opportunities, that could inspire prompt, strong men with his own enthusiasm, that could systematize, and with swift conclusions, few words and bold action, could crowd much into little time; that with genial and polished manners knew how to win friends in the business world, in circles high or low, and also how to hold them—ah, it is his sincerity that has held them!

He might count his honors, his public recognitions, if he would. When the Centennial Exposition was talked of, and Philadelphia looked about for men to aid in the vast enterprise, John Wanamaker was one of the first called to the national work. He was made chairman of the Bureau of Revenue, and with the aid of the Board of Finance, he raised the first million dollars; he was chairman of the Press Committee that brought the subject before the whole country and with difficult labor and judicious management, he stood by and helped carry the enterprise through to its success.

Meantime he had been a leader in every good work. He was one of the founders of the Christian Commission. In the Moody meetings, his sympathy and tenderness touched thousands of hearts.

# SOUTHERN WORKMAN,

TWELVE PAGE MONTHLY.

(Reduced to eight pages from July to October four months.)

Printed on the Normal School Steam Press by students trained in the office.

S. C. ARMSTRONG, } Editors.  
H. W. LUDLOW, }

MRS. M. F. ARMSTRONG, } Regular  
MR. W. N. ARMSTRONG, } Contributors  
MRS. ORRA LANGHORNE, }

Terms: ONE DOLLAR a year IN ADVANCE.

Specimen copies sent upon application. To secure safety, it is important that money should be sent by check, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

A limited number of advertisements inserted at following rates:

PAGE.	1 mo.	3 mos.	6 mos.	1 year.
1 square.	1 00	2 75	5 00	9 00
1-4 column.	2 75	7 50	13 50	23 00
1-8 " "	5 00	12 50	23 00	40 00
1 " "	9 00	23 00	40 00	70 00

Special notices 10 cents per line.

Job work from all parts of the country is solicited, and will be executed cheaply and well. Estimates given.

For further information, address

Business Manager, Hampton, Va.

Entered as Second-class Matter in the Post Office at Hampton, Va.

## Hampton Tracts for the People.

SUBJECTS FOR TRACTS. Ten numbers published. 1—Scripture Laws of Moses. by H. W. Ludlow. 2—Duty of Teachers. by E. W. Collingwood. 3—Preventable Diseases. by M. F. Armstrong. 4—Who found Jamie? by H. W. Ludlow. 5—A Haunted House. by M. F. Armstrong. 6—Woman's Work in Sanitary Reform. (English). 7—The Rights of the Body. by R. R. Colthrop. 8—The Two Branches. by Rev. Charles Kingsley. 9—Cautiousness and Discretion. by E. H. M. D. 10—Our Jewels. by M. F. Armstrong. Published by F. A. S. New York. Edited and printed at Hampton Institute. For sale at all book places. Specimens sent from Hampton at 50 cts. a number, or 50 cts. a set.

We regret the apparent loss of interest in the *Southern Workman*, indicated by the fact that subscriptions have fallen off somewhat the current school year, commencing July 1st, 1883. While its subject and scope do not make it a popular paper, it hopes for encouragement from those who desire the facts relating to the condition and welfare of the Negro and Indian races of our country, of which it is in a position to speak intelligently. It aims to be an educator of public sentiment on the general question of these races, not the least of whose misfortunes is the prevailing ignorance about them: it is also a record of the work done at Hampton, and by its little army of graduates in the South and West.

The *Workman*, together with job work from the School and from outside, creates an opportunity for learning the printer's trade, which seven Negroes and four Indians are now improving, ten having wholly or in part mastered it already.

We have of late been making special efforts to improve the paper, to make it more broadly representative, an able champion of the black and red races, and to bring it up to the point of self-support; in response to this effort, many appreciative letters have been received. Sending, as we do, over seven hundred copies each month, free, to contributors to the school and to others, especially in the South, both white and colored, who are connected with the educational effort of those States, is, we believe, no wasted work, but one that, in various ways, helps the general cause without making a credit on our books.

Every year some hundreds of dollars are sent in response to statements from our graduate teachers scattered throughout the South, whose letters, seldom written for publication, touch the hearts of those who read them in our columns.

It is our ambition to make the *Workman* not only an educator of the peo-

ple, both North and South, a help to many earnest workers who are struggling in obscure places against heavy odds, but also to make it self-supporting. Heretofore we have made a loss of about five hundred dollars a year. We would be grateful for co-operation from our readers by way of furnishing lists of names to which to send sample numbers, or for any suggestions in the matter of increasing the usefulness and strength of *The Southern Workman*.

## Negro Girls.

We suppose no one acquainted with the facts, would deny that more has been done in the education of the colored people of the South by devoted Northern women than by any other class. They came in after our armies. They were unable to fight in the ranks, but they have ever since been fighting a foe which is harder to conquer than troops of armed men. They have been battling bravely against ignorance and vice in a way which it was quite impossible for any body of men to do.

And it seems as though their colored sisters were the ones to whom we are to look chiefly in the future to carry on the work which these brave women have commenced. It is pleasant to bear witness to what we have seen in some recent visits to schools taught by Hampton graduates, of the devoted work they are doing for their own race. It seems to us that Hampton's success has been even more marked in the case of the girls than in that of the boys whom it has graduated. When we consider the condition in which the colored women were left by slavery, the depth to which they were sunk; when we consider the temptations by which they are surrounded when they go out to be teachers; when we see the places where many of them are obliged to live; the testimony borne to their virtue, and devotion to their work, by the Southern whites where they are engaged, is most gratifying. They are more sought for by superintendents of schools than the young men are, and that fact is not to be accounted for entirely by their keeping out of politics, as is sometimes stated, but there are other reasons. In some important respects they excel the boys.

Women are usually more unselfish than men, and these colored girls throw themselves heart and soul into this work of teaching. As a rule, they win the hearts of the children. They have a kind of maternal instinct, with regard to their children which insures their success. They thoroughly love them. While they are at school, the girls do not show as well in some ways as the boys. They have not had the opportunities of seeing life before coming to Hampton that the latter have had; they do not take up the studies which depend upon general information with the same earnestness as their brothers, but when they get into the school room with a little knot of children around them, whom they are to lead, they develop splendidly. There comes before us now the picture of a little woman in one of the school houses of one of our Eastern counties. No general ever had his soldiers under better control than had she those students. A look from her was all that was needed to bring the idle one back to a sense of his duty. Her classes were filled with eager listeners, for she was thoroughly alive to her work. She had carried with her the methods of teaching which she learned at Hampton, and had overcome the strong opposition there was among the people of that county to the "word method", by the remarkable success she had achieved. She had a class of children of five years old who had never been taught a letter, who, with five months' teaching, read simple sentences with perfect distinctness. These colored girls are many of them born teachers. They have a real genius for the work. "You'll find her a right smart teacher if all I hear of her is true," said a southern white man who came here from

dinner, in speaking of a Hampton graduate whose school I wanted to visit. And we were not disappointed. Said a school superintendent in one of the cities of Western Virginia, of one of our Hampton graduates, "She is, without exception, the best teacher I have ever seen." And he was an educated southern white man who had been connected with schools all his life. We attended the closing exercises of a school kept by one of our teachers. We listened with much pleasure to the well selected pieces and dialogues so well rendered and so clearly articulated, that with your eyes shut you would not have known that these students were colored. After the exercises were closed, the parents were invited to say something. The teacher was not to return to the school the following term. More fervent expressions of gratitude for work done we have seldom heard, or more sincere expressions of regret than this young woman received when she announced that she could not come back the next term. But the work in the school room is by no means all that these teachers accomplish. They are felt in the homes in a way that the young men never can be. When we went home with one of these teachers and saw what she had accomplished by her refined and lady-like ways among the women and children, we felt that the department of her work was quite as important as her teaching in the school room. We did not travel far on our horseback journey before we learned that it was wise for us to stop for dinner where the influence of the Hampton cooking teacher had been felt, for the food was better and things looked cleaner there. "She has a mighty civilizing influence on these people," said an intelligent Southern man, who had some sixty hands employed in his saw mill. "The houses look cleaner where she goes. She started a temperance society here, and had tableaux last Christmas. I didn't go to see them, but such a thing has never been known among the colored people here before." At the closing exercises of one of the schools, we saw mats and other pieces of the children's handiwork, which their teacher had taught them to do, exposed for sale to pay for an extra month's schooling which the trustees had not provided for. The white people gladly availed themselves of the industrial work which the girls received at Hampton. We were informed by one of the trustees of schools in a district where several of our graduates were teaching, that one of our girls had promised to come and teach his wife how to iron shirts as they did at Hampton. And the work of these young women is not confined to the week days. Go on Sunday into that log school house, where she has been teaching children all the week, and you will find her with a Bible in her hand, giving to the fathers and mothers as well as the children, the only instruction many of them receive out of God's word. In many of the country districts a preacher is heard only once in five or six weeks, and his sermons are not always to edification. So that these girls are often the only religious teachers which their people have. In some cases we found them doing work among the poor, going out to the cottages as they are taught to do at Hampton and reading the Bible to the sick and old. The better class of colored preachers are by no means slow to recognize what they are doing. "I owe more to that woman than to any one in this place," said a colored Baptist preacher of one of the Hampton teachers who for several years had taught school in the neighborhood. Then he told me how he had opposed her when she first came there, and how he had come gradually to believe that "her quiet kind of religion" was the best kind.

In a meeting we held in one of the western villages of Virginia, all the colored preachers were present and were called on to give their views on education. One of them had been telling how education "made some folks stuck up," but, said he, "taint so with the young woman who came here from

Hampton." And he went on to tell of her work among the poor and with the children of the poor. In many places these young women have changed the whole character of the religious teaching by their silent influence. One of them brought two of the preachers from the place where she had been teaching to the Teachers' Institute held here two years ago, that they might get some ideas of better ways than they have known. But, perhaps, most important of all is the testimony which is borne to the pure lives of these young women when they go out from the restraints of Hampton to places where a fall from the ways of virtue would lower them very little in the eyes of their own people, and is a thing altogether expected on the part of the whites. They are exposed to temptation not only from those of their own color but even more by those of the white race, sometimes by the very ones that employ them; and yet they have stood. We made more inquiries both among whites and blacks as to this matter than any other, and the answers were very satisfactory. They were much more satisfactory in the country than in the city, and yet in both much better than could be expected. We give the testimony of one southern man out of many, because he seemed to us in a better situation to judge than any other, and the whom we met. He had been brought up in the county where he lived, had been the county treasurer for many years, and all the teachers went to him for their pay. He had a large farm, a mill and a store, and was brought constantly in contact with colored people. He was not at all sure how this experiment of educating the blacks would come out, especially as regards its effect upon politics, but he bore strong testimony to the effect which Hampton had upon the morals of the young women. There were fifteen Hampton graduates in the county at the time, eight of them girls, and he told me that in the case of only one of them, after careful inquiry, could he find anything that affected their moral character. This was in a county where he told me that it was not an over-statement to say that ninety-four out of every hundred of the colored women were immoral in their lives. These statements and others that were made to us of the same sort, lead us to think that the work done for girls at Hampton is most hopeful in its results, and that anything which looks toward better opportunities for them, and the granting them the same chances that are given the young men, is a move in the right direction.

The two hundred girls at Hampton, are, as nearly as possible, the right number; not only on general principles of due proportion between the sexes, and giving the girls a fair chance, but also with reference to labor supply and demand. There is work enough for all, and there are enough to do all the work well. For the first time in the history of the school, no regular help from outside is employed in this department. It is desirable, therefore, on the most practical considerations of economy, to keep up this proportion. If we cut down the number of girls, we must cut down the number of boys still more, or spend money for outside labor that might be helping students through school.

The work done by these two hundred girls, is the washing, ironing and mending for the whole school of five hundred, with the housework of their own buildings, and sewing in their industrial room, making chiefly undergarments and uniforms. One boy only—a student—is employed in the laundry to run the steam power washing machine, one as cook, with two bakers. The work is more satisfactorily done than it has ever been before. It is a good thing to have the various departments of an establishment so balanced and mutually supporting. It is the order of Nature, whose different kingdoms run each other.

The earnings of the girls this year are from four to six dollars each, a month. None earn under four, most earn about five dollars, which is the average amount of the boys' earnings, and is half their board, leaving but half—a fair proportion—to be paid by their relatives or by their own exertions in vacation. The amount of work for each is also about all she has time to do well, with one day and a half of work per week, and four of school, with occasional duties, except for the seventy "night students", who, for a year, work every week day, and attend the evening school to earn enough to carry them through the remainder of the course in the day classes. But for this chance, hundreds who are excellent material could not have any education.

Looking beyond economical considerations for the school or the student, the reasons for keeping up the number of its girls become only more urgent. There is absolute need and a waiting place for every good, intelligent young colored woman that Hampton and all other school can send out. They become centres of light, civilizing powers, barriers against barbarism. It cannot be put too strongly. All truisms concerning woman's mission become of vital interest in this foundation work for a race. To cut down their chances is to cut off hope for whole communities.

A very intelligent young woman, who has been teaching ever since her graduation from Hampton, said to one of its teachers—"Oh, if you could only see the homes many of the girls come from, you would wonder that they can do so well here and when they go out to teach. There is—she is dressed up nicely to come here, and you'd think she had been used to nice ways, but her people live in a house with only two rooms, and the whole family sleep in one of them; her father and mother and herself and two grown brothers. A great many live like that." Many, of course, live better, but whether they do or not, they go often to labor among those who do not. It is of the first importance that they should gain at Hampton the knowledge and necessity of better things; habits of industry and order; moral stamina.

School life tends in this direction. The regular hours, regular meals and work and study, occupation for the mind and hands, inspection of rooms and requirement of personal neatness, are among its best lessons. Three years is short enough time to teach them. There should be no obstacles to their full enforcement. Unfortunately there are some.

Visitors to Hampton like to look into the students' rooms. Let us glance into one of the girls' rooms in Virginia Hall. Inspection has been made, and the occupants are still away at school or work. This would no doubt be a prize room if prizes were given for neatness. It belongs to girls who have been two and three years at Hampton, one at least having had also careful early training. Your first word will be an exclamation of pleasure. A red glow fills the room, the sunshine streaming in across the Roads falls through a home-made window shade of Turkey red, which hangs across the upper panes. Their clean muslin curtains do not keep much of it out, the sash is open at top and bottom, and the air is perfectly fresh and sweet. The furniture is of the plainest, and some of it, you are told, is made at the school—the table, chairs and iron bedsteads. For the rest, there is a pine bureau with four drawers and glass, and a wardrobe. This is drawn out from the wall in a corner of the room, making behind it a nice little dressing room, where is the washstand. The chintz curtains which make its door are looped aside, and everything inside and out, is the picture of neatness and order. Bright strips of carpet are on the clean scrubbed floor, pretty cards and photos on the walls; the two beds are neatly made, and on one of them repose in state, in the whitest of gowns,

a doll, whose owner has not quite outgrown her earliest affections. This room has given a tone to the corridor, and its ingenious and tasteful devices have been frequently copied and will no doubt have an extensive mission. This and the room of some new comer, who finds the inspection standard impossible to maintain in a bureau drawer, and if she has any pictures to put up, distributes them without regard to symmetry. You have, of course, taken for granted that a room with two very narrow single beds is meant, for two, and have thought four bureau drawers and a small wardrobe a fair allowance for them. That was the original design ten years ago, but now no girl's room in Virginia Hall has less than three occupants; a number have four. A few of the latter have three bedsteads, none have as many as there are girls; there would not, indeed, be room for them. The problem of arrangement no outsider will attempt to understand. Those most concerned solve it as best they may. The state of things is, or ought to be, positively unbearable, but what can be done to remedy it?

Send a third of the girls away? The reasons against that we have given. But there is nothing to keep them here against their own will. Many more press for admission than can be taken even in this way. They do not want to give up this chance for an education. For this cause, they are bearing the discomforts of their lot with patience, pluck and cheerfulness worthy of respect. If the confusion of their own homes makes it less annoying to some, that is a condition which the school should rather remove than take advantage of.

The general character of the girls now at Hampton is on the whole, good, and they may be expected to become good workers among their people. There are some deficiencies, naturally resulting from the over crowding; some illness is traceable to the same origin. The danger of both must increase. The girls need and deserve a better chance.

There is no more difficult problem than to fix rightly the limits of an apparently successful enterprise, whether business or educational. Bigness seems to be the great American virtue; there is nothing like a "big thing." Our national temperament and surroundings incline us that way. Hence, perhaps, the periodic expansions and collapses of business from which prudent men suffer the least.

Shall the Hampton Institute, with its six hundred students, continue to enlarge? Ten years ago its supposed limits were three hundred.

From the first it has been like a manufactory which could not nearly supply the demand for its products.

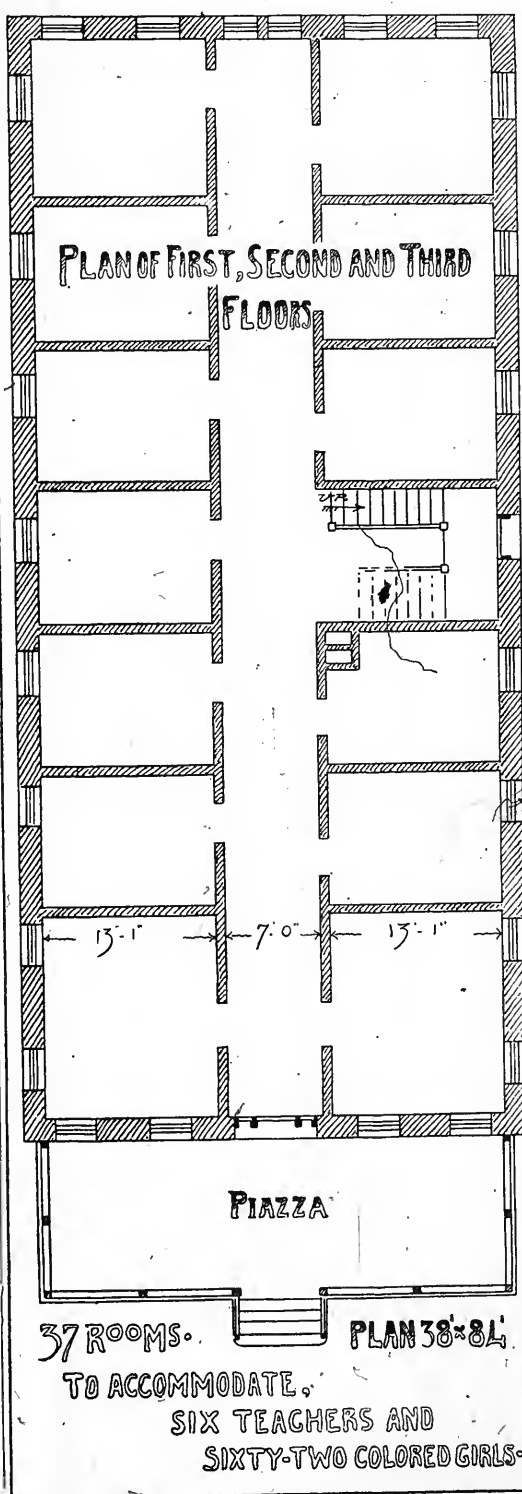

The free schools of Virginia and other states have, since 1870, yearly, been calling for many more colored teachers for five months service than we could supply, offering generally \$25.00 a month to young women, and \$30 a month to young men; often preferring the former for their superior economy and fidelity, and for their separation from politics.

A large proportion of these schools have been under wretched teachers, blind leaders of the blind, whose morality has frequently been as objectionable as their ignorance.

Hampton has, this year, received four hundred and seventy Negro youth; its one hundred and twenty Indians having had special provision, and not kept out one black pupil.

No one out of the work can realize the pressure upon us, on the one hand from applicants for admission, on the other for graduates to teach. Of the latter, since 1870, five hundred and thirteen have been sent out, and five hundred more after a partial course, have been fitted for usefulness. Seventy-five per cent have become teachers. Business, politics, family duties, moral relapse and death have had their share of the rest.

tial course to teach has had and still has immediate employment. With their many imperfections, they, with others from like institutions, have been as shining lights, often dim, but better than nothing; better far than the utterly crude teachers who would have been the alternative.

Teaching about five months each year, though getting sometimes a second five month's session, they have usually worked the rest of the time, for they have been taught to do that; the labor drill we give seems essential not only to livelihood but to moral success. In Negro as in all life, idleness is fatal to morals.

Our triumph in the war created an obligation, and emancipating and enfranchising the slave, a duty—the betterment of the low and degraded classes of the South. This, to those who believe in Providence, was the moral objective of the great struggle. Our black population is gaining at the rate of five hundred a day. How shall this rising tide of ignorance be met?

Living and working in the midst of it since 1868, our students have increased from fifteen to six hundred; officers and teachers from five to sixty, and a property worth \$350,000, free of debt, has been established, needing, besides its small permanent income, and besides aid from public sources, fifty thousand dollars a year for current expenses.

If we mistake not, there is a growing feeling among the friends of Hampton that it is large enough and perhaps too costly. While conscious that we are working in the line of God's providence and for the fulfillment of His purposes, it is for us to consider carefully our resources. There is, too, a philosophy of education which teaches that where, as with these races, the work is not merely mental but upon the whole life, upon head and heart and hand, upon the student material as the work of the potter is upon the clay, or as that of the sculptor is upon the marble,—the end being manhood and womanhood rather than polished scholarship,—numbers cannot be increased beyond a certain point without risking success with the individual.

The Twelve Apostles were better for Christ's purposes than a hundred less well selected and taught.

Our present enrollment of two hundred and fifty three young men and one hundred and ninety nine girls, boarders, besides twenty day scholars, seems a wise limit to our work for the Negro race. There is in the various industries a labor supply for two hundred girls and two hundred and sixty boys.

The Executive Committee of the Trustees of the Hampton Institute recently met, decided that a new girl's dormitory was necessary, and adopted a plan of a brick building to contain thirty-seven rooms besides a sitting room, and to cost about sixteen thousand dollars. The entire work, excepting brick-laying, will be done by our own mechanical departments. With it there will be provision for the whole student force. A limit must be fixed, has unquestionably been reached, and the work before us is to properly provide for those we have.

The condition of woman is the gauge of civilization. Upon the Negro girl rests most heavily all the sad past: in her is the hope of the future of her race. For her we ask a fair chance; she will do the rest.

While the Agricultural and Mechanical departments of the school are well established, needing only rounding out, and there is ample room for all our young men, and for Indian boys and girls, both as to boarding, shop, and school room, there has been, since 1874, when Virginia Hall was completed, no addition whatever to accommodations for colored girls or the lady teachers of the school. What sufficed in 1874 is not enough in 1884.

We now have for colored girls forty rooms, thirty of them intended for two and ten for three occupants. By crowding three and four into each of these, sever-

al into unlighted corners called "pens," fenced off from a passage way, a score into a few Indian girls' rooms, soon to be needed, two hundred Negro girls are at present cared for, but at a sacrifice of what is most important in their training.

The picture on our 30th page represents the proposed building for colored girls; to cost, complete, sixteen thousand dollars; fourteen thousand for construction alone.

The dimensions are eighty-four by thirty-eight feet. There will be thirteen rooms on each of the three floors—excepting on the first, where the space of two will be used as a sitting room for gatherings of various kinds—thirty-seven sleeping rooms, each to hold two girls; four to be for teachers; the *pro rata* cost of each will be about three hundred dollars; its size, thirteen by eleven-and-a-half feet; outfit to cost not over thirty dollars. It is hoped that contributions, both large and small, will be received for this much needed dormitory.

Clay for brick-making is now being dug on the school farm for the three hundred and eighty thousand bricks required. The walls will be double, and the partitions are all to be of brick, the roof of tin: the building to be as nearly fire-proof as possible. We hope soon to be justified in buying the logs now growing timber in North Carolina, to be cut and rafted here and sawed in Huntington Industrial Works, into timbers, flooring etc., and seasoned for use in summer, so that the girls' new quarters may be ready by October 1, 1884.

The Huntington Works are ready to contract with the school for the construction of the building for \$14,000. This does not include steam heating, gas and water fixtures, to cost not over fifteen hundred dollars, all to be put in by the Engineer's department of the school.

Bedsteads, wardrobes, tables, and washstands, will be made by the Indian boys at their workshop. Student labor throughout, except brick-laying, directed by skilled foremen, somewhat cheapens the work, but not very much, for many are employed; they work slowly, and all are paid fair wages. Their labor will bring them not only wages, but much other advantage.

We await the response of friends.

We call special attention to the record of our girls' work in the graduates letters this month, page 31. There is nothing more encouraging in the work at Hampton than the character sustained by our young women graduates. With very few exceptions, it has been without reproach; a light to their people.

#### Mirror Lake, Yosemite Valley.

One of the most delightful of the many charming things in the beautiful Yosemite Valley is Mirror Lake, represented in the cut on our first page. It takes its name from the fact that when there is no wind blowing, the water in its glassy repose reflects as from a mirror the surrounding mountains. The effect is charming in the extreme.

It was the writer's good fortune to see three times in one morning the sunrise reflected in this natural mirror. Taking our stand on a broad rock on the margin of the lake, and gazing into the water, we waited for the sun to rise over the saddle of the South Dome. All at once the water began to change color, then the glory came, and in an instant the first point of the sun shone out, looking like the most brilliant of diamonds. A moment more, and the light was too dazzling even in its reflection to be endured.

Then we hastened to another part of the shore, and as the sun came up over a higher point in the mountain the magnificent spectacle was repeated. Still for the third time moving our point of view, we beheld the wonderful sight. Scarcely any sight can be conceived of more charming than this of the sunrise in Mirror Lake.

When, however, the wind roughens the surface of this sheet of water, it loses its beauty, and becomes simply a shallow duckpond, destitute of charm—an apt illustration of the rule that circumstances alter cases.—*Christian Weekly.*

The Indian Rights Association, the branches in Philadelphia and in Boston, have done the Indian and the country a service in having a representative at Washington to protect the red man's interest. Had it not been for other than legislative care, in the last session of Congress, eight millions of acres of the Sioux reservation would have been to-day occupied by white men in a most unjust way. The iniquitous plan was rushed, without discussion, through the House in the last hours of a dying Congress, but was stopped in the Senate on the strength of facts supplied by friends of the Indians who were there to look out for their men.

When a few weeks ago Gen. C. H. Howard, Inspector of Indians, reported to the Secretary of the Interior the starving condition of thousands of red men in Montana, the representative of the Indian Rights Association who urged, not without ultimate success, immediate action, thus details a part of his experience. Conversing with a prominent man:

"Well, said he, 'there is a regular way for bills to come and go through the proper channels, and we do not violate senatorial etiquette.' I said, 'Mr. Senator, this is an act of Andersonville starvation. Congress has shut up these people where they can get nothing to eat, and they are not allowed, under penalty of outlawry, to leave their prison. It has cut off their rations, and General Howard tells me that he has literally dying for want of food. He said he would see about it. I went over again this afternoon, and my friend said: 'I have just been talking to a member of the committee about what you said, and he tells me the bill has come over, but has not yet been printed and referred, but he will bring it up as soon as it is.' I said: 'Gentlemen, it does not take three months for starving men to die. Congress has made another Andersonville, and is responsible for what is going on.' I saw a man the other day who told me that he had picked up children from the ground, who were dying with hunger."

"Why," said they, "does not the commissioner of Indian Affairs come over here and raise a bowl which will secure action?" I said: "The facts have already been sent here by the Secretary of the Interior, and the House has finally given the magnificent sum of \$3 per head to feed these people, when the Commissioner of Indian Affairs and the Secretary earnestly urged a much larger sum; but that comes so tied up that it could not be used. Congress cut down the recommendations of these officials last session, and we have this state of things as the result. Further conversation led to a statement of my grounds of interest, and my connection with the Indian Rights Association."

From this statement, it is evident how watchful and self-sacrificing the members of the Indian Rights Association are at this period of distress, and how necessary such outside earnestness is to urge any legislation of this imperative kind through Congress. The recent modest call for funds to aid in this work, which has been issued by the Boston association, should find immediate and ready response. Why should not people in New York city and elsewhere lend a hand in the support of either the Boston or Philadelphia branch of the association, or better, form one of their own?

If you wish to help the Indian, do something or give something.

#### Wendell Phillips

One more—about the last one—of the great abolition leaders, has passed away after seeing as few reformers have, the full accomplishment of the greatest object of their lives, though in ways they did not dream of. While some hoped for a millennial change of public sentiment in the grand march of ideas, freedom was born on the battle field and baptised with blood; while others believed, with Wendell Phillips, that the only cure for the cancer of slavery was in cutting the tie between the free and the slave states, it came in a war for the Union, and both sections rejoice together in the result.

Every American freedman ought to be familiar with the biography of this great champion of universal freedom. It has been extensively given in the columns of the daily press, and our part is rather to read the lessons of his life.

One of the finest sights in this world is to see a human being living squarely up to his principles. True, it makes a vast difference what those principles are: the most need them to show the difference by putting them to the

test of practice. There are many to talk, many to teach, many to find fault, many who have no very decided principles to follow, many to follow them afar off or when others lead, and that is better than not to follow them; but how often do we see the man with whom to think is always to do? Not often enough for us not to stand and admire, while we hold him all the more responsible for his opinion. In the many causes to which Mr. Phillips lent his silver-tongued eloquence, his best friend could not always stand by him or fail to regret that he was not more certain to "be right" before he "went ahead" with such impetuosity. But this greatness he had, to be always true to his convictions and heroic in acting upon them. This is what united all hearts to honor his last repose in a city which gave him very little rest in his lifetime: this is the glory that will brighten around his name, when party differences die out and are forgotten and the questions for which he fought have all been decided for or against him.

Born to every advantage of wealth, position and culture, he valued all gifts, natural and acquired, only as weapons to wield for truth as he saw it. He was the champion of every cause he believed in. Whenever he saw it ready to perish, he flew single handed at the adversary, bear or lion or Goliath of Gath.

"Therefore he went And humbly joined him to the weaker part, Placate named and lost, yet well content So he could be the nearer to God's heart. And feel in solemn pulses tearing blood Through all the widespread veins of endless good."

We wish to remove an impression made upon many by the publication of the benefactions of the late Mrs. Valeria Stone of Malden Mass., to the effect that she has just left a bequest of twenty thousand dollars to the Hampton Institute.

In 1881, Mrs. Stone distributed of her husband's estate, to various charities, over \$400,000 and a half dozen, giving to Hampton the above named amount, which was used to erect the Stone Memorial building, completed in 1882.

A friend has kindly sent 100 copies of the Pictorial Commentary on Mark, by the Rev. E. W. Wike, though the American S. S. Union of Philadelphia. The students highly prize these books. They were given to those who go out for missionary work in the cabins, and in the Sunday schools of the vicinity. A number of these commentaries were sent last year, and many expressions of gratitude for the help the students have received from them, are found in their letters.

#### More from Tuskegee

BRAVE BOYS AND GIRLS, A BRICK MACHINE NEEDED.

Dear Workman: No less than ten hands went up in the chapel a few nights ago, in answer to the inquiry among the young men as to how many had been frost-bitten during the cold weather. At this showing, the teachers were not surprised, for on Monday night, when some teacher was making a tour of the rooms at a late hour, to give a comforting word where there were no more blankets to give, have the young men been found hovering around the fire while the cold wind poured in from the roof, sides and floor of the room. Sitting up with overcoats around them was preferable to going to bed. While there has been this suffering, yes, I say suffering, so anxious have the students been to remain in school, that there has been almost not a murmur of complaint, but on the other hand they have shown cheerfulness throughout.

The school does not own the shanties in which the young men stay, consequently, in our present condition, we can't lay out money to repair another's property when we are only using it temporarily. The severe winter finds us wholly unprepared. The worst having, we trust, passed, the young men will be content with their condition for the remainder of the winter. But must they be asked to endure the same thing another winter? We have faith to believe not. They want nothing done for them which they can do for themselves. The new building which has now been begun will cost \$100,000, and over \$5,000 of this amount has been raised. The young men are now digging out the basement for the building, and preparing the clay for bricks in order to begin moulding brick for the building as soon as the weather will permit. In order that the student's work may be utilized to the highest extent, we need a horse-power brick machine very much; the regular price of a good one is \$300, but the manufacturers agree to let us have one for \$200. I write this believing that God will put in the heart of some kind friend or friends to give the needed amount for the machine, in order that the students may have a chance to help themselves.

B. T. WASHINGTON,

Tuskegee, Ala., Feb. 15th, 1884.

Letters From Hampton Graduates.

WHAT HAMPTON GIRLS ARE DOING.

AMONG THE PINES. HOW THEY BUILT THE FIRE. THE MISSION OF OLD NEWS-PAPERS. SIX MILES A DAY. SUPERINTENDING SUNDAY SCHOOL. LANGUAGE LESSONS. TEACHING NIGHT CLASS. READING HISTORY. THE STATION SHE PREFERS. WORKING FOR THE WOMEN. A CITY SCHOOL. "SCHOFIELD SCHOOL" TEACHERS. GOING ON WITH HER STUDIES. WANTS TO STUDY MEDICINE. WORKING UNDER THE WOMAN'S BOARD. A SUPERINTENDENT'S CERTIFICATE. TEACHING AND HOUSEKEEPING. A GRATEFUL HEART. A SISTER'S APPEAL. SANTA CLAUS IN SHEEPSKIN.

As this number of the Southern Workman is making special appeal for the girls, it is but fitting that they should speak for themselves, not by words but deeds. We make up our budget of letters this month from those from our girl graduates already at work in the field, where those now training will follow them, and where so many more are needed. That many may speak as possible, we make most of the extracts short, though, in some cases, from different letters from one hand.

AMONG THE PINES.

—Va. "My school house is a little log-cabin situated among fields of cotton and tall pines. Instead of viewing from my window the broad harbor of Hampton Roads, with ships lying at anchor from the storms, and steamers going to and fro daily, my scenery is the dreary and uninhabited forest. The people are kind, and I get on nicely. The Supt. said I stood a better examination than any teacher he had had this term. My average was 90. I was not examined in Algebra (which I am keeping up) but in Arithmetic through Banking. I like my work intensely. I have an average of 25 daily, 47 on roll. There was no Sunday School when I came, but I succeeded in forming one. Our school term is only five months, but I am expecting to take another school in Jerusalem—not the Holy Land.

—ADELINE.

HOW THEY BUILT THE FIRE.

—Va. "I have 32 scholars," says another. "They are all very poor, but willing to do all they can to get an education. The Board does not furnish us fuel and when I tell them they must bring money to buy wood, they say, 'We haven't any money, but we will carry some sticks,' and they have carried every stick we have burned thus far.

I received the newspapers you sent, and enjoy them very much. When I have read them I give them to the children. Some read them with interest, others look at the pictures. I am going to write to the Southern Workman as soon as I possibly can. I like to know something about dear Hampton.

—MARY.

SIX MILES A DAY.

—West Va. The next five extracts are from letters of one earnest worker, who finds opportunities for varied labors.

"I am in school from nine in the morning to fowin in the afternoon. At night I teach a select class from seven until nine. After that I feel very much like retiring, as I have to walk six miles every day, teaching three miles from home. I am Superintendent of the Sabbath School. Though my duties are heavy, I try to find a little time to feed my mind and shall be glad of any papers you may send. I am trying to bring others to the light by keeping mine just as bright as it was when my Alma Mater sent me out. I would feel very much ashamed to be called a daughter of Hampton if I did not try to do my whole duty."

"My school house is very rude indeed. It is built of logs, daubed with mud. It is only tolerably comfortable. The walk to it has been very pleasant till just now that the weather is so cold. I find that everything taught me at school is of the greatest benefit, especially ancient history. I do not say this to you because you were my teacher in it, but because this particular study has helped me so much in my teaching. I have read a Roman History through since I have been here. I would like to have a history of Greece. I read all the histories I can get. I am very fond of history anyway. I hear from all the girls of my class but two. All are doing well and enjoying the work."

"I am glad to hear of the extensive missionary work that is being carried on at Hampton this year, by the students Young Peoples Christian Association. My thoughts often wander back to my little class across the Creek. I am still studying the Sunday school lesson, but I now have to be the instructor. I have my teachers meet Saturday evenings to study. We use the lesson papers you do at school. When I first became superintendent they were not used, but I kept after them till I got them to take a few, not half as many as we need, but all we can pay for now. The school is very interesting and I hope will grow more so. I felt not capable of the position of superintendent, but I trusted God's word which says 'Accredit your paths.' Truly I have been led by him.

"My work in the day school is progressing. I am particularly encouraged in the improvement made by the children in their language. I have only one class in grammar—well, it is not really grammar either—my whole school has language lessons. They enjoy correcting each other's mistakes."

THE STATION SHE PREFERS

"The school I am teaching now will be out in two months; then I am going forty-five miles back in the mountains to teach a four months school. 'The harvest truly is great but the laborers are few.' I have had more schools offered me since I have been here than several could fill. I go to the place where I think I can do the most good. There are numbers ready to answer 'Here am I, send me,' when the call comes from cities, but when it comes from the 'back woods' as some please to term the country schools, few are the answers. So I prefer to go where my poor people are groping in darkness."

WORKING FOR THE WOMEN.

"My mind and heart are in the work for women. I long to be enabled to do something for the women of my race. I am deeply impressed on this subject; my heart goes out to them. I am willing to make any sacrifice to help them."

—JANE.

A CITY SCHOOL.

—Va. "I have on roll one hundred and forty children this year. Hattie F. and I have primary rooms, and we have two sessions a day, half the children coming in the morning and the other half in the afternoon, because there is not room for all at once. The Board has promised us a new building ever since last summer, but they have not started the foundations yet. I am very grateful to you for the papers. My school was much benefited by my reading them to them."

—GEORGETTE.

"SCHOFIELD SCHOOL" TEACHERS.

Two of our girls teaching in the Schofield school at Aiken, S. C. were moving simultaneously to write to a former teacher, of their work.

"I have a full school room. Sixty every day and they continue to come. Little children are such interesting creatures. In my chart class I have forty. They do delight to count and write numbers. I teach by the objects, you know."

—SUSIE.

"Here I am teaching in the school where I was once a scholar. I am in a good school and have fifty very intelligent boys and girls in my charge. We have on roll about three hundred in all, but the inclemency of the weather has kept at home many of the poor ones who have not warm clothing. We have in our school a debating society, in which teachers and scholars take part. I am secretary of it, and also of the temperance society, and also for the A. M. E. Sunday School. I am taking music lessons and continuing my studies in chemistry, botany, physiology and history. I had and still have a great desire to study medicine. My chances are favorable. What do you think of it? Isn't it funny that Susie and I should be writing to you at the same time, thinking about the same thing? We often do."

—ANNA.

WORKING UNDER THE WOMAN'S BOARD.

One of our most faithful workers, now sent out as teacher and missionary by the Woman's Board of Missions, writes thus of her work:

"This is a field in which so much is to be done, that though I do overtake my strength, I don't know what to leave undone. There are sick to be visited and persons to be instructed who cannot attend the regular

school, letters to be written—all this besides my school and Sunday work. The society was not able to support an assistant this term, and so the county gives us one, but her help is only in the school-room. Next year I expect one from the society—a Hampton graduate. My school work and the written examination at its close very good on the whole. I have the nine months divided into terms of three months, and a certain amount of work to accomplish in each. I have much before me this year, and hope to have strength for it all. I am sending my younger brother to Hampton."

—SADIE.

A SUPERINTENDENT'S CERTIFICATE.

An encouraging feature of our work is the good report often received from county superintendents of our graduate teachers under their employ. "One of our young women writes with natural pride, to send such a report from her superintendent."

"I am still in charge of the same school I have had for three terms, this one making my fourth. I am now in my new school house, which has three glass windows with twelve panes each, and it has a large stove. I am very comfortably provided for, for the winter. I have been teaching now nearly two months; 23.65 average daily attendance; now on roll 31. Not long ago I went to see the superintendent, who lives about sixteen miles from my school. He spoke very kindly and gave me some good advice in regard to school laws. I received from his hand a certificate, which I will enclose for your perusal. The superintendent said he would like to have two more graduates from Hampton now. Be so kind as to return me the certificate."

—MILLIE.

TEACHING AND HOUSEKEEPING.

—Tenn. "The children are delighted with the maps, and all send many thanks to you. It is the first help they have ever received from any Northern person. I mean to have those who study geography write you a letter of thanks. I wish you could visit my school. I have enrolled one hundred and eleven, though the factories have not closed yet. One of my white trustees read your letter and thought it so nice. I have an assistant from Knoxville, one of Miss Austin's girls. While in Knoxville, last summer, I took advantage of the Teachers' Institute held there in the Austin School building. I am having it rather hard this winter. I had to go to house-keeping to take care of mother. She is about the house but not able to do much. I have to pay \$6 a month for my home and had everything to buy to furnish it. I get \$20 a month, and the assistant teacher boards with me. I bought two bedsteads, a stove, a bureau, a home-made carpet for my back room, rocking chair and other things for mother's comfort. My front room looks very nice. I am the only colored person here that has a bed in the front room. I have no pictures, so I have decorated it mostly with autumn leaves. I shall be able to keep house for my mother if I do not get another school when this closes in January. I am now undergoing an examination sent me from the superintendent of questions each in eight studies, that will enable me, if I pass, to get in ten months' teaching in this scholastic year. I have also received an invitation to become a permanent teacher in—Co. MATTIE."

A GRATEFUL HEART.

"To be truly grateful implies nobility of heart," some one has said. Certainly one often fails to meet it in working for others—and the motive for such work had better, in fact, be found elsewhere. On the other hand the response is by no means always lacking—soon or late. Our girls are nearly all teaching, but home duties of course come first. One who after faithful years of teaching has been called home by bereavement and responsibility, writes thus feelingly and gratefully.

"It is with regret that I resign my position as teacher, but you will plainly see that duty bids me stay here for the present. I shall ever have pleasant remembrance of dear Hampton, for it was there I made a woman of myself. My heart is filled with gratitude and I can scarcely express my thanks for the favor conferred upon me concerning my sister's school bills for the remainder of the term. It is an unexpected kindness. I hope she may prove herself worthy of all that is done for her. My father wishes me to say that he also is sincerely thankful for the kindness done us. Though I may never teach school again, I shall try to do the duty which lies before me and thus prove myself worthy of being a Hampton graduate."

—MARY.

A SISTER'S APPEAL.

"There is," as our correspondent above says, "other work to be done besides teaching." The young girl is doing some of it who, choosing to stay out of school herself for a year and work to give a young brother the advantage, sends him in a letter this touching appeal.

"Give my love to all the girls who ask for me, and Willie, when you meet any lady, if you please take off your hat to them, and be polite to every lady for my sake."

—Your sister.

SANTA CLAUS IN SHEEPSKIN.

A kind friend who gladdened the hearts of one of our girls and her little school children by a Christmas barrel, kindly sends us her letter of acknowledgment which picturesquely describes their pleasure. The lady says: "The following letter was received in reply to a Christmas barrel which had been sent from New Haven. The writer is a colored student of Hampton Institute, now occupied in teaching a large colored school in a small Virginia village among the Blue Ridge mountains. Many of the children walk seven miles each day to school, in their eagerness to obtain an education. As seen in the letter, Santa Claus was an entirely unknown character in that neighborhood until his very novel introduction so graphically described. Only a few slight changes in punctuation have been necessary."

—Co., Va., Jan. 1, 84.

My Dear Miss—The barrel got to station on the 19th. That station is eleven miles from here. I trusted to the good will of those going and coming and the man with whom I boarded, to get my barrel here, but the only thing I could hear was "no barrel at the depot." I waited as patiently as I could till Friday, Dec. 27, and I made up my mind I would go and see for myself. I got a man who is always kind and obliging to go with me, and found the barrel there. You see there are several very long hills to climb, and the roads were very bad to drive in. Therefore I think the man I boarded with didn't wish to take his horses. I had to walk a good part of the way as I didn't like to see the horse work so hard. I fell down over some rocks and was hurt much. I can't tell you all I want to, but will try to explain all about the tree.

The joyful time came off at last Monday, Dec. 31. You have no idea how many hearts you have made happy by your loving kindness and labor. Words are not enough to express the joy.

The barrel was such a very nice one. I sat up one whole night looking at the things and reading some of the nice books. Everything was just done up to perfection. I cried and I cried, I laughed, and I prayed my Heavenly Father to bless my dear friend, and all those who so kindly assisted her in giving us so much pleasure.

Nearly a hundred or more received gifts from the tree. I had a Santa Claus (and just let me say here, if I had it and was able, I wouldn't have minded giving any sum of money to have had you here to see and hear what went on). Santa Claus had two large sheep-skins fitted on him, boots that came over his knees, some large gloves, a red round cap on his head, (the one that came in the barrel), a masquerade of light brown paper; he had side brows and long whiskers reaching almost to his waist. The whiskers were made of wool and looked quite natural, the cheeks were lightly painted pink, the eyebrows were of wool. Santa Claus was stuffed with a pillow and several other small things. The little bells and rattles you sent were pinned on him, his arms were covered with picture papers, he had several strings of red berries around his neck. They hung so as to form different circles, some falling just a mile below the others. There were little toys hanging out of his boots, ribbons and light toys were fastened on him. The children knew nothing concerning Santa Claus or the tree. I told them I was going to sing for them and have a recitation, and wished them to help me out with my entertainment by singing the carols and reciting the verses I had given some to learn. I strung some corn and some red berries for the tree. These hung in festoons around the tree, the red and white twisted together.

I will give a little description of the evening. The doors opened at 7 o'clock, the children recited the first psalm, I prayed, a carol was sung, three recitations, then singing again, and so on till all had recited, (singing between each three).

The tree is lighted. Remarks by teacher: "Now children do you see these pretty things on this beautiful tree?"

"Yes, ma'am!"

"Well, wouldn't you like to have something from it?"

"Yes!"

"Well, I want very much you should have them and they have got your names on them; still, I can't touch a single thing unless Santa Claus comes and gives permission. Therefore if he doesn't come this way-to-night you will have to go home and leave the things behind you."

"Dad!" came from one corner of the room.

Teacher: "Children, why don't you call and beg Mr. Santa Claus to come?" she pretends to feel very sorry for the children, and cries out: "Oh, Mr. Santa Claus, won't you please be so good and so kind as to come this way!" (Repeats the same several times.) Children you must call! Beg earnestly!

Then such a begging and calling as there was from the old as well as the young.

Teacher: "I will go children and listen and see if I can hear or see him coming over the mountains. If I hear him in the distance, I will give you a sign by singing."—she goes out, walks outside the church and sings:—

"He's coming, children, he's coming!  
I know he's drawing near!  
Santa Claus will soon appear!  
Listen, children, listen!—hear!  
The jingle of some bells!  
He must be coming, yes, coming.  
Santa Claus doth now appear."

She steps in quickly, followed by a woman who pretends to be all out of breath, exclaiming: "I just must get out of Santa Claus way!" The children begin to call; in comes Santa Claus. The teacher greets him, and introduces him.

Well some of the old folks were as much afraid of Santa Claus as the children; some of the children shouted, Oh, Miss Ollie, do please, ma'am make Mr. Santa Claus go! Don't let him get me! One little boy pulled two other boys to the top of his head from Santa Claus. Some began to take to their little scrapers, but I called them back, made all come to order, shook hands with child in his life and he loved all children. I wouldn't let him hurt them. All got quiet, Santa Claus shook hands with many of them; they all did finely till he stood too near them. You would see them slipping away. Many said they thought I was only fooling them. They didn't think I would bring him, sure enough.

More than a hundred children received presents. I invited our white neighbors to bring their children to see the tree. There were about two hundred persons present. Many came from miles away. Many said they had never enjoyed themselves so much in their lives and would like to come the next night to see the tree and Santa Claus again.

I wrote a letter for the dear ones who helped you.

Respectfully,  
O.

#### A Welcome Snow-storm at Hampton.

The Hampton Institute, with its various factories, workshops and printing office, and its 600 normal and 240 primary (Butler) students, and its nearly 100 officers teachers and employes, consumes great quantities of paper of all descriptions; much of this is used for envelopes, etc., for which any sort of paper that has one side blank can be written on with pen or pencil, will answer.

A few weeks ago, the supply of paper being low, and the funds equally so, a few of us put our heads together to see what could be done in this emergency. Letters were written to some of the large paper manufacturers, who had shown interest in our work, and one was sent to Clemens Herschel, Esq., the superintendent of the Holyoke Water works, who sent a copy to the treasurer of every paper mill taking water from the works under his charge. The responses were prompt and generous; a snow storm of the largest flakes on record, set in, and for a while we were in danger of being buried, but it has already begun to melt as the spring advances. The gratifying result is an ample supply of all kinds for this whole term, at least. Our friends who so generously responded to our appeal will please accept our grateful acknowledgments for their timely contributions. The names of the donors are given below.

#### Incidents of Indian Life at Hampton.

A visit from four Apache chiefs, under the guidance of Dr. Given of Carlisle, and Major Wilcox their agent, has been one of the features of the month. These small, stern, compact, well-nigh immovable figures, in the motley dress of semi-civilization, with long black hair flitting framing their brown, deeply lined, sagacious faces, formed a sufficiently striking group even for Hampton. The watchful, intense expression on those faces, equally removed from vulgar curiosity and stolid indifference, as they looked upon the impressive movement of the great school, was an interesting study. This is an old type of which but few are left, and soon these few will have passed away.

Mrs. S.—tells in her sympathetic fashion how the little maiden in the sewing room who knew that her father had arrived, sat at her work hour after hour with her usual propriety, only glancing up now and then at a new-comer entered to hear or repeat the news. "I wanted to take her sewing away from her and tell her not to work any more—I couldn't have sat so still all the morning. It had been my father," and the kind lady is evidently touched with a little of the natural excitement which her charge had failed to display.

The fascinating papposes who are soon to play on their dour steps and to be sadly missed from Winona, waylaid me on the stairs with a shrill of baby laughter as I set out on one of Hampton's wettest mornings to visit the nearly completed Indian cottages.

They look like good-sized baby-houses all with the diminutive porch, and then the inside finished with really artistic paneling of brown cartridge paper divided by raised lines of dark-red; the tent-like ceiling, the three tiny, pretty, well-cupboarded rooms, but it makes one peculiarly glad to think of the domestic life to be begun in these complete little dwellings, and of all that it represents and seems to prophesy.

Pleasant as was the visit of the Arizona chiefs, it had its dark side, for these raiding Apaches carried off one of Hampton's most promising boys, Telma Voorhes. It was another of the Apache boys who said he was glad he was at Hampton, where he did not have to fight the Indian his brother, or the white man his friend, but certainly Telma, with his frank, bright face, and peculiarly winning smile, seemed of the same opinion. He was doing very well in his studies and in the shop, but his uncle, who was one of the party, was very urgent that he should go back with them, and the Agent felt he could present no more irrefutable argument for educating the children to the wild tribe he has cast in charge, than this same man, refined looking young brave.

The charming Hospital Room at Winona is accommodating a very patient invalid, Maggie Bullhead, a little Sioux girl from Dakota. Another little Maggie, also a Sioux, is telling about her in a letter says I hope she will pray to God, and I hope he will willing to help her and put His hand round her and bless her and make her well and she be glad to play out green grass and green tree.

A kind friend of Indians sends the Sunday School this year one hundred copies of children's papers, which are highly appreciated. Some of the very small boys however, the first Sunday they were given out, put them to rather a novel use. Having discovered that with a little judicious rolling they made excellent trumpets, they proceeded, after leaving Winona, where the lesson of the day had been on David, to form a procession and illustrate the bringing up of the Ark to Jerusalem, as they marched across the lawn in front of Virginia Hall.

#### INDIAN "COMPOSITIONS"

The Indian girls and boys of the "3rd Division," have been waiting for a school exercise in English, what they could remember of she will pray to God, and I hope he will willing to help her and put His hand round her and bless her and make her well and she be glad to play out green grass and green tree.

#### ENGLAND.

I know I can say that the England is famous country, and also I can the England is small, but strong and large cities in the world, is name London and also the some largest castle, and some goods are made strong, many thing to declarative about it, but I declarative about all those things. So that is all declarative about England.

#### JAMES THOMPSON, (WICHAKASAKA).

(Spent three years at Hampton, went home and stayed two years. Has now returned by his own desire, and is improving much, valuing his opportunities more than before.)

#### HOLLAND.

The Holland is very small country, but the people work hard to keep the cows and ben,

and sometimes goats too, and then summer time go to work farming; very nice farms in Holland. Ground is low, flat, the people build around these banks of earth, called dikes. Canals run all through the country to drain away the water, and in summer you will see the people moving about in little boat.

#### MEDICINE BULL.

[Came to Hampton two years ago last October. A Sioux from Lower Brule, Dakota Territory.]

#### SWITZERLAND.

The Switzerland is very small countries. The first thing I heard from Switzerland, Alps is a high rugged mountain and I heard another thing, the Switzerland have farmer, vineyard, orchards, wheat fields and meadows.

The Switzerland is capital, Berne. The all the mountains tie each other all the together, and take care of cows too.

#### CATKATANKA (BEAR BIRD).

[Came to Hampton two years ago last October. A Sioux from Lower Brule, Dakota Territory.]

#### ITALY.

Feb. 5th, 1884.

Dear Friend,

Italy is a very good country and it is very warm and very nice, and good air just right, and every thing is clear, and the sky looks so blue and the sea looks so blue too, and long time ago they use to built very nice houses, but it is very old city now, the city's name is Rome, and some very nice picture, the draw long time ago, and they put some in a large house to show when the people come to write I think, so and some statue they made by the old people long time ago, and there is some volcanoes in Italy too, in Mount Vesuvius there are some villages, and the mountain just open and come out big fires and covered all the villages up and some of the people have to run as fast as they could time and some of them have to die and covered all the fire of stones and ashes, too, and up North there is a city named Venice; it is on 72 islands, they have canals instead of the streets and that is all this time I want to say.

#### REBECCA MAZAKUTE.

[Sioux from Crow Creek Dakota. Knew a little English when she came two years ago last October.]

#### FRANCE.

France is a bright, pleasant country and sunshine. The people like to have good time and every thing like that. Paris is city of France; when sunshine day they have super outside, and some of the things grows in France grapes and flax and olive all things like that. I do not know, I forgot all these and make mast.

#### BAPTISTE GABE.

[Sioux from Cheyenne River, Dakota. Came to Hampton Oct. 1881.]

#### NORWAY.

Norway is a large country, the people that live up there are very tall and very handsome indeed. Sweden and Norway have the same capital; they have iron, gold and silver and copper and pine trees; they cut down the trees and make mast.

That's all I know.

#### JOSEPHINE MC CARTY.

[From Standing Rock, Dakota. Had been at the Sister's School. Came in 1881.]

#### RUSSIA.

is a country that is far away from here and Russia is the capital is St. Petersburg and Ural mountain and Ural river. Well once upon a time there was a woman who had four children and she thought that the wolves would eat her up and so she threw her children to the wolves and until the wolves eat all her children she went to a man and when the man saw her he thought it was very foolish to do that and he kill the woman that she throw her children to wolves.

#### MELISSE INEZ.

[Pima girl from Arizona Ty. Came to Hampton Feb. 1881.]

#### HOLLAND.

I think Holland is very good, and it is very low land, and they have canals for road, and winter time they skate to their works and market, and in summer time they take care of the cattle very good, and they get great many milk out of them; they make cheese and butter, and capital is Amsterdam. That all I can say.

[Pima boy from Arizona Ty. Came to Hampton Feb. 1881.]

#### FRANCE.

In France they make wine with grapes; they make silk; they bright people they like to eat chestnuts.

#### SAYON.

[Native African, from Zulu land. Has been a runner in P. T. Barnum's show; second year at Hampton.]

#### FROM AN INDIAN FATHER.

As Indian father, delighted to receive an English letter from his little daughter, wants to answer her in English, through his agent. The little girl, who has been at Hampton only five months, was helped in her letter by an English speaking school mate, her teachers not knowing of her writing, but she is trying her best to learn, and will be able some day to write one all by herself. Her father's letter shows what Indian parents think of their children and of their education.

#### CROW CREEK AGENCY, D. T.

Feb. 4th, 1884.

My dear Lieutenant,

"Brother of All," wishes me to answer his daughter's letter and to say he was very glad to see she could write English. He had the letter read in the office before all the Indians. He was very proud of it. All his family are well. Red Bull's little children walk and talk. Your pony is fat and fine, your dog has 6 pups. Brother wants me to tell you he loves your letter very much. He keeps it under his arm all the time. He says he is well and gets a long well with the agent. The Indians do not dance as much as they did. He and all his men (Police) are now ordered out by the Agent, stopping gambling. They have brought in to the Agent a great many cards, and the names of the gamblers. He hopes you are well and happy. He wants you to learn all you can and do what your teachers want you to do. He loves you in his heart and hopes you will grow up to be a good and wise woman. He shakes hand with you. This is from Brother of All to his daughter Rose. He wants you to write to him often in English.

#### BROTHER OF ALL.

By the Agent.

Major Riordan, Agent of the Navajos, numbering about 16,000, and increasing, the largest Indian Agency in the country, wrote Jan. 21st, 1884, as follows to the authorities at Washington:—

"This tribe ought to have not less than ten schools actively at work. I believe it should have thirty, but feel that I am away under the mark when I say ten. I believe the Government would be making a paying investment if it put every Indian on the reserve, and started thirty day schools amongst them, half day in school and half in the field, or alternate weeks as may be found advisable. I would not spend a dollar on food supplies except for the sick and crippled, and that should be in the hands of the physician.

Speaking for myself as Agent, I never want to have to handle a dollar's worth of food for this tribe, after the present year. Given tools and a show to learn there is no reason on earth why they should not become self supporting citizens.

It is useless to try to teach the old men and women, I would not waste any time on them, but there is 'good leather' in many of the young people, and they can be led aright. I have utterly ignored all their traditions, as far as tribal Government is concerned, of late, dealing with them as individuals, and ranking all alike, as far as tribal standing is concerned. The result has been the young men are coming to the front. They show a disposition to better their condition and laugh at the anathemas showered on them by the medicine men. The dread of losing their control is a little severe on the chiefs, but I am determined that the old order of things 'must go,' and that natural ability and a disposition to do right, will be the tests for leadership. The one that becomes prominent hereafter will have to earn and deserve it. And the Government should give them nothing but tools and schools."

HOTEL COMFORT, Main street, Hampton, Va. B. Barnard, Proprietor.—This comfortable and home-like house is situated on the main street, about the centre of the town, within a few minutes walk or drive of the depot or steamboat landing. Stages pass the door every half hour for Old Point Comfort and Fortress Monroe, which is about twenty minutes' ride. The Hotel is but a few minutes' walk from the Normal School grounds, National Cemetery and Soldiers' Home. Being near the water, it affords facilities for boating and fishing to those who are fond of these exercises. All the appointments of this family Hotel are first class.

Terms reasonable. Special inducements to families. For further information address the proprietor, B. Barnard, Hampton, Va.

**\$666** a week at home, \$5.00 outfit free. Pay absolutely sure. No risk. Capital not required. Send for our book, which contains full particulars of our new, young or old, can make great pay all the time they work with our company. Write for particulars to HALL & CO., Portland, Maine.

## THE SOUTHERN PRESS.

## ALL SIDES.

Doing Good.  
(From Religious Herald.)

"How many girls there are in Virginia, and all through the South, who might become bright and gifted and useful women if they could only be educated. Some of these are too poor to avail themselves of the opportunities afforded by the many excellent female schools which have been established in the South. For young men, free tuition is provided at our University and at some other schools, but who, in all the South, proposes to help the poor young woman in her struggle for an education?"

If the white race in the South is in danger of neglecting its women or of sacrificing their interests to the predominant claims of their brothers, the danger is even greater from a similar neglect among the colored people, and a plea for the one should be, with a double force, a plea for the other. By inheritance and association, the colored girl is handicapped in the race; she is spared none of the disadvantages common to all women, and, in addition, is weighted down by a burden peculiarly her own, bequeathed to her as the result of generations of enslavement. In the article by Miss Pöster, quoted in our February number, the extreme views, taken of the condition of the Negro women of the South would be almost paralyzing were it not that the experience of a majority of observers goes to show that they are not only extreme, but also local. A reply to her as the result of a colored woman, and dated from Howard University, should be put on record as the protest of a woman who feels deeply the accusation against her race and sex, and has presumably, a knowledge of the facts. She says:

"Is a Negroess less than a woman, that any condition could rob her of all natural modesty and delicacy? It is false. I repeat it, it is false. Slavery has much for which to render an account; it invaded the sanctity of homes, it nullified the marriage bond; it exposed to temptation and induced to immorality; it did all this and more; it was a huge blot upon the face of society, a great ulcer upon the body politic, a burning shame to the American people; but it did not, because it could not, take from the women of the oppressed race that innate regard for purity and chastity which remained theirs by right of their womanhood."

Most fortunately for the future of both the white and colored people of the South, there has grown up since the death of slavery, a class of Negro women who have demonstrated the truth of the above assertion; women who have somehow escaped the brutalizing influences which in the past made virtue an accident, and even yet make its possessors very literally lights in the midst of darkness, and who have a claim of special strength upon their own sex everywhere. No efforts were ever more surely or speedily rewarded than those which have been made for the assistance of these women, and there is nothing in the history of the Negro race in this country which promises so much for its possible elevation as the development of strength among its women. The instances which come constantly under our own observation are so marked as to make them, in the aggregate, the most encouraging feature of our work, and we have no reason to suppose that the experience of the Hampton School is exceptional.

Every argument which has been or which can be used in favor of the education of white women is applicable to their colored sisters, while additionally their claim is strengthened, by just so much as their womanhood has been wronged in the past. Not merely personal either is the claim which these women have upon us, for it is not merely as individuals that they are to be saved and upheld, but because, as a class, they have before them an opportunity as grand as has ever fallen to the lot of the women of any race.

Such a report as the following, made by the State Superintendent of Instruction for Virginia, is a statement of facts which is worth considering, for it holds good of the entire South.

"We want more thoroughly drilled and competent colored teachers, and the education of the colored race will never be what it should be until we have them."

We find that this year there were 1,277 colored schools, an increase of 190 over last year, and that 1,277 of these schools were taught by colored teachers, an increase of 218 colored teachers over last year, which still left 438 colored schools taught by white teachers. We discussed this subject fully in the last report and urged that colored teachers be employed for colored schools, and since competent ones could be obtained, and that time our position has been strengthened by the universal demand for colored teachers for colored schools. This want we fear cannot be properly met for years. The present year we were short 433 colored teachers for the schools in operation, to say nothing about the large percentage of those employed who have been allowed to teach because better ones could not be obtained, and besides, simple justice demands that many more colored schools shall be opened to accommodate the colored children; for by reference to Table No. 1, it will be seen that great injustice has been done them in many localities.

It evident that none but the best teachers should be employed, and this is especially applicable to the colored schools, and while recognizing the justice and importance of having none but colored teachers for colored schools, we again insist that the mere fact of a man's being colored does not entitle him to a school, he must be morally and mentally qualified.

For many reasons, this work of primary teaching falls to the women rather than the men of the race, and the knowledge that they have this field before them, reacts upon them most favorably. It raises them above the necessity for, or temptation to, the hasty and ill-considered marriages so common among them, for, knowing that they have a permanent means of subsistence, they make more careful choice and, as result, their homes, when they marry, are built upon a much surer foundation and become, in turn, a power for good.

The testimony is general, that as teachers they are morally stronger than men, while their gentleness and tact, not to mention their advantage in being political non-combatants, give them an influence outside their merely technical work.

In short, the work done during the past ten years, by the comparatively small number of colored women who have been trained as teachers, has been so good as to create a demand far beyond the existing supply. No policy can be safe which permits such a demand to go unanswered, and that the various means of meeting it should be taken speedily into consideration, is of the first importance.

The Education Bills now before Congress are seven in number, as follows: A Bill to aid in the establishment and temporary support of common schools.—Sen. Blair, N. H.

A Bill to appropriate and expend fifty millions of dollars derived from the internal revenue taxes and sale of public lands, for the education of all children living in the U. S.—Gen. Logan, Ill.

A Bill to aid in the support of common schools.—Mr. Hewitt, Geo.

A Bill to donate in trust, the net proceeds of the sales of the public lands in the states and Territories, to aid in the support of common schools.—Mr. Oates, Ala.

A Bill to establish an educational fund, and apply a portion of the proceeds of the public lands to public education, and to provide for the more complete endowment and support of colleges for the advancement of scientific and industrial education.—Sen. Morrill, Vt.

A Bill to aid in the support of common schools.—Mr. Mackey, S. C.

A Bill to aid in the support of common schools.—Mr. Willis, Ky.

Of these, the bills brought in by Messrs. Blair and Willis are the most prominent, the former in particular having been strongly pushed. Of it, the Virginia Star (Col'd) says:

"We take it that no greater good fortune could befall the South than the inauguration of such a measure for the enlightenment of her ignorant masses of both blacks and whites. We candidly believe that were the masses of the South educated, the acts perpetrated by the Kluklux and White Liners in this section would be impossible. Edu-

cation, popular education, made as common as it were, as water, would be the one panacea for all our woes here in the South. Consequently we say God send the day when the bill under consideration shall be a law; when teachers shall no longer go for weeks and months without their pay while plethoric treasury officers shave the paper paid to them instead of money, with money which those officers have collected from the people, but are unjustly allowed to hold in their possession for months after it has been wrung from the people."

Senator Blair has immortalized his name by introducing that bill, and if it shall become a law, his canonization will have been assured.

The clause in this bill which elicits the favorable comment of the colored press in general, reads as follow:

"\* \* \* which instruction shall be free to all without distinction of race, color, nativity or conditions, and provided, that no different races living in the same community, but attending the separate schools, receiving benefits of this, the same as though that attendance therein were without distinction of race."

And again, Sec. 9:

"That a part of the money apportioned to each State or Territory, not exceeding one-tenth thereof, may yearly be applied to the education of teachers for the common schools, the whole of which may be expended in maintaining institutes or temporary training schools or in extending opportunities for normal or other instruction to competent and suitable persons, of any color, who are without necessary means to qualify themselves for teaching, and who shall agree in writing to devote themselves exclusively, for at least one year after leaving such training schools, to teach in the common schools, for such compensation as may be paid other teachers therein."

The feeling, which, to a certain limited extent, prevails in the South in regard to Federal aid, is expressed in such articles as the following, from the Richmond State:

"It is no time now to ask Federal aid for public schools while the people are demanding a reduction of taxes. The Government can assume no further burdens; but, on the other hand, should be relieved of most of the weight that now rests on its shoulders. Moreover, there is no more dangerous sign of the times than the tendency of not a few to look to Washington as the source of all their strength more than has already been done, and the people should be ever on their guard and ready to oppose every step of centralization."

The States are able to educate their children, and the support of schools should come directly from the people. Why take it to Washington to be piled up, then, did States? No! Let the Federal taxes be reduced, and the people of each State will take care of its schools."

Sec. 6 of Mr. Blair's Bill seems to meet this objection, and certainly the statement given above that "the States are able to educate their children" provokes an enquiry as to why, if such is the case, they do not do it, and at once settle the vexed question of Federal intervention."

Sec. 8. That the design of this act not being to establish an independent system of schools, but rather to aid, for the time being, in the development and maintenance of the school system established by local government, and which must eventually be wholly maintained by the State and Territories wherein they exist, it is hereby provided that no part of the money appropriated under this act shall be paid out in any State or Territory which shall not, during the first five years of the operation of this act, annually expend for the maintenance of common schools at least one-third of the sum which shall be allotted to it under the provision hereof, and during the second five years of its operation a sum at least equal to the whole amount it shall be entitled to receive under the act."

## Dr. Elisha Harris.

The death of this good and noble man is a great loss to the interests of systematic and scientific philanthropy. With the United States Sanitary Commission, the health department of the city of New York, which was his home, the Prison Association, for improving the condition of prisons and that of their unhappy inmates during and after their term of confinement, the American Social Science Association, and the cause of social improve-

ment generally, his name has been intimately associated for many years. In the midst of his constant, laborious public services, his sympathies were ever open to special calls. Thus he took time from his busy days to write one of the Hampton Health Tracts, on "Cleanliness and Disinfection" carefully prepared, an interesting pamphlet, adding much to the value of the series, to whose objects he gave his hearty and active encouragement.

We are glad to have received the following tribute to his memory from his life-long friend, an honored trustee of Hampton Institute, Dr. Lewis H. Steiner, of Frederick City, Maryland.

Frederick City, Md., February 21st, 1884.  
Editor of Southern Workman:

Our friend, Elisha Harris, died at Albany on Thursday, 31st, ult. His name has been connected so largely with sanitary and philanthropic operations, that it seems fitting for the Southern Workman to bear its tribute to his memory, more especially as he was the author of one of the Hampton tracts. Although comparatively a young man he was more effective work for the promotion of the health of the American people than Dr. Harris. When the Rebellion broke out, his reputation as a Sanitarian directed attention to him as one of those best fitted to organize the U. S. Sanitary Commission. During the war, he was employed in directing much of its work among the sick and wounded, personally laboring on battle fields and in hospitals, and seemingly utterly regardless of fatigue or the wear and tear which results from this kind of service. Kind, genial, sympathetic, always wonderfully effective upon the jaded spirits of the suffering. Strong in his attachment to the national cause, he still ministered to those who opposed it, when they were prisoners within our lines, with a gentleness and care that showed him free from all ill-feelings or thought of anything but how he could relieve suffering. And during these years of his life, there seemed to be no desire to claim any credit or honor for what he was doing. There was no self assertion in him. His mission was to work for the alleviation of distress, and his reward consisted in being allowed so to work.

Since the war, his work in systematizing the health service of New York City, and that of the State of New York, has shown how much administrative ability, this gentle, good man possessed. He also had the singular faculty of stirring up men to work, and making them enthusiastic in carrying out suggestions that proceeded from his busy brain. In this way, from small beginnings, the American Public Health Association, first proposed by Dr. Harris, has grown to such proportions as to have enlisted thousands in the work of caring for the health of the people of our land.

His philanthropy was cramped by no considerations of race or nationality. He has shown that if so relief must be procured in suffering—if so relief must be procured in some way or other. This seemed to be the motto which inspired him at all times.

The writer, having for twenty-two years had most intimate relations with Dr. Harris, feels that his death has removed one of the most useful, intelligent, philanthropic, kind hearted, and patriotic men he has ever met. While he lays this tribute upon the grave of the dead, he fondly trusts that the results of Dr. Harris' influence may never die, but that many may take his place as apostles of health and good will to their fellow men. L. H. S.

## How it looks at Last.

J. B. Vassar, in the life of his father, "Uncle John Vassar," gives the following incident:

"My father, as is known to many, was for many years in the employ of Matthew Vassar, the founder of Vassar College. It may not be generally known that the money with which the college was founded was made from the sale of pale ale. My father was the foreman in the business which the most of the money was being made. When he was converted, and for 'conscience' sake, left the premises, Matthew Vassar was very much offended, and for a number of years would not speak to him. A year before Matthew Vassar departed this life, father called upon him, and as was his wont, offered a short prayer before leaving. Mr. Vassar kneeling, I, a boy, observed the two men with uncommon interest. Never shall I forget that at the end of the prayer Matthew Vassar arose, and with tears, laying his hand upon father's shoulder, said, 'John, you did right in leaving the business.'"

## Horsford's Acid Phosphate,

AS A NERVE FOOD.

Dr. J. W. Smith, of Wellington, O., says: "In indurated nervous supply I have used it to advantage."

Daily and systematic reading had enriched his thought, trained his mind, enlarged his sympathies, broadened his outlook, widened the horizon of all his heights. Said a prominent man to us recently: "I have not read a book for twenty years, but I have not been reading. But the man who does not daily broaden his mind and heart, goes poor into eternity."

In the latter years, Mr. Wanamaker has given one hundred thousand dollars to the Young Men's Christian Association, of which he has been president for thirteen years, has built a church near his country home, has aided hospitals and orphanages, and, says a friend, "He gives a fortune every year in private charities." Three years ago, he established an Industrial College at Bethany, where five hundred boys and girls, under the presidency of Rev. Dr. Arthur T. Pierson, study book-keeping, telegraphy, cooking, embroidery, printing, painting, etc.; a mission akin to that of Cooper Institute. Thousands of our future citizens will probably bless him all their lives for having been a motive of study to him to earn their living and establish themselves profitably and pleasantly in business.

How does he find time to accomplish these charities, and yet manage his great business interests? He saves the moments often studying the next Sunday-school lesson as he goes from his business to his home. On his desk I read the words, framed: "Nada die sine linea." "No day without a line," the motto of a Roman painter, Apelles. Mr. Wanamaker is still in his early prime. He has light hair, blue eyes, with the light of youth in them, and a frank, manly face, whose sunny smile, like his mother's, one never forgets. Said one of his employees to me: "I can work better for a week after a pleasant 'good morning' from him." With a persuasive voice, a magnetic manner, a noble presence, he is one of those men with whom he comes in contact, as I have said before.

Unostentatious, he is yet a born leader of men.

WITH THE SKILL OF A GENERAL, he deploys the seven thousand persons who work for him. Years ago he said to his associates, "I will not lie to sell goods," and he requires no subterfuge from his clerks in their dealings with buyers. He says, "When a country boy, I was shy about going into a store; and I resolved if I ever owned one, that everybody should feel at home in it, and not be urged to buy goods." It is a pleasure to walk through his immense houses, look at beautiful things or linger in the reading-rooms for rest. Always progressive, he was the first in this country to use pneumatic tubes for carrying money, in place of cash boys, and to utilize the electric light.

But this busy, alert, occupied man takes time to carry flowers to the sick-bed of a Sunday-school scholar, and to talk with any person who needs his help. A man came to the office one morning and asked for Mr. Wanamaker. A score were waiting to transact business with him, involving thousands of dollars. What was his errand? To talk about being a Christian? The great merchant eagerly responded. That hour together they knelt and prayed over this, the most important decision of life.

In his home, with his four children, he is a boy again. He enters heartily into their amusements. He plays croquet as though croquet were the one important thing in a man's life. He starts off in arm in arm with a friend, to see who can come out ahead in a brisk mile walk. It is this warm winsomeness of temperament that will keep him always young. He is interested in boys and young men. He says often after the day's whirl of business, "The best thing I have had to-day was a talk with a poor boy."

Does it seem strange, now, with his upright life, his energy and his attention to business and good judgment, that he should have won success? Does it seem strange, with his sympathy, his consideration for others, and his cheerfulness, that people love and trust him? You must see, I think, that it has not been chance or luck. And is it not inspiring to see a man, still young, so grandly successful in business, so eminent in Christian work, and so joyous and brotherly as to make life for himself, and for those having to do with him, like one of those bright days in spring, when hope, courage, a sense of youth and strength and some gladness to come in the very air?—*Philadelphia Bulletin.*

#### Santa Claus at the "Butler."

Visitors to Hampton Institute will remember the first object to which their table driver calls their attention as they turn into the Normal School grounds, with a shake of the whip and a jerk of his thumb, and, "Yon de Butler. Would you all like to stop and see de kitchen garden?" A big, barn-like structure, like two long freight depots crossing each other in the centre at right-angles, stretches out into the fields, east and west and north and south—an object lesson on the points of the compass, for which one may be truly grateful to the late Governor of Massachusetts, in a region where you be-

come so distractingly turned round from the first that you cannot wonder that Captain John Smith explored every maddening crevice and inlet for the North-west Passage. A crowd of pickaninies is probably surrounding the latticed porches at the four ends of the building. The visitors generally conclude to alight, and see what the "Butler" and its "kitchen garden" may be. Entering a door at one of the angles, they find themselves in a large square room, as barn-like as the exterior, free from paint or polish, and without furniture but for a tapestry of little shawls, hats and caps, and in the centre a platform with a few seats, to which they are invited by the teacher.

A big bell is rung. The cloud of pickaninies crystallizes into orderly lines that come marching in, headed by the smallest of boys in the biggest of boots. Of course you ask his name, and are not surprised to hear that it is Methuselah, or Abednego, or something equally scriptural and appropriate. In their poor, till the dusky room is overflowing with a sea of dusky little faces with shining eyes and flashing teeth. Another minute and it is overflowing with song, rich, melodious; children's voices, but how different from the shrill piping of Northern school infants—no offence to the little pink and white cherubs, but they cannot sing like their little brothers in black, who beat them at their own songs. If anyone who has never been at Hampton fancies he has heard "Johnny Schmokey" sung, let him suspend his judgment till he visits the "Butler." "Wide Ribber," "Roll Jordan," and "Peter on de Sea, Sea, Sea, Sea," are best after all; and by the time the "whale has swallowed the whole"—the visitors, not knowing whether they feel more like laughing or crying, are generally doing both.

A door on each side of the square room is opened, the dusky regiments file out, with their own music, and the visitors follow one after another of the cardinal points of the compass, surprised to find in all quarters, neat and cheerful school rooms, bright with sunshine and pictures, well furnished with charts and maps, and other school belongings; some classes presided over by graduate teachers from Hampton Institute, and some taught by pupils from the same, under supervision and training as teachers.

The kitchen garden is of course the great attraction, with its dainty devices for teaching the little ones the ways of well ordered homes.

Many have enjoyed such a visit to the "Butler," and all who have we think will wish they might have been present when Santa Claus made his visit this winter. To provide Christmas presents for three hundred is a serious matter. For two or three years past, the kindness of certain Northern friends has made it possible to include this little Hampton "annex" in Hampton's Christmas joy. But, like other features of Hampton, the "Butler" has been growing—and three hundred—the question looked serious. Santa Claus was not to be snubbed. He meant to come, and come he did. Little hearts are easily made glad. Some people don't know what to do with old Christmas cards, some do. Not that Christmas cards were all that Santa Claus could bring. Didn't he count every little nose three times over? It was some days after Christmas, but that was no matter. The year was young, like the children. They had been in school all the morning, and were not surprised to find a few visitors in the big room when they marched in at noon to sing before being dismissed. They had grown accustomed, too, for a few days back, to the presence on the platform, of a clever imitation chimney made of wood painted like bricks. It was, moreover, partially hidden now by the group of visitors. A little singing, some mysterious preparation going on meanwhile, and the visitors quickly changing their places, a row of little stockings becomes visible hanging around the fire-place, and a few irrepressible screams and shouts burst from the most excitable as they are discovered. But there are not three hundred stockings, and they are evidently empty; so the enthusiasm subsides. The presiding genius of the place comes to the front of the platform and tells the children that if they will be good she will tell them a story. The eyes shine. It is a delightful story:

"'Twas the night before Christmas, and all through the house  
Not a creature was stirring, not even a mouse."  
Emphasis and gesture make it vivid. The attention is breathless. But what do they hear? Is it the prancing and pawing of each little hoof? It seems like it, indeed. The emotional thermometer is rising rapidly.

"As I drew in my head, and was turning around,  
Down the chimney St. Nicholas came with a bound."  
He did, sure enough; and it wasn't the children only who were surprised. They shriek—three hundred in one—rose to the rafters, and that room was half empty before one knew what had happened. But through the open door they poured. A span of horse and whose owner had deserted to watch the fun, took flight before them and broke their wag-

on. One guilty conscience betrayed itself in the piteous cry, "It's been a naughty boy; he's come for me." There was no time to laugh at the unexpected turn of affairs. First a rush to the rescue to pick up the fallen before they were trampled on, and rally the fleeing; a vain effort, till a wise head thought to strike the school gong. The voice of law and the interrupted instinct of obedience, and an instant hush fell upon the crazy little crew. The panic was broken; the deserters came trembling back, encouraged by kind and firm room where poor "Mr. Santa Claus" was marching disconsolately back and forth before the lonely hearth, stroking his long, wistful beard, in dismay at the unexpected sort of sensation he had created. He stood considerably back from the edge of the platform, while his harmless and benevolent character was explained to the children, and the interrupted story went on till—

"Laying his finger aside of his nose,  
And making a bow, up the chimney he goes."

More screams and a feeble attempt at a presiding genius that any who went out again could not return, pricked the bubble of their fear and they collapsed into good behavior. A conversation with the invisible Santa Claus resulted in that worthy's forgiveness of his uncooperative reception, and his return down the chimney with little injury to sensitive nerves; and the most amicable relations were soon set up by the appearance of a basket full of candy bags which he proceeded to distribute among the children himself; the "naughty boy," we said, laughing equally with the rest. One small girl had to be comforted for some time, remaining through the whole performance in another room, afraid to venture forth, but by no means forgotten or deserted. Another inquired condescendingly of a visitor, "Didn't any of the big folks run?" and was quite gratified by the suggestion volunteered by an unscrupulous friend of the biggest of them, that gentleman looked as if he would have liked to. The day after the occasion, most of the school were anxious to disclaim any share in the panic, though one honest lad feelingly exclaimed, "Oh, but when I saw his heels come down!"

Some help was required for the distribution of the Christmas cards and the third lot of more substantial gifts—shoes, hats, mittens, looms, scarfs, aprons, material for gowns, and oh, crowding joy to little girl hearts—dolls! pretty dolls; beautiful, wonderful creatures to their blissful recipients; dolls with nice clothes and real hair! The supreme delight of attainment, the motherly adoption of the treasures, were somewhat to make one's heart tender. If the Sunday school that sent that gift could have seen the ecstasy on one little dark face, they would have had a Sunday-school lesson that would never be forgotten. And, somehow, through the whole scene, even with the amusement softened by compassion, and with the sympathy in the little terrors and delights, mingled an echo of the old, dear words: "The least of these—my brethren."

The thanks of the children and their teachers are here and are most heartily extended, to those friends whose generous thoughtfulness sent Christmas joy to the "Butler." To the Congregational church S. S. C. Northampton, Mass. through Mr. S. C. Bridgman; the children of the First Field, Mass. through Rev. R. M. Woods; the ladies of Memorial church New York city; the First Cong. S. S. Keene, New Hampshire, through Mr. G. E. Holbrook; Mrs. G. Fountain and daughters, New York city; Mr. F. C. Briggs, Hampton, and many donors of Christmas Cards. H. W. L.

#### The Rescue—A Virginia Story.

By Miss Jennie B. Hope—Published by T. H. Estlin, 3 Whitaker street, Savannah, Ga.

The sketch of colonial life in Virginia which was lately been published under the above title, is not only a bright and pleasantly written novelette, but has a special interest by virtue of the thread of history which is interwoven with its romance and upon which, indeed, the romance itself depends.

Just three hundred years ago, in April, 1584, Sir Walter Raleigh despatched from the Thames the "two small vessels," which were destined to bear back to England such a description of the land they found as to win for it a christening from the Queen herself. "Virginia" by royal order it became, and from that day this fair and fertile coast, with its lovely, wide-spread waters, began to play its part in the drama of nations, crowded its records with material for novelist and poet. From the ivied walks and stately magnolias of the James River to the yellow beaches of Chesapeake

Bay and "the Roads" the country is rich in legend and tradition, and from among them Miss Hope has chosen one for her plot depends upon the pirate Blackbeard, a veritable personage, who for years maintained a proud pre-eminence among the sea-robbers who harassed the commerce of the Virginia and North Carolina coasts.

"The Rescue" is the story of an attempt made by this bold buccaneer to abduct a beautiful young woman of whom he was enamored after the ardent fashion of his kind, from her father's plantation on the York River, and her rescue at this most unpleasant crisis of her fate, by the opportune arrival of her lover, an officer of no this much dreaded pirate, there is no reason, judging from other of his exploits, to doubt that he was capable of such an attempt, and Miss Hope has worked into her narrative so much local coloring, and given it so pleasant a flavor of "old time" life, that it is likely to be read with interest beyond the circle of those who know and love the "Peninsula" whose charms she celebrates.

While history and tradition indicate that Blackbeard did not confine his depredations to any particular locality, yet Hampton has a special claim upon his memory, for the shores in the neighborhood of Hampton Creek, in his time thickly wooded, are said to have been among his favorite haunts. It is easy to imagine him lying here in wait to pounce upon the richly laden vessels sailing in between the Capes on their way to some of the river ports, and that his warfare was no child's play is shown by an inscription upon the broken headstone of a grave, which may be found, with a half dozen others, in a little tangled thicket whose neglected vines are almost within reach of the passer on the busy highroad between Hampton and Newport's News.

This Stone was given by his Excellency Francis Nicholson, Esq. Lieutenant and Gouverneur General of Virginia, in Memory of Peter Heyman Esq. Grandson to Squire Peter Heyman of Sumerfield in ye County of Kent, he was collector of ye Customs in the Lower District of James River and went Voluntary on Board ye Kings Ship Shortland in Pursuit of a Pirate who Greatly Infested the Coast, after he had Behaved himself seven hours with undaunted courage he was killed with small shot ye 29th day of April, 1700 In ye Engagement as he stood Next ye Gouverneur upon ye Quarter Deck—And was here Honorably Interred by his Order.

There are those still living who can tell the tale of Blackbeard's life and death "as it was told to them," and it is with a vivid consciousness of the contrasts of human life that one looks from the windows of Virginia Hall across the water to a peaceful little point of land, which, reaching out into the narrow, winding channel of the creek, is known still as "Blackbeard's Point," its name having clung to it from the day when, to quote Miss Hope, "the head of the malefactor having been brought into Hampton Roads as a grisly trophy swinging from the bow of the 'Seahorse,' was exposed on the little peninsula on the west side of the river at Hampton, as a prey to the fowls of the air and a terror to all evil-doers."

If you intend visiting Old Point Comfort or vicinity, send for a copy of the VISITORS' HAND BOOK, which gives a complete history and description of all places of interest in the neighborhood, together with numerous illustrations. It also gives the addresses of the principal reliable hotels and boarding houses in the vicinity. Nicely printed, on heavy calendered paper, by Northern students trained at the Hampton Institute. Price 25cts., by mail—Address, C. W. BETTS, Box 10, Hampton, Va.

Horsford's Acid Phosphate. As a Nerve Food. Dr. J. W. SMITH, Wellington, O., says: "In impaired nervous supply I have used it to advantage."

## At Home.

## "He Careth for You."

BY REV. R. B. MURKIN

Yes, leave it with Him,  
The little all day,  
And they grow in the dew—  
Yes, they grow in the dew—  
They grow in the dew, revealed by the light;  
They grow in the dew, revealed by the light;  
Sull they grow.

They ask not your blessing;  
They need not your care,  
As they grow;  
Dropped down in the valley,  
The field, anywhere—  
There they grow;  
They grow in their beauty, arrayed in pure white,  
They grow clothed in glory by Heaven's own light—  
Swee they grow.

The grasses are clothed,  
And the raven is fed  
From His store;  
But you who are loved,  
And guarded, and led,  
How much more

Will He clothe you with Him, and give you His care!  
Then leave it with Him, He is everywhere  
Ample store.

Yes, leave it with Him,  
To more dear His heart,  
You will know,  
Than the lilies that grow  
Or the flowers that start  
Nimbly the snow;  
Whatever the need, if you seek it in prayer,  
You can leave it with Him, for He is there,  
You, you know.

—THE INTERIOR.

## The Education of Girls.

A young man who is willing to sit down in idleness, or devote his time to "Society," and live off the earnings of his father, is justly looked upon as a useless if not a dangerous member of society. No young man of spirit or principle will consent to do such a thing. And further, every man, however wealthy, if wise, teaches his son some business by which he can earn a livelihood. The same principle should be applied to girls. Every girl should be taught to be self-supporting—should be taught that it is creditable to live a life of dependence, even upon her father. Every girl, whatever her social or pecuniary condition, is liable at some time in her life to be thrown upon her own resources and this emergency should be provided for. Besides, the ordinary duties of life require that boys and girls be taught to work, whether their parents are wealthy or not. Public sentiment is greatly at fault in this matter, especially with reference to girls, and teachers can do much in correcting this sentiment. They should teach the boys and girls in school that work is honorable and that idleness is dishonorable, and that it is the duty of every girl as well as every boy, to learn how to earn a livelihood. It is not enough in this world that one be good; one must be good for something.—*Indiana School Journal*.

## After Graduation.

A few years ago a young man was graduated at Harvard University. He determined to become a cotton manufacturer. Instead of relying upon his general education, and waiting for an opening, as many of his classmates did, he began at once to prepare specially for the business he had chosen, by entering a machine shop as a workman—making full hours and acquainting himself with every part of the machinery of a cotton mill. From the machine shop he went into the cotton mill, and by hard work and close attention rapidly acquired knowledge of all the process of cotton manufacture. While some of his classmates were waiting and looking for an opening in business, and others with difficulty filling subordinate positions, he was rapidly rising step by step, until he is to-day in charge of one of the leading cotton mills in New England, with ample salary, and what is better, is discharging the duties of his position with great satisfaction to the company he serves. *Providence (R. I.) Journal*.

## Frank Leslie's Sunday Magazine

The March number is promptly on our table and is, as usual, with a light reading matter—edifying and entertaining, and admirable embellishments. The popular editor, I. W. Falmagne, D. D., contributes a characteristic article, "A March Tale of To-day," and the Home Page contains one of his series—"Sanctified by the Spirit." "Annals of Little Compton," "Anthony Vandeck, a Court Painter," etc., are finely illustrated and exceedingly interesting articles. "The serial, 'How It All Came Round,' and 'A Wrong From History,' are excellent. The 'Famous Sketches,' 'Lives,' etc., are by popular writers. Marion Mackland has a charming story, 'Practical Good Women.' The contents are so varied and abundant that no one can fail to be gratified. Price 25 cents. Sent by mail for 30 cents. Address: New FRANK LESLIE, 55 and 57 Park Place, New York, N. Y.

## "Sentiments" for Memorizing and Recitations.

SELF RELIANCE.

Keep steadily before you the fact that all true success depends at last upon yourself. By nature we are weak, our destiny is to become strong. We do not get on the track of success until we cease to lean upon others and learn to depend upon ourselves. By success, I mean a full manhood and its inherent peace.

A man may have money, friends, opportunity, good fortune, but that which underlies achievement is the ability of the man himself. If success comes from without, it will be fictitious and will fail to make return of happiness. When it springs out of one's energies, it is a vital, living thing. One of the most successful men England has produced said: "The longer I live the more certain I am that the great difference between men, between the feeble and the powerful, the great and the insignificant, is not anything that can be done in this world, and no opportunities will make a two-legged creature a man without it. But energy and invincible determination; these with us are nothing but the strength of his own body and soul would he depend. There must however be a self to depend upon."

And "This above all, to thine own self be true, And thou canst not then be false to many men."

THEO. MUNGER.

## From On the Threshold.

BOOKS.

In books, be it remembered, we have the best products of the best minds.

We should any of us esteem it a great privilege to pass an evening with Shakespeare or Bacon, if such a thing were possible. But were we admitted to the presence of these illustrious men, we might find them touched with infirmity or oppressed with weariness; to us the oracle would be dumb and the light eclipsed.

But when we take down one of their volumes, we run no such risk. Here we have their best thoughts embodied in their words; immortal flowers of poetry, wit with Castilian dews, and the golden fruits of wisdom long ripened on the bough, before it was gathered.

We may be sure that Shakespeare never out-talked his Hamlet, nor Bacon his essays. Great writers are indeed best known through their books.

The ruin of most men dates from some vacant hour. Occupation is the armor of the soul. I remember a satirical poem in which the Devil is represented as fishing for men, and adapting his bait to the taste and temperament of his prey; but the idler, it was said, played him best, because he bit the naked hook.

To a young man away from home there is no surer safeguard, no more certain means of keeping him from evil companions, than a love of reading. If, when the shades of evening bring a sense of loneliness and friendlessness, he can find companionship in books, he is indeed the friend of the friendless, and the library is the home of the homeless; friends that will soothe you when fretted, refresh you when weary, counsel you when perplexed, and sympathize with you at all times.—*G. S. Hilliard*.

## Stirring Words from an Educator.

The royal inspector of public schools, at Mestrata, Italy, Professor Luigi Palmirani, delivered an address upon the occasion of the distribution of prizes to the most deserving scholars, from which the following stirring words are taken, translated from *L'Espresso*: "Do you, for your part, combat egotism with a love not swollen with words, but fruitful in works; to-day love your country in high studies and severe discipline, which educate the mind and the heart; love in your fellow-scholars who are your brothers, because one is the history, the language, the religion, the future of Italy. Love the mother of you all; love her in the teachers and educators, who with a faithful hand guide you upwards through the pathway of virtue and knowledge; love and venerate her in the parents whose whole life is bound up in yours, and promise to render their old age serene and proud; to-morrow, having become citizens, you shall love her in your respect for the laws, in the jealous custody of your rights, in the scrupulous fulfillment of your duties. Love your country; that love inspires in man the most noble and generous sentiments; love her with all the powers of your soul, and let her be for you and your descendants, united, free, and independent."

## Health and Humanity.

## A Mother Seal's Love.

During the visit of an excursion party to Anacapa Island, a young seal pup only a few months old was brought away from the island. The little animal was secured by a rope around one of its fins, and tied within a small yawl belonging to the sloop. Shortly before sailing, a large seal was noticed swimming round the sloop anchored off the cove where the capture was made, uttering loud barks and at times howling piteously. No particular attention was paid to the animal at the time or to the little captive, which, at times barked in response to the old dam's plaint.

The boat sailed away, making for Ventura shore. When off San Buenaventura, a calm in the wind decreased the speed of the boat, when a large seal was noticed near by. On reaching the wharf at Santa Barbara at two o'clock the next morning, a seal was again discovered swimming about the boat. It was not supposed that this was the mother of the captive, or out of pity for its misery the pup would have been thrown overboard. To better secure the pup until daylight, the rope was taken from its fin, and it was soon up in a jute sack, and let loose upon the deck. Soon after coming to anchor, the seal responded to its mother's invitation by casting itself overboard, all tied up as it was within a sack. It was asserted by the man on the boat that the mother seized the sack, and with her sharp teeth tore open the prison of her offspring. This, however, is a mere conjecture. It did, the little pup was saved, and the incident was the more interesting from the fact that the old seal had to follow the sloop at least eighty miles over the ocean in a hopeful endeavor to rescue its young.—*Christian at Work*.

## [From Our Dumb Animals.]

## Good Drivers.

NUMBER ONE.

One day last winter the attention of a lady was drawn to a lad who was using every possible means (except striking and kicking, as all animals do) to get a poor old horse up Pinckney Street. Although its load, consisting of a few bags of rags, was light, it seemed impossible for the animal to get it through the snow; finally he stood still, seemingly discouraged. In vain the boy talked coaxingly, patted and stroked him, he only moved his head from side to side, as if to say: "don't you see the ice and snow?"

The lady, pleased with the gentleness and patience of the boy, and wondering what he would do next, stopped to see the result.

Suddenly the boy darted into a grocery store and returned with a armful of hay in the reach of the horse, saying: "Come now and you shall have it;" the horse moved; the boy went slowly in front, and, by dint of shouting, the hay was consumed, succeeded in getting the animal to the top of the hill, where he stopped until the hay was eaten, when he moved on without further difficulty.

## Raw Oysters.

Dr. William Roberts, in an interesting series of lectures on digestive ferments, published in the *Lancet*, says:—The practice of cooking is not equally necessary in regard to all articles of food. There are important differences in this respect, and it is interesting to note how correctly the experience of the mankind has guided them in this matter. The articles of food which we still use in the uncooked state are comparatively few; and it is not difficult in each case to indicate the reason of the exemption. Fruits, which we consume largely in the raw state, owe their value chiefly to the sugar which they contain; but sugar is not altered by cooking. Milk is consumed by us both cooked and uncooked, indifferently, and experience justifies this indifference; for I have found on trial that the digestion of milk by pancreatic extract is not appreciably hastened by previously boiling the milk. Our practice in regard to the oyster is quite exceptional, and the correctness of the popular judgment on dietetic questions. The oyster is almost the only animal substance which we eat habitually, and it is interesting to know that there is a sound physiological reason at the bottom of that preference. The fawn-colored mass which constitutes the dainty part of the oyster is its liver, and this is little else but a heap of glycogen. Associated with the glycogen, but withheld from actual contact with it during life, is its appropriate digestive ferment—the hepatic diastase. The mere crushing of the dainty between the teeth brings these two bodies together, and the glycogen is at once digested, without other help, by its own diastase. The oyster in the uncooked state, or merely warmed, is, in fact, self-digestive. But the advantage of this provision is wholly lost by cooking, for the heat employed immediately destroys the associated ferment and a cooked oyster has to be digested, like any other food, by the eater's own digestive powers.—*The Scientific American*.

## Agriculture.

## An Agricultural Creed.

According to the *Canada Farmer*, the agriculturists of Canada met in convention and adopted for themselves the following creed: We believe in small farms and thorough cultivation; we believe that the soil lives to eat, as well as the owner, and ought, therefore, to be well manured; we believe in going to the bottom of things, and, therefore, deep ploughing, and enough of it—all the better if it be a subsoil plough; we believe in large crops, which leave the ground better than they found it, making both the farm and the farmer rich at once; we believe every farm should own a good farmer; we believe that the fertilizer of any soil is a spirit of industry, enterprise, intelligence, without these, lime, gypsum and guano would be of little use; we believe in good fences, good farms, good farm houses, good orchards, and good children; we believe in the fruit; we believe in a clean kitchen, a neat wife in it, a clean cupboard, a clean dairy, and a clean conscience; we believe that to ask a man's advice is not stooping, but of much benefit; we believe that to keep a place for everything and everything in its place saves many a step, and is pretty sure to lead to good tools and keeping them in order; we believe that kindness to stock, like good shelter, is saving of fodder; we believe that it is a good thing to keep an eye on experiments, and note all good and bad; we believe it is a good rule to sell grain when it is ready; we believe in producing the best butter and cheese, and marketing when it is ready.

## Small Farms.

How often we find a farmer who is going over far too much land to make it profitable. He has too much land, and the remedy may be to sell a part, or giving it to his boys, or keep them from going West. I believe in small farms, although a great many think, unless they have one hundred acres or more, they can do nothing at farming. A young man of my acquaintance who works on a large farm, is quite anxious to engage in farming, but does not wish to purchase less than one hundred acres; but he has not the capital to buy so much property, so he proposes to wait until he does have. Now if it were the writer, he would purchase fifty, twenty-five, or ten acres even, and go to farming. A great deal can be done on ten acres, if it is properly situated and judiciously worked. More depends on the man than on the amount of land he possesses.—*N. E. Farmer*.

## Money in Ducks.

Ducks possess many advantages over other domesticated fowls. They are very hardy, and are liable to but few diseases. They take to confinement much better than most kinds of fowls. A very cheap fence is sufficient to keep them in the place desired. They are not liable to be injured by vermin. Their feathers are of considerable value. They stand transportation, when alive or dressed, better than most kinds of fowls. They are great egg-producers. It is true they will eat almost anything, but they make a great deal of the food they consume, and good showing for the food they consume, as animal, that any bird or animal will. They are not liable to stray off long distances, as turkeys are. Ducks are not as reliable sitters as hens, neither are they as good mothers. On these accounts it is better to allow hens to hatch the eggs and bring up the young ducks. Generally ducks show little disposition to stray after they have laid their first litter of eggs in the spring. They will often lay three litters of eggs before they show a disposition to take to the nest. Two show a disposition to take to the nest, and the last, litters may be hatched by hens, and the last, litters will ordinarily be more successful in raising good flocks. This is largely owing to the fact that they keep the birds away from the water when quite young. By so doing they keep many of them from being destroyed by snakes, turtles, and water animals.

Ducks will be much more likely to live and thrive if they are not allowed to go into the water till they are at least six weeks old. Hens will keep them from it, while ducks will encourage them to swim almost as soon as they are out of the shell. If young ducks are raised in an inclosure, a tub or half hog-head may be sunk in the ground and filled with water for them to swim in. Security may in that way be insured against their enemies.

People who desire to raise ducks often covet the advantages of those who live on the shores of a lake or the banks of a large stream or river. They think a large body of water is almost essential to raising ducks successfully. They do not take into consideration the fact that water snakes, minks, muskrats, and turtles are likely to abound in these places, or the additional fact that a large body of water often tempts ducks to swim off to a long distance and become lost. Small bodies of water, under the control of the breeder, are much better than lakes, rivers, or even very large streams. A comparatively small spring will afford sufficient water for several hundred ducks, if the supply is properly managed. Small and quiet shallow ponds can be excavated along the line of the overflow and their sides covered with gravel or sod. By taking pains to form little islands in these ponds they may be made ornamental as well as useful. Artificial ponds suitable for the uses of ducks may be filled with the water escaping from artesian wells, raised from ordinary wells by wind power, or furnished by the laid for drainage purposes. Good ponds may also be made by building dams across small streams that flow from a farm. If these small ponds are kept free from grass and bushes, they will be likely to be infested by animals or reptiles that will prey on the young ducks. They can be readily cleaned-out when they become foul, by cutting off the supply of water and allowing that which is foul to flow off. An ordinary dry-goods box with a door cut in one end affords a good house for a flock of growing ducks. These little houses may be located on the islands in the pond or on the sides of them.

Ducks while laying should be kept in inclosures during the night, and until such time in the morning as they have dropped their eggs. Many ducks do not repair to a nest for the purpose of depositing eggs. They drop them on the ground, and it is necessary to gather them up. Great improvements have been made in the varieties of ducks during the past few years. The most popular breeds are the Aylesbury and Rouen. Birds of either of these breeds mature early and grow to a large size. Their plumage is beautiful and their flesh is fine. There is money in breeding ducks to sell to persons who wish to raise them, as well as in producing birds to supply the general market.—N. E. Farmer.

#### Castor Oil for Fowls.

A correspondent of the *Country Gentleman* says castor oil is his resort whenever he finds a fowl is affected by any internal disease, and he finds it uniformly successful. When a chicken has symptoms of roup, he shuts it up in a warm, dry, ventilated coop, sprinkled with air-slaked lime, and gives it a teaspoonful of the oil, more or less, according to the length of time the fowl has been ill, repeating the dose two or three times a day, and keeping the coop, feed-dish, etc., absolutely clean. The fowl soon recovers.—N. E. Farmer.

#### Receipt for Cure of Foot-Rot.

The following is said by an old stockman who has tried it, to be an excellent receipt for foot rot: Six tablespoonfuls of tallow, one teaspoonful red precipitate, one teaspoonful pulverized blue-stone, four teaspoonfuls flour sulphur, three-fourth inch cube of beeswax, sufficient sweet oil for thick paste. Melt tallow and beeswax and work in other ingredients as it cools, oil last. This was given by an old herder, and I found it a cure in from one to two applications in very bad cases. Use every other evening after cleansing the hoofs.—N. E. Farmer.

The Horsford Almanac and Cook Book mailed free on application to the Rumford Chemical Works, Providence, R. I.

**GOLD** for the working class. Send 10 cents for postage, and we will mail you free, a royal, valuable and sample good that will put you in the way of making more money in a few days than you ever thought possible at any business. Capital not required. We will start you. You can work all the time or in spare time only. The work is universally adapted to both sexes, young and old. You can easily earn from \$2 cents to \$5 every evening. That all who want work may test the business, we mailed this unsolicited to all who are not well. Make this unsolicited your first trial. We will send you full particulars for the trouble of writing. We will be made by those who give their whole time to the work. Great success absolutely sure. Does not delay. Start now. Address: Buxton & Co., Portland, Maine.

Harrison Phoebus, Proprietor.

Old Point Comfort, Virginia.

Is situated one hundred yards from Fort Monroe, at the confluence of the Chesapeake Bay and Hampton Roads, about 180 miles south of Baltimore, and 15 miles north of Norfolk and Portsmouth. The place is reached by the splendid steamers of the Bay Line, Potomac and James River Companies, running daily between Baltimore, Washington, Richmond and Norfolk, and by rail direct from Richmond via the Chesapeake and Ohio Railway.

The Hygeia is four stories in height, substantially built and comfortably furnished; has two Otis' hydraulic elevators, gas and electric bells or Creighton's Oral Annunciator in all rooms; rooms for bath, including HOT SEA, and closets on every floor, with the most perfect system of drainage of any hotel or public building in the country.

As a resort for the pleasure-seeker, invalid, or resting place for tourists on their way to Florida or the North, this house which has accommodations for 1,000 guests and is open throughout the year, presents inducements which certainly are not equalled elsewhere as a summer resort or cold weather sanitarium. Over \$150,000 have been expended in enlarging and improving the place within the past two years, and it is the most perfect in all its appointments of any hotel south of New York.

There is music and dancing every evening and all the pleasures of a fashionable watering place are to be enjoyed. The climate of Old Point Comfort is unequalled for salubrity and general healthfulness, malarial fevers being absolutely unknown. The record of the Meteorological Observatory for the past ten years shows an average temperature of 74° in summer; 59° in autumn; 42° in winter, and 52° for spring; the invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. The whole region roundabout is filled with picturesque scenery, offering delightful drives by day and romantic strolls by night. Boating and fishing are especially attractive, and the surf bathing, which is good from May until November, is unsurpassed on the Atlantic Seaboard. For sleeplessness and nervousness, the delicious tonic of the pure ocean air and the lullaby of the waves rolling upon the sandy beach, but a few feet from the bedroom windows, are most healthful soporifics of the Hygeia.

For further information address by mail or telegraph.

H. PHOEBUS, Prop.

#### JUST FROM THE PRESS.

#### The New & Revised Edition

OF THE

#### Underground Railroad,

BY WILLIAM STILL.

With a Life of the Author.

A large, handsomely printed, highly illustrated, and beautifully bound book, which explains the mysteries of the UNDERGROUND RAILROAD, and preserves the only records, made at the time of the escape of slaves and their heroic struggles to obtain freedom. These records were faithfully taken from the lips of fugitives. Their making and preservation would have cost the life of the author had he not been detected. They are therefore history which would have been lost but for the risk he took. And what wonderful, stirring, thrilling history! How it reads out and completes the history of our country! How momentous is the colored race! It is their exodus from Egypt, their grand march through the wilderness, their entrance into Canaan. All would know it. All will know it.

This new Edition contains much matter not in the old, among which is a carefully prepared life of the Author, written and published at the request of many friends, and inserted in his book with the hope that men must do in order to succeed. This life also contains many pleasant allusions to the great anti-slavery leaders, such as Sumner, Wilson, Arnold, &c., and also a history of their lives have never before seen the light, as, for instance, the escape of several of old John Brown's officers, and the way they got passage on the Underground Railroad to places of safety. Altogether this book is one which must prove interesting and profitable to every reader, and to the colored race, whose brethren helped to make it. It must prove a history at once instructive and inspiring. A commanding volume on 64 pages and 74 illustrations. A work which sells readily.

Agents wanted, with which liberal terms will be made. There is money in it for energetic canvassers, male and female. Sold only by subscription. Price \$4.50. For circular and terms address:

WILLIAM STILL, Author and Publisher, 244 SOUTH TWELFTH ST., Philadelphia, Pa.

JOB WORK, of every description, either Printing or Binding, neatly and cheaply executed at the Normal School Printing Office. Estimates made. Samples sent to any address.

**Cut This Out**—Return to me with 10¢ and I will send you a copy of the book "The Underground Railroad" by William Still. Address: Buxton & Co., Portland, Maine.

#### THE DEPOT.

Having opened a Store in connection with my business, I am on hand at all times to furnish

#### PURE PAINTS AND OILS

PUTTY, GLASS, VARNISHES, ETC.

A good selection of

#### BRUSHES

of all kinds,

Painters' Supplies & Artists' Materials.

AGENT FOR

JOHN'S ASBESTOS MIXED PAINTS SHEATHING PAPER, ROOFING PAPER &c.

Also for JOHN'S DRY KALSOMIN and FRESCO COLORS.

A fine assortment of

#### WALL PAPER & SHADES

of the latest patterns.

Paints Mixed and Glass cut free of charge.

All orders promptly attended to.

Thanking the Public for their generous patronage in the past, I shall still endeavor, by strict attention to business, and low prices, to merit a continuance of the same. Call on

J. W. BOYENTON

PRACTICAL PAINTER.

At the Depot, opposite F. A. Schmelz's Store, HAMPTON, VA.

Close connections with Old Point Comfort and Newport News.

**A PRIZE** Send six cents for postage, and receive free, a costly box of goods which will help you to more money right away than anything else in this world. All of either sex, succeed from first hour. The broad road to fortune opens before the workers, absolutely sure. At once address, Tarr & Co., Augusta, Maine.

#### ONLY \$20. PHILADELPHIA SINGER

is the BEST BUILT, FINEST FINISHED, EASIEST RUNNING

SINGER MACHINE ever offered the public.

The above cut represents the most popular style for the people which we offer you for the low price of \$20. Remember, we do not ask you to pay until you have seen the machine. After having examined it, if it is not all we represent, return it to us at once, without expense. Consult your interests and order at once, most for circular and testimonials. Address: CHARLES A. WOOD & CO., No. 11 N. Third St., Philadelphia.

10. Our Deeds, by M. F. Armstrong  
Published by Putnam's Press, New York.  
Edited and printed at Hampton Institute.  
For sale at 10¢ in place, specimens sent from Hampton at 6¢ a number, or 5¢ a set.

We are glad to report a marked gain,  
during the past month, in the subscrip-  
tions to this paper. Friendly expres-  
sions have been received, both in words  
and in more substantial form. A dol-  
lar for the paper may do more good  
than a dollar directly to the school, for  
its facts and thoughts spread abroad  
are likely to fall, like seed, into good  
ground, and bear fruit in many ways.

We realize from nearly every issue  
of the *Workman* its helpfulness to  
teachers in remote places, amid many  
discouragements, whose letters, pub-  
lished in these columns, excite the inter-  
est of far away readers, and often bring  
valuable aid. We aim to make this  
medium of communication between  
earnest Southern and Western workers  
and their friends self-supporting, as  
well as helpful to the causes it advo-  
cates.

THE ANNIVERSARY EXERCISES of the  
Hampton Institute will be held in  
the New Gymnasium building on  
Thursday, May 22d. Friends in all  
quarters are cordially invited to attend.  
Inquiries as to routes, hotels, etc., ad-  
dressed to the Principal of the Insti-  
tute, will receive attention.

The March edition of the *Southern  
Workman*, though unusually large, was  
soon exhausted, owing to the general  
interest felt in its account of, Negro  
girls. That account, with the accom-  
panying illustrations, has been repub-  
lished in a four-page sheet of the size  
of this, and will be sent to any one who  
may desire it, or be willing to distribute  
it.

## Prison Reform.

The article in the February number  
of *The Century*, by Mr. G. W. Cable, on  
the subject of the convict lease system,  
has done much good in calling the  
minds of men to the duties owed to  
prisoners. Said one of the recent gov-  
ernors of Virginia, in an interview with  
him on the subject of prison reform,  
"It is hard to make the people of this  
State feel that they owe any duty to  
prisoners except to punish them."

In a somewhat extended tour through  
Virginia, I have found the sheriffs and  
jailers good hearted men, with but one  
or two exceptions, having no thought  
of reforming the prisoners placed under  
their care, and having the general idea  
that a prisoner is different from any  
other man in that he has been found  
guilty of crime and placed in prison.  
I am glad to be able to say, that the  
present Superintendent of the State  
Penitentiary is a very honorable excep-  
tion to the class of which I have spoken.  
His influence is on the side of bet-  
ter things in the matter of prison man-  
agement. Speaking of the gangs of  
convicts employed in different parts of  
the State, he said: "Humanity requires  
that these men be brought within the  
prison walls. But the conditions un-  
der which he has to work are most dis-  
couraging. He showed me the Peniten-  
tiary, built in the year 1860, to contain  
250 prisoners, and having within its walls  
at the time of our visit 688 souls. What  
sort of discipline was it possible for this  
man to have, when he was obliged to  
place as many as twenty men in a single  
cell? How much classification of pris-  
oners could there be under such a con-  
dition of things? I was surprised to  
find so little sickness in a place where  
men were huddled together in a way  
that no respectable farmer would think  
of herding his hogs. There was much  
truth in the remark of the Superintendent  
when he said, "It is like trying to  
dress a man in the clothes of a child."

He tried to care for the increased number  
of prisoners with the accommodations of  
eighty years ago. The women's  
quarters were still worse than those of  
the men, and yet it was with difficulty  
that the Legislature could be persuaded  
to appropriate \$20,000 toward a new  
building, which was about half that was  
needed for a decent place for the women.

There are many valid objections  
to the contract system, but the in-  
roduction of this system is such an im-  
provement on the condition of things—  
as shown by the reports of former years  
in the Virginia Penitentiary—that one  
can but rejoice in the change for the  
better, even though there be very great  
room for bettering the condition of  
things. The Superintendent told us  
that when he took charge of the Peniten-  
tiary he found 300 convicts utterly  
idle. As to the condition of the men  
on the railroads, of whom, according to  
the Superintendent's report, there are  
now two hundred and sixty-five, al-  
though they are not free from the dis-  
advantages which belong to the convict  
system everywhere, they seem to me to  
be treated with more care than in  
many of the neighboring States. Their  
death rate tells its story of what that  
system means under its best conditions.

While in the crowded Penitentiary there  
were nine deaths out of seven hundred  
convicts in one year, on the railroads  
for the same time there were thirty out  
of three hundred. I went down on the  
train with a gang of these convicts  
going to work on the Mechenburg and  
Danville railroad. They seemed happy  
and contented, and said they were glad  
to get out of the prison walls. The  
keeper showed me his gun. On the stock  
were the names of the men he had shot  
while attempting to escape. He said  
the men were worked in squads of 16  
or 20, and an officer from the Peniten-  
tiary guarded them; while their work  
was superintended by a "pitt boss,"  
employed by the railroad company.  
These convicts, I was told, were al-  
lowed one cent a day for their work,  
which enabled them to buy tobacco, and  
acted as an incentive to good conduct.

They slept in large barracks with three  
tiers of bunks rising one above the other.  
So far as I could find, the food given  
the prisoners was good, and they were  
treated humanely. Their quarters were  
rough, and provided insufficient pro-  
tection against the weather, which  
undoubtedly accounted in part for the  
increased mortality. But, after a pretty  
careful inspection of the Penitentiary,  
and inquiring into its condition and  
the conditions of the convicts at work on the rail-  
roads, it seemed to me the least objec-  
tionable of our system of prisons in Vir-  
ginia. Very much remains to be desir-  
ed. As the Superintendent says, "the  
gangs on the railroad ought to be called  
in where there can be some discipline,  
and the Penitentiary ought to be en-  
larged to meet the demands of a large  
and growing State." The best kind of  
work is impossible in a prison where  
there are twenty men together in a cell,  
but the saving feature in the Peniten-  
tiary and in the railroad gangs is that  
the men have to work. It is the ab-  
sence of this element of manual labor  
which makes the jails of this State and  
of other States such a curse to the com-  
munity. Go with me and look at some  
of the institutions that we are support-  
ing at public expense, and judge of the  
work they are doing. Look, for a mo-  
ment, into the Norfolk Jail. At my first  
visit, I was told by the jailer that  
there were 75 prisoners in the jail.  
There were two long corridors with  
three tiers of cells rising one above the  
other. In one of these corridors, I  
found between fifty and sixty prisoners  
turned loose; one great herd of filthy  
human beings—black and white, young  
and old. I was told by the jailer that  
unbanded, and these men were turned  
loose together, with no attempt at sepa-  
ration or classification. I found a  
boy of nine years turned loose with old  
and hardened offenders. There was no  
work for them to do. They were allowed  
to spend the hours, from seven in the  
morning until seven in the evening, in  
absolute idleness, the older ones teach-  
ing the younger ones in the way of  
wickedness. Instead of being in any  
sense of the word a reform school, it  
presented the best possible conditions  
for vice. It was a real seminary of  
crime. At 7 o'clock in the evening, the  
prisoners were turned into their cells.  
I entered one of them. The prisoner  
confined in one cell, 12x12. The air was  
stagnant. There was no ventilation  
except through the door. The beds  
were filthy, and some of the prisoners  
complained that they had none. Some of  
the prisoners were partially or wholly  
naked. The boarding in the floor-  
ing of the cell made a secure retreat for  
vermin, of which the prisoners reported  
the jail as being full. One-half of the  
jail, where the three or four women were  
confined, was scarcely used. It was the  
show part of the jail, where some of the  
good ladies of the city came once a  
week to pray with the prisoners who  
were then allowed to file into this part  
and listen to the services. It was kept  
well white-washed and clean, while the  
other part was filthy. I asked the  
jailer why this part was not more used.  
He said it was not needed, that there  
were not one half as many prisoners as  
at some former time, and he seemed  
to think the putting of men in a cell  
12x12, not at all out of the way. The Mayor  
had endeavored to better the condi-  
tion of these men by giving them a  
chance to work on the parks of the city,  
but the men complained that they had  
so little food that it was impossible for  
them to work; and if the morning's al-  
lowance—which was one of two meals  
a day—was a fair sample, there was  
scarcely cooked at all and covered with  
black-strap was their only article of  
food. Coffee, they said, could be pro-  
cured of the jailer at four cents a cup.

Here is a picture of only one of the  
prisons of Virginia. It is not the worst.  
It gives us an idea of the working of  
the county jail system in this State and  
in other States. As the Secretary of  
the Illinois Board of State Commis-  
sioners of Public Charities says, in his

article on the Public Jail System,  
"They are an absurd attempt to cure  
crime, the offspring of idleness, by mak-  
ing idleness compulsory." And again,  
"In our jail system lingers more barbar-  
ism than in all our other State institu-  
tions together." At the recent meeting  
of Prison Managers and Reformers, in  
the city of New York, a report was  
made from the jails of that State which  
showed a condition of things little im-  
proved on our own. The cause is, in  
both cases, the same. It is the connec-  
tion of the Sheriff with the jail. In-  
stead of having them under State con-  
trol, as is our Penitentiary, they are left  
in the hands of petty local politicians,  
who are chosen at popular elections,  
with no eye to their fitness for their  
place. It is not strange that under the  
existing condition of affairs the number  
of prisoners in the Penitentiary is on  
the increase. It must of necessity be  
so while our jails perform such an im-  
portant part in preparing the occupants  
for the higher schools of crime.

During the summer of 1883, I visited  
the Penitentiary and seventeen jails in  
different parts of Virginia. I hope in  
next month's *Southern Workman* to give  
a further account of their condition as  
I found it at that time.

This trip through Virginia was made  
possible by the generosity of two ladies  
of Boston, who agreed to bear all trav-  
elling expenses in order to bring to  
light, and if possible, remedy in some  
manner, whatever evils might be found  
to exist. In all cases, I called upon the  
local authorities and public officers,  
from the Governor down, and so far as  
possible, secured their co-operation. In  
most cases, it was most cordially given.

I do not make these statements pub-  
lic to bring reproach on this noble old  
Commonwealth, but for the sake of a  
broader and more hopeful interest in  
these offenders, and as a teacher in the  
Hampton School whose scope is the  
whole range of civilization, although it  
is so largely devoted to the "three R's,"  
and to teaching farming and the trades.

The people of Norfolk have already  
made a move toward a better condition  
of things in the matter of prison man-  
agement, and I feel sure that this will  
be the case wherever the condition of  
the jails is fairly brought before the  
minds of the people.

## Indian Rights Associations.

These are the order of the day where-  
ver there is an interest in the fate of  
the red man. Through them a unity  
of action is possible, for the want of  
which much enthusiasm and energy has  
been wasted.

The Philadelphia Association is the  
natural centre of them all, for there is  
the headquarters of Mr. Herbert Welsh,  
who has thrown himself into the work  
with tireless earnestness; much hard  
work has already been done by that  
body to secure better legislation at  
Washington, to gather and publish facts  
regarding Indians from the North-west  
and Southwest, and to kindle a fresh  
interest in the Eastern and Western  
States. Over two thousand dollars have  
been expended in the work.

We have received a pamphlet con-  
taining the Constitution and By-Laws  
of the Middletown (Conn.) Branch of  
the Indian Rights Association, of which  
Mr. Benjamin Douglas is President. It  
is a model for such organizations.  
The Ohio State Journal of March 1st,  
contains an account of a meeting of  
twenty prominent citizens held in the  
office of Governor Hoadley at Columbus,  
which was addressed by Mr. Herbert  
Welsh, with a view to organizing an  
Indian Rights Association in that city.

Mr. Welsh is now visiting Western  
cities, doing similar work in all of them.  
The lack of unity in efforts for In-  
dians has been fatal to nearly every  
good measure proposed. It can be  
brought about only by homogeneous  
organizations everywhere, independent  
of any one church or sect, welcoming  
to membership all who are interested.

and, by correspondence, working with the central Society for the salvation of the Indian, so far as a better public sentiment can do it.

A right public sentiment is the only solution of the questions of the day. This unity of action, and pushing the right points, are the chief-end of Indian Rights Associations. There should be one in every town in the land.

We have received the thirty-first Annual Report of the *Children's Aid Society*, of New York, of which Rev. Charles L. Brace is the Secretary, and its centre and inspiration.

No work in the land appeals more strongly to the benevolent. We invite the attention of our readers to the following account of this noble charity, taken from the Report, which tells the story better than we can.

"The workers in this charity have been striving for more than thirty years to lessen crime and misery among the children of the poor in this city. They have gone from house to house in the most wretched quarters; they have searched attics and cellars in the crowded wards for the abandoned or neglected children of poverty; explored the streets in the silent hours of the night, or wandered through the markets and over the docks in the day to find out the little ones who were homeless and friendless. Often in these laborers they have been in rooms where small-pox or scarlet fever or typhoid fever, and have stood by the beds of the dying. Recognizing that the criminal classes are filled continually from the neglected and outcast children of the city, they have sought to prevent crime by early care and instruction of the young, and have reasoned that it was more humane as well as more economical to check the growth of crime than to punish it. Their great desire has been to lessen human misery and soften the fearful social evils of this great city. They have wished to wipe away tears, to cure wounds and cause young children to begin wholesome and pure lives, instead of growing up to crime and debauchery. In these efforts of thirty odd years our hundreds of laborers—both 'volunteers' from comfortable homes and employed agents—have not spared themselves. They have given their best days and best powers to this humble but most useful service. Some have grown old in the work, some have perished by the way from too earnest devotion to these labors of humanity. Among so many, in more than a quarter of a century, there never has been a single instance of the slightest peculation, betrayal of trust, or scandalous conduct with the Society.

Their efforts have been crowned by Providence, with a remarkable and unexpected success. The plan of this charity was carefully formed in the beginning, and has been faithfully followed out through these thirty years. Its great advantage has been in uniting so many branches under one head, thus saving the expenses of many agents and much machinery. It has had the enormous assistance of the almost unlimited demand for children's labor in the West. And it has been favorably regarded by the great public of moderate means throughout the country who support such enterprises of charity. It is the small gifts from every part of the Union which have enabled this Society to accomplish its important work.

Its great results are that over 60,000 homeless children have been placed in good homes in the rural districts; that some 30,000 boys and girls have been sheltered, fed and instructed in its six Lodging Houses; that hundreds of thousands have been cared for and trained in its 21 Industrial Schools, or taught in its 14 Night Schools, and many thousands refreshed, strengthened or restored to health by its Sick Mission and Summer Home.

The fruits in this city are seen in the diminished number of petty thieves, child vagrants, young prostitutes, boy burglars and youthful criminals. Since these labors began there are fewer children's faces behind prison bars; less childish poverty, beggary and crime; a smaller number of deserted orphan and waifs; and a lessened crop of young offenders against the laws. We are enabled to say that no child in New York at the present time need be homeless on the street, or beg for a living, or want for a meal if he will work for it, or be without a school where he can get both industrial and book training and plain food; or wait long for a place of work and a home. There is little excuse now for children's homelessness and crime in this city; and the friendless young girl in New York need not, if she will, be without shelter or work or home for a single night.

#### A Good Work.

No more remarkable or deserving work has grown up, as a consequence of the war, than the "Holy Communion Church Institute," founded and built up by the Rev. A. Toomer Porter, D.D., of Charleston, S. C. It was opened December, 1867, to provide a practical and religious education for Southern boys, especially those of good families, whose fortunes had been utterly wrecked in the war. Friends at home and in the North have helped it liberally; the latter, with many in England, have contributed by far the most, and still do for the current expense, which is about \$35,000 a year for 200 young men, nearly two-thirds of whom are boarders from all over the State, one-third at least being able to pay nothing whatever, and the rest an average of \$17 apiece towards the remarkably low charge of \$200 a year.

The school is held in what was formerly the United States Arsenal at Charleston. It was given to the school in 1880, and, with many improvements, has become a noble institution, a blessing to the State of South Carolina and to those beyond; its sixteen years of work show results in over two thousand educated men, whose leaving influence will be a power in Southern civilization. It is non-sectarian, though under Episcopal control; it is not hotbed of Negro-hate, for Dr. Porter has given Negro mechanics and laborers every chance he could, and has earned their gratitude and admiration in many ways. It is reconstructive. There is no better work for the South than to help its white as well as black youth to the education which the ravages of war made impossible. They were not responsible; they will not forget the kindness they have received. To-day there is no stronger bond of union between North and South than the kindly and grateful feeling created by the gift of over twelve millions of dollars from the one to the other for educational purposes.

Had our politicians the good will of the people they are supposed to represent, the nation's record in the cause of true reconstruction would have been different.

Lifting the people by Christian education is casting up a highway for the coming of the Prince of Peace. Our reconstruction laws have been like a bridge of wood over a river of fire.

Dr. Porter's work has been one of faith and love, its history, as he tells it, is marvelous. Its origin was an inspiration; its growth was through tremendous difficulties, of which the lukewarmness, or worse, of friends, was not the least.

We believe that there is no school in the United States where the standard of honor and of manly conduct is higher than in that in the old Arsenal at Charleston, which stored the shot that was fired at Sumter. The New South is building up on the very spot where its terrible break-up began.

#### Santa Claus at the "Butler."

REPUBLICATED BY REQUEST.

Visitors to Hampton Institute will remember the first object to which their sable driver calls their attention as they turn into the Normal School grounds, with a shake of the whip and a jerk of his thumb, and, "Yon's de Butler. Would you all like to stop and see de kitchen garden?" A big, barn-like structure, like two long freight depots crossing each other in the centre at right-angles, stretches out into the fields, east and west and north and south—an object lesson on the points of the compass, for which one may be truly grateful to the late Governor of Massachusetts, in a region where you become so distractingly turned round from the first that you cannot wonder that Captain John Smith explored every maddening creek and inlet for the Northwest Passage. A crowd of pickaninies is probably surrounding the latticed porches at the four ends of the building. The visitors generally conclude to alight and see what the "Butler" and its "kitchen garden" may be. Entering a door at one of the angles, they find themselves in a large square room, as barn-like the exterior, free from paint or polish and without furniture but for a tapestry of

little shawls, hats and caps, and in the centre a platform with a few seats, to which they are invited by the teacher.

A big bell is rung. The cloud of pickaninies crystallizes into orderly lines that come marching in, headed by the smallest of boys in the biggest of boots. Of course you ask his name, and are not surprised to hear that it is Methuselah, or Abednego, or something equally scriptural and appropriate. In their pout, till the dusky room is overflowing with a sea of dusky little faces with shining eyes and flashing teeth. Another minute and it is overflowing with song, rich, melodious; children's voices, but how different from the shrill piping of Northern school infants—no offence to the little pink and white cherubs, but they cannot sing like their little brothers in black, who beat them at their own songs. If anyone who has never been at Hampton fancies he has heard "Johnny Schmeker" sung, let him suspend his judgment till he visits the "Butler." "Wide Rider," "Roll Jordan," and "Peter on de Sea, Sea, Sea," are archest after all, and by the time the "whale has swallowed Jonah" the visitors, not knowing whether they feel more like laughing or crying, are generally doing both.

A door on each side of the square room is opened; the dusty regiments file out to their own music, and the visitors follow to one after another of the cardinal points of the compass, surprised to find in all quarters, neat and cheerful school-rooms, bright with sunshine and pictures, well furnished with charts and maps, and other school belongings; some classes presided over by graduate teachers from Hampton Institute, and some taught by pupils from the same, under supervision and training as teachers.

The kitchen garden is of course the great attraction, yet the dusty devices for reaching the little ones the ways of well ordered homes.

Many have enjoyed such a visit to the "Butler," and all who have, we think, will wish they might have been present when Santa Claus made his visit this winter.

To provide Christmas presents for three hundred is a serious matter. For two or three years past, the kindness of certain Northern friends had made it possible to include this little Hampton "annex" in Hampton's Christmas joy. But, like other features of Hampton, the "Butler" has been growing—and three hundred—the question looked serious. Santa Claus was not to be snubbed. He meant to come, and come he did. Little hearts are easily made glad. Some people don't know what to do with old Christmas cards; some do. Not that Christmas cards were all that Santa Claus could bring. Didn't he count every little nose three times that it was Christmas day after Christmas, but that was no matter. The year was young, like the children. They had been in school all the morning, and were not surprised to find a few visitors in the big room when they marched in at noon to sing before being dismissed. They had grown accustomed, too, for a few days back, to the presence on the platform of a clever imitation chimney sweep, or of a minstrel like him, who was, moreover, partially hidden now by the group of visitors. A little singing, some mysterious preparation going on meanwhile, and the visitors quietly changing their places, a row of little blackheads becomes visible, hanging around the fire-place, and a few irrepressible screams and shouts burst from the most excitable as they are discovered. But there are not three hundred stockings, and they are evidently empty so the enthusiasm subsides. The presiding genius of the place comes to the front of the platform and tells the children that if they will be good she will tell them a story. The eyes shine. It is a delightful story:

"Twas the night before Christmas, and all through the house  
Not a creature was stirring, not even a mouse."

Emphasis and gesture make it vivid. The attention is breathless. But what do they hear? Is it the "prancing and pawing of each little foot?" It seems like it, indeed. The emotional thermometer is rising rapidly.

"As I drew in my head and was turning around,  
Down the chimney St. Nicholas came with a bound."

He did so enough; and it wasn't the children only who were surprised. They turned the tables on their elders. One wild shriek—three hundred in one—rose to the rafters, and that room was half empty before one knew what had happened. Out through the open door they poured. A span of horses whose owner had deserted to watch the fun, took flight before them and broke their wagon. One guilty conscience betrayed itself in the piteous cry, "It's been a naughty boy; he's come for me." There was no time to laugh at the unexpected turn of affairs. First a rush to the rescue, to pick up the fallen before they were trampled on, and to rally the feeble, a vain effort, till a wild head thought to strike the school gong. The voice of law touched the instinct of obedience, and an instant hush fell upon the crazy little crew. The panic was broken; the deserters were trembling back, encouraged by kind and firm

exhortations, in tones they knew, to the room where poor "Mr. Santa Claus" was marching disconsolately back and forth before the lonely hearth, stroking his long white beard, in dismay at the unexpected sort of sensation he had created. He stood considerably back from the edge of the platform, while his harmless and benevolent character was explained to the children, and the interrupted story went on till—

"...laying his finger aside of his nose,  
And picking a bow, up the chimney he goes."

More screams and a feeble attempt at a second panic, but a wise assurance, from the presiding genius that any who went out again could not return, pricked the bubble of their fear and they collapsed into good behavior. A conversation with the invisible Santa Claus resulted in that worthy's forgiveness of his uncooperative reception, and his return down the chimney with little injury to sensitive nerves; and the most amicable relations were soon set up by the appearance of a basket full of candy bags which he proceeded to distribute among the children himself; the "naughty boy," we fear, fared equally with the good. The small girl had to be comforted at long range, remaining through the whole performance in another room, afraid to venture forth, but by no means forgotten or deserted. Another inquired confidently of a visitor, "Didn't you of the big folks run?" and was quite gratified by the suggestion volunteered by an unscrupulous friend of the *largest* of them, that that gentleman looked as if he would have liked to. The day after the occasion, most of the school were anxious to disclaim any share in the panic, though one honest lad feebly exclaimed, "Oh, but when I thaw him he'll come down!"

Some help was required for the distribution of the Christmas cards and the third lot of more substantial gifts—shoes, hats, mittens, hoods, scarfs, froons, material dresses, and oh, crowning joy to little girl hearts—dolls! pretty dolls; beautiful, wonderful creatures to their blissful recipients; dolls with nice clothes and real hair! The supreme delight of attainment, the motherly adoption of the treasures, were something to make one's heart tender. If the children had sent that gift could have seen the ecstasy on one little dark face, they would have had a Sunday-school lesson that would never be forgotten. And, somehow, through the whole scene, even with the amusement softened by compassion and with the sympathy in the little terrors and delights, mingled an echo of the old, dear words: "The least of these—my brethren."

The thanks of the children and their teachers are due, and are most heartily extended to those friends whose generous thoughtfulness sent Christmas joy to the "Butler." To the Congregational church S. S. Northampton, Mass. through Mr. S. C. Bridgman; the children of Hartford, Mass. through Rev. R. M. Woods; the ladies of Memorial Church New York City; the First Cong. S. S. Keene, New Hampshire, through Mr. E. Holbrook; Mrs. G. Fountain and daughters, New York City; Mr. F. C. Briggs, Hampton, and many donors of Christmas Cards.

H. W. L.

The good work of Miss Emily L. Austin, at Knoxville, Tenn., is already known to many of our readers. It has, by good management, become a permanent establishment, in cordial relations with the city authorities, and is doing every year increasing good.

It teaches practical industry: carpentering to boys, and sewing to girls; is crowded and needs more room. Miss Austin speaks for herself:

"I send you my school report for three months. Our work has grown in interest and in the good will of our people to such a degree that I feel very much encouraged. It is my desire to build a larger house for our training school, as we are crowded beyond comfort in the small building we occupy. We need a reading room, a larger shop, a sewing room, and a kitchen; at present we are working and sewing in the same room. The city authorities will help us in material extent, but we shall have to look to our friends at the North to do as they have done before, and aid us with their generous gifts. Unfortunately, our work will spread and grow out of the narrow boundaries with which we commence it. I thought I was done building, but our school-house is crowded; our training school overflowing, and working in bad air and crowded rooms. Will you tell me what I can do or what you do yourself in like circumstances.

Yours, EMILY L. AUSTIN.

Knoxville, Tenn., Jan. 22, 1884.

We advise Miss Austin to ask for what is needed for the good of her school.

## Letters from Hampton Graduates.

FROM ONE OF THE HAMPTON SINGERS.  
"ACCUMULATING SOME PROPERTY." SUNDAY SCHOOL WITH TWO BIBLES. MAKING HER OWN CHARTS. KEEPING A GROCERY STORE, BUT "DON'T BELIEVE IN SELLING WHISKEY." STARTING A SEWING SCHOOL. "COLDER IN SOUTH CAROLINA THAN IT HAS BEEN IN A HUNDRED YEARS." A NEW SCHOOL HOUSE. FROM "A LITTLE BIT OF A GIRL." WORK OF A JUNIOR.

FROM A HAMPTON STUDENT SINGER.

The "Hampton Students," whose songs helped build Virginia Hall, and interested many throughout the country in the cause of the school, nine years ago, are now scattered through the South, most of them engaged in teaching and doing good work for their people. One of them writes to us as follows:

—Va., Nov. 2nd, 1883.

My Dear Friend:—Down in the fork of the river, and in an old dilapidated log cabin, is the boarding place of the recipient of your circular. This little cabin sits on a beautiful little hill, about four hundred feet above the low lands; it overlooks one river on the south, and the other on the east. You may know by this, that I am teaching school. I commenced my first term here, the first of October. My school term is six months. This school has always been taught by white persons, and the children are very wild and reckless. They do not know anything about order in school or out. I have to commence as I do with a school that has never been taught. I have a very large school, which numbers about sixty-two pupils, and new ones are coming in every week. I am teaching in a church which will not be comfortable this winter. This is my first experience in teaching in this district, and I hope I will give good satisfaction, as I have in the past. I have been teaching ever since 1876, excepting one year. I like the work more and more every year, though I have many discouragements. I remember Poughkeepsie very well; I met many pleasant faces there when I was traveling with the "Hampton students." I hope you will excuse this short letter. I will say more when I write again.

B.

## ACCUMULATING PROPERTY.

A more recent letter from the above writer gives further and still more cheering account of himself.

—Va., Feb. 15th, 1883.

My Dear Friend:—I received two packages of papers a few days ago, and I am assured they come from you, for no one would have thought of me but you. The papers found a happy welcome with me, and I am very thankful to the giver. I am teaching very well, but I am not teaching in the same district. I am teaching in a church which has been very uncomfortable, but I made my complaints to the Board and they have had the house worked on a little. I have a very large school, numbering eighty-two pupils. I have no assistant, though I have applied for one. I have to work very hard, and I am almost broken down when I go to my boarding place, yet, I am in good heart because I am doing a good and noble work. I have since I have been teaching, accumulated some property. On one of my lots, I have quite a neat little building, which I rent to a white man for five dollars per month. I expect to commence my farm building this spring if I have good luck. I spend my Saturdays in cutting and splitting rails for fencing.

I would like very much to see the school in its present condition, and if I can fairly get off next May, I want to come down there. You will please find enclosed one of my pictures, and hope sometime in the future, you may send me yours. I often speak of you to my scholars, and they all know you by name and say they would be glad to see you; so your picture would not only afford me great pleasure, but all of my pupils. I must now close by hoping you may excuse all mistakes for the children are coming in continually telling me something.

I am yours as ever,

B.

## A SUNDAY-SCHOOL WITH TWO BIBLES.

Most of our graduate teachers become also Sunday-school teachers, often starting Sunday-schools where none have been before. The lack of all appliances for such work—even of Bibles—is great-

ly felt. Whoever buys a new Bible or Testament for himself could not make better use of the old one than to make it a missionary to supply some such need.

—VIRGINIA, 2-15-1884.

## My Dear Friend:

I hope you will pardon me for not writing before now. I did not mean to leave your letter so long unanswered, but I have had so many things to do that I neglected to answer. I have a great deal to do. I have ninety-five pupils on roll. I have to teach in the day and study at night. I teach Sunday-school, but it is a very poor one, though I do my best. We have only two Bibles and nine singing books.

I received several packages of papers from Hampton, and I gave them out in Sunday-school. The little ones are very much delighted with them. I have nearly as many old people as I have children. I have never described my school-house to you.

It is situated in the woods, with the front door facing the road. My distance to walk is about half a mile. The house is very small for the number of scholars; sometimes I have seventy in one day. Their ages range from five to eighteen years. I have not been home since I have been here. Papa came to see me a few weeks ago. I have made some little charts for my school, as I did not have any. I take a large piece of paper and take a picture of some kind and paste it at the top of the paper; then I print several sentences about the picture; and a printed sentence I write a sentence, so I may teach them to read and write at the same time.

I saw all of the teachers Tuesday except three. The Teachers' Institute was held at the Court House on that day.

It is late and I will stop writing.

Respectfully yours,

MARTHA.

## A TEMPERANCE GROCERY.

Less than ten per cent. of our five hundred graduates have failed to devote themselves to teaching. Of this small majority, some are pursuing their studies, some keeping house and taking care of their children; some have gone into business. The grocery business is one which is open to colored men, and is a good business, except that the temptation it brings to sell liquors is almost irresistible. Competition is strong, and temperance groceries are very few. We are glad to have this report of one kept by a Hampton graduate.

—Va., October 12th 1883.

Dear Friend:—Your letter of the 3d inst. came duly to hand and was quite welcome indeed. At present I am not teaching and don't expect to teach here again, but my P. O. is the same and will be I suppose for sometime to come. I taught here eight sessions and left the school work last winter. Have been asked to take the same school again this session but declined to do so. During the present year I have been engaged in the grocery business, on a small scale so to speak, and have done tolerably well. But whiskey around here seems to be the staff of life and without it as a leading principle in business, one can't do much. I don't believe in selling it at all. Many thanks are tendered for your kind remembrance of me as one of Hampton's children, and will be ever glad to hear from you.

I am indeed, respectfully yours, &c.

B.

## STARTING A SEWING SCHOOL.

Hampton ideas of industrial education get pretty well wrought into the Hampton student's faith and practice by the time he graduates—and frequently reappear, as far as practicable, in his own teaching. One of our young women writes of a sewing class she has gladly started at the suggestion of a kind friend.

—Va., Feb. 3d 1883.

## My Dear Miss C.

When I went up to the second week in January, I found your letter there, and read it to the school. Oh my! the girls were so proud to know that you wanted them to learn how to sew. Some of them asked me if I would learn them how to cut out a dress. We truly will thank you for any thing you should send and I will show them all I can about sewing. By teaching them to sew it will do much good among them. I have met many of the parents who do not know how to cut an apron. In the house where I heard, are three females a mother and two daughters, who did not know how to cut a button hole, when I first went there.

— is here in —, keeping books for a store. He has been here since September, '83.

We have had snow one day but it did not stay on the ground any time. It is said that it is colder in S. C. now than it has been for one hundred years. We have a cold day and then a warm one. To-day it seems like a day in May.

My love to you.

Yours truly,

R.

## FROM "A LITTLE BIT OF A GIRL."

Another of the first band of Hampton singers, then a little girl indeed, and now not much bigger, writes cheerily of her new school-house and her work.

MISS A. E. C.

Kind friend, I have wanted to answer your letter ere this, but I felt as though I wanted to enter into my work before I wrote you. I have been waiting for the trustees to finish our new building; they finished all but the painting, and we begin our work last Monday, a M. H. and myself. The school house is quite large with black-boards on the walls, two small rooms and two large rooms; one I want to arrange as a reading room for the little folks. I have thirty in my room, and I have only been teaching one week. Both rooms have over 100 when the peanut pick-up is over; the farmers are very busy now getting their peanuts in. Our building is two stories high, six windows in each room and two windows in each small room. I have learned to teach in four terms and I conduct myself in the way that were I to leave I can at any time get the same school again should there be a vacancy. My Superintendent has told me he wanted as many of Hampton's students as he could get. This is quite a town; the only objection I have is, they don't want to pay us but \$25.00 per month. I have petitioned for \$30.00 per month, so I am persuaded to teach in the country if they don't agree to pay more. My reasons for teaching in the country is, because I can get board for \$7.00 and not more than \$8.00. I have a dear mother and grandma to care for. I haven't any father or brother, not any one to look to for one penny outside of my work, so it makes it quite hard for me. I have one dear sister who does the best part for the old folks, as she gets a little more. We also have to clothe them; neither of them are able to work, house rent to pay also, so it makes it very hard for me to bear. I have made up my mind to be one of Hampton's best work, and to make an honest living, God helping me, though I am only a little bit of a girl. Most of my children are as tall as I am.

Respectfully yours,

S.

## THE WORK OF A JUNIOR.

Many of our under-graduates engage in teaching for the summer, or for a year, to earn money to continue their own education. A Junior—who is evidently competent to teach spelling and writing—gives this report of his work.

—Co. Va. Feb. 10th, 1884.

## Dear Sir:

I have been thinking for some time I would write you a letter. But only being a member of the Junior class when I left, I thought I would not be able to write you an interesting letter. However I will drop you a few lines telling you of my success as a teacher.

I left Hampton in June '82, and the following October I went to Augusta Co. for an examination, which was very good, and then took up my work here for a term of six months. I had never given the idea of teaching a serious thought until I began my work. I found to instruct was more than to receive instruction. I taught here one term and gave general satisfaction both as a teacher and in moral department.

I am now teaching my second term at the same place. My advance class is finishing up decimals. They would make very good Carriers. I would like for my beginning to be carried on to success, and as I intend to return to Hampton next term, I feel I would be doing a good part if I could bring one or two of my scholars to Hampton with me. Let me know whether you have any vacancies in the industrial department. They will be ready by the 1st of September.

Please let me hear from you before that time. They are working hard now so they may be ready. If I teach this term I will make thirteen months in all I have been teaching since leaving Hampton.

I find there is a great deal that the young men of my race can do in this world of ignorance if they only prepare themselves with an education such as Hampton gives. If no-

thing happens I will be back to finish up where I left off, next term.

I remain your o'b. pupil,

M.

## Indian Debating Society.

By an Indian Student of the Middle class at Hampton.

When we first came here in '81, the Indian boys who are in the higher classes, gave a debating society for our own good, or to encourage us in speaking English, but they themselves have not courage enough to carry out their plan any longer than two weeks.

So we started again this year, on seeing the arrival of some of our Western friends, who do not know anything of the English language, to teach or to encourage them in trying to talk English. I am very glad to say that our Great Father has helped us in this and now carrying the work out successfully.

My idea in this, as I have said, to encourage the boys in speaking English, and those that can already talk English, to encourage them to speaking before many people, and practice speaking. We have seen many boys who go back from here to their homes and have to look for an interpreter to the Agent, and often wonder what was the matter, why because they never did try to encourage each other in speaking English. That is one of our great faults towards getting our civilization, never encourage each other. Now this year we have our debating society every Saturday night except the first Saturday in the month, which that time was given up to the temperance meeting. On the first Saturday night when we commenced the society, one of us spoke on the subject appointed for the night, which was: "Shall we allow the white men in our reservation," and the rest in recitations and singing; and since then we are improving it every time, and we also have many thanks from our kind teachers who have so willingly helped us. We have one debating society with the girls in their Winona Lodge, who also willingly agree out, and we boys have two debating societies in our own cottages. There we, those who can talk or understand English, take about two or three of the new boys and teach them a sentence or two to say before the rest, which they did with willing heart. About the second Saturday in Feb. T. T. had one to teach, and I have one to teach, and I teach scholar this sentence: "My friends, I want you all to talk English and I want you all to help me, which he and I went to his room after supper and have him stand against his room door and first make his bow and then say it, and we practice there until the boys are back from prayers. And when the time I called on him to recite his piece, he bravely got up and said: "My Friends—I want to learn to talk—English—I want you all to help-me," without any stammering at all which made me think that we could be raised from that degradation.

Those new boys are now learning the English language very fast, and hoping that they will not be ashamed to practice and be an honor to our poor race. And may our King find us in striving to get something worthy of having in this world and in the next.

We all ask your prayers that we may improve still more and more.

From your Indian friend,  
JOSEPH H. ESTES.

One of the blessings conferred by Christian missions upon Pagan lands is the impulse given even to those who are not now converted to the faith, to care for their own people. A striking instance of this comes just now from India, where for centuries the Brahmins have not only despised the lower classes, but have deemed it a part of their religion to do so. Roused by the efforts of missionaries in behalf of the Pariahs, and the consequent turning away of this class from the national faith, a society has been formed entitled the "Native Philanthropic Association for the regeneration of the Pariahs," and two prominent Brahmins have sent out an appeal to the native princes, zamindars, and gentlemen of South India, calling for contributions for the establishment of charity schools for the education of the lower orders, and the employment of preachers to teach religion and morality. The appeal is a telling testimony to the influence of missionary labors in reaching the lower classes, as it complains of the readiness of these Pariahs to embrace foreign faiths. It is no slight thing to have thus turned these men to care, to some extent, for their own neighbors, for whose welfare they have hitherto been totally indifferent.

## Horsford's Acid Phosphate,

For Lungs, or Time Juice, is a superior substitute, and its use is positively beneficial to health.

## Indian Incidents.

## OUR INDIAN HOUSE WARMING.

A year ago a plan was drawn up for the "Onah" Cottage, described in the last *Workman*, in accordance with the kind proposals of the donors, two New York ladies. It was a very pleasant coincidence, that one of these ladies happened to be here a few weeks ago, just in time to give the first finished little house a "warming," and with a few other friends to fill it brimful of good wishes, on the day when Noah La Flesche and his wife Lucy, a sister of Bright Eyes, moved in. That Monday morning was a busy time in the bright, cosy rooms, as Lucy and her helpers put the finishing touches to the new home. The Indian girls chattered gaily over needle or scrubbing brush, and "My little house out West" seemed to cease to be an airy castle, and to grow into a glad possibility before their eyes. The furniture is of the simplest. Wooden boxes upholstered with furniture covering or bright cretonne, stand at the front windows as miniature sofas; corner shelves answer for a what-not, while a wardrobe and wash-stand have been manufactured out of a few boards and draperies of coarse burlap, trimmed with maroon cant flannel. The same material curtains the windows, while a maroon hanging conceals an obnoxious cupboard door. A little necessary furniture, some strips of red carpeting, gay Christmas cards tastefully arranged on the walls, and a few plants near the window, make the place look very like a home. In the afternoon, the young brave and his wife received their guests with quiet dignity, and Lucy regaled them with lemonade and cake of her own manufacture, so tempting as to augur well for her success as a housekeeper, when a cooking stove was added to their present menage. That evening after study hour and night school were over, the husband called for his wife at Winton, and they went out through the darkness to light up the little home. Let us trust its light will shine far off into many a crowded cabin and comfortless street, and transform them likewise into pure, sweet, Christian homes.

J. R.

## OUR STUDENTS IN BERKSHIRE.

We have for several years sent a number of Indians North for the summer among the Berkshire hills and its farmers. It has proved to be a most excellent plan in many ways. The change of air and diet has tended to build up bodies, never robust, while the moral, social and domestic life into which they have been thrown, has in many instances met with very striking results.

It is necessarily so arranged, that no more than one or two are taken into the same family, and they are consequently obliged to confine themselves to the English tongue.

The common every day life among these busy, thrifty people affords, to the Indian girl especially, advantages such as no large institution, however well conducted, can give; the art of planning and arranging work for one's own self is so important, and yet with so much difficulty learned where almost every motion and almost every thought is governed by bells. The bells, however, have their lesson, which is among the first the Indian has to learn, that of having a time for everything and every thing in its time, as well as place. For these and many other reasons, eight boys and nine girls were encouraged to remain with their kind friends in Berkshire during the winter, thereby making their stay of fifteen months' duration.

So far, this plan has been a very successful one. Seven boys have homes in Monterey, three girls and one boy in Tyringham, three girls in Great Barrington, and others in adjoining towns.

A girl in Tyringham who could speak scarcely any English a year ago writes, "I am getting along very nice indeed and I know great many English words since I came up here but I couldn't read in English and I am very sorry about that, but they teach me in the house everything, and I can do them all alone now, and I want to learn everything if I could. I think my classmates are all learn more than I do now and I will try and learn all the work they will teach me."

Most of the boys attend the regular winter schools, while others are taught more quietly, and perhaps as effectively, at home by their friends.

One boy says he goes to school all day and the young ladies of the family teach him in the evening. His letters show that his ambition is meeting its reward. Another writes that, "All boys study hard in Mass. and work is going quick," and then adds, "Why is it all boys study hard? because no girls here to bother us, that's the reason why," showing to the experienced eye that a certain problem is reaching a timely solution in his mind. Another extols the ice and snow, the doughnuts and pies of Massachusetts, and speaks slightly of one poor little snow storm and the very welcome fare which seems to linger still among his memories of Hampton. One tells of the Sociables which meet at different houses once a week;

the supper, the games, the music, and the kindness of all in teaching them new forms of entertainment along the "white man's road."

Judging from these letters, the daily routine of all is much the same; for the girls, the ordinary duties of a farmer's household, with lessons during the day or evening; for the boys, caring for horses and cattle, chopping and bringing in wood, and other light work; then off for school with a nice new pack away in a pail or basket; "just like a picnic every day," one boy says; back again at night, more "chores," then a long quiet evening, and a night blessed with "pillows with feathers in them."

Such a life cannot fail of making a lasting impression for good on a life hitherto controlled by the calls of hunger or pleasure; and though it may oftentimes seem monotonous, they feel the advantages of it perhaps, like more thoughtful people, more appreciatively after it is past.

One very pleasant feature of this work is the affection and respect in which these kind people are held by the children whom they have helped in this way. For years after, you may hear them reciting the kind words of "my Massachusetts mother," or some wonderful feat of "my Massachusetts father" while letters directly from them almost invariably speak of *mother* and *mother families* as "my father" or "my mother." This filial confidence does not, however, prevent this free-born thinker from differing from the parents of his adoption and making considerable trouble sometimes, but a long patient talk of the old Indian's only medicine for this trouble is—pretty sure to restore harmony and insure a better spirit.

Until this year, the Berkshire visit has been almost entirely as a reward of good honest work of one kind and another, and has been eagerly sought, as it is still, but in the Spring we had among us some whose influence we had reason to distrust, and yet whom we were glad to give one more chance. We therefore sent them to the country, hoping the change in surroundings might be all that was necessary, but it proved otherwise, and some were finally dismissed to their homes rather than to be kept in places more worthy ones were ready to fill.

A letter from the teacher of the school in Monterey has just been received, and seems so fitting a conclusion that it is given here. Those who are acquainted with the undemonstrative Indian character know that the practical bestows upon them must reflect in great measure upon herself. A less devoted teacher would hardly be apt to find her pupils "devising ways to make her work easier."

Says:—"My whole number of pupils was thirty-two, six of whom were your Indian boys. These were very studious and expressed a great desire to 'know English.' Their advancement in some of their classes was superior to the white children's. Of course, they are like all other children; some have greater intellectual ability than others; but comparing these six with the other pupils, the Indians are above the average. Their conduct, with the exception of one, was excellent. They always treated me in a very gentle, manly manner and were quick to devise ways to make my work easier."

The only noticeable error is they have such a strong passion for tobacco. They seldom failed to go out after eating their dinner and have "some little smoke."

My experience, though slight, with this race of people, has caused me to become greatly interested in them, and I feel assured that all efforts for civilization among the Indians will in the future bring their just reward."

C. M. F.

L. M. MINER.

## FROM OUR INDIANS AT WORK.

Some of our Indian students learning different trades at Hampton, give, at our request, the following accounts of their workshops and work.

## PRINTING OFFICE.

The printing office of the Normal School is in a large and comfortable room in the Stone Memorial Building. We have one large steam press which we use for printing the *Southern Workman* and other papers which are brought in from the surrounding towns. There are also two small presses run by treadles; on these are printed jobs and small bills which are brought to us.

We have a great many cases of type, nicely arranged in a row, on one side of the room, while in one corner is a book bindery.

The boys not knowing anything about book-binding, an old soldier from the Soldiers Home is employed for that business.

There are four of us Indian boys and five colored boys working in the office. Three of us Indian boys have only worked at the trade five months while the other boys have worked from one to two years.

We who have not been in the office long set up articles for the *Southern Workman*,

and those boys who have been in for some time set up hard jobs.

We like the trade very much and take a great deal of interest in our work. We hope to learn the trade well enough while we are here, so when we return to the West we will be able to take it up and carry it on out there.

THOS. MILES.

Sioux, Middle Class at Hampton, CARPENTER SHOP.

In the spring of 1883, which is now about twelve months ago, our new carpenter shop was completed by the students of the school (both colored and Indian) of those who were members of the shop. This shop was furnished by one of the kindest ladies in the state of New York, and it is called the Indian Training Shop, of this Institute, to which I am now in situation as apprentice carpenter. I am interested in it. It is a great many things to say about this place that I could not describe. It is quite business place. The carpenter shop was not quite entirely finished by the hands of the students but by the manager of the shop, who has charge of all the new buildings that are now standing around the place. The gymnasium which is the largest frame building on the ground, will soon be finished. The members of the carpenter shop that are now in the hand of the shop are about fifteen in all (not including colored). The Indian boys who have been brought here for the short time ago are now doing most anything in the interior part of the work. Some of them, when they came here without any knowledge of the training of the kind, or any meaning of an education, or in general progress towards civilization, are now capable of something in the cause of life. They have not learned enough during the term for studying four hours and working four hours which is very short, than the white people have. When I first came here (four years ago) I could not find any carpenter shop until I found it in an old cabin—one of these cottages used as the carpenter shop. Now I am able to report my own duty as the carpenter, although I have not fair knowledge of my trade yet, as I ought to have.

I thank for the people who have done a great many things for the school, and to those who are kind to the Indians of this school.

Respectfully yours, JOHN KING, Absentee Student, Junior Class, TIN SHOP.

I will write a few lines about the tin shop. The shop is of pretty good size and very convenient. The work is always very comfortable in summer and winter. I like my trade and always try to do my work well. In order to learn it better I worked about 16 months, all day and went to night school. I think I have lost nothing in so doing, if am not allowed to finish my course in school.

There are five Indian boys working in the tin shop at present, 4 Sioux and 1 Pima. One Apache boy who worked all day to learn his trade has just gone home. He was a good boy and did good work and is going to teach his trade in Arizona. We make tin-cups, coffee-pots, dish-pans, wash-boilers, tin roofs, &c.

Most of the tin-ware is sent to the Indians in the West at various places. Our people use by this that the Hampton boys are learning to work as well as they study and they are learning to walk in a path that is new to them. I think Indian boys can work and learn trades as well as any other if they have the same means to do it with. The boys are most trying to do their duty in working. That is a good spirit for any one to have. No doubt they will have great success if they don't get discouraged as I do in many others. That is one of our great faults and when one gets started down hill it is very hard to stop until we come to the bottom. Then we have to pick ourselves up again and commence anew and follow the advice of our guides (the teachers) and then we come out all right.

CHAS. PICOTTE, Sioux, Junior Class.

SHOE SHOP.

Dear Friends:

I will tell you something about our work at Hampton school. The Indian boys are now trying to learn their trade, and many of them are work students, that is they work all day and go to school in the evening. It seems to me every year the boys are trying to learn more about trades and one important one is about shoe making. There are now eleven Indian boys working in the shop, six of them work all day, and I am one myself trying to learn the trade. We are now able to make our own shoes and for others also. The shoemaking is good for any one who wants to learn it. The trade is for us so when we go home we can make shoes, and more than that we can teach the others also, and when we go we can say we have done our duty well. So many times I want to learn my trade and say "I can't wait." I am now trying to learn all I can, while I am at school. The trade is mine and I am going to learn it if I can and do it well. The Indian boys in the shop are

very anxious to learn their trade while they are here. There are now six boys work students and five are not yet, and I hope after a while there will be more boys work students. I have not much to say but I am very thankful for what I receive.

Yours respectfully,

W. B.

## From a Returned Indian Student.

The good work done by Indians returned from Eastern schools to their homes is illustrated in the following from one who was educated at Hampton.

Cattle men have had a taste of Indian grazing lands, and are likely to acquire all they can get by fair means or foul.

While we have advocated renting out unused pastures, we regard the policy as fraught with danger from the corrupting influences of designing men.

The writer of this letter was no doubt sound in his opposition to the return of leasing his people's lands;

PAWNEE AGENCY, I. T., February, 1884.

Dear Friend:

I guess you have heard that we are to have a paper in our school, called "The New Era." It will be in the form of a magazine. You see I shall put to use the knowledge of printing of which I obtain while I was at Hampton. Mr. B—made me a present one day at Hampton—a nice nickel plated composing stick, and I now often use it with I set types.

There has been quite a time among the Pawnees about leasing part of their reservation to a cattle company. Many approved it. Few wanted to lease, because they were brought, were paid somewhere about \$600. When I found out, I opposed it. I oppose it for some reasons. I know it was against the wishes and interest of the Government. The Indians are now getting on their claims, and I was afraid if they should lease, would not advance them any, nor would they be put back to a stand-still. They would all go back into their villages and mud lodges. They would then depend on the few beavers they would receive from the company. In Councils I was threatened by some dignities; but as I know that I was for the right, I stood for it. My side came out as conquerors, and it was a glorious thing for the poor class, for this is the first time the low class have something to say, and also conquer the dignities.

My scholars were all new scholars, but I tell you they are learning fast; understand most anything you tell them. Daniel Horse Chief, Clifford Taylor, Jacob Echobow, Wakings-Path White, and many more names I would like to write, but as you see my paper is near full, are very bright.

J. R. M.

## A Young Hampton.

A letter from the Lady Principal of Hampton Institute, written a few days ago from Tuskegee Normal School, Alabama, describing her first impression of that noble work—Hampton's oldest child—says:

"The wish constantly on my lips or in my heart, since I reached here last evening, is that you could see this school. I am sure you would feel, as I do, that the dial of time must have turned back 12 years in its course. In many respects it is more like the Hampton I first knew than the one of to-day; it is in some things, I think they have improved upon us. I was particularly struck by the contrast in their plantation melodies, which Mr. Washington called for at the close of the evening prayers. Their rendering makes ours seem artificial; there is more of the real wall in their music than I ever heard. The teachers here laugh themselves over the exact imitation of the *alma mater* even the right school feature has sprouted; to be sure only numbers two students, but it is on the same plan as ours. Do you know that Mr. P. has lately given them 400 acres of land, making their farm now \$24 acres?"

## Horsford's Acid Phosphate.

## For Alcoholism.

Dr. C. S. ELLIS, Wabash, Ind., says: "I prescribed it for a man who had used intoxicants to excess for fifteen years, but during the last two years has entirely abstained. He thinks the Acid Phosphate is of much benefit to him."

(Continued from Page 41.)

where have women more influence, social and political, and although an extreme conservatism in regard to female education is still, perhaps, the rule, yet "Shirley" is not alone in her views, and there are thousands of women in the South who would rejoice to see the way opened for them to obtain knowledge and train themselves for honest, useful and lucrative vocations."

\* To the Editor of the State:

"The Old Dominion, mother of States and of statesmen, has provided well for her sons. The University of Virginia, the Virginia Military Institute, the Agricultural and Mechanical College, all supported by State appropriations, offer advantages surpassed by no other schools in every department of learning, intellectual or industrial, that a boy may desire, or even aspire to obtain. The Indian and the Negro have been invited to her seats; but, unfortunately, whether blind, deaf and dumb, or insane, have been cared for; the orphan has been sheltered, warmed, fed and clothed. Only one class has been overlooked or ignored. All over this State, from the mountains to the sea, are girls and young women struggling with poverty and ignorance; poverty of circumstances, and ignorance of the ways and means of earning an honest and respectable livelihood, and no helping hand or dime has been extended to them. Why should Virginia not do something to make the acquisition of a literary or industrial education possible to these poor, neglected, and almost forgotten children? Why should the soil whose adverse fortune has shut from select schools? Are they not as deserving as her sons? Are they not as true? Wherefore the difference?"

In our Legislature are pending, even now, bills asking for larger sums for those institutions that have been nursings of the State ever since they had an existence. Should every gift from the public coffers be bestowed upon those schools open only to boys and young men? Why should girls and young women be left to pick up what they can in public schools, glean a few shavings in some private institution for young ladies, and then be turned upon the world to live as best they may, with memories crammed with scraps of information, intellect untrained, no real knowledge, and may be skillfully used and successfully applied?"

Will not the fathers and brothers bring before the Legislature a bill for an appropriation to aid young women in their attempts to obtain knowledge and train themselves for honest, useful, and lucrative vocations? They do not ask for seats in your representative halls, within your legal bars, upon your judicial benches, nor in your jury boxes; they do not ask to visit your polls, stand upon your rostrums, nor be known in your political circles. They do ask for something out of that treasury their mothers helped to fill, for aid like that given their brothers. Shall they have it?

"The pen is the tongue of the absent." Will you listen to its call, give a serious thought to its call, and grant its prayer?"

SHIRLEY."

Once more we must remind our readers that colored women as well as white are in dire need of help, and that their inability to speak for themselves makes it the more necessary that others should speak for them. There is much truth in the following general statement of the case by the Richmond Planet:

"Twenty years ago the Negroes were turned adrift upon the world and told to shift for themselves.

Previous to this time, with few exceptions, they had all of their simple wants supplied by the hand of a master, and in the natural order of events, had sunk to that state of dependence which incapacitated them from properly thinking or acting for themselves; thrown upon their own resources some proved unequal for the task and were lost.

Those who braved the tide and stood the storm were the fittest, and thus survived, and in them and their sons was an almost "new line" developed. Of course the weaklings remain sheltered perhaps by the stronger, but they, from lack of vitality, must soon go.

It is therefore not to the slaves of old that we look for a redemption of the past but to this new race which has sprung into existence."

And it is in its women that to-day the strength of the "new race" lies. The material which they furnish is worthy of the most careful training, for in proportion to its development will be the progress of the whole people. The white women of the South have the men of their own race to look to, but their colored sisters have, for the most part, dependent upon the charity, or at least upon the exertions, of individuals

who may interest themselves in their behalf. Their appeal is a strong one, and, be it remembered, they can do little for themselves.

President Andrew D. White of Cornell University, N. Y., in a recent address said:

"Take, first of all, the political spirit. Its manifestation in American patriotism is strong; who shall deny it, since, in obedience to this feeling, such prodigies of valor, such examples of self-sacrifice, have been exhibited on both sides in our recent civil war? And we may hope that in any future great crisis, commercial interest will be again put beneath the feet of political interest. But the life of a nation does not consist of great surges; what we are talking about is the steady normal march of our civilization.

And how does patriotism hold its own in this daily life against mercantilism. Glance for a moment over the greatest political question now before this nation. One is unquestionably the education of those millions set free and endowed with citizenship in the civil war; and indeed, not only of the colored population, but of the white population in many States. It is a question of prodigious import; for it is the question of "educating our masters." Every thinking man in the country accepts the principle that a controlling body of illiterate voters will, in the long run, ruin any country. To grapple with a question of this sort is worthy of the greatest statesman; and yet session after session of our national legislature passes by, and though it is made the text for a few speeches, the great majority of the representatives simply mirror the feeling of the vast majority of the people when they pass it by without a thought.

"Take another question—the reform of our civil service. At this hour our civil service presents many features which have been sloughed off by every other leading nation. More and more it has become evident that some reform in this respect is a condition of national honor, indeed of any decent national existence. And yet how little thought or attention can our people or our public bodies be induced to give it. They have been, indeed, ready to hurry it off the scene, but real thought they have not given to it. They are like the people of Gadara; they have simply beheaded the Reformer 'to debar part out of their coats."

On the fourteenth of January last, the Commissioner of Indian Affairs, Hon. Hiram Pierson, addressed a letter to Major Riordan of the Navajo Agency, which we in part publish, to show how far the Indian Department is able to help those who look to it:

DEPARTMENT OF THE INTERIOR,  
OFFICE OF INDIAN AFFAIRS,  
Washington, January 14th, 1884.

D. M. RIORDAN,  
U. S. Indian Agent, Navajo Agency, New Mexico.

In his report on the inspection of your Agency, Inspector Gardner refers to the need of establishing a sub-agency in the settlement on the San Juan River, 30 miles from the Agency, where Francis Capitan and his 4,000 followers are located, and of providing a sub-agent, blacksmith and carpenter, laborer and teamster.

Want of funds will prevent the carrying out of this recommendation, but possibly in another way something valuable can be done for the people. For the establishment of schools there is money; for buildings, there is, as you have often been informed, only the most meager allowance. If you can devise some way in which a building for a day-school, and for the occupancy of a teacher and his wife, can be furnished, a school can be established there provided you can find suitable people to fill the positions. The man could spend half his time in the school room, and the remainder amongst the Indians, directing them, and giving them help of every sort. If advisable, a daily lunch could be served the pupils, prepared by the girls under the direction of the teacher's wife. If this suggestion meets your approval, and is practicable, I would like a report from you on the matter, with definite recommendations and estimates. It is possible that for a school building a very small sum might be spared.

Major Riordan forwards the above to us with the following remarks:

"I beg to enclose copies of some correspondence on the subject of a school on the San Juan river, on the northern boundary of the Navajo reserve. I have taken the liberty of laying it before you, in the hope that through you some of the friends of Indian education might take hold and push the matter through to a successful issue. If you can do anything, and will let me know, I shall try and make other efforts

combine, and success will follow. I hope, soon. An earnest, energetic man on the San Juan, properly supported, would do great good. The people must do what Congress won't. Yours, D. M. RIORDAN, Agent.

#### Concerning Educated Indians.

Extract from a paper prepared by S. C. Armstrong, to be read before the National Educational Association at Washington, Feb. 13, 1884.

"My own view is that Indians at our Eastern schools who, to begin with, have a strong home and filial feeling, and would seldom consent to settle permanently among strangers, should be taught that they have a duty to their people; that education is more than a preparation for their own support and decent living, but that they have a great work, which they must begin by writing home good advice (which in many cases has had good effect, and expect to return to teach by precept and by example a more excellent way. Our Hampton pupils are already inspired with this idea; it is the staple talk of their meetings and runs through their compositions, little speeches and short prayers.

The enthusiasm of the educator as well as of the educated is kindled by this thought. The former feels that his work is germinant, to be, probably, repeated many times upon others by the pupils before him, who, himself, is stimulated by the thought of helping his own brighter people. I regard the idea of a mission in the mind of an Indian, Negro or any youth as a directive and helpful force of the greatest value in the formation of character.

To improve, and to all appearances, change radically for the better once wild Indian boys and girls is comparatively easy, by bringing them to and teaching them in the midst of civilization; it is like throwing them into a stream that bears along alone. Whatever the past may have done, I am satisfied, from experience, that present surroundings may overcome the power of heredity. So circumstances may even more easily drag them down; they go with the current.

Are the influences at home necessarily fatal? Can conditions be created favorable enough for their salvation while they are with their people, thus making them object lessons in Christian civilization which the Indians have so sadly needed? It is a matter of experiment and experience. I believe that it can be done.

To offset bad home influences three things will, I believe, in the majority of cases, suffice.

1st. Good Indian Agents. "The difference in the condition of Indians at the reservations is the difference in their Agents," said a competent observer.

When, in 1881, I took back twenty-five boys and five girls, leaving about five apiece at six Sioux agencies between and including Yankton and Fort Berthold, Dakota, there was only one first rate Indian agent among them all. Those left with him remained steadfast, not without some inconsistencies, due to the fickleness of Indian character, and are now employed in the government service. The rest, poor from the weakness of the agents, made, at first, a less satisfactory record; but, on the whole, did remarkably well, though some were reported as having gone back to the blanket. But the eleven worked, better men were placed in charge of the Agencies, and now in two and a half years not over five out of the thirty are given up as hopeless; the majority are school teachers and mechanics in the public service. Three who graduated later have gone back to the Indian Territory; of these, two are teaching in responsible positions and one is a government clerk and a successful cattle raiser. All did better the second year than the first. The best third of these trained youth had, I think, enough force of character to do well under disadvantages; the rest were not so fortunate.

The Indian Agent in the Indian Territory is called their "Father." To the red man the white man is typified by the "Father" in charge of him, and the Great Father in Washington. The former, if competent, and especially if sustained at Washington, has great power for good or evil, and is to-day the great factor in the life of the Indian; to the educated youth who return to the reservation, he is as important as the school that trained him. It is clear that Indian agents like Majors McLaughlin, Gassman, McGillicuddy, Riordan, Jackson, Llewellyn, at least a score in all, are able to hold up our returned boys and girls, unless the conditions are specially unfavorable, as when the lands are bad, or their resources are cut off as the result of short sighted legislation.

The present policy of paying small salaries to Agents is against efficient service. Congress wishes the cheapest of everything; party record seems paramount to justice. The Bureau department heavily taxes the adequate pay for the responsible and difficult duties required. I consider it useless to

work for some of the reservations on account of the inferior quality of the management. 2nd. Schools at the Agencies furnish an increasing field for work, for returned Indians. The breaking up of tribal life and settlement on limited areas if not on lands of their own, which is not far off, will increase rather than diminish the educational work which public sentiment clearly demands and Congress more and more favors.

Not only are they calling for glass teachers, but for our graduate carpenters, blacksmiths, shoe makers and harness makers. Probably not over six thousand, five times as many as now, will ever be taught away from their reservations; the rest, not less than thirty thousand, will be trained, if at all, at their homes. Each field supplements and helps the other. In quantity, the Western work is far ahead; in quality, that at the East is far ahead, as a rule. Liberal expenditure may bring the former up to the highest standards. To illustrate their relations: Dr. Jackson, Agent of the Pimas in Arizona, recently asked to have a dozen picked youth out of the hundred at his agency boarding school sent to Hampton to be fitted for teachers of book-keeping and mechanical knowledge, and they will be accepted, if government will aid in the matter. I think our specialty should be training teachers and mechanics. The agency schools can fit Indians to be farmers as well as we can, and the great majority must be farmers.

3rd. The missionary is the other important factor in the life of the returned Indians. Like the agent, the student's first-rate man, or he may be worse than useless. Very few missionaries are as bad for the causes as weak agents. The religious societies have made some mistakes in their selections. In the mission fields of Bishop Hare, Rev. Dr. Williamson and the Rev. Thos. L. Riggs in Dakota, and others, our Indian graduates have found most helpful allies. Men like these have, after all, created a better world, the few bright spots in Indian life. Wherever have been their failures, the Christian churches of our country are the hope of the red man, whose existence is a question of morality and intelligence. Government is only incidentally Christian in its influence; it can fight, feed or educate Indians, but will utterly fail of the needed moral results unless the religious part of the country shall take hold of them and their best men into the field. With capable and well sustained Indian agents and a proper Indian missionary force on the ground, there need not be serious disaster to the Indian youths who return home from our Eastern schools. I would not say this of all the reservations, but of many of them.

"All very well" it may be said, "but must the government keep up an expensive system to give employment to these youth?" It certainly will continue the school work. The reservations will be long broken up, or much reduced, and the shops closed.

Yet so far as Indians are (and not less than half of them are) on grazing, now arable ground, the entire value of what depends on access to water, home-made grain, the usual way is out of the question—yet large numbers will receive lands in severity. In this advancing stage, will no shops or mechanics be weapons, repairs, harnesses, shoe horses and build houses? Nothing is more important than to establish a force of Indian mechanics at once, in advance, if possible, of their racial change, whose intelligence, as well as skilled labor will be indispensable to the welfare of their people in this crisis. Let Government abandon the work-shops when it shall so choose; we can depend on a certain amount of wisdom and care in the matter; nothing could be greater folly than to keep back skilled Indian labor from the reservations, which, if employed steadily, will improve till thrown upon itself.

The far West is the battle ground of Indian civilization: white men's lust, avarice and ruin, besides their own besetting sins, make the issue doubtful. The easy assimilation of the races will lead, I believe, finally to the absorption of the Indian by whites; pure blood Indians are probably decreasing; mixed ones are increasing, and the name will finally be nominal as it now is, in so many cases, in the Indian Territory and elsewhere.

All men, whether white or black or red, are continually engaged in a physical and moral struggle. Christian institutions can save them by training selected youth for their leaders. The annual re-enforcement from schools and colleges sent yearly into the midst of this struggle, is the hope of the races and of the nation.

Pour into Indian life men and women of better lives, living illustrations of what their people should be, create the conditions which shall make manhood and citizenship possible, and, there will be, in a few years, no Indian question.

The new Indian School near Arkansas City has been opened and is nearly filled with Indian youths. It will be run on the plan of Carlisle, with the constant help toward solving the Indian problem.

## Among the Contrabands.

## REMINISCENCES OF A VETERAN SEMINARIAN.

The stories of an eye witness have always a peculiar interest and value; they give flesh and blood life to the dry bones of statistics. The reminiscences of those who, on either side, passed through the dramatic scenes of our civil war, will be read and sought for with increasing interest as time goes on. We are glad to have these pictures of the Hampton of twenty years ago, from the pen of our friend, Mr. W. L. Coan, who has recently visited the Normal School grounds for the first time since those eventful days, when they were not Normal School grounds, but Camp Hamilton, covered with soldiers' tents and barracks, and the cabins of "contrabands."

## "WHO WERE THE CONTRABANDS?"

"A recent visit at Fortress Monroe, Hampton, and Norfolk has called to my mind vividly—scenes witnessed twenty-two years ago, when my first visit to those interesting points was made. Can I write them up? No—emphatically, no. It could not be done. Shall I try? If you will charitably bear in mind that more than twenty years have passed, and that I am not undertaking to write a history, but only to give, as memory calls them up, a few of my personal observations among those 'peculiar people,' of whom the younger portion of the Freedmen themselves can now know but little."

Then, go back with me, reader. It is the first year of the war, Dec., 1861, and we are at Fortress Monroe. The old flag floats over the fort. At every point we see evidences of strife, preparation for 'forward' movements; huge mounds of earth on the shore, and war ships floating on the beautiful waters of Hampton Roads. Hampton village is a wreck, blackened chimneys along marking the places where it once stood. Only five miles across the Roads floats the rebel flag, and a few miles back of the ruined town are the Confederate forces.

A few months previous to this time, there had come within the enclosure of the fort what appeared to be men, women and children; beings who could not only walk and run but talk, and with panting breath beg protection from those who claimed them as their property. We call know the story of Gen. Butler's famous order, which at least settled for the time the question of what should be done with those who, as human beings, a United States' Chief Justice had decided, had no rights which a white man was bound to respect. "If property, they are, then, like other property falling into our hands, they can be declared contraband of war—to be held by the United States Government, cared for and employed for the benefit of the Union." This shrewd measure cut the knot of the problem; and the contrabands flocked in by hundreds. But the poor fugitives did not taste at once the sweets of freedom; the sympathies of even the Union officers, who had the charge of them, was not always with them; they were set at work on the defenses at the Rip-Raps, in the quartermaster's department, in the camps—which was all right; but for some time they were not paid, which was all wrong. On inquiring at headquarters, I found that the orders required that they should be recompensed for their labor; but no money reached them for a long time, and it is no wonder that to them, and to us who sympathized with and worked among them, seeing their toil and their needs, it seemed sometimes that they had but changed, one slavery for another. One of the more intelligent of them stated it thus:

"Dey said that we, de able-body men, was to get \$8 a month, an' de women, \$4, and de rest; only we was to allow \$1 de month to help de poor an' de ole which we don't get—an' one dollar for de sick ones, an' den anudder dollar for Gen'l Purpouse. We don't zactly know who dat Gen'l is, but 'pears like dere was a heap o' dem Gen'l's, an' it takes all dar is to pay 'em, 'cause we don't get nuffins."

This was quite too literally true, and knowing naught of their future, or whether they would ever be really free, it is no wonder that they were often sadly depressed and discouraged.

## A CONTRABAND PRAYER-MEETING.

It is Christmas day, 1861. The 'contrabands' are to have religious meetings. About two hundred and fifty of them have gathered in a dirty, gloomy room; some seated on old boards laid on kegs, some standing. We approach, Hark—they are singing:

"God moves in a mysterious way,  
His wonders to perform."

We enter; the singing ceases. They know me, for I have seen many of them, and have been sending them clothing, etc., for several months. Their mission, Rev. L. C. Lockwood, of the American Mission Association, is sick to-day, and at their request and his I am to lead the meeting. A few selected passages of scripture read, a short prayer, a hymn lined off—

"Most Jesus bear the Cross alone!" and sung pretty well, and I say, "Now, Christian friends, this must be your meeting, not mine. An aged woman prays, all bowing low, many prostrate on the ground. 'O God, be pleased to bless my dear children now away in slavery. And, oh, bless de ole massa an' wails and walls and walls and groans all over the room. A brother rises and says, 'Brudderin, we's now 'right in de Red Sea—looks dark, but I bieves de Gubberment 'll bring us outen it. We must trust in de good Lord.' Another shakes his head and says, 'Maybe dat brudder can trust but I sees no light. Nebber seen no such darkness befo' de war. Seems like ery ting gits worse an' worse.' Then a prayer—

"Will de good Lord be pleased to bless de Gubberment ob dese United States. Carry der arms for 'em, an' giv 'em full victories." Another says, "I don't see how we can pray for de Gubberment. 'Pears like dey just done bring us 'yer to work fur dem, an' its de fact, hrudderin an' siteren, my ole massa nebbet treat me so hard as I see been treated since I come widin de Union lines."

Another says, "Brethren, we must be patient an' wait. God an' seems like tryin' on us. We does has our trials. I has to work hard, I don't get nothing 'cept de rations, but means to be faithful, an' if I dies in de cause, 'an' never sees freedom, 'praps my children now in slavery may get to de land of promise. Remember de Bible does says, 'Godliness which is de great gain. I knows it seems hard to be treated as we is, but I specs de Gubberment aint to blame, but its some o' dese ole army officers. We must work an' do all we can; pray for de President an' de Gubberment, an' believe in God, who is much more mightier dan all de enemies. Let us all pray.' And it seemed as though all did pray, indeed; and our prayers were answered."

## THE FIRST SCHOOLS FOR CONTRABANDS—UNCLE PETER'S SCHOOL.

As early, I think, as September, 1861, two schools were opened near Hampton, one of which was for quite small children gathered by a worthy, aged 'contraband,' who had been a slave of ex-President Tyler, whose summer residence was at Hampton, 'Uncle Peter' remaining in charge of the property when it was left by the owner. Possessed of little learning himself, his efforts to help his race were praise-worthy. Go with me into the cellar kitchen of the 'Tyler Mansion.' Uncle Peter is seated in a large arm-chair; some twenty-five little 'contrabands' around him; a 'class' standing at his knee; he is trying to teach them the story of Gen. Holding up before them an old, well-worn spelling-book, bowed over it and turning it so that he can see the letters himself—they see it they can—pointing with his finger as he finds the place, he announces, 'That's A.' 'A,' responds the 'class'—looking everywhere but at the letter, which they could hardly see if they tried. 'That's B.' 'B,' they answer. So on, down the line. 'Wait a moment, Uncle, that is answering you pretty well. Now try them on the up grade. Begin at the bottom.' Looking over his glasses, then under, then through them, Uncle Peter announces frankly, 'I don't zactly know 'em up dat yer way, boss, but I done knows 'em all down dis yer way'—with finger sliding action to the word.

## MRS. MARY PEAKE'S SCHOOL.

Mrs. Mary Peake was the first teacher of a 'Contraband School.' A sketch of her life, self-denying labors, and her triumphant death, was published by the old 'American Tract Society' of Boston. Mrs. Peake was never a slave herself, but had married a slave. She was an intelligent, quite well educated woman, possessing noble, womanly traits; was alive to the terrible wrongs and needs of her race, and chose to suffer affliction with them, and watch the dealings of Providence with them. Though in very feeble health—long-standing consumption—she voluntarily gave her little strength to help the ignorant, to live her few remaining days for her people. But go with me into her school-room, and see for yourself.

An old house, standing but a short distance from the 'Chesapeake Female Seminary' (now the Soldiers' Home), was known as the 'red cottage,' and was used chiefly as 'quarters' for contrabands. In one of the upper rooms lived Mrs. Peake. In a dirty, forbidding room on the ground floor, she gathered the children now in the school-rooms at Hampton Institute to-day!

We enter; the children are here, but—'Where is Mrs. Peake, children?' 'Up stairs, she 'm being sick, worse to-day.' Clambering up the old stairs, the room is reached. What a scene! Ten or more girls, from ten to eighteen years of age, are standing close around the bed of their devoted but dying teacher. She is bolstered up by pillows, holds her book, is hearing, correcting, aiding her pupils, and, between terrible paroxysms of coughing, doing what she can, and as fast as possible, for her poor race, fully realizing that she must soon leave them. Wasted to a shadow, grown rapidly worse in the few days since I saw her in her school-room below, the failing voice, oh how weak every symptom, was unmistakably, dying—almost through with earth. Watch that expressive countenance. Would I could portray it as it lives in my memory. Startled by the scene, I take her hand, saying: 'Mrs. Peake, you must dismiss your pupils; stop now—you cannot continue your school any longer.'

Raising her poor thin hands as high as possible, fastening upon me the intense gaze of the unken eye, once so soft, bright, and sweet, she said: 'Oh, Mr. Coan, don't, please don't say a word. Let me do what I can for my race, my poor race, till I die.' Then, with an earnestness impossible to describe, she cried: 'O, God, O, my God, what is to become of my race, my dear, wronged race?'

And we leave the poor room which, in a few days, became the chamber of death—no, surely, but the pathway of life to Mary Peake, from which she entered into the presence of the God of her race. At midnight, as the watchman cried 'twelve o'clock, and all well,' catching the word, she answered softly, 'Yes—all is well.' 'Even so, with the Spirit, for she rests with her labors, and her works do follow her.'

## The Heathen Chinese in San Francisco.

From a private letter we extract the following interesting sketches:

"Yesterday I went to 'Chinatown' to visit a small school which is taught by Mrs. Sheldon, a friend of mine. Besides her household duties, her family consisting of her husband and four children, she teaches a class evening, and goes out two hours in a day to teach a small class. Three of her pupils are ministers. She reads with them and gives them scripture lessons, besides lessons on the construction of the English language. One of the three, Gee Gam, is a preacher in Chinese, and assists on a Chinese newspaper which is published here. I will get one for you as a curiosity. It is published by the American Christian Association to work for the Chinese."

I reached the place early, and found a minister studying a spelling lesson, so I assisted him until Mr. Sheldon came. He speaks English quite well, but English must be as hard for them to learn as Chinese is for us. Yesterday was a day set apart for Mrs. S. to help Gee Gam on his paper of the newspaper, which consists of items. He had several daily English papers to glean from, and it was interesting and amusing to see him glance over them and eagerly ask me, 'What is this?' He was particularly interested in the troubles between France and Annam. I said, 'France is like a naughty child and needs to be governed'—at which he seemed amused. The room was dark and dingy, but his mind seemed very bright.

While Mrs. S. was teaching another one, Gee Gam escorted us to his family apartment. We followed him up a dark and narrow stairway, through a long, dark hall, and entered a small, dingy room, which was crowded with various things. There was his wife in Chinese costume of dark blue, with a baby boy in her arms. Its birth was on the Luther anniversary; so it was named, if I recollect right, Wong Su Luther McLane (for Dr. McL. of Oakland) Gee Gam. It was a pretty baby. Another, about two years old, had an equally long name, ending with Pond, for Rev. Mr. Pond, the missionary. To crown his other garments, he wore a scarlet head-covering with a cape, cut and made in a resemblance to two short horns on the head, which were tipped with white swan's down. It was most comical, and reminded me of the way men dress their hair at the Marquesas Islands, either with one or two horns. It was evident that the boy's parents had taught him manners. He was shy at first, but came from behind his father's chair, and bowed to me, lifting his little hand, and then bowing almost to the floor. This was repeated several times. It was extremely funny. Both children were well wrapped, as it was a cold day, and there was no fire. Gee Gam remarked that he was ashamed of their room, for he had no time to put it in order. A high desk was filled with papers, books and so forth. The room would not hold more than twelve or fifteen people. The Chinese seem to like small

Mrs. Gee Gam appeared quiet and pleasant. A son, of some eight years, was at school. When I called there, the eldest had a large sore on one cheek, caused by a stone thrown at him by some rude white boy. They still receive rough treatment from rough fellows on the street.

M. and J. continue to teach in the Sunday School for Chinamen, and feel increasing interest in them. We have read with interest an article by President Angell, of Michigan University, on China, in the *Missionary Herald*, of December. We have some pleasant calls from some of the Chinese, and enjoy talking to them, though their English is broken.

"A bright Chinaman called on us yesterday, whose name is Quai. He speaks English very well. He was in a Mission School in Canton for a while before he came here. We asked why he came here. He replied, that he thought he would preach to the Chinese. When asked why he did not preach as he intended, he replied, that preaching is hard in the mind. When asked his present employment, he replied, 'I pick a chicken.' We then learned that he was in a grocery store, and sometimes earned \$2 per day by picking chickens. He has roomed among Chinamen, but has had a small room by himself. Knowing that Chinese love to live in crowds, we asked if he liked to be alone? He said yes, for he did not like to be among the 'brothers.' He called me and read and steady. E's cook, Wong Zeh, continues to do well, and perseveres in learning what he can. He was desirous to learn to play on an organ, so that he could play for the brethren (the brothers). He calls on prayer meetings. With another Chinaman he bought a house organ, and has taught him to read music; and he has got so as to play some music. He calls on us once a week, when we hear him read and speak, and talk with him. He is refined and polite. He continues to cook, yet has friend in a store, of which he is half owner. C. C. A.

Yet the Chinese must go!

## Frank Leslie's Sunday Magazine.

The April number has such an abundance of good material, that our space will not permit us to give a full list of the contents. The editor (Mr. T. D. Witt) has put in a splendid article, "The Royal Exile." The illustrations are by the artist, Mr. D. E. Hervey. "Easter Festival at St. Petersburg," "The Founding of New York City," and other articles, essays, sketches, etc., by Alfred Russel Wallace, Rev. E. H. Hall, Mrs. F. E. Alexander, Rev. J. F. Clay, Mr. J. A. Alexander, and others. The serial and short stories by Helen W. Pierpont, J. T. Neale, Josephine K. Williams, etc. The poems for the great season are by Mrs. F. E. Alexander, and others. Price, 25 cents a single number, or \$2.50 a year, prepaid. Mrs. F. E. Alexander, 55, South 3rd Place, New York.

## National School Supply Bureau.

DETROIT, July 31, 1883.

National School Supply Bureau:—  
Last April, before we had a large public school, but which position in some good schools or colleges placed my name with your Bureau. During that part of the present month I received notice from you of a vacancy in such a place as I desired. Putting my name in competition with the other party concerned I received the appointment. I am well pleased with the result, and am sure that it will be a useful and necessary place to our school country. You are at liberty to use my name if you wish.

Respectfully,  
EDWARD O. FISKE.

Headmaster Markham Acad., Milwaukee, Wis.

For application-form and circular, address:

Nat'l School Supply Bureau, Chicago, Ill.

N. B. We want all kinds of

Teachers for Schools, and

Families. Good pay to

Agents and Private Correspondents.

JAMES PYLE'S

PEARLINE

The Great Invention,

FOR EASY WASHING,

IN HARD OR SOFT, HOT OR COLD WATER,

Without Hurting to FABRIC or HANDS,

and particularly adapted to Warm Climates.

No family, rich or poor, should be without it.

Sold by all Grocers, but beware of imitations.

PEARLINE is manufactured only by

JAMES PYLE, NEW YORK.

**YORK.**

Animals know when they are kindly spoken to; speak kindly to them when they are sick or disabled and lay a gentle hand upon them. They are conscious of a kind word or caress, though they cannot speak and tell you so. How quickly they start and tremble at harsh tones; why should they not be fully as sensible of kind ones?

*The Human Journal*

## Palliser's Useful Details.

We have received from the firm of Palliser, Palliser & Co., architects, of Bridgeport, Ct., a copy of the above work, consisting of forty plates 26 x 30 inches each, filled with practical and tasteful designs for every description of architectural work, which we have examined with much interest. These plates are drawn on a large scale and will be of great service to the builder and mechanic, and tend greatly to improve the taste of the Community. Price \$3.00 per set.

## Horsford's Acid Phosphate.

A good thing. DR. ADAM MILLER, Chicago, Ill., says: "I have recommended Horsford's Acid Phosphate to my patients, and have received very favorable reports. It is one of the very few really valuable preparations now offered to the afflicted. In a practice of thirty-five years I have found a few good things, and this is one of them."

## The National Association For Sanitary and Rural Improvement

was organized the summer of 1882, at Greenwood Lake, N. Y., at a convention which was attended by many representative sanitarians.

The objects are to establish local societies for Sanitary and Rural improvement; the issuing of tracts and other publications as means of popular enlightenment; and the holding of annual conventions for discussion and conference.

The Association issues a monthly journal entitled "INDOORS AND OUTDOORS," devoted to diffusing knowledge of how to have healthy homes and beautiful surroundings. The price is low, only 50 cents per year, and it is furnished in quantities to Rural Improvement Societies at much less. It aims to stimulate the members of such societies in their work, and to supply practical information in this special line. The editors are Charles F. Wingate, Sanitary Engineer, and John V. Culver, Civil Engineer and Landscape Architect.

The officers are as follows:—  
President—Hon. ERASTUS BROOKS, New Brighton, N. Y.

Vice-Presidents—HENRY E. PELLEW, New York.

FRED'K LAW OLINSTEAD, Brookline, Mass.

GEORGE E. WARING, Jr., Newport, R. I.

Prof. HENRY MORTON, Stevens Institute

Mrs. ISABELLA BEECHER HOOKER, Hartford, Ct.

Secretary—CHARLES F. WINGATE, New York.

Trans. Sec.—WM. O. McDOWELL, Newark, N. J.

The Office of the Association is at No. 119 Pearl Street, New York.

## G. P. PUTNAM'S SONS,

27 and 29 West 23d St., New York.

Handy Volumes for General Reading.

I. How to Educate Yourself.—A Complete Guide to Students; showing how to study, what to study, and how and what to read. It is, in short, a "Pocket Schoolmaster." By George Cary Eggleston. 12mo, 151 pages, boards, 50 cts.

"No book, we fancy, could more directly appeal to the mass of Americans than one with this title."—*N. Y. Evening Express*.

"We cordially commend this book."—*N. Y. School Journal*.

II. How to Succeed, in Public Life, as a Minister, as a Physician, as a Musician, as an Engineer, as an Artist, in Mercantile Life, as a Farmer, as an Inventor, and in Literature. A series of essays by Senators Bayard and Edmunds; Doctors John Hall, Willard Parker, and Leopold Damrosch; Gen. S. Smith, Hamilton Gibson, Lawson Valentine, Commissioner Geo. B. Loring, Thomas Edison, and E. P. Roe. With an introduction by Lyman Abbott. Volume XXVI in the Handy-Book series. 16mo, boards, 50 cts.

"No book, we fancy, could more directly appeal to the mass of Americans than one with this title."—*N. Y. Evening Express*.

"It is a frank little book, and says unpleasant things plainly."—*N. Y. Herald*.

"A young man will find solid help in these remarkable little essays that deal with great expectations."—*N. Y. Herald*.

III. How to Make a Living.—By George Cary Eggleston, author of "How to Educate Yourself." 12mo, boards, 50 cts.

"Shrewd, sound, and entertaining."—*N. Y. Tribune*.

"An admirable little treatise, full of sound, practical advice."—*Christian Union*.

IV. Work for Women.—Being Hints to Aid Women in the Selection of a Vocation in Life, and describing the several occupations of Short-Hand Writing, Industrial Designing, Photographing, Nursing, Telegraphing, Teaching, Dress-Making, Proof-Reading, Engraving, etc., etc. By George J. Munson. 16mo, boards, 50 cts.

"This book is thoroughly practical in character, and aims to be a real help to that large and growing class of women who, either from choice or through necessity, are trying to discover how they can make a living. The information is thoroughly reliable, having been obtained from the best-known sources, and it is confidently believed that the little book will meet a popular demand."—*Cleveland Leader*.

"A practical volume."—*should prove of real service.*—*Cleveland Leader*.

"Full of useful suggestions."—*Philadelphia American*.

G. P. PUTNAM'S NEW CATALOGUE FURNISHED TO ANY ADDRESS.

Is situated one hundred yards from Fort Monroe, at the confluence of the Chesapeake Bay and Hampton Roads, about 180 miles south of Baltimore, and 15 miles north of Norfolk and Portsmouth. The place is reached by the splendid steamers of the Bay Line, Potomac and James River Companies, running daily between Baltimore, Washington, Richmond and Norfolk, and by rail direct from Richmond via the Chesapeake and Ohio Railway.

The Hygeia is four stories in height, substantially built and comfortably furnished; has two Otis' hydraulic elevators, gas and electric bells or Creighton's Oral Annunciator in all rooms; rooms for bath, including HOT SEA, and closets on every floor, with the most perfect system of drainage of any hotel or public building in the country.

As a resort for the pleasure-seeker, invalid, or resting place for tourists on their way to Florida or the North, this house which has accommodations for 1,000 guests and is open throughout the year, presents inducements which certainly are not equaled elsewhere as a summer resort or cold weather sanatorium. Over \$50,000 have been expended in enlarging and improving the place within the past two years, and it is the most perfect in all its appointments of any hotel south of New York.

There is music and dancing every evening and all the pleasures of a fashionable watering place are to be enjoyed. The climate of Old Point Comfort is unequalled for salubrity and general healthfulness, material favors being absolutely unknown. The record of the Meteorological Observatory for the past 20 years shows an average temperature of 72° in summer; 59° in autumn; 44° in winter, and 52° for spring; the invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. The whole region roundabout is filled with picturesque scenery, offering delightful drives by day, and romantic strolls by night. Boating and fishing are especially attractive, and the surf bathing, which is good from May until November, is unsurpassed on the Atlantic seaboard. For sleeplessness and nervousness, the delicious tonic of the pure ocean air and the lullaby of the waves rolling upon the sandy beach, but a few feet from the bedroom windows, are most healthful soporifics of the Hygeia.

## The New &amp; Revised Edition

## OF THE

## Underground Railroad,

BY WILLIAM STILL,

With a Life of the Author.

A large, handsomely printed, highly illustrated, and beautifully bound book, which explains the mysteries of THE UNDERGROUND RAILROAD, and preserves the only records, made at the time of the escape of slaves and their heroic struggles to obtain freedom. These records were faithfully taken from the lips of fugitives. Their markings and preservation would have cost the life of the author had he been detected. They are therefore history which would have been lost for the risk he took. And what wonderful, stirring, thrilling history, too! How it traces out and completes the history of our country! How momentous it is to the colored race! It is their exodus from Egypt, their grand march through the wilderness, their entrance into Canaan. All would know it. All will know it. This new Edition contains much matter not in the old, among which is a carefully prepared life of the author, written and published at the request of many friends, and inserted in his book with the hope that it may encourage his hearers everywhere to do what he has done in order to succeed. This life also contains many pleasant allusions to the great anti-slavery leaders, such as Sumner, Wilson, Greeley, &c., and friends of their hand writing. In it are found, too, many bits of history which have never before seen the light, as, for instance, the escape of several of old John Brown's officers, and the way they got passage on the Underground Railroad to places of safety. Altogether this book is one which must prove interesting and profitable to every reader; and to the colored race, whose heroism helped to make it, it must prove a history of once instructive and inspiring. A commanding volume of 800 pages and 70 illustrations. A work which will sell readily. Agents wanted, with whom liberal terms will be made. There is money in it for energetic canvassers, and for those who sell by subscription. Price \$4.50. For circular and terms, address—

No. 5.

THE RACE OF THE DRAGON-BOATS IN CHINA.

[From Christian Weekly.]

## No. 3

"You was your husband willing that should keep your mother's children asked, thinking of the feeling usually a man to men in regard to relations—  
"Yes, marn," said the woman, "he has been good to the children; an' he never made no objection to keepin' them. Though there was plenty of people, his kink-iks, an' people that didn't have no to do with it, that tried to set him keep'in'em. But we had took the children when they was little, an' we always call 'em our own. An' they calls John father an' mother, jes' like our own young ones do. We never thinks about 'em not bein' our own." This woman had been brought

[illegible]

other troublesome idolatrous ceremonies ended and the gods have been freed, then people sit down to their feast. If they have no good dinner at any other time of the year, unless it is on the Day of the Dead, they must have a feast now. The Chinese enjoy good living as well as any other people, but there are some boys and girls in America who would like a feast in China. The meal is soon finished, for there is something better to follow. Dressed in his best, the man and boy, sometimes the girl, suggest that they go into the streets and get some water, for to keep this festival as the people think it should be kept, there must be water near. The banks of the river are the place. The boy and girl get a bucket and the man goes to the pump. The waiting time is past, and one is a little late to be seen. Every one who owns a house can hire or beat a seat in his neighborhood soon aloft, until the water seems alive

When the race is ended, the proud winners rest on the sides of their vessel, listening to the cheers and praises of their friends while those who did not "beat the record" paddle idly about and wonder why such fuss is made about a mere mile. Any boat might have won; their own surety would have them cared enough about it to try had it not been for a little mishap. There is no prize, no reward for the winners, nor some one chooses to give the successful boatmen a prize. Praise and flattery satisfying to the Chinese, and all are well for each reward.

to work hard for such rewards.

Lesser races follow this, and so times a single boat will start out with speed its men could have given it, perhaps to what they would have done in the race itself. Often during the afternoon or more dragon-boats may be seen gliding swiftly up and down the stream, this that way on the water, as if in search of something. The reason for this may be that when the origin of the festival is given.

Later in the afternoon, the dragon-boats one after another, go ashore, and then away to wait a year for the festival. A few may be left near the water so that the owners may try to get ashore too, and gradually scatter to their homes.

(Continued on Page 58.)

## BY REV. L. A. DAVIS.

About the first of June, as we count time, or the first of the fifth month; as the Chinese reckon, begins one of the great festivals of China. In some parts of the country this is called the "Children's Festival," though it is generally known as the "Festival of the Dragon-Boats." It lasts five days, but the most important time is the afternoon of the fifth day. The children do not think five days too long for the festival, but many of the grown people would be glad if it did not begin until noon of the fifth day.

boats, or lying on the water. From the crowd, are a number of long narrow boats, filled with men. They are the famous dragon-boats that give the name to the festival. They are from twenty to sixty feet in length, and rarely more than six feet wide and three deep. They are pointed at sharp at both ends, and are built for speed. From the prow comes a huge and unshapely black and red serpent several feet above the water. This head is carved to represent the Chinese dragon. As far as we know, it is an excellent likeness. It surely does not look like anything else, and, being the homeliest dragon that can be made, it is the most successful. The boats whose names are announced afford to carry a carved dragon neck and head have them painted

We republish the information that the Anniversary exercises of the Hampton Normal and Agricultural Institute will be held Thursday, May 22d; the morning to be devoted to the usual recitations and to industrial exhibits in the various shops, and the afternoon to rhetorical exercises in the new gymnasium. There will, at that time, be ample accommodations at the Hygeia Hotel, which is not likely to be more than half full, owing to the lateness of the season. The friends of the school are cordially invited to attend.

The National Education Bill now before the House of Representatives, reduces the proposed aid from one hundred and five millions of dollars in twelve years, as proposed in the original "Blair" bill to seventy-seven millions in eight years. This, we think, an improvement. What is wanted is not so much a great quantity of money as a wise and stimulating expenditure that shall leave all the State's (especially the Southern) school systems, in a vigorous, hopeful condition after the government aid shall be discontinued.

The bill provides that a State shall receive from government each year no more than it shall expend from its own funds, which is the saving clause in this direction. There are provisions guarding the first distribution of the fund between the races. The three "R's" with geography and history and other branches of useful knowledge are to be taught in the schools aided. Public funds can be applied to the use of common and industrial schools that are not sectarian.

One-tenth of the national aid received can be applied to teachers' institutes or temporary training schools. Not a dollar is allowed for the school house or for rent, which is a mistake.

Just and stringent regulations are made to insure on the part of the States and Territories compliance with the letter and spirit of the law, on pain of

forfeiture of all its benefits. The time within which the expenditure is to be made is, we believe, too short. If, instead of eight, twelve or sixteen years were allowed for the distribution of the seventy-seven millions of dollars, the results would, without question, be far better. The object of this short period is probably to prevent too much dependence on government aid.

Educational work is only in part dependent on money. The true value in teaching is the personal element, the teacher. For the past ten years, Virginia and other States have had plenty of school houses, such as they are, and small salaries; the paramount difficulty has been the lack of teachers, especially for the blacks. This the records of the Hampton school show emphatically.

For the first five years the making of teachers should be half the business. The normal institutions in the South established by northern aid, do not appear to be regarded in the law; yet they have been the source of nearly all the mental and moral force that has gone into Negro schools; they even now supply over a half of the demand for colored teachers; they are over-crowded with students; they cannot afford to build more. The states are doing better than ever in this direction, but it seems clear that the eight years of proposed national aid will pass before that which is most vital and valuable in education can reach, as it should, the freedmen. There will be thousands ready to hire out for the salaries, but few who will do really good work. More time is necessary to develop the moral strength needed to make the most of national aid.

The plan of aiding and stimulating the school system of the Southern States is grand; it is an absolute necessity of the times; but the stimulus should not be like a dram, the reaction from which would make the last state worse than the first. The bottom and vital fact of all is the popular sentiment on education. Let it be built up by wise management, and such aid be given that at the end of national help there will not be a disbanded army of teachers, and a demoralized system, but a strong healthy growth; to this end, with States as with individuals, the main thing should be a constant cultivation of self reliance. To help those who help themselves is wise and constructive charity; help to the nation's weak school systems should last long enough to permit a solid growth; eight years are not, we think, enough.

On the other hand, it is justly said that after eight years, the work done will be tested and that the will of the people in the matter will be carried out. Let the duty of the day be recognized and the future will take care of itself. The more attention given to this subject, the stronger has been the conviction of its importance. A vote on the bill may not be reached this session, but if reached, it will unquestionably be passed by the House. National aid for the enormous illiteracy of the land is an idea that has been gathering force many years, and is now only a question of time. Failure is not to be thought of; it is emphatically the demand of the people who have long been pushing it upon Congress and its reluctant leaders. They will stand longer in the way at their peril.

## Prison Reform.

The Prison Association of New York is doing a grand work in the matter of prison reform. A convention was recently held under its auspices, of ministers and friends and officers of our various reformatory institutions, to consider the relation of the churches to the criminal classes. A resolution was adopted approving the work of the Association, and recommending that all the churches of the State set aside one Sunday in the year for the consideration of the relation of Christian people to the reformation of criminals. It would be well if here, in the State of Virginia, we could have a like

Association, to arouse us to a sense of our duty to prisoners.

In this convention, Bishop Henry C. Potter said: "There are two great crises in a criminal's life. The first is when he finds himself within prison walls, and the second, when his prison doors are opened and he is a free man again. When a young man is convicted, he should be kept from the evil influences of hardened prisoners. He should be isolated for a few hours each day while his hands are kept busy in some healthful employment, and then he should be brought into contact with good Christian influences."

In my visits to the jails of Virginia, of which I gave some account in the last issue of the WORKMAN, I was led to the conclusion that none of these conditions which Bishop Potter deems so desirable, are attained. The prisoners are not isolated but herded together. The young prisoners are not kept from the hardened ones, but are allowed the freest intercourse with them.

The hands of the prisoners are not kept busily occupied but they are left for the most part in absolute idleness. And, as for being brought in contact with good Christian influences, it would be hard to find a worse atmosphere than that which pervades our county jails. And in this respect, unfortunately, we do not differ widely from other States. "Did you ever know of a man being reformed in this jail?" I said to the sheriff of one of our counties. "No, I never did, but I can tell you of hundreds that have been made hardened criminals by it," was the answer. "Do you see those two boys?" he asked, pointing to two, of about twelve years, standing in the midst of a crowd of hardened looking men. "They're in for their third time now. They'll be in the penitentiary one of these days. They'll be better off there than here, for they'll have some work to do." Said one of the judges of the State: "Whenever practicable, I send boys to the reformatory schools of other States, for I know that it would be utter ruin to place them in our county jails."

One of the worst jails in the state, I found in the city of Petersburg. I visited it on the 5th of July, 1883. The sheriff was a very polite man, who answered all inquiries in regard to the jail very pleasantly. He evidently prided himself on the fact that he ran the Petersburg jail more cheaply than the one at Richmond was run. The building was of brick, situated in the same yard with the clerk's office. It had been built about 50 years. The sheriff's offices were on the first floor, prisoners' cells being on the second floor. The jail was on the side hill, a narrow court separating it on two sides from the earth wall. The cells on the floor next below the office, were about 18 by 18. I entered one of them. There were 14 prisoners in it of different ages, some of them being mere boys. The day was warm. Part of them were entirely naked, and others had only one or two pieces of clothing. The floor and bedding were in need of washing. There were two windows opening out toward the street. The male and female part of the prison were separated by a grated door, allowing of conversation between the men and women. The women's side of the jail opened into the narrow court of which I have spoken. During half the day the women were allowed access to this court, their cell doors being left open. In this court was running water, the only place for washing allowed the prisoners. Here was the kitchen and laundry, where four men and three women were employed, the only work done by any of the prisoners.

Half the day the women were locked in their cells and the men were allowed access to the court. The condition of the cells on the second floor below the offices, was very bad. They were damp and dark and filthy. In one of these I found an insane man confined. I entered his cell. It was so dark at noon that I could hardly see the man. A little light came through

double grated windows where the filth of rats and other vermin had been allowed to accumulate for months. Outside, in the corridors and in the court, hardened women and young girls were turned loose together and were listening to the coarse jokes of one of the male prisoners who was employed in the kitchen.

The sheriff told me there had been 623 commitments in six months. There were 65 prisoners in the jail at the time I visited it. He said that the crowded condition of the building made it impossible for him to make any separation between those awaiting trial and those convicted of crime—boys and hardened wretches had to be thrown in together. He said there was little sickness, no regular visitation—no regular religious service, no books or papers—time spent in idleness. He reported the capacity of the jail quite insufficient for the prisoners. He knew of no one ever reformed there.

I found the jail in Richmond an improvement on the one at Petersburg, although much remained to be desired. The city jail contained, at the time I visited it, 93 prisoners; 18 whites and 75 blacks. There were two long corridors on the first floor into which the cells opened. These were occupied by male prisoners, the females being confined on the second floor. During the day the prisoners were allowed to be together in the court. Thirteen prisoners were at work on the streets, choice being given them between that and bread and water. The sheriff said that classification of prisoners was impossible; but the jail was clean, the prisoners were obliged to bathe regularly, they had religious services nearly every Sabbath, only two men were placed in a cell, they had a hospital, and the separation between sexes was fair. The Chief of Police of the city of Richmond, reported marked improvement in the condition of the colored people of the city. Pointing to a large room in the same building with his office, he said: "Ten years ago I used to have that wall high filled with colored women who had been arrested; now I seldom have more than five or six." The sheriff of the Henrico Co. jail in the city of Richmond, bore witness to the same thing. He spoke of the smaller number of arrests, and emphasized the fact that the colored people no longer concealed their crimes committed by their own people.

There were, at the time I visited it, a colored boy and a woman, convicted of murder, confined in the jail. The sheriff said that they had both been convicted on the testimony of their own people. He said that the colored people of the county believed in their guilt and demanded that they be hung. The woman said to me, speaking of the evidence that her own relations had born against her: "Yes, my daughter and two sisters swore my life away but it don't make no difference."

The jail building was new, the prisoners well cared for, and the sheriff an intelligent man who was interested in those under his care.

At Danville the prison was filthy, the records miserably kept and the separation between the sexes very imperfect. At Lynchburg I found the best jail in the state and a good sheriff. They had tried to give the prisoners work but the attempt had been a failure. The jails in the western part of the state were an improvement on those in the east, as a rule.

In the smaller places, where there were two or three prisoners confined, the jails received very little attention. In many cases they were insecure. Not infrequently, the jailor lived at a distance from the jail and having given the prisoners their allowance of food in the morning, locked the outside door and left them, not to see them again until the following day. A popular mode of construction for the smaller jails, was that of having an iron cage in the middle of one large room where all the prisoners were placed together like so many wild beasts.

[May, 1884.]

In some cases, owing to the insecure condition of the buildings, one county jail was doing duty for two or three counties. There seems to be no reason why one jail should not do service for several counties.

As the jail system is now conducted in Virginia, (and the same is true in other states) there can be no adequate provision for the employment of the prisoners. The few counties that try to make the inmates of the jail work, fail, and single counties cannot well provide work houses for the small number of prisoners. Why could there not be district prisons whose organization and discipline should correspond to that of the penitentiary, and thus work be provided for every prisoner? Why should not the jail system be under State control, and why should not the districts of the State be sufficiently large to allow of work being provided for all the prisoners instead of having them supported in idleness as they now are at public expense in the county jails which are too small to make any adequate provision? As Dr. Lyman Abbott said in the New York Convention, the avowed object of prison machinery is to protect the innocent, and discipline and reform the guilty. The real object now seems to be to make money. In the county jails the profits go to the sheriff—the county boarding house keeper—who is interested in having his hotel as well filled as possible.

Certainly, the needs of the State of Virginia, as regards its prisoners, are imperative. The penitentiary is so overcrowded as to make the hiring of the convicts to the railroads, by the lease system, almost a necessity. The same overcrowded condition makes the discipline of the penitentiary difficult, and all attempts at classification fruitless.

There is much need of new jails in many of the counties and cities, especially in Norfolk and Petersburg, and some system ought to be adopted, by which the inmates of the jails shall be obliged to work instead of living in idleness at public expense.

A reformatory school for young offenders is much needed, so that they may be taught some useful trade, instead of being educated in crime, as they are, according to the present system.

There is much need of change in the existing prison laws of the state of Virginia.

A Prison Association which should inquire into the condition of the prisons and jails of the State, and interpose itself in the conditions and needs of prisoners, is much to be desired.

My attention has been called to the work of Christian citizens of Richmond, in the religious instruction of the convicts at the Penitentiary in that city. It is reported to me as being a work of remarkable devotion and success, and I gladly make mention of it.

In my account of the Norfolk Jail, I neglected to speak of the work done by the Young Woman's Christian Association of Norfolk, in connection with the jail in that city. These efforts are the prophecies of reform in the matter of prison management.

H. B. F.

The *Pawnee New Era* is a bright attractive little monthly paper published in the Indian Territory at the Indian Training school. Price fifty cents a year. It is referred to in the letter of Mr. James Murie published in this number. The following is from the editor.

"THE PAWNEE NEW ERA is established in the interest and as another industry of the Pawnee Industrial Boarding School, and is entirely under the management of school employees.

At present it is wholly independent of government patronage—our press and printing material being a gift from entirely disinterested parties living in the East; and the editorial and mechanical work done by ourselves.

We propose to make THE NEW ERA a complete epitome of school, agency, and general territory news, and therefore a first-class advertising medium for stock in class traders, and others doing business in and adjacent to the territory.

We have secured a correspondent at each of the neighboring Indian agencies and cattle camps; but will gladly publish any items of general interest from any source. The receipts from subscriptions and advertisements will be applied to defray the running expenses and the purchase of material and stock of our office—no person or persons to derive personal pecuniary benefit therefrom."

We accept the suggestion, made in the following letter from a friend abroad, as excellent, and publish it in the hope of some response from our Southern readers, and of suggestions from that quarter. There is a literature that is fast escaping forever as the old Negroes die out. That collected below has a market value and is paid for by periodicals that are making money; hence its easy collection. Hampton's busy clientele of graduates have no time and seldom a taste for such work; it should however be done. An admirable collection made by Miss H. W. Ludlow was printed in the book entitled "Hampton, and its Students."

Dear Sir: You probably have it within your power to perpetuate reminiscences of the greatest interest and value, by gathering and printing in your important paper the stories that can be related by colored people of the period before and during the war.

These can be collected for you by the graduates of your Institute who can transcribe the experiences given them by the word of mouth of those who themselves are unable to write. The *Phila. "Weekly Times"* has made an excellent feature of its record of the war, and the *"Weekly News"* of Charleston seems to be following in the same line. By all means let the personal incidents as narrated by the colored people be added to the history of those eventful times. These incidents will help to form, like those seized upon by Sir Walter Scott, Fenimore Cooper, and Mrs. Stone, graphic tales, which will reproduce for posterity a life-like picture of an era which can never be repeated. The few narratives we already have, such as those of Wm. Still and Frederick Douglass, are essential to the writing of History by the future Macaulay of the colored race. Commending and thanking you and your co-laborers most heartily for your valuable efforts in behalf of the colored people and the Indians.

I am, very respectfully,

Yours truly,

HORACE J. SMITH.

Paris, France.

March 9th, '84

An appreciative subscriber on a distant Pacific Island, sends us the following letter in the vernacular of his country, which, fortunately, we understand, and publish, believing that it may edify our readers as a curiosity at any rate, if not by its kind and liberal spirit.

HAIKU MAUI,

La 22 o Maraki, M. H. 1884.

LIMAIAKAIKA OPIO.

Aloha oe.

Oia hoi ka uku no ka nupepa no na makahiki elima mai ka mahina o Aperila, 1883, aku a hiki i ka maka hiki, 1888, a he hahapa kekehi no ka uku banaka no ke kilaku kela kala ma kalapoi. Me ka mahalo.

Owau no Kau Kauhau hahau.

C. H. DICKEY.

#### A Distinguished Visitor.

The school had the honor of a visit on the 11th of last month, from General Sheridan, who came to Hampton on the annual visit of inspection of the National Soldiers Home. After looking through the various departments of the school and its industries, the General and his party were greeted by the assembled students with their singing, and in a short speech he kindly expressed his pleasure in what he had seen, and his interest in the causes it represents.

The following private letter from an able, reliable and most valuable Indian Agent shows how the tide of Indian progress is checked by the parsimony of government in paying inadequate salaries.

The Indian Department has long urged better pay but utterly without effect upon Congress.

We know the man by his work, from personal observation last August. The Pimas and Maricopas need his care and will suffer from his departure. Can nothing be done to retain this excellent Agent?

PIMA AND MARICOPA AGENCY,

April 3rd 1884.

This day I have sent in my resignation to the Department, to take effect at the end of this quarter, June 30, '84.

No doubt you very well know my reasons for so doing. No man can afford to undergo the anxiety and look after four reservations for the amount of salary I am getting, and live on a desert like this.

In a lengthy letter to the Commissioner I have given him my reason for tendering my resignation. If they will give me a better Agency I would take it, or send me to Alaska I would go there, but I cannot afford to stay here and look after so many reservations and two thirds of the time pay my own expenses. You have been here and know partially what an Agency must go all through. I would prefer a wild tribe at any time in preference to a half civilized one that does not communicate with low whites that you find around so many Agencies living with squaws. So far my salary has kept me about even. In the treasury department of that I cannot make a satisfactory answer to, I must pay that out of money made by "pill peddling" before I came here.

Very respectfully yours,

A. H. JACKSON.

The *Alumni Journal*, devoted to the interests of the Graduates of the Hampton Institute, makes its appearance every month with every sign of life and prosperity, and keeps a keen eye on events, and takes wise and strong ground on the rights of the Negro, does not believe in setting aside competent colored men as representatives of their race, for white men who are no better; complains, in a manly way, of rude treatment of a party of colored students on one of the Potomac steamers from one no better than they, and quotes as follows from a well known newspaper:

"I've got three colored reporters on my staff, and I'm proud of it," said Julius Chambers, the city editor of the *Philadelphia Times*, from his seat under the clock. "I am proud to be among the first newspaper men to really acknowledge these people as men and brothers by having them work alongside of white men and do editorial assignments. In the second place I am proud to have discovered a new journalistic class, as it were. I tell you, sir, the colored men are the reporters of the future, and of the near future, too. The men I have engaged do their work admirably. I only wish my white reporters were 'em up, I tell you. It is the first time that colored men have been put on as regular reporters. They have never before, as far as I know, been sent to represent a newspaper at balls, parties, weddings and so on as they are doing under me. They are very apt at society gossip—taking to it quite naturally. It is very easy for men to obtain that class of news. My former editor who at first was prejudiced against them, has become quite reconciled, now he realizes their usefulness. I think these men I've got are so bright that they will soon work their way into editorial positions. I wouldn't be surprised at seeing a black managing editor some day or even an octocorn dramatic critic."

A number of able-bodied young men of the Hampton Institute, trusty and handy about work, would like situations for the summer vacation, from about June 15th, to earn funds to help them through the next school year. Wages should be from fifteen to twenty dollars a month besides board; at the former rate, traveling expenses one way, (eight or ten dollars) if north of New York, should be allowed. Correspondence on this matter with the Principal of the school is invited.

#### A Visit from Osage Chiefs.

An unexpected and interesting visit from a party of ten Osage Indians from Indian Territory, under escort of Dr. Bird, their agency physician, was received at Hampton last month. They manifested great interest in going through the Indian classes and training shops. The head chief, Strike Axe, a tall, commanding looking man, thus explained the objects of their visit, through his interpreter:

"We have been intending for some time to visit the East. The Osages two years ago, organized a government of their own. Last summer they got a patent for their land, but as it is explained to them, it is not satisfactory to the tribe, being only a deed of trust to the United States. They want to secure a home to themselves and their children forever. We have been to Washington to see about it, and are going again. Another object is to see the schools where Indians are taught. Another is to visit our children at the Carlisle school, where each of the delegation has from one to three. I am well satisfied with what I have seen of this school, and I am glad to see so many Indians here. We want to become a civilized people; therefore we want to see civilization—to see how you do all these things and tell our people. That is all."

The chief was assured that his speech should be printed, so that man should hear it as if they were present. Questioned as to his opinion of the severity bill, the Chief replied: "We don't want our lands divided. To have them all in one, make a vote for us unless all say so, and it is better if one man don't like his land to be able to go elsewhere." At the Chief's request, his national secretary further explained in English that the severity bill is objectionable because it would put the full blood Indians at a disadvantage. They would hang back, not approving the change, while the half-bloods and sold men in the tribe would rush in their applications and get all the best land first. For these reasons they have petitioned to be excepted from it. The tribe numbers not quite 180,000 of whom are half blood or white. Of the 450 whom are about one third are not full blood. Epidemics have recently decreased the proportion of full blood Indians. The Osages were formerly settled in Kansas, sold their reservation to the Government and bought 100,000 acres in Indian Territory from the Cherokee. Their income from the balance is now \$100 per capita, which, with farming, supports them; they have also an educational government and compulsory education laws, these reforms originating within themselves; white men marry into the tribe, and cannot vote, and if childless, lose their connection with it when their wife dies. The policy is to exclude them. The tribe has mechanics, all Indians. The Friends have a mission now among them, but most are Catholics as they were in Kansas—none are pagans. The Osages are evidently an intelligent people, capable of development.

The *Virginia Critic* is a new weekly paper published in Staunton, Va., priced \$1.50 a year, devoted to the colored people. It will advocate their civil and political rights, keep them informed on all educational matters, and furnish them with the latest news and reading matter; it will aim to improve the condition of the laboring class, generally.

It is excellent in tone, and may do great good. The appearance of numerous newspapers amongst the Negro population of the country is significant. It means that they are thinking more than ever; they will work together better from wide-spread discussions, and their power will be increasingly felt. The intelligent Negro is fast becoming a factor in our national life. It is of the greatest importance that the progress of this people morally shall keep pace with their mental growth; knowledge is not always wisdom. It is, after all, moral earnestness that tells. This quality is not wanting in many of the educated young colored leaders of the South; as they shall direct the thought of their people, that the tendency of the colored newspaper literature of the day is to a better moral tone, and to a true political independence.

#### Raby Lodge For Sale.

We call attention to the advertisement of George Dixon, offering for sale his pleasant cottage on the banks of Hampton-Creek adjoining the Normal School Grounds. This is a rare opportunity for any person wanting a pleasant home in this vicinity.

The Southern Press.

ALL SIDES.

After quoting from an address made at Louisville by Rev. Dr. Curry, as agent of the Peabody fund, the Southern Christian Advocate (Charleston, S. C.), says:

"It seems to most thoughtful Christians just now, that the cloudy pillar is in motion, leading the churches on to a great aggressive missionary work. That work must include the colored people in the South. No one will presume to limit the great commission, to 'Go EVERYWHERE, except to the blacks at your doors.' No one will say that Paul's great maxim, 'God loveth a cheerful giver,' does not apply to any gift bestowed upon his messengers. The imperative demand, 'Go, or SEND,' applies to them, likewise.

Without referring to the past, we can see enough in the present to give the colored people a strong claim on us. The ignorant, and the needy always have a claim on all who have means or benefits to spare. Let us put aside all remembrance of their connection with us in the past, their indebtedness to us, and our indebtedness to them in the past. They are all around us to-day, and they are human beings, fearfully exposed on every side. Much that is now being done for them will never find its way into census statistics, or into history. The ten thousand acts of kindness done daily, in the common relations of employers and employed; the valuable help given them in the way of example, advice, gifts, mercy—these cannot be taken account of. Let us be thankful for every gleam of 'silver lining' that is shown on the dark cloud. This is all that we ought to do, if this is all that we can do. But if other doors are open, or, if they can be opened by Christian love and patience, then we ought to do more.

A certain slowly increasing number of Southern whites are committing themselves more and more to views like these, and are by no means limiting themselves to the enunciation of theories. Since the close of the war, much kindly work has been done by individuals, but it is only of late that such work has begun to be fused into organized shape, or to be of any importance as a factor in the relations of the two races.

Evidence of the change is found in an occasional expression of appreciation like the following from the *Biblical Recorder* (colored, N. C.), which gives a hopeful view of the situation from the colored standpoint:

"A brighter day has dawned: The Negro is moving; true he set out with nothing twenty-three years ago, with nowhere to lay his head; what property the white man had, was swept away by the two armies, hence they at that time were unable to help anyone as doubtless they would have done, if they had had the means. But the present age shows that he is rising. The State is dotted all over with little cottages and school-houses erected by him since his liberation and many friends surround him. The obstacles which laid before him then are no longer obstructions along his pathway. Prejudices which existed then, are not met with to-day. A better feeling prevails throughout our commonwealth. All Christendom is praying for our success. The white man of the South is no longer considered as our enemy, but our best friend. He overlooks the previous condition of the colored man, and respects him just in proportion as he carries himself. Much has been and is being done by the white people for the education of the colored race. The law that provides an appropriation for the whites asks the same for the colored. The hand of the Government reaches around both races alike."

Another view is afforded in a letter written from Richmond to the *New York Globe*:

"Much interest is manifested here in the bill for National Aid to Education. It is a bill that should certainly be the means of lifting the colored man to the foreground, but we cannot see any reason for leaving the distribution of this money to the several States. Dr. J. L. M. Curry asserts that the Southern States will certainly do justice to the Negro in the distribution of this money, and cites their past generosity (?) as an example of the same. If the true state of affairs was known the matter would assume a different aspect. Let any fair minded man examine the various institutions of the South entirely supported by State appropriations, and let him judge for himself. Let him place the institutions for the colored youth alongside of those for the whites and he will find that this confidence is entirely misplaced. The white people of the South will put \$100 on a white school where they will not put \$10 on a colored one,

Nearly all the fine institutions of the South for the colored youth were reared by northern contributions. When the accommodations for the whites are accommodations for the colored, then, and not until then will we believe in the possibility of the whites doing justice to Negroes in this respect. The South passed laws before the war to crush the educational abilities of the black man, and it takes more than twenty years to wipe out that spirit. To consign such a bulk of money to the keeping of the Southern Bourbons would be worse than folly, and fatal to the interest of the Negro."

And still another in the resolutions passed at the convention of colored men held in Gainesville, Fla., a few weeks ago:

"WHEREAS, It is feared that the present division among the colored voters in this State between the two old parties and the Independents will lead to weakness, and thereby render our political future hopeless, and our large vote ineffective in the next election, as it was in the last District in the last campaign; therefore it is respectfully suggested that the leading colored men meet in conference and determine on such a course of action as will unite our vote in favor of the election of an Independent for Governor, and the circumstances existing thus warrant it. By uniting, we can effect the election of such men to office as will secure to our people redress for the following evils and grievances to which we are subjected:

1. We want increased facilities for common school education and the highest branches, so as to be able to reduce the high rate of illiteracy which the last census shows to exist among our people in this State.

2. We want a fair representation on juries, and a fair show in the Courts and Justices of the Peace.

3. We want to cast our votes freely and have them fairly counted; and also a better system of registration; one which shall give county Commissioners less power to do injustice to colored voters.

4. We want a fair recognition and representation in the offices of the State and county, and also under city governments.

5. We want to enjoy the same rights and privileges accorded to others in all public places on railroads and steamers, when we pay the same fare.

6. We want a law enacted restoring to the right of suffrage all men (most of whom are colored) disfranchised for alleged petty offences tried before Justices of the Peace.

7. These are our grievances and disadvantages, and it will be to our interest hereafter to act in full political accord in local and State matters, with such of the whites as we deal justly with our people and give them such chances as will enable them to enjoy the full rights of citizenship, and to bear their just share of public burdens and responsibilities."

How far these resolutions may have been "assisted" by white politicians it is, of course, difficult to say, but that many members of the white Republican party in the South have a very strong and perfectly honest conviction of the dangers to be apprehended from theocratic rule, is beyond doubt. The *National Republican* publishes a letter from Birmingham, Ala., which expresses views by no means so uncommon as is supposed, among men of Southern birth.

A Note of Warning.

"A large number of Confederate soldiers were upon principle, opposed to secession; but when the war began, actuated by love of home and sympathy for friends and neighbors, were easily and willingly induced to take up arms against a government they respected and loved. When the war ended, they returned as prodigal sons, desiring to be taken back into the family, and willing to prove their sincerity by faithful observance of all the duties and obligations of citizenship. Southrons who had believed in the right of secession, but who honestly acquiesced in the result of the war.

All of these ex-Confederate soldiers know the evil which would result to the National Government from a victory of the Democratic party in a National election. They know that no spark of love dwells in the breasts of the leaders of the Democratic party toward the Federal Government, at least so far as the leaders in the South are concerned. They know that the cohesive power of Southern Democracy is antagonistic to the Federal Government, and that the success of that party in a National contest would be a conquest of the United States Government and not a political triumph. The United States Government would be the spoils.

That there are true and loyal citizens of the Northern States members of the Democratic party I am willing to admit; but how

they can be induced to deliver the reins of government into the hands of those who hate the government, as long as it is in the hands of the colored, then, and not until then will we believe in the possibility of the whites doing justice to Negroes in this respect. The South passed laws before the war to crush the educational abilities of the black man, and it takes more than twenty years to wipe out that spirit. To consign such a bulk of money to the keeping of the Southern Bourbons would be worse than folly, and fatal to the interest of the Negro."

It is not true that the Southerners are largely in favor of the Bourbon Democratic party. I honestly believe, if they had an opportunity, that a large majority would vote against that party. But, situated as they are, intimidated, bulldozed, ostracized, vilified, and denounced as traitors to their race and section, and, lastly, swindled out of their votes, with no aid from the Federal Government, what can they do?

The history of the South since 1874 is full of evidences of how little regard is paid to the rights of citizens who dare to oppose Bourbonism. Character, liberty, and life are dare to lift a voice in behalf of fair elections and honest count. Is it possible that the law-abiding people of the North have failed to read in return for the Stanton and cowardly assassinations perpetrated by the leaders of the Democracy in the South; the only reason assigned being that they opposed the Democratic party? If they have read, is it possible that they don't believe? If they will shut their eyes to the truth and permit Bourbonism to obtain control of the National Government, as it now has of the Southern States, then truly is loyalty at a very low condition."

Over against this may be set such a statement as the following from the *Norfolk Virginian*:

"The Negro race has nothing to fear from the success of the Democratic party. It has been the dominant party of the South since redemption from carpet bag rule, and from that period the Negro has prospered. The Negro has been protected in all his rights, paying but a mite of the taxes; the same educational advantages have been extended to him that have been secured the whites, and yet in return for all these favors, the Negro has been almost solid in support of the party that has exerted every effort to oppress and degrade the South."

And again, in the *Charleston News* we find a warm denial of aspersions on the loyalty of Southern citizens, and a reasonable statement of what they themselves believe to be their motives in adopting the course which has laid them open to the charge of disloyalty. Southern "Dislike of the Government."

"We find in a leading article in the *New York Evening Post* the following extraordinary statement:

"Probably three-fourths of the white population of the South to-day—that is, the bulk of its governing class—dislike the United States Government, and teach their children to dislike it."

There is not a vestige of truth in the assertion that the white population of the South "teach their children to dislike the United States Government." The children of the country, and that they must be true to it and serve it faithfully. We have never known a single instance where a Southerner, after the war ended, taught his children to dislike the General Government. Why should he? We have no other country than this, and for that reason we make much of it, and desire that our children shall be proud of it. Nearly all the text-books used in the Southern schools are published by Northern houses, and these assuredly do not inculcate dislike of the Government.

There is no truth in the assertion that "three-fourths of the white population of the South to-day dislike the United States Government." Among the older Southerners there are some, no doubt, who have never forgotten or forgiven the injuries and losses caused them by the invasion of the South. But even these rarely go to the length of a positive feeling of dislike. There is not to be found in the South, in our opinion, even a single man who dislikes the United States Government in the sense of wishing harm, or desiring that it shall be brought into disrepute.

The mistake of the *Evening Post* is a common one. It consists in counting dislike of ignorance, incapacity and corruption, in the public service, with dislike of the Government itself—the visible representative of these United States. The Southern people insist that the Federal officers ought to be capable and honest, and they desire that the administration of the Government, in every department, shall be economical, efficient and clean. They condemn any variation from this standard and frankly avow their dislike of it. They condemn the partisanship, the sectionalism and the prejudice of the Republican party as in conflict with true

Republicanism, and dislike the methods of the dominant party to the extent of exposing them on the stump and in the press, and voting against them at the polls. Just such dislike of the Government as this is to be found in the South. No other, and no more."

So thoroughlygoing a disclaimer can hardly be set aside, and is especially worthy of notice in that it comes from the city where the first attempt was made to overturn the Government and destroy the national life. That the people for whom, twenty years ago, the United States existed only as a hated name, should now be willing to teach their children "that it is their country, that they must love it, and serve it faithfully," shows that the changes which are going on in the South are in the direction of a wholesome growth which is, to a certain extent at least, beyond the reach of political tricksters. There are, fortunately, forces at work in the South, which do not come within the domain of politics, and that they are, in the main, healthful, becomes, from day to day, more evident.

Recognition by the colored people of their weakness and its causes must take the place of the false estimate of their power, which is at present one of their chief dangers, before they can be reckoned as trustworthy members of the body politic, and the first indications of this change are to be looked for in the colored journals. The "West Indian Abroad," a weekly paper edited in the city of New York, by colored men in the interest of colored West Indians, is strong enough to confess this, and in the extract given below touches a truth recognized by many friends of the race.

"In the political battle between the two races who are citizens of this great Republic, we dare not conceal the fact that the Negro is not organized and united; and neither is he prepared or equipped for consequences. The lack of these absolute necessary elements constitute a nation's weakness, and will render him powerless and unrecognized for some time yet. That positive race-unions which characterizes the English, Scotch, French, Irish, Dutch, and German emigrants, whether settled in the United States or in any part of the world, is in an embryo stage of development among us, as an important factor in the United States. But in order, too, that the Negro may be recognized, power from Maine to Mexico, he should by all means get the almighty dollar, land and education. He is fast acquiring these, and twenty years hence he will be heard and felt as a link in a common brotherhood—though carved in ebony."

Asheville, N. C., has taken a step in the right direction by establishing a colored "Reform Club," with the following objects:

1st. To furnish all the possible moral aid to the young people of that community in their efforts to totally abstain from intoxicating drinks. To stimulate them to a higher religious, social and virtuous standing.

2nd. To prevent, so far as it is in its power, all profanity and unwarranted use of our Creator's name.

3rd. To foster and encourage a spirit of industry and economy, heartily endorsing a course of strict integrity and honesty as the only true avenues to our future development and permanent success.

4th. To collect for our race a library of useful and instructive books and periodicals, to be under the control and management of a proper Librarian, and known as the "Rural Home Library."

American Newspapers in 1884.

From the edition of Messrs. Geo. P. Rowell & Co.'s AMERICAN NEWSPAPER DIRECTORY, now in press, it appears that the newspapers and periodicals of all kinds at present issued in the United States and Canada reach a grand total of 13,402. This is a net gain of precisely 1,600 during the last twelve months, and exhibits an increase of 5,618 over the total number published just twenty years since. The increase in 1874 over the total for 1873 was 493. During the past year the dailies have increased from 1,138 to 1,254; the weeklies from 9,062 to 10,028; and the monthlies from 1,091 to 1,429. The greatest increase is in the Western States. Illinois, for instance, now shows 1,009 papers in place of last year's total of 904, while Missouri issues 604 instead of the 523 reported in 1883. Other leading Western States also exhibit a great percentage of increase. The total number of papers in New York State is 1,523, against 1,399 in 1883. Canada has shared in the general increase.

### Letters from Hampton Graduates' CONDITION OF PRISONS AND PRISONERS.

"HAPPY AS A MOUSE IN A MEAT-HOUSE." CROWDED QUARTERS. BAD AIR. NO EMPLOYMENT FOR WOMEN. NO SEPARATION OF OLD AND YOUNG. NO SEPARATION BY DAY OF MEN AND WOMEN. NO RELIGIOUS INSTRUCTION. A BETTER REPORT IN SOME RESPECTS. CAUSES OF CRIME. CROWDING THE CITIES. THE POOR HOUSE. FROM A MISSIONARY BEGINNING HIS MISSION AT HOME. STARTING A MISSION SUNDAY SCHOOL IN RICHMOND. FROM A GRATEFUL GIRL.

#### PRISONS AND PRISONERS.

Inquiries among our graduates as to the condition of the prisons in the towns where they live, have brought a number of replies, among which are the three following from those who seem to have had the most opportunity, or to have done the most of personal investigation of the subject. It may not be always easy to obtain access to these places, or accurate information concerning them, but we recommend the matter to the serious attention of our graduates, as one of deep interest in its relations to their people, and for the good they may do when allowed, in bringing some knowledge and desire of a better life to those who have few to care for their fate.

#### FROM A COLORED JUROR.

One of our earliest graduates, a man of character and good report, gives a graphic picture of the jail in his town: DANVILLE, VA., 3-21-1884.

#### Dear Friend:

Your letter of February 25th was duly received, and should have been answered promptly, but I was serving as a juror for eight days after, so that that and my other business have prevented me from doing so. I hope therefore that you will not think it negligence and lack of interest on my part. I went through the jail the other day for the first time since I have been living in Danville, and as I entered the door of the main hall of the prison I felt somewhat, I suppose, as a fly feels when he alights in a plate of grease or milk—the air was so very bad!

#### IGNORANT CONTENTMENT.

Around a large stove that gives heat for the whole building, were seated and standing about fifteen prisoners, who seemed as happy as a mouse in a meat-house, so to speak. There are about 20 prisoners in the jail, and about one-third are females, ages ranging from 13 to 54 years—average age 20 years. Term of imprisonment from 1 to 6 months, for stealing, fighting, getting drunk, &c., and not being able to pay the fines imposed by the Mayor, or Magistrates, they are put to work on the streets as corporation hands, until they work out the amount of the fine.

The females have no employment, as I know of. There is no separation as to old and hardened prisoners, from the young. They are turned in together as hogs are turned into a pen.

The sexes are separated at night, but in the day they are not. The building is two-stories high, and the women occupy the upper story. The general condition of the whole building, as to cleanliness, &c., is very bad, and I wondered how any one could live and seem perfectly satisfied in such a place. When I came out I felt as, I suppose, the fly feels when he succeeds in crawling out of the grease to the edge of the plate.

The ministers, so far as I know, never go to the jail to hold religious services. The moral condition of our people here is deplorable, and preaching seems to have but little effect upon them. I would like very much to attend the Alumni meeting, but I very much fear that I shall not be able to do so. I have not been able to attend the Alumni meeting or Commencement since I graduated in '75, and I have lost trace of nearly all my old class and school-mates.

I had to give up teaching this term because the trustees would not pay me enough. I disliked very much to give up my school, but my duty to my mother, who is left alone, demanded higher wages, so that I had to seek employment at something that pays a little better.

#### A BETTER REPORT IN SOME RESPECTS.

In the jail above described, as in that described below, food seems to be plenty, judging from the animal contentment of the inmates. Some, no doubt, are better fed than in their previous

outside its walls. In some other respects, the following report is more cheerful than the former one:

PALMER'S SPRINGS, VA.,  
MECKLENBURG CO.,  
March 19th, 1884.

#### Dear Friend:

Your requesting information in regard to the prison at Boydton has just been received (forwarded to me from Boydton). I have not been to Boydton for some time, and therefore I am unable to give you what I have seen from my own observation, but I have asked of those that have ample opportunity of knowing the condition of the prison, and they assure me that as far as the condition in the way of cleanliness, it could not be better, but they say that there should be more room. The prison is very small—only having four small cells, and only two of them are used as regular cells, because the others are on the ground floor, and have wooden doors, and would not hold prisoners any time if they were put in them. The prisoners are fed twice a day, and have plenty; this I enquired particularly about of a young man that has just been turned out, having served a term of six months for stealing an ox from a neighbor of his, and if looks go to show anything in that respect, I must say that they have plenty, for he is as fat as a pig. The greater number of offences are among the colored people, but not all. Most of the offences are for petty thefts, such as stealing a pig or ham, but not all are for thefts; some are for fighting, &c. Old and young offenders are generally put in the same cells. No employment is required, except to cut their own wood for the stove and bring water for the prisoners. The two sexes are always kept apart. Mrs. Sharp and the Rev. Jno. T. James, the teachers of the Boydton Institute, hold religious instruction quite often for the prisoners, and allow me to say just here, I think these two servants of the Lord are doing a good work among our people in this country. I have never seen the chain gang, which is employed on the railroad, and therefore cannot give any information.

If I had gotten your letter soon enough, I would have tried to go to Boydton to investigate the matter more fully. I am busy with my school, which is very large, and demands all my attention and more besides. I have on roll 95. My last month's report showed 63.50 attendance. I am employed every Sunday with my Sabbath school from 9 o'clock to 4 o'clock. This part of my work is very encouraging, indeed; old and young attend regularly, and take much interest. The bundle of papers sent was very much needed, and thankfully received. If you have any picture papers that could be spared, I would be very glad to get some to put up in my school-room.

Mr. G. W. B. is only three miles from me, and is doing a noble work among the people, both in public school and Sabbath school. I saw him last Saturday; he is to spend next Friday night at my place. I am always glad to hear from any of my Hampton friends. I want to attend Alumni meeting, if my school closes time enough.

Your former pupil.

#### CAUSES OF CRIME.

The degradation which cannot feel going to jail a descent, is a sufficient reason for much of the going there. Other causes of crime are suggested in the following letter from a young man who, while as yet an under-graduate, is doing good work as a teacher, and is well able to observe.

STAUNTON, VA., March 16, 1884.

#### Dear Teacher:

I have visited the prison and poor-house since receiving your letter. The city jail is a stone structure, well located for the good health of its inmates, drainage good; heated in cold weather by a furnace. Prisoners are well attended to, their food being well cooked, and their clothes frequently changed. "But some of them," says the jailor, "are very hard cases, refusing sometimes to eat, saying that 'such food is not fit for us'."

Staunton is in the centre of the valley. Here the whites predominate. Before the war there were but few colored people in this section; since then they have come up in large numbers from East Virginia, and now swarm the cities and the towns of this "Garden Spot of Virginia." This not being manufacturing, but a farming district, employment can not be found in proportion to labor seeking employment. Hence idleness abounds, crimes increase, wages are low. Colored and white are emigrating West; colored men to the coal fields of Iowa, and young white men are crowding the already overfilled business centres of the North and West. But I am digressing from my subject. Though there is a large number here, whose time is not profitably occupied during certain portions of the year, the

people are as well behaved as can be expected under the trying circumstances. Our population is about 7,000, of whom about 2,500 are colored. Last year there were 464 arrests; 378 were for petty larceny, 29 of a large number of women—the jail now contains a few of this unfortunate class, mostly I am sorry to say, colored—and the rest for drunkenness, and other causes. The sexes are divided in cells so arranged that there can be no communication. The term of service varies from 30 days to 18 months. Some are returned several times during the year.

The jailor tells me "there are as many whites arrested as colored—the whites commit the worse crimes, the colored a greater number of small ones. More colored women are arrested than colored men, and more white men than white women. Employment is given to some who prove themselves good cooks at the jail. They receive no religious instruction. A few tracts," says the Warden, "were sent me not long since, but the prisoners could not read them." I gave him your letter to read, and if he had a time reading those tracts to the prisoners as he had reading that, I would not give much room for the satisfaction derived from the tracts.

#### THE POOR-HOUSE.

The poor-house is occupied exclusively by colored women and children, about 15 in all. The overseer is white, is paid a regular salary, and is an efficient officer. Most of the children are orphans—a majority of them offspring of unmarried women. What is to become of this numerous class of colored children in and out of the poor-house, you know! There are several ministers who visit these deserving people and read little ones, and administer to their spiritual needs, while the city (to its honor) provides a good warm, comfortable home for them. There are just as many poor whites, more, probably, but they are provided for by church societies, &c. In conclusion, I wish to say that many of the colored people here are well-to-do—have fine churches, wear the best of clothes, have good stores, and plenty to eat.

Your friend and pupil,

D.

#### A MISSIONARY BEGINNING AT HOME.

A young man who has devoted himself to practical missionary work in Africa is preparing for it, not only by going on with some of his studies, but by doing with his might what—by seeking—his hands find to do for the needy right around him.

#### RICHMOND INSTITUTE.

Richmond, Va.

REV. H. B. FRISSELL.

Dear Friend:—Since my arrival, the 3d inst., I have met the missionary lady of whom I spoke to you, and have found that she is from Pennsylvania and working under a Baptist "Women's Home Mission Society, Chicago." The Sunday school has grown since the 1st inst. from fifteen to thirty.

Our Mission school is on the corner of Twenty-first and Maine streets, in the basement of the court-house, where we have a very large room that was given to us by the Judge for the purpose. There has been no school in that part of the city for the children, and they being poorly dressed, are ashamed to go to the large school on Sunday; so they play all day in the streets, and grow up to be worthless. I would meet the children on the street and ask them up. On the 13th I had 31 children, girls and boys, (two white children). The lady was at another Mission school, therefore I was alone; the school had not been organized, so I just read, sang and prayed with them. They seemed to be very much interested. Time will fail me to tell you how I tried to impress them; whether they were impressed, we will see. The lady came and was very much surprised to see so many little bright-eyed children, and more so to see those white children. We organized the school, took the names and number of each child; then she turned all the work over to me, feeling satisfied that it would be a successful field, and that I could conduct it. I told her that I would do all I could, both in getting teachers and children. The children promised me that they would come and bring their playmates. Last week I succeeded in getting five good young men. At 8 o'clock I went down, finding a goodly number. I opened the school, and classified them, and about one-third or more could read the Bible. I made two Bible classes and three infant classes. We had no Bibles or papers for them; so we read to them and asked questions, and in their midst I found some very bright ones. At 3:30 P. M. we had singing, thirty-eight on roll. The lady came, having quite a lot of papers, which pleased the little ones very much. We have in the treasury 43 cents. I have the boys marching in order, and I try to do everything in order. When I closed I found a woman at

the door with her daughter, saying that she did not know such was going on in that part of the city, and when she heard such sweet singing, she came to see, and also stating that she had two more at home. Soon came another mother, saying that she had five and could send them. I told them yes, and only wished that they would come themselves and bring others. They promised that they would. I am looking forward for a great work, if God be my helper. I am having now severe studies; but I make out to get to see some families.

My kindest regards to you and family, teachers and Principal. May the blessings of God be with you all in sickness and in sorrow. Pray for me that I may not be swept away by the storms of the evil one, but that I may ever hold fast to that which is true and noble in the sight of God. Please write me how things are going on at school. My co-worker, Miss L. C., wishes to be remembered to you.

I remain yours in Christ, B.

A later letter of April 2, from the same writer, says:

"The average attendance on our Sunday school now is about sixty-five, besides fourteen teachers, and now the young men have become so interested, that from fifteen to twenty young men and ladies come to visit the school, and many have joined the Bible class. I have visited the families, and they have received me kindly, indeed—have manifested their interest in the work, and do send their children. Sunday before last I was called in by an old lady to see a very sick young man; happy was he in the Lord. I talked with him, read to him, and prayed for him; that night he passed away. Another grand and hopeful field for Christian workers is that of the alms-house. I have been working there two months in company with the white lady of whom I spoke to you; but I have brought the subject up before the young men, so that every time I go now I have company."

#### FROM A GRATEFUL GIRL.

One of our young women graduates, and faithful teachers, thus expresses her gratitude to a dear and generous friend of Hampton and its students:

February 29, 1884.

#### My Dear Friend:

Nothing can afford me more pleasure than this opportunity to write to you. I have been quite ill, but thanks to God, I am up again and at work. I have had a fall, which has injured my spine. Wednesday was a happy day in my school. I had three writing desks made, costing three dollars of my own money, you sent us, and presented them to the children just as if they were directly from you. I purchased a school-bell, costing seventy-five cents. Oh, they were so happy. After all were seated, we sang, "What a Friend we have in Jesus." Presently all were in tears; then I explained the hymn to them, telling how God has helped us through you and Miss . . . . . There is a great contrast now, for when I first came to this school I found them sitting on rails. I asked them what I should tell you for them. All cried out, "Tell her we thank her." One said, "Miss R. tell her God will bless her for us." Now, my dear Miss L., my heart is overjoyed. When I see what you have done for these children—just a little to what you have done for me—I cannot thank you enough. I only wish there was something that I could do in return, to show you how I appreciate the favors and benefits I have received from you. But from my heart I give you thanks.

My school will close the last of March. It lasts five months; this year longer than ever. With my love, I am yours gratefully.

#### Frank Leslie's Sunday Magazine.

The May number contains some particularly notable articles, and is altogether most interesting and edifying. The editor, T. De Witt Talmage, G. D., has two articles—"The Arctic Martyrs" and "The Great Freshet," which are of profound interest and noble inspiration. "Cathedral of our Saviour, Moscow," "Love and Life in Norway," "The Planets, Ancient and Modern," are prominent features of the number. There are local and short stories, essays, sketches, &c. By Rev. E. Barriss, Miss G. A. Davis, Alfredon Hervey, L. L. Meade, J. A. Patten, and other celebrated writers. A number of great merit: the Home Pulpit, with sermon by Talmage; and miscellaneous articles, etc., as a certain and reliable with information. Single copy, 25 cents, or 2 for 50 cents. Sent by mail, 60 cents. Publisher, 34, 35 and 37 Park Place, N. Y.

#### Horsford's Acid Phosphate.

In Seakickness.

Prof. ADOLPH OTT, New York, says: "I used it for seasickness, during an ocean passage. In most of the cases the violent symptoms which characterize that disease yielded, and gave way to a healthful action of the function impaired."

[May, 1884.

## Incidents of Indian Life at Hampton.

## NEW COMERS.

A party of nine Indians girls from Crow Creek Agency, Dakota, arrived at Hampton April 5th, under the escort of the Rev. Mr. Gravatt of St. John's Church, St. Thomas. Their Agent reports of them as follows:

Indian name	English name	Age	Father's name	Race	Hand
Spotted Horse	Ira Lucy Black	15	Black Inside	Brown	Wizi
Yellow Star	Geo. Banks	9	Geo. Banks	"	"
Red Legs	Jessie Banks	16	John Thewm away	Brown	Running Bear
Yellow Eagle Woman	Thewm away	14	John Thewm away	Brown	Running Bear
Joe Winona	Laura Bowd Head	21	Bowd Head	"	Dog Back
White Woman	Mamie Bowd Head	8	"	"	"
Yellow Eyes	Amy Wizi	15	Wizi	Chief	Wizi
Good Body	Emma Grease	19	Grease	Brown	Running Bear
				White Ghost	

## MEDICAL REPORT.

GENERAL ARMSTRONG, *Dear Sir:*

The company of nine Indian girls which arrived April 5th, was examined by me the same day. With two exceptions, they appear to be in excellent physical condition. Two have some general indications of weak lungs, but no local disease. One has enlargement of the cervical lymphatics, but is apparently strong and in good health.

It is, on the whole, the soundest company which has been received.

Respectfully yours,  
M. M. WALLIRON, M. D.

## A NEW THANKSGIVING DAY.

Some kind friends of our Indian boys in the North have lately started for them a library by sending a generous supply of handsome and well selected books; also a bookcase. When the box was opened and the books were being examined by their grateful and admiring recipients, it came in and said, "It looks like a holiday time, is it Christmas?"

One of the little fellows immediately replied "No; Thanksgiving."

## OUR NEW GIRLS.

For days and weeks, not only the wiser members of the Indian Department, but many of the dusky maidens, have been busy planning for a number of girls "who were to come from Crow Creek Agency, D. T., as soon as snow and weather would permit; and when, about three weeks ago, the Rev. Mr. Gravatt of Hampton started westward, the nimble fingers flew faster, keeping pace with the busy tongues, as the girls put finishing touches to many necessary garments, and wondering who should wear this dress, or that skirt, and would the new comers be larger or smaller, bright or stupid, friends or strangers, and withal, how many would accept the hand held out to draw them from their homes into this strange land. What delight there was in Winona when on Wednesday the end, a telegram came from Chicago: "Leave here tonight with nine Indian girls." Saturday morning would find them there, and nine while only eight had been expected. But could we be ready? But seeming mountains melt into mole hills before our sympathetic thoughtful planner, and soon enough nine piles of neatly made clothing were ready. On Saturday morning, it seemed to me before time for Apollo to be fairly on his course, but in reality at about seven, throughout the whole house there "was such a clatter" that like the renowned people of St. Nicholas, "I sprang from my bed to see what was the matter." Flew to the window, threw up the sash, and all that, and there in a flood of beautiful sunshine, beheld for the first time our new nine. Out they

came, one by one, from the depth of a great stage coach, straight into the midst of a happy group of the school girls who formed a circle about the steps. All was quiet now, and I could imagine the comments which passed through the child's minds as they or to welcome some familiar face. An hour later, and the Assembly room at Winona was the scene of much merry making and no little consternation for behold here three tiny mites whom it seemed at first nothing we had prepared would fit, and there, two as much larger than had been expected. So there were tucks to be taken in, or let out, and some things to be borrowed from school supplies, before each one had a fresh set to start with. Over the names, too, there was much fun, and a great deal of tact called in to service, for Indians are as disinclined to answer "What is your name?" as many of us are to reply when asked "How old are you?" The black eyes would disappear under the blue shawls, before the timid voices would murmur "Mamie," "Emma" or "Mabel" as the name might be; but no sooner was it given than down it went in black and white, indelibly marked on some piece of clothing. One was dot seemed utterly unable to dub herself by any title, and so was passed over to a little chatterbox, who took her off into a room by herself and there, through the medium of the mother tongue, gained a glorious victory, emerging ere long triumphantly, leading little "Yellow Star," which is the English of her pretty Indian name. A happy morning was spent by the old girls, directed and assisted by two of the graduates, who cheerfully bear on their shoulders much of the hardest care of our children, giving baths, allotting rooms, etc., until at last everything settled into quiet again.

Then came a visit to the Doctor, where it was proved that appearances are not always deceptive, for the girls' physical condition was pronounced good in most cases, as the healthy, bright faces seemed to indicate.

The evening shadows creeping in, found the Western strangers surrounded by many friends, safely and happily ensconced in their new Eastern home. But here again came our little "Yellow Star," led by two laughing friends, who declared "It has no place!" though they were delighted enough to bear "it" off again to share their beds, and as the last bell rang, a great peace came into our hearts, as we thought of those who had made this home and new life a possibility to our children, and of Him whose love passeth all understanding, while we answered a sigh as we missed the bright smile which has always before added sunshine to the welcome at Winona.

L. T.

## Simon Mazakute.

On the 12th, of May 1873, Rev. Paul Mazakute, the first Dakota Presbyterian of the Episcopal Church, died at Santee, Neb. at the age of 31, and on the 26th of Mar. 1884, his son Simon died at Hampton, where he had been at school since the previous fall.

In his "Last Words to his Friends," published by the "Dakota League of Massachusetts," the father wrote: "I have for many years lived with one child, no matter where they live, will have pity on them for my sake, and teach them letters, to lead them along the way of Christ, they will make me truly thankful. I must now soon leave them, and as they are yet very small, I am truly sad at heart."

I do not look to any of the Dakota people. But I look with confidence to the white people who have the charity of Jesus. I seem now to be very near the gates of death. Therefore, for my children's sake, I put my trust in strangers.

In the year 1863 I went to the East, and saw much of the country there. In Pennsylvania, New York, Connecticut and Massachusetts, especially, I saw many houses and works of mercy. I have a very strong affection for all those States on that account, and a desire that my children be there. In a little while I shall not be with them, and if they are not instructed, they will grow up foolish and sinful, and if I think it sad that I can no longer see them on earth, it will be sadder still if I shall not see them hereafter in Heaven.

Therefore, if any one will pity me, and take one of them, and make it wise, and so cause me to see it in Heaven, my soul will have great joy. I am an Indian, and I know all their thoughts and ways, and they are all hard and full of misery. I grew up among them, and I was wretched; but at last I found a blessed Faith, having which, though I am dying, I know I am but waiting for a great joy and peace. It is true that the Dakotas have teachers, but these are among Dakotas, and the teaching is in their language, and so it is difficult for them to think of much, or to learn much. I desire that my children be well taught, and that as I was the first Minister from the Dakota people, so, if God my Father shall so

bless me, and keep me, from mine may grow up another Minister, who though I be not here, shall bear my name among the Ministers of Christ, and finish the work that I now lay down.

A man is rich, and humble himself to ask from another man, it is a shame; but if a man is poor, and in misery, humble himself to ask help from another, it is right. Thus La Dakota, ask for help, and I ask without shame. And it is a shame for one to ask help from another people, but I send these my words to the whites, but I do it without shame because we are one body in Christ."

Wholly ignorant of this pathetic plea of the father's, Capt. Brown, when collecting his party of Indians from Crow Creek last September, at first refused permission to young Mazakute to accompany them to Hampton, as girls for Winona Lodge were especially desired; but he was not to be denied. The party had driven about twenty miles, when they were overtaken by Simon riding bareback on his pony with only a rope for his bridle. Most earnestly he begged to be allowed to come with them. He was ready to work to do anything, if only he might come to gain an education and to see his younger sister a girl of much promise, who had already spent two years at Hampton. He was not sent back.

It was soon evident after his arrival that the tall, fine looking, young fellow, though quiet and reserved, had received careful training. For the first few months, he seemed well and strong and made an excellent record.

About Christmas time he was stricken down with violent hemorrhages of the lungs, from which he had suffered before leaving home. His otherwise strong frame battled bravely against disease, and it was not until the spring blossoms came that the struggle ended. The patient fortitude with which he bore the weariness and pain were surprising. It, sometimes, considerate as were his boy friends, the soundness of the Wigwag Sem. by his bed side would ask if the noise troubled him, it was with a sweet smile he would answer "No" and the response always was, "if questioned as to whether he had all he wanted."

His sister, often went to see him, and fruit, flowers and jelly were carried to him. A Scripture Roll was the gift of one friend, and he liked it turned every day so that his eyes could rest on the fresh verses.

He passed away very gently one night. It seemed as if the Good Shepherd of whom his father spoke as "Always active, He who never tires. He who walks bravely in difficult places and in desert lands ever seeking the lost; this One only everywhere strong in wing, this One only every where strong in battle." Himself bore him through the valley of shadows.

The wish of Paul Mazakute that one of his sons should take Orders was not realized in Simon, yet among the ranks of the his people may not be given him?

The setting sun lighted up the school Chapel when his schoolmates and friends gathered for the simple funeral services, and when we walked home from the Cemetery after the bugle had sounded the long good night to the quiet sleeper, the West was still glorious, reminding of the City which by eloquence described as, "The City always brilliant, and the buildings all of shining gold; the men in their raiment brighter than the sun; these all day and night, wise in mind, walk, making peace and singing hymns such as we never knew before, and with voices such as we have never heard. And on either side, the everlasting mountains bright and ever green; men walking there rejoicing; the City with its streets of gold, and houses pleasing in their color like the leaves of autumn, green, scarlet and white as silver, and there is no sun, but the face of the Lord is the everlasting Light."

## Does it Pay to Educate Indians?

The following from a young Pawnee, illustrates the spirit and life of one Indian trained in the East and sent back to his own people, and serves to answer the above question.

Pawnee Industrial School,  
Pawnee Agency, Ind. Ter.,  
April 3rd, 1884.

DEAR SIR:—  
Though an undergraduate of your institution, I feel it my duty to write to you about my work.

I arrived home last May, and was asked at once to clerk in the store. I accepted the offer, and clerked there 3 months. I like that kind of business and work. It was not for my beloved learning place, Hampton. While clerking there I used to go up to Pawnee school to collect. The Pawnee students all sang well, and I enjoyed the services. Mr.

L. D. Davis, Supt. of this school, asked me many times to speak to the scholars. I did, and all seemed to listen to me, that he asked me to come up again and often.

Mr. Davis asked if I would teach if he got the place for me. I told him that Hampton expected me to teach, but what could I do. I could not go to teaching for nothing. He saw Mr. Hayworth, Supt. of Indian schools, and got the place for me as an assistant teacher.

The 1st of October I went up to the school and found Mr. W. W. Davis, principal teacher in the school-room. He turned all the new scholars just brought in from the camps, and those that were in the primary department, over to me. Here I took my first class into another recitation room; boys averaging from 10 to 12 years of age—never attended school before, neither did they know a word of English. When I entered the recitation room I found the Supt. in there. He had taken a chart, (Appleton's) in for me. I hung the chart up but did not have anything to do with it until for some time.

One of the smallest boys in my class stood in front of the class. I told them that *pe-lus-ke* was boy in English. Here they learned their first English word. After teaching them some other words, they got so they could read sentences like these—

*I see the boy.  
The boy can see.  
See the boy.  
Can you see the boy?  
The boy has two ears.  
The boy has two eyes and one nose.*

I did the same way with my girls, but instead of writing boy I wrote girl, for I had a girl in front of the girls' class.

Sunday came around. The Supt. took all his scholars the older boys, while I took all those that could not understand a word of English, for my class. I took them on one side of the school room, and told them that I was going to talk to them in Pawnee, so they could understand what I was telling them. Many of their parents were present and I took them to where my class was.

Our lesson was in the Old Testament. I commenced telling them about the way they worshiped and offering sacrifices on the altar to God, when a tradition of the Pawnees came into my mind. I told the Indians that their custom corresponded with the Bible. They were very glad they had come that morning. They asked me if I would give them their dinners if they came every day. I told them I would, and they came to hear me tell more about the old stories in the Bible. A priest came to me and wanted me to talk with him about the Bible. On talking with him, he told me that though he was a priest, he believed that their religion was altogether nothing now. He said if he had some one to talk to us and to enlighten our minds, we would listen to him.

The Pawnees are a religious people and I am trying all I can to tell them about our Saviour, as far as I know. I wish I had become a minister while they were at school, for I could do more work right there among my native people. Gen'l I do not see why Christian people do not send their missionaries among these Indians, where the Gospel is needed. They send missionaries to foreign countries.

Monday I found that my new scholars had remembered what I taught them the week before.

It was not very long when they got so they could go to the Supt. and asked him for shoe-strings, or a coat, or a pair of shoes. They would go and say, "Mr. Davis, please, I want shoes," or anything they wanted. I taught and do teach the way I saw teachers teaching their scholars at Butler, in primer or in numbers.

Not long after I organized a battalion, including every boy in school. I have four companies and all drill well now. I have a Sergeant Major, Sergeants and Corporals. They appreciate their offices. They mind, and are careful not to do anything wrong while drilling.

Not long ago some friends in Philadelphia, through Capt. R. H. Pratt, sent us a nice little job "Jewel" press. So we have started a paper called the "New Era." Out of my school and drilling hours, I work in there setting types. In my department all are doing well. They are learning fast. I will not say any more about my teaching, for I do not like to tell of myself in teaching.

While teaching, an Indian told me that they wanted me at the Agent's office. I went down and found the case full of men. They asked my opinion about leasing part of my reservation. I told them that I opposed it because many are yet in villages; and they some day would have to pick their claims, and I wanted them to look out—first for the Pawnees, then cattle men.

I learned that a proposition was laid before the chiefs by Mr. Bennett (who owns the cattle) at 2 cents an acre for the term of ten years.

100

and is always ready and willing to aid any effort for the progress of her race.

With such training, such character, such enthusiasm, what can keep a woman down, what can prevent her from baying a useful and honorable life?

Blessing and blessed in her life among men, may she, when the Master calls, enter those "who walk in white garments, for they are worthy."

For the other, what shall I, what can I say of her? An outcast, homeless child, she knows not her father; her mother has given her no love, no home, no care.

Degradation and shame, hunger and cold, have been her portion. She has not grown up, but been "jerked up." From infancy, her associations have been with the evil and the vile. At a time when the children of comfortable homes are absorbed with playthings, she has learned to work for food and clothes, and learned also to steal, to lie, to sink, whenever opportunity offers.

Whilst scarcely beyond childhood, she has become a mother, and the base father of the ill-fated infant who shows its relationship to him by the fair complexion of the proud Caucasian race, deserts it, and the unhappy creature, who has brought it into life, to struggle as they may.

What can she do? It will become of her now, with this additional burden. Some spark of nature in her dusky breast keeps her from destroying the child, but she gives it away or abandons it on the hill-side, and begins her wretched life again. She is young and strong, and can find work, and now for a few months a chance is given her in a well-ordered household, where her duties are light and she is surrounded with comfort. But she has never been taught that a steady, regular life of industry is necessary for the child of man. Evil habits cling to her, temptation is ever around her. Again she is sternly ordered away from the home that would have given her shelter if she had done her part. Where can she go? who will take her in?

In a bitter storm of rain and sleet, a woman tottering with weakness, blunt with fever, shaking with cold, is wandering. This time the child is dead, and the people in the hovel where she had taken refuge have driven her away. Some blind instinct leads her out into the dreary fields in search of a hut she has visited where others like herself had gathered. In times gone by, where orgies had been held, and drink furnished, and evil acquaintance made. The hag who keeps the place does not want her now, in this wretched condition, but she can go no further, and moaning and shivering, she creeps into a corner to suffer a little while longer and then die!

These are no pictures of fancy. The sketch I give first is taken from life. Thank God, such houses and such women are to be found among our colored people.

The second story, alas, is true also. A year ago, just such a miserable girl died in the hut of a degraded Negro woman within a few miles of my house, and the untended corpse lay for days in the corner where the hapless creature died, before burial was provided for it by the brutal beings around it.

Is there not in this Christian land some remedy for such cases as this? Is there not some hope to hold out to the erring ones like her to whom the Saviour said, "Go and sin no more?"

#### Virginia School Report.

We have received from Hon. R. R. Farr, State Sup't, of Public Instruction, a copy of the Thirtieth Annual School Report of the state, for the year ending July 31, 1883. It is as usual an interesting document, showing progress, and growth of public sentiment. "The enrollment of pupils has increased over last year, by 29,314, the number of schools by 592, and of teachers, by 605, with a corresponding improvement in the amount of available funds, which, for the past year, justified the opening of many new schools, and enables all to run for an average session of 6.09 months."

The school population of the State is, of white, 314,827, of colored, 240,980; total, 555,807. Of these, the percentage enrolled in schools is 56.3 per cent. of whites, and 37.7 of colored, an increase over last year of 1.7 per cent. of white, and 3.3 per cent. of colored. The number of graded schools has increased by 27 white and 9 colored, there being now 221 white and 66 colored. The number of pupils enrolled is, white, 177,412; colored, 90,948; an increase of 5,378 white, and 5,620 colored. But the number in average daily attendance is 102,

155 white, and only 48,850 colored. A reason for this is doubtless the necessity of keeping children at home at certain seasons for help in work, or for want of warm clothing. On the other hand, the statistics show a rather curious difference in the relative number of those studying the higher branches, of whom there are 5,850 white and 801 colored, a decrease from last year of 5,850 for the whites, and for the colored an increase of 801. The whole cost of public education per month per pupil enrolled is, 79, against 72 cts. last year; per pupil in average attendance, \$1.25 this year against 1.21 last year. The number of white male teachers has decreased by 180, that of white female teachers increased by 289. The increased business prosperity of the State, offering other more lucrative positions to men may account for this. The number of colored male teachers has increased by 79, but that of female teachers by 121, perhaps in part from the same cause, and in part from a preference for colored teachers who are sure not to engage in politics. The average monthly salaries are about as last year; for males, \$39.60, for females, \$25.84, an increase in both of less than one per cent. Our graduates generally report more prompt and full payment.

The comparative summaries, extending from 1878 to 1883, show a steady growth and improvement in all respects. The grand total of expenses of the public school system in 1879 was \$1,902,52; in 1883 it was \$1,288,409.32. "To those who are interested in statistics, the tabulated reports showing the number of schools, teachers, pupils, and various school facilities in each county and district, will be convenient and interesting. In regard to public sentiment in favor of the schools, 89 superintendents report favorably, 3 report unfavorably, 9 report improvement, 5 report some opposition, 4 make no report. In 85 counties and cities, teachers' institutes have been held, in 18 none; 7 counties do not answer on this point."

A new and excellent feature of the year's work has been a Conference of the County and City Superintendents and Principals of Public High Schools of the State, held in Richmond, from Feb. 27 to March 2, for consultation as to the best means of securing unity and efficiency in the administration of school affairs. Great interest was manifested, 89 out of the 109 County Superintendents attending, and only 3 failing to respond to the invitation, though paying their own expenses. The other expenses of the Conference were supplied from the Peabody Fund by Hon. J. L. M. Curry, its general agent. The capitol was placed at the disposal of the Conference by Governor Cameron. Reports are given of addresses made by Hon. John Eaton, U. S. Commissioner of Education, and others. Resolutions were passed in favor of annual Conferences and Institutes, supported by State appropriations, in favor of national aid to education, in favor of increasing Normal Schools, and making William and Mary College a Normal School, and in expression of cordial approbation of the work of Hampton Institute and its graduates, of whom 174 were reported by the 93 superintendents who made reports, as being teachers in the State.

From the Peabody fund, Virginia received this year \$1,378.50 for Institute work in addition to the \$446 for the Conference. Institutes were held at Blacksburg, for white teachers; and at Staunton for colored. Reports of both are given, the first conducted by Professor and Mrs. Walton of Massachusetts, and Professor McGilvray of Virginia, the second by Professor K. A. Mitchell, assisted by a full corps of teachers, among them Miss Lucy Eubank, a graduate of Hampton, who explained the methods of teaching object lessons and primary reading. Of the Staunton Institute, Mr. Farr says: "I cannot speak too highly of the zeal and interest manifested by the teachers. It has never been my pleasure to meet a more earnest, self-sacrificing body of teachers. It is extremely grati-

fying to me to make special mention of the aid and hearty support given to the Institute by the citizens of Staunton." The opening of the Virginia Normal and Collegiate Institute at Petersburg is noticed as "marking a great period in the history of the colored race in Virginia." Founded by the State, with a faculty and Board of Visitors composed, with one exception in the Board, entirely of colored men, "the school, formally opened the first Wednesday in October, with nearly one hundred matriculates, and this number was soon increased to one hundred and twenty-five, all that could possibly be accommodated in the building."

The report shows that less than half the school population in the State is enrolled in its schools, while the present enrollment averages to each school reported forty-five pupils, which are about as many as a school can accommodate (each grade of one teacher is counted as one school). "Clearly we must have more schools or deny to half the children in the State any part in the benefits of public education. The Superintendents report that there are still needed in the State 519 white and 465 colored schools. If these were added, the schools would aggregate 6,688, which is far in excess of the wild dreams of those who inaugurated the school system. But according to the census, and allowing the present average of 45 to a school, this would leave 98,461 white and 142,880 colored children—in all 241,341 children—outside the scholars. We then need at the lowest calculation 2,036 more schools. In view of this manifest need, the Hon. Superintendent advises amending the Code so as to increase the maximum allowed, and give Boards of Supervisors more discretion in fixing the amount of district tax to be levied; also so as to allow Boards of school teachers, upon recommendation of the County Superintendent, and with the sanction of the Board of Supervisors, to borrow money for a greater length of time than six months, and to execute a deed of trust to secure its payment, upon any property purchased in whole or in part with the money borrowed."

#### For the New York Evangelist.

#### The Invisible War-cloak.

A Friend in Charleston, Mass. has kindly sent us the following extract:

*Extract of a letter from T. F. B. Marshall, merchant, of Honolulu, Oahu, Sandwich Islands, to his friends in Charleston, Mass., written in May, 1879.*

"I have to-day seen the most valuable cloak in the world, computing the value at the price of the material and the labor bestowed upon it. I mean the feather war-cloak of the King, which belonged to his father, the celebrated warrior Kamehameha. The King's Secretary, Hailie, brought it for us to look at—his Majesty having heard us express a wish to see it. We were deeply sensible of the distinguished honor done us, and examined the cloak with much pleasure and interest. It is of yellow feathers, and the enormous value of it arises from the fact, that the birds from which these feathers are taken, are very rare, having but one such feather under each wing, and consequently very valuable. The common price for one feather is a piece of nankin, or \$1.50. Thus, at a rough estimate, the cost of the cloak, computing it at the value of the feathers alone, is at least one and a half millions of dollars. The cloak has been seven generations of Kings in making, and computing the value of the labor bestowed upon it at the average rate, that is, 25 cents per diem, the whole cost of the cloak would be quite as much as I should wish to see at the foot of any of my tailor's bills. It is 11 feet broad at the bottom, 2½ at the top, and 4 feet long. It is called the "Invisible cloak," old legends to his friends in Charleston, Mass., written in May, 1879. Kamehameha having been impressed with the idea that when he wore it, he was invulnerable. His war spear was also shown us, and a very formidable weapon in the hands of a master of the exercise."

#### Horsford's Acid Phosphate.

Beware of Imitations. Imitations and counterfeits have again appeared. Be sure the word "Horsford's" is on the wrapper. None are genuine without it.

#### Fires in Hampton.

The most extensive fire that has visited the town of Hampton since it was all laid in ashes during the war, broke out before daylight April 18, and raged till twenty-nine buildings, and \$127,000 worth of property were consumed. The Normal School engine was first on the ground, but lent its hose to that from the Fort, that the stronger engine might reach the water, and the student brigade did faithful service for six hours in carrying out property from the houses. The steamer from the Soldiers' Home was on and did efficient work. The School engine went over in the afternoon to play upon the still burning ruins. After their hard morning's work, Mr. J. J. Barnes, proprietor of Barnes Hotel, courteously invited the students into the hotel dining room to take coffee, but they had already partaken a good breakfast through the hospitality of Mr. and Mrs. S. E. Dickford. For both these courtesies we tender their and our hearty thanks. A card was published in the Hampton Monitor by Mr. Barnes, expressing his own recognition of the services rendered the town by the Normal School brigade.

We are glad to say that the examination by the Grand Jury resulted in the belief that the fire was the result of accident and not incendiary malice. We are glad to hear that a county meeting has been called by Judge Boekerto consider the advisability of providing the town of Hampton with a fire department and engine.

On Sunday evening, April 13, a Normal School guard about to ring the retiring bell, saw flames on the Soldiers' Home grounds and gave the alarm. The boys were on the alert and surprised the Home officials by reaching the scene as soon as any one did. The fire was in the stables, and had gained such headway that all were consumed, with a granary just stored with 300 bushels of grain. Four fine horses were unfortunately perished. It being impossible to get them out. The Normal School engine was able to render good service in playing upon the flames so as to enable the Home officials to save the Hospital buildings which were in great danger. Captain Woodfin, Commandant of the Home, made handsome acknowledgment of the students' services. We hope they may not be again needed in such a way.

DIED, on Wednesday, March 19, at her home in Chatham, Va., of consumption, Mary V. Ivy, recently a student at Hampton Institute, and a niece of its graduates Lorenzo L. and Frank B. Ivy. In hope of eternal life.

DIED, on Wednesday, March 26, at Hampton Institute, of consumption, Simon W. Agnew, an Indian student of the Sioux tribe, from Crow Creek Dakota, Ty. Simon was the son of the Rev. Paul Mazakute, the first native Presbyterian under the Episcopal mission in Dakota.

DIED, of malarial fever, Nov. 22, 1883, at Middletown, Penn. where he was working to earn money to re-enter school, Thomas Lee Jones, an under graduate of Hampton Institute, a faithful worker, and an earnest Christian.

DIED, Monday, April 21, at Hampton Institute, of consumption, Cracking Wing, a Sioux Indian student from Fort Berthold Agency, Dakota. At his intelligent desire, he received Christian baptism, a week before his death, on Easter Sunday.

#### RABY LODGE.

#### FOR SALE BY PRIVATE CONTRACT.

This pleasant residence, adjoining the Normal and Agricultural Institute grounds at Hampton, Va., comprises seven rooms on the ground floor, three of them with open fire places; six rooms on the second floor, with commodious bath-room. The rooms are well clothed; large dry cellar and kitchen; large ground cistern, with pump, for rain water; a well of excellent spring water with pump; also well and force pump in cellar. A two stalled stable and coach house with granary and hay loft above. Ornamental and fruit trees, shrubs and vines on the grounds; a good boat landing opposite the house, with unobstructed view of Hampton Roads.

For further particulars, apply to GEORGE DIXON, Raby Lodge, Hampton, Va.

#### Frank Leslie's Popular Monthly.

The contents of the May number are, as usual, extremely varied, and in a literary and artistic point of view, its comprehensive and cheapness, its magazine in far ahead of its contemporaries. Among the notable articles are: "The Origin of the Normal School," "The Origin of the Normal School," "The Adventures of Bold Alonzo de Ojeda," "Morocco and the Lady Blanche Sturpy," "Zula W. Sturpy," "Garry Moss," "Fanny Driscoll," "Anne Thomas," "Aristotle's delinquency," "The Story of the MacKay," "Wade Robinson," "H. H. Shupler," "The 'Geyers,'" with eleven fine illustrations. There is a large, most interesting and instructive. There are 128 quarto pages, more than 1000 words, and a beautiful colored-plate frontispiece, "By the Soft Sea Waves." 25 cents a copy, \$3.50 a year, postpaid. New York, Duns, Publisher, 25 and 27 Park Place, New York.

and         mous approval of our medical team.

## Health and Humanity.

Hampton Institute Band of Mercy.

*Our Dumb Animals*, the lively little paper published by the original Massachusetts Society for the Prevention of Cruelty to Animals, publishes in its March number the programme of the first meeting of the Hampton Band, which was organized this term. Our society is growing in numbers and sustaining its interest. We trust that it will accomplish its share of good, and that to most of its members its membership may be something more than a name.

Hampton Friends — Fred and Shunka.

Fred is a magnificent fellow, part New Foundland and part St. Bernard, it is said, and sharing the excellencies of each fine race. "Shunka" is a beautiful collie, just full grown, and hardly out of his puppyhood, walking—when he does walk—as if he were on springs and could hardly keep himself on the earth. As he belongs to the "Indian Department," of course he had to have an Indian name; and who but a Sioux would know that it only means Dog?

Shunka was "to the manor born"—the Hampton manor. When Fred arrived this season to assume his proud position as *attaché* of the Executive Department—the honor of which he does not fail to appreciate—it was, of course, very necessary that he should come to a definite understanding with all the other dogs on the place. This was very soon accomplished—with varying results. The Skye (ecclesiastical in disposition in name), and the vixenish little Scotch terrier, who had been a member of the household for many years, were the only ones who

riers, he snuffin' at 'as they meandered  
their fate. Since then he ignores their in-  
significant presence. With the big bar  
watch dog, and a fine shepherd dog who  
arrival had not long preceded his, it was  
different matter. They must have dispute  
his usurpation of authority, and they were  
foemen worthy of his ivory. I regret to say  
that war to the teeth was at once instituted.  
With the bull-dog—spite of its race—the  
battle was short and decisive; and Spot  
surrendered to the humble unctuities of the harn.

## THE FRUITS OF LABOR

To the youthful aspirant of to-day, who is willing to take so humble a sentiment as "Labor" for his watchword, there are many noble examples among the great names of the past to cheer him on his way. Some of the brightest lights that have adorned the generations in which they lived have led the way wherever they have appeared; and those that have been obliged to turn to their own hands for maintenance and aid.

With strong wills and trusting hearts, their lives have exhibited that majestic action, steady, noble, successful action, alone

James Watts, the inventor of the steam engine, was in early life a toiling mechanic in indigent circumstances, but the thinking of that man revolutionized modern society, and future generations will rise up to bless his name.

Nathaniel Bowditch was a Boston sailor boy, and spent the greater portion of his years as a practical navigator. He had no instructor and no opportunity for study, except such as the deck or the cabin of his vessel could afford, but he wrote mathematical hooks, which only learned professors could understand, and his "Practical Navigator" has carried many a sailor through the storm and darkness of a tempestuous ocean, and has guided him safely over unknown seas. He died lamented as a man, a Christian, and as the first mathematical scholar of his age.

Elihu Burritt, the linguist, antiquarian, and philanthropist, was, when a fatherless youth, apprenticed to a blacksmith, but his mind was not satisfied with blowing bellows. He was seized with a desire to learn Latin and while the iron was heating he read Vergil. From Latin he passed to Greek, then to the modern languages, and finally back to the oriental tongues. Thus, with no other but his own right hand, and with no teacher but his untiring mind, he acquired a knowledge of upwards of fifty of the leading languages of the earth, and earned a world-wide reputation as the "Learned Blacksmith."

Need I mention in this household word, which has become an honored name of Frankland, that he has been a merciful and a just ruler upon the mercies of the world who has given you, with no opportunity for reward, education, it is like listening to a fairy tale to read the simple narrative of his life. You see him enter the printing office as a boy, and then, when he is grown, as an awkward apprentice, wander the streets of a strange city, wandering up three rolls of bread. He becomes a master spirit in literature. Step by step he steadily mounts the heights of fame. He joins hands with the Father of his country, and he is the first to make the making of a nation and that noble band of patriots who make the Constitution for his age crowned with glory and honor, receives the grateful homage of a people whom he has blessed. S. P. BAILEY

### The Watt Theory of Farming.

Mr. Watt, the well known plow maker of Virginia, promulgates the following views relative to farming, which are so sensible and good that we hope every reader of this paper who does not already practice the principles laid down, will at once begin to

"First," says Mr. Watt, "preach to your people diversified crops."

"Third: In the preparation of land to do half the work of cultivation by preparation before the ground is planted. Take a piece of land and half prepare it and it takes five times the labor to work it that it would well prepared on the start.

"Fourth: No man, rich or poor, is able to keep a mean mule, a mean horse, mean cow or mean anything else. It takes as much to keep a mean mule as it does to keep a good one. It will take half the labor of a man to whip a mean mule ahead of him, whereas a good mule will carry the lazy rascal ahead without any whipping at all.

Suppose you have six mean mules, and six men, at fair, average wages, plowing the same doing half work. Why, three good mules with three average men, will do the same work, saving half the expenses of labor, feed, gearing and tools. A man is just paying double wages in such a condition of things as this.

[illegible]

### Principles Governing Rotation of Crops.

No matter how fertile a soil may be, constant cropping with one, two or three kinds of grain which require the same elements of plant-food, will soon result in permanent exhaustion. It may be laid down as an axiom "that every system of culture which does not bring from an outside source the materials—whether nitrates, phosphates or potash, rare in a soil, and carried off by the produce, must ultimately cause the soil to become exhausted."

As the most important elements of plant food are nitrogen, phosphoric acid and potash, it is necessary that such crops be grown in succession as to consume the least amount, while the cotton crop appropriates more nitrogen than the corn crop, it is quite as much more potash consuming. It is taken up by one crop of cotton, 31.00 nitrogen, 9.06 phosphoric acid, 11.06 potash; four crops of corn, 35.00 nitrogen, 11.00 phosphoric acid, 8.58 potash. The cotton is a store house of food like all the other economic plants, the main difference being as to the quantity of each. A double crop of corn would consume about as much nitrogen as one crop of cotton. Of the principal crops in the South, the cotton crop destroys more potash than the other crops, and the field pea less phosphoric acid. Each of the other crops consumes more nitrogen than the other.

The need of a rotation that will leave soil in the best possible condition is a fact. Every bushel of grain, pound of beef, mutton, pork, or bone, and every

[From Christian Weekly.]

### Sixteenth Anniversary of Hampton Institute.

A gratifying circumstance common to anniversary occasions at Hampton is that before the day is over some one or other is sure to say "This is certainly the most interesting anniversary you have ever had." This enthusiastic tribute was not wanting on the present occasion, and shows at least that the interest of these days does not decrease as the years go on, though less outside effort is made to secure it. The growth of public interest in and knowledge of the school and the causes it represents, and its daily visitation, kept up more or less through the whole year by the throngs who stay at Old Point Comfort on their way South or North, make such effort less important than in earlier years. The real interest of the occasion is felt to be in the school itself, its students and its results, and though on this anniversary there was little speaking outside of the programme, it was in some other respects, as was said, one of the best we have had.

Among those who were present were all the members of the Board of Trustees but one, a larger attendance of this board than has ever before been possible, viz: Rev. M. E. Strieby, D. D., New York; Mr. Elbert B. Monroe, of Southport, Ct.; Judge F. N. Watkins, Farmville, Va.; Mr. Z. S. Ely, New York; Mr. A. M. Kimber, Newport, R. I.; Dr. L. H. Steiner, Frederick City, Md.; Mr. Robert E. Ogden, Philadelphia; Rev. Henry W. Foote, Boston; Mr. Moses Pierce, Norwich, Ct.; Mr. Chas. L. Neud, Rev. Mr. Hon. R. W. Hughes, Norfolk; Rev. Alexander McKenzie, D. D., Cambridge, Mass. Also the five Curators, Judge John Booker, Rev. Wm. D. R. H. Jones, New York; Mr. R. G. L. Paige, Norfolk, Hou. Mr. Norton, Yorktown, and Mr. E. S. Hamlin, Newport News.

Among the guests were Rev. Sheldon Jackson, D. D., and wife, Colorado; Dr. Spaulding, Manchester, Vt.; Rev. D. S. Schaaf, New York City; Hon. R. R. Farr, Richmond, State Superintendent of Education of Virginia; Hon. A. A. Johnson, of New York; Hon. D. R. James, of New York; and Hon. H. H. Hatch, of Michigan, Members of Congress; Jno. Cary Thomas, M. D., and wife, Baltimore; Mrs. Aiken and Mrs. Dorman, of New York; Prof. T. A. Stewart, of Liberia College, studying industrial school systems in this country; a lady representing the Brazilian government for the same purpose; Mr. G. S. Griffiths, of Baltimore; Prof. Jas. Storrins, and Prof. R. L. Mitchell, of the Normal College at Petersburg, Va.; Prof. C. C. Painter, Washington, D. C., representing there the National Indian Rights Association; Miss Dorsey, correspondent of the San Francisco Argonaut and Chicago Tribune; Mrs. B. C. Barrows of the Christian Register, representing also the Christian Union, and the Boston Herald; Rev. Jno. Hargrett, of the Springfield Republican; and representatives of the Washington National Republican, Richmond Dispatch, Norfolk Virginian, and Hampton Monitor. The New York Evening Post sent for letters from the school.

The industrial exhibits, grouped in the airy Industrial Room of the Stone Memorial building, and the various shops where colored and Indian students were at work, at the morning, attracted, as usual, much attention.

Outside the building stood more than the usual number of wheelbarrows, carts, and farm wagons, fine in their newness and gay paint, but expecting hard work, the manufacture of colored and Indian boys in the wheelwright shop. Its table inside the door showed iron work, and axe-belts in various stages, from the rough stick to useful shapes. On the Farm table next, raw material was represented in part by a box of unwinning bone dust, from which in Nature's laboratory, are evolved with daintier art, the mammoth cabbage heads and odorous onions, and delicate asparagus, and tempting cherries and luscious strawberries, the rich wheat and rye and oats and rosy clover, surrounding it, which have all come forth from this most wonderful of conjurer's bags. Fresh sweet butter, the pride of the Hampton graduate who, with her husband, presides over the Hemmery farm, was also an ornament of the table, and a nest of rempkade eggs the achievement of some of her well-fed Brahmas, one of which measured 9 inches by 7½ in circumference.

The Indian Training shops showed school furniture, tables, settees, washstands and cupboards; in ware of various kinds, harness, single and double, the work of Indian and colored boys; the shoe-shop, samples of the heavy brogans made on contract with the Interior Department, and the light but substantial shoes for school use. The knitting department had a large box of mittens ready for shipment to Boston; the Indian girls table showed neatly made garments cut and sewed by them, and samples of bread and cakes from their cooking class; the sewing and tailoring department showed well made shirts and uniform suits. The

Huntington Industrial Works had a table covered with handsome specimens of wood cutting and turning, and joiner's work; mouldings, balusters, scroll work, etc. There was also a table of the pottery painted in native style by the Indian students.

For further details of these departments and their progress, see Annual Report of the Principal, which, according to custom, fills the chief part of this number.

The usual recitations and Senior examinations occupied the morning in Academic Hall, and showed good progress and encouragement for the next year. They had been preceded by a three-days' written examination of the Senior class; after which the more public one is less trying.

After the usual rest and lunch at noon, the afternoon exercises were held in the new Gymnasium just completed, the generous gift of the late Mr. Frederick Marquand of New York City, and other friends. Its great, airy hall, 125 x 50 feet, was, for the occasion, an improvement even upon Whittin Chapel, in the story of Virginia Hall. The school masses collected in rising seats at the end of it, behind the platform, and the audience, which filled the room, sat in perfect comfort and unwaried attention through the long exercises, which, after the opening prayer by the Rev. Alexander McKenzie, D. D., of Cambridge, and the chanting of the Lord's Prayer by the school, proceeded according to the following

#### PROGRAMME.

- MUSIC.  
SALUTATORY, "The Wreath of our Race."  
JOSEPH PORTER, Middle City, Graduating Class.  
"Industrial Education at Knoxville."  
WILLIAM C. BROWN, Norfolk, Va., Class of '83.  
"Teaching in Virginia."  
ADOLPH M. WILLIAMS, Norfolk, Va., Class of '83.  
MUSIC.  
"Historical Surroundings of Hampton."  
IDA F. SAYS, Cleveland, O., Graduating Class.  
"Short Talk in Sioux."  
SANTER SINGLE FEATHER, Crow Creek, Dakota, (Interpreted by Geo. Bushnell, Junior Year, Dakota).  
"Colored People in Georgia."  
EDWARD STEWART, McIntosh, Ga., Class of '83.  
MUSIC.  
"My African Home."  
GEORGE GUEST, Shreve Island, Sierra Leone, Graduating Class.  
"Address to my White Friends."  
RONALD MCKENZIE, St. John's Indian, San Carlos, Arizona Territory.  
"Relation of the Races."  
WHITT T. WILLIAMS, Danville, Va., Class of '86.  
MUSIC.  
"The Children of the Year."  
RECESSION by four little Indian girls.  
MERCY CONGER, Sioux, MARY TRAVINER, Sioux, SENEAGLE, Seneca, ADOR ST. JOHN, Minnabeg, Work Among the Refugees in Kansas.  
GEO. W. DAVIS, Abingdon, Va., Class of '83.  
VALUATION, "The Indian's View."  
JOHN R. DUNN, Colorado, Va., Graduating Class.  
MUSIC.  
PRESENTATION OF DIPLOMAS TO GRADUATING CLASS.  
MUSIC.

The salutatory's essay was a sympathetic, earnest appeal to her girl classmates to devote themselves by teaching and example to the women of their race. The graduate who has for a year since his graduation had charge of the training shop of Miss Emily Austin's enterprising industrial school in Knoxville, Tennessee, gave an interesting account of the work, and its growing value with its Southern neighbors, one of whom had said: "We like the Yankee idea—teach a man to do anything that comes along." The speaker thought that this was what all the race should like—that skilled industry would be the secret of its success.

Another graduate of '83 brought down the house repeatedly by her humorous account of teaching in Virginia; her night ride of twelve miles through the woods over a corduroy road in an ox-cart, "jostled up and down, backward and forward and side-wise—not because the oxen carried me too rapidly—till the poor creatures at last became entirely exhausted, gave out all at once, and, quietly folding their legs under them, lay down in the woods, leaving me perched up in the cart, looking down on their worn-out forms and wondering whether life was extinct." Then she told of her call to Jerusalem—"not the Holy Land, but the county-seat of Southampton"—where she became, not only day-school, but "Sunday school teacher, local preacher, and general adviser." A graphic bit in the sketch of Hampton's historical surroundings, was the history of Peter Herbert, ex slave and trusted servant of the departed President Tyler, still living near the school and fond of telling how he was left in charge of the Tyler mansion, in Hampton, when it was abandoned in the war; and how he opened the first school for contraband children; and how the spirit of the ex-President afterwards haunted the grounds and terrified many, but was always pleasant to him; and how it is his firm conviction that the departed President wished that he should take possession of his property—"case his ghost was always so partial to me."

The Short Talk in Sioux was impressive, as interpreted by the speaker's friend, who is one of the Indian boys who, after three years at Hampton and two of subsequent

good record at home, have returned to perfect themselves in trades and the language. Santee said the people out West had sent their young men and women to Hampton so that they could teach the children the white man's road on their return. He ended impressively, saying, "We cannot get valuable things in an easy way. If any one is trying hard, and after a while gets what he is after, I think that man must be thankful."

An interesting account was given of the condition of the colored people in Georgia, particularly of the progress of one little settlement which succeeded in buying land from a Northern owner, paid up all instalments promptly, has done well, has lived down all prejudice, has two good school houses, and sends a colored representative to the General Assembly. The speaker is satisfied with the progress of the race on the whole, wants no more class legislation, but does want education for all.

The native African's account of his trip to his home interested all new enough to catch his rather broken accent. The Apache's address we give below. He was, as he says, a United States scout; was brought to the school three years ago; has worked faithfully, and will be of use among his people.

A graduate who was one of the original band of Hampton Student singers, and has taught eight years since his graduation, in western Maryland, gave an interesting account of his experience among the "exodusters," as a teacher and agent of the Relief Association, where his skill of head and hand were called into use, to make his own benches and blackboards as well as teach books.

The valdicatorian, the third of four brothers who, with their sister, have been educated at Hampton, spoke earnestly for a fair hearing and urged on his classmates the importance of building up the race in wealth, education, co-operation and industry.

It has not been our custom to print any of our students' essays, but as the smaller number of outside addresses gives a chance for it, and some of our friends may be interested in a specimen of their efforts, we subjoin one by an Indian student, and will print two by colored graduates, next month.

As many know, most of the appointments on our programme are given to members of the graduating class, but to those who have given their spare by a year's work in the field. The revision of these essays is simply cutting down, and occasional transposition of a sentence or correction of some error in English. The thought and expression are wholly their own.

Robert McIntosh was brought to Hampton from Arizona three years ago, at his own request, by Dr. Sheldon Jackson—though the present school, and what part of his essay, to have sometimes been interchangeable. He had been a United States scout, and had picked up a little English. He has worked very faithfully since he has been to Hampton, is older than most of the Indian boys, has made the most of his time; attending by his own desire both day and evening classes, to get more English; and working at the same time in the afternoon. He can cut and make a suit of clothes and will be able to do good to his people by example and teaching. His address was spoken with great earnestness, and quite distinctly.

#### ADDRESS TO MY WHITE FRIENDS.

Dear Friends:—It is time for me to give you my thoughts, as I should like to tell you something about my people, how they live, what they need. They live in Arizona, on the San Carlos river. About twenty years ago the people of my tribe use to live in tents covered with hides, and they wore clothes made of buckskin. At that time they got their food by hunting the deer and other wild animals, and also by trading with the white people, giving them deer skins for grain. Now they live in log houses and raise their own grain. For a long time the Government gave them rations and clothes. Nearly every week they got rations. Once a year before cold weather came, each of them got a suit of clothes, a pair of shoes and a blanket. When I was at home I was employed by the Government as a scout to put down the Indians, whenever they rebelled. Six years ago I began to help the government to look out for the Indians. We went into Mexico, where we found in the mountains wild Indians. That is what you call savages. Ten days we have been towards their homes, and they are very anxious to fight with us. We fought with them until night, and all the next day we heard the echoes of the guns way below at the foot of the moun-

tain, where the white and colored soldiers camped together one mile below. Soon we ran down towards that camp to help our friends. We found all the soldiers scattered away. Wild Indians had got their things all ready before we got there. Then we came down behind those wild Indians and drove them away. The white soldiers fired at us, but I said: "Holloo, Apaches solado," which means the Indian soldiers. Then I waved my red handkerchief to show that we belonged to the Government soldiers. Sometimes the white men in the West got into trouble with Indians, and it is because they do not understand their language, and should I make the most of my time here, I may be able to put an end to all their strife. At my home in the San Carlos Agency we have no school at all; therefore you can see that my people have no chance for an education. The great question with my people is that they wish to have a good interpreter for the elevation of my people. They said that they want educated Indians to teach them, so that they can trade peacefully with whom they wish. They like trading in a polite and honest way. My relatives were the first Indians to come acquainted with the white people, and I was the first Indian who ever came to Hampton school. I remember all that our Indian chiefs said to me before I left home. They promised a long time to put away their arrows and not to fight any more. "Now you go to school," said they to me, "and see if you can learn the English language." "If you learn, you may be able to speak for us some day." They said this to me, and I made up my mind to come to school. On the way I had a very hard time getting here. Probable you know Little Red river in New Mexico. On that river we had a terrible time. We began to cross the river and the horses stopped, and the wagon began to sink. Then I jumped into the water to save Dr. Jackson and his wife. I carried his wife out first, and then I carried him to the shore. His shoulder hurt very much, and we were here for many days. We can send more Indian children here to school. I shall persuade my people to send their children to school that they may be educated for them. They can do much to carry the light to those who are now in darkness. This is the principal need of my people, and the great blessing to the whole nation. Then they will become responsible for their wrong doing, and must give account for their own religion and faith in God. Your assistance is a great blessing everywhere. Whatever you have done good to us, we thank you kindly for it. Educate us that we may preach the gospel to our people as you do. We may be able to lift up our people to a better life. If you walk along between beautiful valleys hearing the birds singing, and the soft wind, and the little river, you should take it up in your hands and teach it some good lesson. It is the way with the Indian; you can help them if you will. We can learn as well as any other race, but do not learn all at once. We should try hard, yet it would take us a long time to receive it. Nearly every day the people ask me questions—how I like Hampton school, and what part of the United States I am from. Then I hold up my hand to answer their questions. It is impossible for some Indians to hold up their heads. I think a great lesson for the Indian is to hold up their heads. We shall very soon be the white ways. They wish us to follow their examples. And if we learn whatever the white race knows, we shall be able to stand between the white race and our own race, and help both of them. We expect you to shake hands with us, and we thank you for the schooling which we have received. I hope you will like us better when you know all about us.

General Armstrong, I cannot help thinking you for your kindness to me since I have been here, and that kind feeling which you have shown towards me since I have been here under your care, I shall never forget for I believe you are a friend to my people.

Dear teachers, I cannot leave Hampton without thanking you for your kind instruction in so patiently showing and telling me the ways of your people. Think not where I am I ever shall forget you, for thought of Hampton will always be with me, and remembering the place would be of no use at all unless remembering you.

My dear school friends, the time has come and I must leave you to return to my people in the West. I must thank you for your kindness since here I have been. Though I am an Indian, you have treated me like one of your own people. In our different departments we have enjoyed many pleasures, we have become acquainted with each other, and school life has bound us close together as brother and sister. Hoping you will all pray for me, thanking you all, good-bye.

Naki—ROBERT MCINTOSH.

The girls sustained themselves well in their efforts; the story of teaching in Virginia, the ride of twelve miles through the woods in an ox-cart, and other experiences, humorously (Continued on page 70.)

# SOUTHERN WORKMAN,

TWELVE PAGES MONTHLY.

(Reduced to eight pages from July to October four months.)

Printed on the Normal School Steam Press by students trained in the office.

S. C. ARMSTRONG, }  
H. W. LUDLOW, } Editors.  
M. F. ARMSTRONG, }

REV. H. B. FRISSELL, Chaplain, } Regular  
M. N. ARMSTRONG, } Contributors.  
MRS. ORRA LANGHORNE, }

TERMS: ONE DOLLAR a year IN ADVANCE.

Specimen copies sent upon application. To secure safety, it is important that money should be sent by checks, Post office orders, or registered letters. Write plainly, give name in full, and name of Post-office, County, and State to which the papers are to be sent. A limited number of advertisements is inserted at the following rates:

SPACE.	1 mo.	3 mos.	6 mos.	1 year.
1 square.	1 00	2 75	5 00	9 00
1-4 column	3 75	7 50	13 50	23 00
1-3 "	5 00	13 50	23 00	40 00
1 "	5 00	23 00	40 00	70 00

Special notices 10 cents per line.

## HAMPTON N. & A. INSTITUTE.

Sixteenth Annual Report of the Principal,  
For the School and Fiscal Year ending July 15, 1884.

To the Trustees of the Hampton Normal and Agricultural Institute.

GENTLEMEN:—This, the sixteenth year of the school, has been one of unprecedented numbers and of good progress toward the completion of the system required for the work we have to do. While the total enrollment, not including those who have been here less than a month, has been 654, the average attendance has been 550: 426 Negroes and 124 Indians. They are of the average age of 18 years, and represent 10 States and 4 Territories.

The number of officers, teachers, assistants and clerks, is sixty-four. The School has, I think, reached its maximum number, and should hereafter be limited to two hundred (200) colored girls, two hundred and fifty (250) colored young men, sixty (60) Indian girls, and seventy (70) Indian boys, making a total of five hundred and eighty (580) boarders: there are besides about twenty (20) day pupils from the town of Hampton in attendance.

There is employment in the industrial department and general service of the Institute for this number, about one-third of them working the entire time (with night study), and the rest laboring at the rate of two days each week, leaving four days for study, through which their earnings this year will be nearly forty thousand dollars. As much labor is given to students at a disadvantage, for purposes of instruction and of opportunity, the school cannot employ more without undue strain. The situation seems to point to six hundred as the limit of growth in numbers. It is twice as large as was thought of ten years ago; it is folly to make more of quantity than quality, and our future efforts should be to more perfectly arrange and economize the affairs of the School. The only present difficulty is the want of room for girls, there being, besides certain makeshifts, only forty rooms for the two hundred here, into which three and four have, this term, been crowded, at the expense of comfort, if not of decency. A new building, to provide forty more rooms, two girls in each, has been proposed, and will be referred to again.

With this, and some minor improvements, complete and paid for, there will be next year, ample accommodations for all; the Institute will be nobly equipped for its work, and be, in its general outline, substantially finished, free from debt, at a cost of over \$400,000.

There are three principal divisions of students, each with its own head and teachers, an arrangement which, by dividing and simplifying things, pre-

vents the friction and confusion so liable from large numbers, and keeps each pupil under careful watch.

1st. The Normal School, consisting of Junior, Middle and Senior classes, and, with the Pastors' class, numbering, 349 ad. The Indian Classes, a three years' preparatory course, 93  
2d. The Night Classes, for work students, one or two years' course, 212

Total, 654  
Industrial training is given to each division, and is connected with them, as described below. Labor is universal, because it is the great practical factor in life, and without it a drill and a consequent skill and force most essential to success and to character would be wanting.

### THE FIRST DIVISION.

#### Normal Classes.

These work at the rate of two days of ten hours, and study four days each week, attending school from 8.30 A. M. until 12 M., and from 1.45 P. M. till 4 P. M., besides meeting for study from 7 to 8 o'clock A. M., and from 7 to 9 o'clock P. M.; 34 teachers are employed, including 7 belonging to the Indian Department. The Normal course receives Indians who have passed through the three preparatory years of language lessons and rudiments.

The year has been one of hard and generally satisfactory work. A great concern has been to get the best material to work upon, and to get rid of those who were incapable or not in earnest and deserving. Considering the past lives of students, it is wonderful that there are so many of worth and promise. Attention is given at the weekly faculty meeting and the teachers' Wednesday meeting, to many individual cases, and three times a year the entire list of students is gone carefully over in order to "weed out" the unworthy.

Negro youth seem to have lost none of their zeal for knowledge; they are pressing in upon us as never before. Scores, if not hundreds, must be turned from our doors next year, as many have been this year, while our graduates are in more pressing demand than ever as teachers. The trouble in the South is not the want of school houses and salaries, but of men and women qualified to teach.

While fifty thousand dollars a year must be annually raised to keep this school afloat, I have too little time or strength for the important duty of watching or studying the class work of the school. The best of teachers are helped by suggestions and fair criticism; ours are too much left to themselves. A public school has this advantage over a private one, that its methods are regularly inspected and discussed, and as a rule thereby improved. While isolation like ours does not promote intelligent self-criticism, the desired end can be, in a measure, attained by securing skilled teachers, by class visiting, by mutual discussion, and by inviting the co-operation of able educators who may be willing to come. This should, I think, be done more carefully in the future than it has been in the past. Where all is done in three years, and a fifth of the time usually given to study is devoted to manual labor, the work should be carefully studied and skillfully done. Other schools for Negroes, in some cases at least, take more time than we do to do the same work. See Miss Mackie's report of her recent visit to southern institutions.

I believe with her, that for our pupils more brain work can be done by working two days each week and studying four, than in the usual five days' studying without work. In the night class the results of two hours' evening study after ten hours' hard labor have been a surprise.

Students are hard pushed from morning till night, and I believe the "go" is good for them; it quickens their pace through life; their thoughts are purer, and their characters are better for it. There is little mischief when there is

no time for it; hence, I think, the remarkable moral record here for the past sixteen years. Activity is a purifier; labor is perhaps the greatest moral force in civilization.

Student life outside the school room is just as formative as that within it; pupils influence each other, and are moulded by contact with teachers; whatever gives tone and direction to their thoughts and actions is educative; no care is greater than the moral of students. This depends more upon the force and wisdom of the officers and instructors than upon their technical skill. A corresponding influence to that here exerted upon them, the students are likely to have hereafter upon others in the wide field of labor before them at the South.

The discipline of the young men is largely committed to the "Students' Court-Martial," under the care of Lt. Brown, Commandant, to whose report on this subject I ask attention. In nearly six years it has passed upon many and grave offences, and never has done a weak or unworthy thing. Headlessness is the chief cause of unsatisfactory conduct. There is a general respect of the proprieties and a lively interest in the instruction given on "Habits and Manners."

The interest in schools like this is that the teacher has a far more decisive formative work to do than among more advanced races who, on their part, are not nearly so responsive to or appreciative of what is done for them.

The "despised races" make, on the whole, a better use of their advantages than the more developed ones. I call attention here to the suggestion in the report of the Lady Principal, that after the second or middle year of the Normal course the class remain out one year at teaching or other work, in order to best realize their needs and deficiencies. A number from every Middle class have done this of their own accord, or from necessity, always with excellent effect. A Senior class, made up of those who had a year's practical experience of life, would be morally stronger than one of youth who had not been tried by responsibility.

In Appendix A, under the heading NORMAL SCHOOL, may be found the reports of the Lady Principal and her associates, which treat in detail of the studies pursued and of the nature of the work done, to which your attention is invited.

### THE SECOND DIVISION.

#### Indian Classes.

Evidently a part of Hampton's duty is to supply an object lesson on the capacity for improvement of the two races with whom it is dealing. From February till May, and during July and August, the School is daily visited by guests from the neighboring resorts, especially from the "Hygeia Hotel," two and a half miles distant. I think valuable impressions have been made and a better sentiment regarding both races created; Indians, however, being the chief curiosity. The elevation of the Negro is unquestionably a matter of time and effort; to this end nothing has proved more favorable than his position as an American citizen. A similar capacity in the Indian has been shown, but the most important condition for its development—citizenship—has not yet been created.

The question is, no longer, can the Indian be civilized? but what becomes of the civilized Indian? The best answer we can give is that, of over seventy Indians, chiefly Sioux, who, since 1881, have returned from Hampton to their homes, not over seven have relapsed to Indian ways; not one has become a bad character; even the few who have "gone back to the blanket" having not misbehaved. Most of them are doing well, and some of them very well. They were, at last reports, employed as follows:

Teaching in Government Schools, - 4  
Assisting in Government Schools, - 1

Clerks at Agency, - 2  
Interpreter at Agency, - 1  
Working at trades at Agency, - 9  
Employees at Agency, - 4  
Attending School at Agency, - 3  
Working on their own or parents' farms, - 9  
Cutting cord-wood, - 2  
Young boys at home behaving well, - 4  
Married well, - 2  
Unemployed and adrift, - 5  
Returned to Hampton for more education, - 5

#### Girls.

Assisting in Girls' School, - 1  
Attending, - 3  
At home doing well, - 4  
Married well, - 2  
Unemployed and adrift, - 2  
Returned to Hampton for more education, - 2  
Died since return—both sexes, - 71

These do not include the seventeen who, in 1878, came, under Capt. Pratt's care, from St. Augustine, Florida, most of whom have turned out well; nor about a dozen who were sent back early for poor health or bad conduct, who improved very little at this school.

I refer you to the "Report of the Rev. J. J. Gravatt, in Appendix "B" for recent and satisfactory information on returned Indians.

The Indian Agent has great power; he is the "Father," is so addressed, and when competent, faithful men are appointed, there is little danger of the relapse of students, in spite of all the evil around them.

We have chiefly to thank Indian Agents Gassman, McLaughlin, and Swan, of the Sioux reservation, for their earnest efforts to build up our returned pupils; others have been helpful.

Last year, we were, by the aid of friends, able to add a little to the salary of these agents, whose pay from Government is so small, that competent men are often unwilling to serve, or soon leave the work. The wisdom of securing a good executive force is practically denied by Congress, where, rather than in the Interior Department, the obstacles to Indian progress are found. The latter, well informed and in earnest, asks for what the Indians need; the former, as a whole, ignorant and indifferently, refuses it. It is most important that private aid to agents be continued. We cannot overstate the importance of competent agents to the Indian youth whom we educate and send home: here they go with the current; there against it, and the crisis is serious.

You are referred to the reports in the Appendix B, from Miss Richards, head of the Indian department, and her assistants, and to information given by Rev. H. B. Frissell, Chaplain, and by the Commandant, Lt. Brown, showing what the work of the year has been, and the grounds of encouragement in all departments of their training.

Our general policy has been to concentrate effort upon a few agencies or tribes, that they might be fairly leavened with intelligent trained youth who will gradually take their place as leaders. There is in the outlook much to encourage. Friends have supplied all needed buildings and the scholarships we have asked for to provide tuition for Indian pupils. The number aided by Government next year is likely to be 120 instead of 100 as now, and the rate \$175.00 a year instead of \$167.00 as now, which covers cost of board and clothing; tuition to be as before, provided by friends. The school this year has had twenty Indians wholly at private charges, and has always provided for more than the number aided by the Government. Our efforts will, probably, as before, be directed chiefly to the Sioux, but a few Pimas and Apaches have been expected from Arizona, and some select youth from the Indian Territory. The recent resignation of Dr. Jackson, the very able Agent of the Pimas, because he could not do his duties on his salary, makes it doubtful about taking Pimas for it is useless to work for a tribe un-

less its Agent is a man to be depended upon."

### THIRD DIVISION.

#### Night Classes—The Work Students.

No year of the course is more improving than the preliminary one of labor, in which those who have no money or mental preparation spend one or two years to earn the means to take the full course, and to acquire by two hours of evening study, five nights a week, for eleven months, the requisite knowledge for admission.

While many fall out by the way, for the ordeal is severe, they gain much even in a few months' attendance, and our work for them is not a total loss.

More and more I believe in LABOR AS A MORAL FORCE. While its pecuniary return to the student is important, and the acquired skill is equivalent to a working capital, the outcome of it in manly and womanly quality is, in the long run, perhaps, the most valuable of all. Work students, to be worth wages, must be able-bodied; they are the oldest class of students; hence often dull, but more than all others, earnest. The majority, chiefly farmers and mill hands, work only a year at wages from the first; those who are taught trades are a younger, quicker class, spend two years in the shop, receiving, for the first six months, board only, afterwards, if satisfactory, steadily increasing wages, and by the end of the second year have not only mastered a trade, but in many cases have saved up over \$100, which, supplemented by the earnings of two days' work each week, in school, carries them through the entire course.

The brightest of these are able, by evening study, in the second year, to keep up with the Junior class, then enter as Middlemen, and thus by two years in the work shops and night school, with two years in the Normal course, acquire in four years a trade and a good education without a dollar from charity. Of course their tuition is free; a scholarship is provided for each one. A complete manhood is what we aim for, not expecting that most of those who have learned trades will be tradesmen; while having in their lives constant use for their manual skill, and in case of necessity a resource in it, they will be more likely to teach and exert a wholesome influence among their people. They can interest their pupils in the use of tools as well as of books. Young women, who compose one-third of this class, will not only be competent to teach, being in great demand for that purpose, but by their practical training, be better able to take care of themselves during the half-year when schools are closed; they will be saved from the temptation that poverty makes strong, and be better fitted to fulfill whatever part they may take in life. Twelve Indian boys have voluntarily left half-day work, preferring to work ten hours a day and study at night, in order to master their trades.

Experience leads me to believe that young mechanics or even day laborers in any part of the country, can, by evening study, acquire a good education; two hours of earnest night study is often worth more than six hours of ordinary day schooling.

I refer you to the report of Miss Baldwin, in charge of the night classes, and those of four out of her eight assistants, in the Appendix C.

### THE INDUSTRIAL DEPARTMENTS.

Every student has a place in these; labor being required of all. There are three:

1. The Household industries, including the boarding department and the care of all the buildings.
2. The Agricultural.
3. The Mechanical.

#### THE HOUSEHOLD DEPARTMENT.

Miss C. L. Mackie, in charge (assisted by Miss M. A. Wheeler, Supt. of Laundry, and Miss M. L. Dewey, teacher of Cooking school), gives employment chiefly to girls, who are assigned to work as follows:

#### Girls.

In the laundry 26 work all the time,

studying nights, and 60 Normal School girls work one day each week.

In the four kitchens (diet, cooking school, students' and teachers') there are 2 cooks and 7 assistants, the latter caring for the dining rooms—all work girls. Sixty school girls set tables and wash dishes three times a day. Sixty-three do general house work, including the care of teachers' room. There is one nurse.

Girls in the Normal course are employed one entire day each week, either in the laundry or sewing school, and one hour every day in the week in house work. Cooking lessons are given from January till June. For account of girls in sewing and tailoring shops see below.

#### Young Men

are employed as follows: one cook, three bakers, and one for general duty; all night students. Thirty-seven Normal school boys are employed as waiters at as many tables, averaging sixteen at a table, and there are thirteen janitors in care of the various buildings.

Since the completion of the new laundry, with bath rooms, etc., costing \$4,000, the girls' work has been done to far more advantage than ever. I cannot say too much for the hygienic importance of this improvement. Such needs do not excite general interest, but they are vital, and a few have helped generously to erect this building so requisite to a civilizing work.

The large amount of work in the Household department is wholly done by student labor, excepting a hired hand in the teachers' kitchen and laundry; while non-productive, it is a vast saving of expense, and most profitable as practical training.

All have regular wages, but are paid in kind not in cash, except small amounts for necessary expenses.

#### THE AGRICULTURAL DEPARTMENT.

Besides forty-three acres recently leased for a long term to the National Soldiers' Home, and thirty-five taken up by school grounds, building lots, and roads, there are about one hundred and ten acres under cultivation on the home farm. At the "Hiemaway" and "Canebrake" farms, five miles distant, there are five hundred and fifty acres; four hundred under cultivation, the rest pasture, of which a part is marsh. Thirteen work boys and two work girls, under the care of Mr. and Mrs. Charles Vanison, graduates, do the farm and house and domestic work at this plantation—studying nights. It is in itself a complete institution, satisfactory in every way. Others like it might be established at considerable first cost, but could be run at small current expense.

The home farm, on which milk, vegetables and small truck are raised, gives employment to thirteen work students, who also do a variety of service for the institution; they are engaged for a year, and attend night school. Daily details for farm work from the Normal School average ten boys, except Mondays, when half the entire farm force is out, giving each one a day and a half each per week for work.

The agricultural department is comparatively complete and in good condition.

For an account of agricultural operations, see report of Mr. Albert Howe, Manager, herewith submitted.

Under the farm management are the *Wheelwright and Blacksmith Shops*, in which there are six Indian boys working half days, studying the other half, and six colored boys, of whom as with Indians three work in one shop and three in the other, but the latter for the whole year, studying nights. The work has been very satisfactory.

#### THE MECHANICAL DEPARTMENT.

The leading industry is the *Huntington Industrial Works*, a saw-mill and wood working establishment, under the general charge of Mr. Albert Howe.

In the saw-mill, managed by Mr. W. T. Westwood, there have been sawed during the past year over two million feet

of lumber, and work has been furnished to 19 Night students and 10 Normal students, who work two days each week. There is on hand a full supply of marketable lumber, and though during the past three months the demand has been light, the outlook for summer business is good; our market is almost entirely local; the machinery is in first-rate condition, and the workmen are reported as doing well and a very promising set.

Mr. James H. Brinson, in charge of the wood working part, reports in his employ six journeymen and thirteen colored apprentices. "Orders are taken from and contracts are made with outside parties in Norfolk, Portsmouth, Hampton and Old Point for a variety of articles, such as fancy front and vestibule doors, store fronts, store doors, newel posts and balusters, pulpits, pews, window and door frames, brackets, trusses, scroll work, wooden mantels, counters and cabinets and stair-rails, ready to put up; also moldings of all sizes and patterns, and turning in all forms. Plans of buildings are prepared, estimates made, and information given."

This department has, the current year, put up four moderate sized buildings for the School, and is ready to undertake the much desired new building for colored girls, furnishing even the bricks to be made on the School farm. The apprentices are spoken of favorably; their success is a mere question of will. Three or four who have served two years, mastered their trade, and gone into school, working two days each week, have done remarkably well. The Industrial Works have now plenty to do, but competition is sharp; builders have little capital, do not always come out ahead, and we have some difficulty in collecting what is due us.

#### The Pierce Machine Shop.

Mr. J. B. H. Goff, Engineer, in charge, employs four night students, who, besides iron work in summer, take care of the gas works, of nine boilers, four steam pumps, and five steam engines, (one a sixty-horse power Corliss) employs also five Normal students, two days each week, three of whom have served a two years' apprenticeship; they look after the steam, water and gas pipes in the many buildings, and do general repairs and aid in construction, when any is to be done. Seventy-two iron bedsteads have been made for the school this year, and fifteen for the county. Gas and steam fixtures have been put into the Stone Building.

There is an ample and satisfactory supply of water and of gas; of the former, 40,000 gallons are consumed per day; of the latter, in the long winter nights, an average of 3,500 cubic feet; less, of course, when the days are longer; the number of burners is 786; the cost per thousand feet has been ninety cents.

The large steam heating apparatus has worked well, but needs more boiler surface. Burning the refuse of the Saw Mill has been a great economy in making steam.

#### The Printing Office in Stone Building.

Mr. C. W. Betts, in charge, is training six colored boys (four of them night students), four Indians, and employs four outside hands, of whom two are ex-students, one a girl. The *Southern Workman*, *Alumni Journal* (monthly), and *African Repository* (quarterly), and the little monthly paper of the Indian Debating Society, the composition, type-setting, make-up, &c., of which is wholly done by Indians, are printed here.

The supply of outside job work has been good, and the year's work satisfactory. The office is in good condition, and the progress of student learners encouraging.

Ten who have fully or partly mastered the trade have already gone out, and the majority are at their trade.

There is a decided increase in applications for colored printers, and there are very few places in the country where they can learn the art.

#### Girls' Industrial Department.

Miss M. T. Galpin, in charge.

Fifty-nine Normal School girls, work each one day every week, about twelve a day, mending clothes for 350 boys, and making household furnishing of all kinds, bedding, etc.; about 2,000 sheets are in use and kept in repair. There are thirteen work girls attending night school, of whom three do general work, four make shirts and under-clothing, five are in the

*Tailoring and Shirt-making Department*, under the care of Mr. Robt. H. Hamilton, a graduate of the School, assisted by two young men, apprentices, where, during the year, so far, 140 uniform coats, 225 pairs of uniform pants, and 100 uniform vests have been made for students; six of the above-mentioned thirteen girls doing most of the work; some outside help, however, being employed on coats; 1,500 other garments have been made.

#### The Indian Training Shop.

Mr. J. H. McDowell, in charge.

This includes carpenters, tin-smiths, harness-makers, and painters, as follows:

There are 13 Indians and 6 colored carpenters, who, with one journeyman assistant, this past year have put up a gymnasium 50 x 125 feet, with bowling-alley annex 16 x 70 feet, new engine house, etc., 32 x 52 feet, two new cottages for Indian families, each 12 x 24, with 8 x 12 kitchen. Alterations, additions, and repair of buildings, the manufacture of a quantity of school and house furniture have, with buildings, kept the force constantly busy.

Five Indian and two colored apprentices to tin-smith's trade, under a journeyman instructor, have made over 15,000 pieces of tin ware (13,000 of them for the Government Indian service), put on 22,000 feet of tin roofing, besides doing all manufacturing and repairs for the school much of that of the Hygeia Hotel, and considerable for the local trade.

Three Indian and three Negro apprentices, under a journeyman instructor or have, during the year, made for the Government Indian service 28 double sets of wagon harness, two double sets of plow harness, and to order for customers 15 sets of fine harness, besides all repairs for the school and a large part of the neighborhood work.

Two Negro and two Indian apprentices, under a journeyman teacher, have painted all the new buildings, and done a large amount of repainting, glazing, and glazing.

There has been in the training shops a marked improvement over our preceding year, both in the quantity and quality of the work done, a decidedly better spirit and increased interest, and less complaint, in all the shops. This is very much due to more constant employment; the fewer the breaks, the more contented the boys are.

Total number of Indian boys employed, 23; Negro, 13; of the former 11 and of the latter 7 work all day, attending night school; the rest are in the Indian or normal classes, and study three full days each week.

#### The Shoe Shop.

Mr. E. F. Coolidge, in charge, employs three colored and eleven Indian students, and occasionally, an outside hand; they are, for the third year, manufacturing two thousand pairs of men's brogan shoes for the Government, to be issued to Indians in the West; will make this year for the School and for custom work about five hundred pairs, and repair annually at least sixteen hundred pairs.

This work of the shop has been well tested, is gaining confidence, and finer kinds of shoes are called for than before. School officers and teachers often purchase there. A good serviceable girl's shoe at \$2 a pair is made, which is becoming popular among the young women, long outwearing "store" shoes. For the boys, an English Balmoral at \$2.25 is made, and is the regulation shoe; custom made, it costs \$3. The

boys are doing better this year than ever. Instead of working half and studying half the day, five of the seven Indians have applied to work all day and study nights, in order to learn more of the trade—a good sign.

#### Knitting Work.

Mr. F. N. Gilman, in charge.

Twenty-two young colored men, 14 of them night and 8 of them normal students working two days a week, are under Mr. A. G. Lyons, instructor, a former student, filling an order for ten thousand dozen pairs of mittens, manufactured on the "Lamb" knitting machine; a low grade of work at moderate prices, for a Boston firm, which supplies the material and pays us for the labor. Five school girls work two days a week "tacking" the finished mittens and preparing them for shipment. Against 15 outside hands last year, there are this year; 7 such hands, 4 white and 3 colored, who share in the different parts of the work.

This not only helps many to an education but, as task labor, is an education in accurate and rapid work. It is the only industry in this place in which students are paid for their work; in the rest they are paid for their time. If possible, piece work should be more generally introduced; it is the true method.

#### Remarks.

The accounts of each of the above-mentioned departments, household, agricultural and mechanical, showing receipts, expenditures, and loss or gain of each, will be published in the Treasurer's Report, and sent after the close of the fiscal year, ending June 30, to each contributor to the school.

The total earnings of students last year in these three divisions were \$35,288.93, and will be considerably more this year. Paying them or crediting them with such a large amount for their work is, to some extent, a direct drain on our income, for the instruction of the student is regarded as equally important with the profits of the shop. To make money we would select the most skillful, keep them from year to year, dismissing at once the dull and doubtful. But as soon as a student is skilled, his course is ended, and a new hand takes his place; many are kept who are earning force is at least 25 per cent. larger than it need be for regular business. From his standpoint, the student is honestly self-supporting; from our own, one-fourth of wages paid (amounting to \$10,000 or \$12,000) is a direct drain. Does it pay? A sound practical education costs much more than one in book knowledge only. Two sets of teachers are required, and the shops should, as a rule, not be expected to bring back more than cost of student's labor and material; salaries of managers, with building and outfit, being a school expense. A few of the shops can do better than this.

I stated last year that our system of workshops needed a working capital of \$25,000. In all production, capital is as important as the "plant" or buildings and machinery; not a dollar of working capital has ever been given us; hence much embarrassment and a serious check to the success of our mechanical operations. Each one should be on its own basis, endowed, complete and independent, to test itself by fighting its own battles.

The distinctive feature of the Hampton Institute is the labor system as a means of support, and as a moral force; probably nowhere else have work and study been so fully allied, and I believe that the plan should be worked out to completeness. Especially in the mechanic arts are the Negro and Indian races at a disadvantage; the former are losing their ground, the latter have none, while skilled labor is paramount to the progress of any race. Conducting mechanical operations without capital is like "making bricks without straw."

#### SUPPORT.

The matter of permanent and reliable means of support is becoming more

and more serious as the school is better established.

Fifty thousand dollars a year, besides the yield of our small endowment fund and State and National aid (which is for specific purposes), must be annually secured from the benevolent public. A wide-spread impression that this is a government institution, has done no good. It is not generally realized that not a dollar of public money goes to land, building or improvements, or that the trustees are a private self-perpetuating corporation, chartered by special act of the State of Virginia, representing the constituency which mainly supports the work.

By the annual contributions of scholars of seventy dollars (the cost of tuition or instruction of a student for one year) about twenty-two thousand dollars may be reasonably hoped for yearly; two thousand have been received this year from the Slater Fund, and five hundred from the Peabody Fund.

#### Estimate for next year.

From annual scholarships and from these two funds say - \$25,000 00  
From donations for general purposes (average of previous years) about, - \$10,000 00  
For the remaining - 15,000 00  
We look to legacies and for gifts that so far have come to the school from unexpected sources. We do not know how it will be this year or in the future; if the money does not come, we must cut the work down; the larger salaries can be reduced. It is to be hoped, however, that our student force will not be cut down while there is so great a call for able, earnest men at the South.

#### Endowment.

The Negro is rapidly increasing; he is here to stay. Institutions are as important for the black race as for the white race, and just as the latter will need forever a supply of trained men and women, so will the former. We must organize for all time; Hampton should not always be in the front rank of charities. Should it secure an endowment of five hundred thousand dollars, it still would need twenty-five thousand a year in charity for current expenses. A partial endowment at once, I think, important to give the school a more assured life, power to go through exigencies, and allow some of the force and strength at present devoted to revenue to be given directly to the uplifting work of the school; to a better knowledge of the field and of the people.

To ask for half a million dollars seems hopeless; but other things seemingly more hopeless have been done, and I believe the money is somewhere.

#### THE WORK BEFORE US.

I, believe, 1st. A limitation of the school to not over six hundred students, including both races, of whom not over 150 shall be Indians.

2. Completing our system and organizing the school throughout in the best possible way; there is room for improvement everywhere. This is, in many ways, the hardest duty of all, and is never ended. A work that is really sound and worthy of support will, I believe, get it.

Omitting minor improvements, the pressing need, as above stated, is of a New Girls' Dormitory, with forty rooms, each to hold two, that will cost sixteen thousand dollars. Each room will cost about \$300; the girls' assembly room, \$1,000, and the hospital, \$1,500. This will complete the system of buildings required for 600 pupils. The last \$5,000 have already been guaranteed, not \$200 besides have been subscribed. Ground is broken for brick-making, and other preliminaries have begun. The building can be ready, if the means are supplied, by next November.

3. Securing an endowment fund of five hundred thousand dollars more than we now have, one-half, I would suggest, in the form of permanent scholarships of fifteen hundred dollars

each, to yield \$70 annually; and half as a general fund. The two are equally important.

A direct effort should be made by an appeal to the public for the funds, and an equally important work is to make the school as worthy as possible of that which it asks for.

#### CONCERNING GRADUATES.

Of the 528 who have taken a full course, 195 of them girls, at least 75 per cent. are teaching, and an equal number of those who failed to take a full course are employed in the country school houses of Virginia and the neighboring States. There is little to attract an intelligent colored man or woman to these remote places; school houses are poor, often miserably fitted up; salaries are small, from \$20 to \$30 a month; school sessions last about five months, and for most of the year teachers must support themselves in other occupations.

But the most and the best of the people are in the country, and I feel that Hampton's work should be for the rural farming population quite as much as for those in cities. For a graduate to teach year after year on less pay than he or she could get in steady city employment, or in some public service, is a strain under which a number have given up teaching.

The demand for teachers is greater than ever; the need of them is growing; hardly the *harvest* of our black population is being adequately taught; the evils of an ignorant voting population are not lessening; it is creating a state of things in some parts of the South that threatens, if not civilization, at least the integrity of republican institutions.

There is no remedy but in popular education. This is so far as it goes, the work of our school through its graduates, of whose work some account is given by Miss Cleveland and Miss Tieston, correspondents. See Appendix D. Our interest in and care of them is most important.

No fact in my experience is more striking than the growth in manly and womanly qualities of many of those who have engaged in teaching. Morally their record has been, as a rule, admirable. Many of them are seriously deficient in scholarship, are poor spellers, readers and writers, and at the same time exert a moral influence, and set an example of estimable value.

I ask attention to Rev. Mr. Frissell's remarks, in the Appendix, upon his personal visitation of graduates; a work in which I long to engage.

From the very first since 1870 they have been generally well treated and appreciated by all intelligent people about them. For such workers there is no color line; only those who love darkness rather than light are against them.

#### IN GENERAL.

Your attention is invited to the following reports in the Appendix marked E. To that of Rev. H. B. Frissell, Chaplain of the Institute, especially to his account of the Pastors' class; to that of Dr. M. M. Waldron, Medical officer; to that of Miss Alice M. Bacon, Librarian; and to that of Mr. F. C. Briggs, Business Agent, giving details of school expense and other statistics of great value, also to the full reports from the various labor departments which have been outlined above, including that on the New Green House by Mr. J. O. Folsom, not heretofore referred to.

I commend to your attention the report of Lieutenant Geo. Le Roy Brown, U. S. Army, Commandant, (see Appendix E), which is his last, as his duties here will soon cease. The self-government of students of both races to which he alludes, has proved more successful than we had dared to hope.

My application to the Secretary of War, dated January 17th, 1884, for the detail of Lieut. Brown for another term, his three years of service here expiring July 1st, 1884, was replied to in a letter from the office of the Adjutant General in the Army, dated May 7th, 1884, stating that the Secretary of War had

decided to detail an officer at the Virginia Agricultural College at Blacksburg, thus depriving us of any officer after next July, as the State is entitled to but one officer on the active list. Hampton Institute has had the benefit of that regulation for six years, and consideration was due to its sister institution for the white race.

This decision has placed the school at a disadvantage. The duties here require a mental and moral energy, a physical activity and an adaptation to peculiar conditions rarely to be found, and hardly to be expected from an officer on the retired list, from which a detail could be made.

Lieut. Brown has done most valuable service as Commandant of the battalion of Normal School Cadets, having brought it up to an excellent condition of drill, discipline, *morale* and performance of guard and other duty. Night and day he has labored for its improvement with most satisfactory results. In every relation he has commanded the confidence and respect of all.

The cause of Indian progress receives a blow; his six years' service among the Sioux qualified him to deal with this peculiar people and to be a daily help in our efforts for Indian youth. He has, I believe, rendered a more valuable public service than many officers in the field.

I think that the only Agricultural College in the United States, where Negroes can get the *ionic* of military discipline, so useful for them, should have been deprived of its officer so summarily.

#### Resignation of the Treasurer.

In closing, I cannot but refer to the resignation of General J. B. Marshall, Treasurer, to take effect July 1st, having served the school with an untiring devotion for nearly fourteen years, is now compelled, by the condition of his eyes, to give up the duties he has so long and ably performed.

Our relations here were a renewal of early associations in the Hawaiian Islands, where the peculiar and almost the precise conditions of the present Negro problem of the United States had to be dealt with thirty years before they were created in America by the results of civil war. That experience, of which he was, for twenty years, a witness and a part, furnished the plan of the Hampton School. For his wisdom and aid, and no slight self-sacrifice in building up this work, which has been an attempt to solve two of the nation's problems, not only the institution but the country is indebted to General Marshall.

His work began almost with the school's life, and to him is due the very perfect condition of its records, the order and method of its business, and the credit of a most faithful stewardship of the great trust committed to his care. With his estimable wife, he has been socially and in every relation helpful and strengthening to this work. Both will be missed seriously in the life and work of the school.

I trust that the dictates of thoughtful appreciation in this matter will be regarded, and that his future may be, to some extent at least, one of continued usefulness to the cause which he has served so long and faithfully.

Respectfully submitted,

S. C. ARMSTRONG, Principal.

Hampton, Va., May 21st, 1884.

#### Appendix A

The following reports are from the instructors in charge of the studies specified, in each of which there are from one to three teachers engaged:

#### NORMAL DEPARTMENT.

Report of Mary F. Mackie, in charge.

The roll of attendance for the present Academic year, not including those who have been here less than a month, is as follows:

Boys 380, Girls 274, Total 654. Of these 426 belong to the day school, 228 to the evening school. The daily average attendance for the year has been 550. The following is the order of classification.

## Normal Students.

YOUNG WOMEN.	YOUNG MEN.
Senior Class 18	Senior Class 27
Junior " 40	Middle " 63
Junior " 98	Junior " 89
Evening " 69	Evening " 143
Indian School 49	Indian School 44

Pastors' class 16.

Of the 124 Indian students, 19 are included in the Normal classes and 12 in the evening school. The remaining 93 are Preparatory.

Of the total number on roll, 31 are day scholars from Hampton; the balance, 624, are boarders, of whom 597 entered as new students this year.

This is much the largest attendance we have ever recorded. The gain has been chiefly in the number of girls admitted to the Junior class. In previous years, nearly twice as many boys as girls have applied for admission to the school, but this year at the opening, the Junior girls outnumbered the boys, and while in the higher classes they do not equal them in numbers, they have gained on their ratio of former years.

A marked feature of the attendance has been the promptness with which the students came in at the opening. Formerly, applications were made and students entered quite up to Christmas, much to the detriment of class work, but this year, before the close of the first week the classes were full, but few have been admitted since.

The large decrease of day scholars on our roll needs an explanation. At present we have only 31 against 60 of last year. This is owing to the fact that we have arranged with the two county schools of the town of Hampton, the "Lincoln" and "Butler," to fit the students they send us for the Middle class, instead of the Junior as formerly. In consequence of this arrangement, made last fall, no new day scholars were admitted in October.

The record of class work has been about the same as that of former years. As regards the mathematical classes, the progress has been satisfactory and as usual our work has been mostly in the line of arithmetic about two-thirds only of the Senior class taking algebra.

We tried for a part of the year giving some "Inventive Geometry" to the Seniors with very good success. The pupils showed an aptness for designing their own geometrical figures and in some cases wrote fair original demonstrations of their problems. Want of time alone prevented us from giving the study anything more than a trial.

The only change we have made in our order of studies is to take the "Theory of Teaching," out of the Senior and put it into the second half of the Middle year. Our reason for so doing is that many students leave the school at the end of the Middle term, and return and enter one of the excellent work as teachers. Their training in this study will be invaluable to them in their work. Hereafter the Senior class will have only the daily practice which they get in our Training School, instead of combining Theory and Practice as formerly.

There is one point in our curriculum which I consider at present very weak and where I would urge a longer time for the study, even at the expense of some higher branch, on the ground that this being an elementary study, ought to be more thorough, and that is geography. We give one year to it, while the best schools give four, and every year the complaint grows louder on the part of our geography teachers that they cannot possibly, in the time allotted, take their classes through the intermediate geography which we use, and give more than a very superficial knowledge of some of the great divisions of the earth. I think a year and a half is the shortest time we should allow for geography, and this with the physical geography we give later, for a half year, would be quite satisfactory to the teachers in this department and as much as could be allowed in justice to the other branches taught.

So far as I can judge from my own experience and what I see of the work of other teachers in the corps, the aim and desire is constantly to require more and more thorough work in all the branches taught. Comparing as I now can, the work of this Institution with that of many similar schools in the South, I feel that we have reason to be encouraged. Considering how much shorter is the number of years in the academic course with us than in any other school, we giving in three years nearly the same English branches which elsewhere is given in six and, in some cases in eight years, the work is well done.

I think our experience proves also that, for our class of students, the two days of work and four days of study, instead of the usual one day of work and five days of study, is a gain. Bodily exercise seems to stimulate their brain to better action. I attribute also our ability to put students through the course in a limited time we have, to the constant and close grading we do in our classes.

If a Normal School is to be judged by the work it does through its graduates, I think

ours will stand the test. Nowhere during my recent visit South, did I see more satisfactory work by colored teachers than by those trained at Hampton, and in some cases it would compare well with that of many white teachers who have had much greater advantages. Whenever I met superintendents, I received most gratifying reports of the satisfaction Hampton graduates gave as teachers.

In discussing with some of our graduates the training which Hampton gives for the special work, more than one expressed the thought that it would add greatly to their power as teachers if there could be a year allowed to every class for teaching between the Middle and Senior years. I have long held the same opinion myself. We frequently have students who for want of sufficient funds to take such a year of work midway in their course, and we have always found in these industrial cases a gain of at least 100 per cent. in the earnestness and intelligence with which they have taken hold upon their Senior studies. Generally, too, they come back with a much higher appreciation of the value to them, as teachers, of thoroughness in the elementary branches.

I think the effect of some such step as this would be to sift out the lighter and less earnest part of the class and give us material for our Seniors which would make that year of study worth double what it is at present.

## Report on English.

By Helen W. Ludlow, teacher.

I have had charge this year of the Middle class in rhetoric and composition.

The class now numbers 22, having dropped out from time to time, chiefly for want of means to carry them through. Of these, some are teaching, others working in various ways, most of them expecting to repeat the year or the year after, to repeat their middle year if necessary, and complete their course.

The average ability compares favorably with that of other classes of the same grade I have taught heretofore. For English, and some other studies, they are divided into three graded sections. There is great difference between the highest and lowest of these. Most of Section 1 are excellent materials, some of the best. Most of Section 3 will either repeat or be dropped at the end of this year. On the whole, the promise is good. I think, for the next Senior class. There are seven Indians in the Middle class; two boys, a Sioux and a Pawnee, in Section 1, three girls, Sioux and Gros Ventre, and two Sioux boys, in Section 2. These Indian students have generally done very well, keeping up with their class, and are likely to be promoted.

Most of the work of the year in my department has been practical, the constant writing of exercises and compositions. The only text book used has been one highly recommended to us last year by Mrs. Supt. Baker of Norfolk, who has used it in the St. Louis school. Dr. Calhoun also thought it "one of the clearest books that I have ever seen." "How to Write"—Coppeworthwaite Co. It is a progressive succession of exercises in composition, with many interesting pictures, some of them botanical, to furnish subjects for description or narrative, with other extracts, work in the end of the book. The only objection to it is that having been prepared for Northern pupils of the same grade, the subjects are not so well adapted to our students, rather juvenile by our standards; but a suggestion that the best talent in the country is devoted to writing children's stories and that their own work as teachers will demand an ability to interest children, sufficed to satisfy them. As much might have been accomplished perhaps without any book, but less easily, and there is an advantage often in all having the same picture to write from, and much in their learning to use a book, and in having a good one for reference in their own work after leaving here. Besides the text-book, they have had small blank books in which to write additional rules or suggestions given by the teacher, and others for copying some of their exercises in composition.

Most of these exercises have been in descriptive writing. Like all beginners, they find this more difficult than narrative. I have been trying to train them to see what there is and to tell what they see. Early in the year, I read with much interest an account in some educational journal, of an experimental examination to test children's powers of observation, in the Boston public school. It stimulated my efforts in the same direction. I cannot exceed that writer in giving examples of the lack of perceptive power. But I can equal some he gives. His pupils were of course much younger than ours. One young man, in Section 2 of our Middlers, in a descriptive exercise, wrote a carefully written, of an illustration taken from the Deserted Village, described the venerable pastor as "the largest of three little boys who is talking to a beggar"—having judged his age from some peculiarity of dress without taking the slightest notice of expression or proportions. Another called a winding, narrow river, in a picture, a lake, and could not be

brought to perceive the difference. A girl described the horse as having a head, "about nine inches long." Asked to show me the length she meant, she measured about a foot on the table, and was sure that was "outside measurement." Their imaginations are far more active than their perceptive power. The distant village in a landscape may be omitted altogether from a description, but if it is mentioned, it will be pretty sure to be supplied with "well paved streets, gardens full of roses and flowers, and a church with a steeple, or a picture, or at the distance represented. Few seem to know by name or by sight, the common flowers and plants of the garden or field, or many of the trees. Not one of the girls in one section, most of whom had been here over a year, knew one sailing vessel from another by name.

This lack of observation and curiosity as to the common objects surrounding us, is, I know, only too general a failing. I think that a training of the perceptive faculties is of especial importance to these students, and will have a bearing, as I suggested in my report last year, upon their education in various directions, as for instance, their ability to spell, and to read at sight, and even further, in the very foundation of work of character and the power to speak the truth.

Another of my aims has been to accustom them to classify and arrange their thoughts; to think out some outline of thought and follow it closely. This also is a weak point with them. In revising, and in preparing essays of Seniors and even of graduates, the chief work has usually been to follow the meandering mind of the writer backward and forward, through his arguments, and put his arguments into order, and pick out his introduction from the middle, and his climax from almost anywhere. I think the year's work has done this respecting, and extended in higher work though another year, will make a great difference. In this work also, our text book has been helpful.

For the rest, my efforts have been directed as usual to improving the English, in grammar, vocabulary, accuracy and neatness in writing, spelling and expression.

There is noticeable, I think, in these, and in all the points I have mentioned, a general advance in the standard of the school over earlier years. This is true, I should judge, of the present Senior class, and certainly is so of the best half of my Middlers.

Graduating, younger and younger as they will be likely to do, it would be well, I think, if our students could have between the Middle and Senior years, a "wander-year," like those of the Germans, of practical experience of their life-work, coming back better fitted to appreciate the last year of their course, and graduating with more mature views and powers.

## Junior and Senior English.

By M. J. Sherman, teacher.

Three years is too short a time for the accomplishment of all our pupils ought to know in the line of English grammar, composition, and literature. We can only do our best to ground them in the fundamental principles of these branches. This being done, we can hope that they will carry on the work by themselves after they leave us, especially if they teach.

It was decided at the close of the last term, to extend the study of Reed and Kellogg's "English grammar," which we use merely as a guide, into the Middle year, and thus to make our work in English more thorough than ever before.

The most glaring defect in the language of our students is their incorrect use of verbs. They will persist in saying, "I taken," and "he have." Particularly inclined are they to drop final *ed*. As this is, each year, to our Junior, the hardest battle of all to fight, it was thought best that, after learning how to write, punctuate, and capitalize short sentences, they should attack straightway the Goliath of their foes, the verb. In November they began the contest by learning the conjugation of the tenses where are found the forms *is* and *are*, *was* and *were*, *has* and *have*. This was followed by sentence building to illustrate the use of these words. Then, step by step, the entire conjugation of the verb in all its forms was learned. Most of the work was written, the students being required to observe a systematic method of arrangement, accuracy in the use of periods and capitals, and above all, scrupulous neatness.

It was thought that if they had blank books of their own in which to write their exercises, they would do better than if provided with slips of paper as had previously been the case. The experiment resulted in marked improvement and increased interest in the work.

We believe in the "new methods," but we believe in the old as well. If a verb is worth studying at all, it is worth studying thoroughly. Our chief aim is to correct errors in the use of the verb, but in order to do this effectually, the verb must be perfectly mastered. This work is mostly done, it is true, by learning the conjugations; but they themselves are made secure by practice in parsing—no careless "Verb, Indicative, Third, Sing-

ular," but a carefully arranged bit of composition, with heading and margin, correctly spelled, punctuated, and capitalised. Thus the student is taught how to arrange any composition, while learning how to parse, and this has been a part of our work on verbs, a work in which our Juniors have been engaged for five months, a long time, indeed, but time well spent, for now all but the poorest understand at least one thing thoroughly.

And now comes the practical application of what has been learned. The many exercises already written have been for the most part detached sentences. This week begins the work of continuous composition, consisting of letters mostly, describing bits of personal experience. The verbs will be most carefully criticised, and the pupil required to give the reason for the correction.

We hope before the term ends, to teach adjectives and pronouns, but whatever may be left undone this year will be attended to another. We believe that the work already done will be especially valuable to those who may be unable to return to school another year from lack of money, ability, or both.

All departments of our academic work would be greatly aided, if before entering the regular course, our students could be trained, not in technical grammar, but in English. A large part of the work we are obliged to do ought to be done before a student tries to enter the Junior class. Ought any one to enter that class who cannot use *is* and *are* correctly? May there not be a certain proficiency in language as well as in arithmetic required of all candidates for admission?

We should like to send our graduates forth fully prepared to answer every puzzling question in grammar which a wise county Superintendent might ask, but the simple truth is, we can't. When boys and girls come to us speaking fairly correct English, and it may be, having studied grammar under competent teachers, and when they spend five days in school each week instead of four, we may be able to give them a course in some higher text-book. Until then we are obliged to wait what they most need. We are inclined to think that skill in expressing oneself may be of somewhat more importance than analysis and parsing; hence the Middle year is mainly spent in composition writing.

We believe that in these days of time novels and low-class periodicals, a taste for good reading is a point in the education of our young people which ought not to be utterly lost. They lead busy lives during the year, and here, having in many cases but very little time to read, and perhaps not knowing exactly what books to choose. Believing that the class-room and recitation hour can be used in no better way than as a place, and a time in which to cultivate a taste for good reading, we have made it our aim during the past year, to interest our Seniors in a few good books, hoping thereby to awaken a desire for more.

At first, they analyzed "The Witch's Daughter," and made a written abstract of the poem. Then followed a study of "Abraham Davenport." As this poem contained an allusion to the "wilt of the gods," a few familiar talks upon Norse mythology were given. They read the class, where they reproduced in writing. They then were required to appreciate Longfellow's "Skeleton in Armor" and "Baldur the Beautiful." A month was then spent in reading Dr. Butler's "Land of the Vedas." The class was not only interested in the book was completed, wrote essays upon different subjects connected with the history of India.

As they were studying the history of Greece and as Bryant's translation of the Iliad was at hand, we tried the experiment of reading, practically the whole, but in reality omitting what was not necessary to the thread of the story. "Appreciative?" Yes, delighted, ever ready to gather some bit of historical information, and so interested that every one regretted that there was not time for the Odyssey too. Then followed a brief study of a translation of Plato's Apology, read to the class, and reproduced each day either in writing or orally. This was enjoyed greatly by the class, although perhaps not by all, for Socrates' argument was much harder to reproduce than even now with John B. Alden's price list. Every Senior has one of that publisher's catalogues, and is laying many plans for patronizing that benefactor of poor scholars, even now with John B. Alden's price list. Every Senior has one of that publisher's catalogues, and is laying many plans for patronizing that benefactor of poor scholars, even now with John B. Alden's price list.

Our work may seem somewhat desultory. Yet if our students have, as we believe is the case, learned to enjoy reading of this sort, the work has not been in vain. We will indeed be a blessing to that race, one of whose daughters once told the writer that there was a good library in her own city, but "colored people" were not allowed to draw books from it. Our own library has been used more this year than heretofore, and there is a growing tendency on the part of many to select histories and biographies rather than stories.

We believe the majority of those who leave this year have laid a foundation upon which they will build in the days to come.

#### Report on Natural Philosophy.

By J. E. Davis, teacher.

The study of Natural Philosophy is begun by the Middle Class in February, and finished a year from that time. Until 1883, it was a half-study in the Senior year, but when the spelling and writing classes were combined, it was found possible to give a full year to Natural Philosophy, a change which was much needed.

Our conveniences for teaching natural science are much greater than ever before. The recitation room in the Stone Building is furnished with raised seats, blackboards, charts, and a stationary working table with a sink set in one end, and drawers and closets underneath. This was made in our carpenter shop, as was also the heliostat which is used in teaching Light. The arrangements for darkening the room are not yet perfectly satisfactory. The room is also provided with water, gas, steam, and closets for the small stock of apparatus owned by the school. We say small, and while that is true, but few additions are necessary for our purpose, which is to teach the students with the simplest possible apparatus; so far as may be, with such as they can easily procure or make with their own hands. Much that we are using has been made on the place, and some of it by the students in the philosophy classes. There are many valuable pieces of apparatus on the grounds, such as the Corliss engine and the machines at the mill, the gasometer, centrifugal wringer and force-pumps, with all of which the students are made as familiar as possible.

We have been using the same text-book, Cooley's New Physics, for the last three years, but it contains parts unsuited to our students, and though it is valuable in many ways, especially for the accuracy of its statements, in some respect Steele's Fourteen Weeks in Natural Philosophy would be better for our work. There has been a constant increase in the ability of our students to use a text-book intelligently, and the reference books in the library are much more generally read than in previous years. It is now entirely unnecessary to read over the advance lesson with any section of the class, a daily habit two years ago. While there is thus, undoubtedly, a gain in the ability to acquire and use knowledge obtained from books, there is at the same time, a decrease in original thought and inquiry. To stimulate this and encourage the use of the eyes and hands, the students are required to describe and perform original experiments as well as those given in the book, and to draw from memory diagrams illustrative of principles, and of such apparatus as air and water pumps.

The classes review each subject as it is finished, reciting from analyses given by the teacher, but usually written on the board, from memory, by the students. After each review comes a written examination, and at the end of the term, covering the term's work. In these written reviews there has been a marked improvement in spelling, neatness, and expression of thought.

#### Report on History.

By M. F. Dibble, teacher.

Our estimate of the value to our students of historical study is shown by the fact that it is introduced into each year of the course. Illustrative of the work in the Junior and Middle classes, the following report by Miss Small is inserted:—

"Since in one school year our students must get all they can from the study of U. S. History, it becomes a question how to best teach them, very hurriedly, the necessary facts, of which, usually, they are utterly ignorant, and at the same time get them so thoroughly roused and interested that they will be eager to carry on the course of supplementary reading suggested. Recent inquiry upon this point has shown the results to be satisfactory.

Books of the nature of Coffin's, Higginson's and Abbott's, with reference books, and some stories of historical value, are in constant demand at our library by the Junior and Middle classes. Reading lessons frequently supplement work done in the history class. The Juniors are reading 'The Boys of '76' with great interest.

Barnes's History is used as a text book, because of its valuable topical arrangement. Since the first difficulty is with the use of difficult words and obscure expressions, it is found necessary to always take the time for reading the advance lesson.

During this preparation, after a paragraph is read, the class is called upon to suggest a topic for that paragraph. This has been done fairly well. Topics arranged by the teacher, are afterwards copied and kept for use in their own schools. Classes are easily roused to enthusiasm over the story of some hero's brave deed, or exciting battle.

Oftentimes, however, their admiration gets the better of their judgment, and they credit Roger Williams or John Smith with all that is noble, quite overlooking their mistakes.

Class exercises are brightened by matches and other recreations. Maps, on which as pupils proceed they locate discoveries, settlements, and campaigns, have proved invaluable. Tests of the progress of pupils are given in frequent oral and written descriptions of some person or event, as Arnold's treason.

The boys like the political history and do best with that. The girls excel in descriptions.

This year the Middle class had a review in the form of several lectures on the Civil War, by Gen. Armstrong. Abstracts of these lectures were written, and served to show that they carried away a clear mental picture of the campaigns and their significance.

All through this course, students are required to recite topically. We insist upon it. We also aim especially to teach pupils to see clearly the relation of cause and effect, to grasp the salient points, and to make full, accurate, and concise statements.

The results of this work are very noticeable in the recitations of the Seniors, who show less inclination to wander from the topic or to repeat the phraseology of the text-book, and express themselves with greater freedom and clearness.

The plan of the Senior work has been much the same as last year. The class has advanced more rapidly, not because the work has been less thoroughly done, I believe, but because there has been a more judicious selection of material, more careful separation of essentials from non-essentials. Fewer subjects have been studied, but those few have been studied more thoroughly.

Since the element of personality imparts more interest to events, the method of grouping the events of a period about a few prominent characters has been helpful in producing distinct impressions upon the memory. We endeavor to have the daily recitations bright and interesting, thus to make the mental impression vivid; then to call up the picture by frequent reviews, and finally to stamp it indelibly by having each student reproduce it upon paper. Very creditable essays have been written upon Greek Civilization, which show the results of the topical method of study and recitation. A few of the subjects chosen will illustrate the character of this work: "Contrast between Greek and Oriental Civilization," "Spartan Education and its Results," "Influence of the National Festivals," "Growth of Democracy at Athens," "Relation of Greek Religion to Christianity."

The aim throughout the course has been not so much to teach history, as to teach *how to study history*, and to create an appetite for historical reading. Lists of books read, or consulted for certain topics, have been handed in by the class. Considering how little time in our crowded schedule is left for general reading, the results have been in many cases surprising. The girls have referred to in class are in constant demand from the library, and the supply of reference books is inadequate to meet the needs of the class. There is an especial need of standard works on Greece and Rome.

The plea made last year for a half-year's course in English History seems to me of enough importance to be repeated here.

#### Report on Geography.

By J. Koch, teacher.

Interesting as geography necessarily is, my scholars find it the easiest thing to forget, and I am obliged to bring that best assistant to memory, repetition, into constant use, varying the questions in every possible way to be sure they have gotten the idea and not a mere form of words. I find them more interested in such things as are not mentioned in their books; for instance, a lesson on the coral island, with an account of the wonderful way in which it has built up the peninsula of Florida, accompanied by specimens of different kinds of coral, was more accurately reproduced than a trip from St. Louis to New York by water, and I am sure that my class can more easily describe the coffee tree and tell me about its cultivation, than name the Pacific States and Territories, giving the capitals of each.

These scholars are most deficient in English, and every study that fails to bring good English, written as well as spoken, into constant use, accomplishes but half its object. I soon found out their poverty in this respect; it showed plainly in their written examinations; and I began devising ways and means of combining geography with written English in their every day recitations. Dividing the lesson for the day and the review lesson into short topics, they are sent to the black board to write all they know about their topic. Ten minutes before the

close of the recitation, they take their seats and the little compositions are read, while the teacher is called upon for help in correction; thus not only the whole lesson is recited, but they have had an exercise in English and have learned to spell the hard names they are constantly meeting.

Having given this plan two or three days' trial, the question as to its frequent use was put to vote and all were in favor of its continued employment.

Some of the pupils find map drawing very hard, while others have drawn very correct and even elegant maps from the first. All have improved in this particular.

Specimens of ores; pictures of noted places; manufactured objects from different states and countries; all have contributed to making this study interesting and helpful; but if they could go more slowly, taking lessons on manufactures, productions, customs, manners and dress of different nations, and other related topics, there would be a great gain in intelligence and thoroughness.

#### Physical Geography.

In teaching physical geography to a class of grown-up men and women, with their reasoning powers in full activity, it seems necessary to give a reason for every statement of fact made either in their text-book or by their teacher; therefore, as the book taught them that the world was once a gaseous condition, they were given the nebular hypothesis first, as the generally accepted theory of the formation of the world. Many of them looked incredulous and insisted that the examination papers on "God and spake and it was created," were much as if the authority of the Bible had been called in question. But when, profiting by experience, they were taught the successive steps through which this world has passed, by the light of the first chapter of Genesis, they no longer doubted, and accepted the nebular hypothesis with all the rest.

It was curious to notice how the mind, craving knowledge, takes the best that it can get. One of my scholars, a grown man, said that he had been told by the "wise man" of his neighborhood that a volcano was caused by a flash of lightning striking and setting on fire an exposed seam of coal, and it was really difficult for him to disabuse himself of that idea.

The text-book, Warren's, though shorter and easier than Mitchell's, which they had last year, is still much too difficult for many members of the class. They must necessarily meet with many new and difficult words, but I have not yet found a geography as simple as it might and should be for them; for instance, the statement that "the earth was, at a remote period of its existence, in a state of igneous fusion," was simply unintelligible to most of them. For this reason all the more difficult lessons, such as the theory of the cause of earthquakes, the Newtonian theory of the tides, or electricity, have been given orally, with illustrations on the black-board when practicable. To explain the summer shower and hail storm, Prof. Espy's theory, every step of which was supported by a well-known physical law, was given, and they followed with constantly increasing interest and curiosity even through the explanation and application of latent heat.

The Indian, confessedly the hardest lesson they had to learn, is in itself so interesting a subject that they could not fail to be enthusiastic over it, and their interest only ceased with the lessons.

#### Report on Reading.

By Margaret Kenwill, teacher.

The points which require particular attention in this department are:

- 1st. Learning words and their uses.
- 2nd. Articulation and pronunciation.
- 3rd. Comprehension of thought and expression.
- 4th. Cultivation of a taste for reading.

A large per cent. of the students who enter the Junior class are very poor readers. Some of them are almost unable to read at all. It is perhaps not too much to say that, with the exception of the first section, about one sixth of the whole number, they are extremely deficient in this fundamental study. For these the little practice possible during a short recitation in a large class is altogether inadequate, and unless a love for reading is awakened, which will insure much outside practice, they are quite likely to continue to be poor readers, although much time is given to simply learning words and their uses. Various methods are employed to make this exercise pleasant and profitable, and the student feels richer day by day as new words are added to his vocabulary.

A measure which will doubtless produce good results by imparting increased zeal to the learner as additional importance is given to the study, has recently been decided upon, and hereafter no student will receive a diploma unless a certain per cent. in reading is reached.

Articulation and pronunciation require particular attention. From hearing only correct English, in other words, careless, slovenly habits have been acquired which are not easily overcome, and ceaseless correction by the teacher and utmost effort by the pupil are often powerless to effect a lasting reform. A tendency to lapse into the old peculiar dialect when out of the class room is quite universal.

As a constant reminder to the teacher and pupils, charts, containing examples of classes of words and sounds in which the student is habitually defective, has been arranged and will soon be placed in the recitation rooms.

We believe with Delsarte that impression must precede expression. Not until the reader understands and feels can he give expression to the idea of the author. He must be trained to a ready comprehension of the thought, and no word, sentence, paragraph or subject should be passed over until it is understood. This ability to quickly grasp a thought will assist the student in learning other lessons, for often the idea derived from an expression is very vague or distorted; as, for instance, the line: "The subtle brain of Yaroslav" which was explained to mean, "a brain suited (settled) down and become solid."

Experience has proved that to devote the entire course to the study of technical education is a mistake. The school reader still has a place in the class, but is supplemented by other valuable books, that useful knowledge may be acquired along with art of reading and that a love of reading and a familiarity with books may be acquired by the pupils in becoming proficient in this study.

As a means of mental and moral culture, this study of the lives of great men, great deeds and great epochs this familiarity with good writers and good books, though limited, has not been fruitless. It was very encouraging, after having introduced that admirable little book, Dickens' Child's History of England, to one of the classes, to find every word on English history drawn from the library, everybody reading English history, and the record of Good King Alfreð bunched up and down.

Gems of poetry from British and American Authors have been studied with an appreciation and interest which we feel sure will not cease with the class room but will be a source of future pleasure and growth.

#### Report on Spelling.

By Anna E. Kimble, teacher.

There has been a noticeable improvement in the spelling during the past two years. This is due in a great measure to the fact that the teachers of every subject have given especial attention to it, deducting a certain percentage for every misspelled word in their different exercises. Before this was done, many of the pupils would go from a class in spelling to one in history or geography, and misspell the words they had just spelled correctly.

We meet the same difficulty in teaching spelling that we meet in teaching writing—the difficulty of undoing a careless method of their own.

The Indians in the same classes with the colored are usually their superiors in spelling as in writing. This is chiefly due to the fact that they were taught correctly from the first. I think, too, that the Indian is naturally more accurate and has greater power of imitation.

With the exception of a short exercise in oral spelling at the end of the recitation or at the end of a week, our lessons are written.

At one time, a number of words are placed on the blackboard in a plain Spencerian hand and copied in books by the class. These words are arranged in sentences showing their use, and are written by them from dictation the following day.

To a considerable extent, news items, items of history or geography, and other gems of thoughts from good authors, are used as lessons.

Thus, while spelling is the main feature of the exercises, the general knowledge is increased. The books in which the new lessons are taken grow into small encyclopedias containing much that will be useful to them in the future work.

I would say that in all cases, the lesson is read aloud by the class before being written. Words are carefully pronounced and the attention of the pupils called to new ones. This gives an opportunity to correct a careless pronunciation, to which much of their bad spelling is due. It also teaches them the true sounds of the words.

The greatest difficulty we meet is the lack of observation and want of accuracy on the part of the pupils. A student, after all our care in directing his attention to the proper spelling of the new words, will, when writing, look carelessly and see nothing wrong, give "caution." Being familiar with the use of the word, he spells it in his own way "caution" and repeats the next day, "I copied it from the book."

By various methods, we seek to reach the many difficulties of the learner, to avoid rote, to make the recitation bright, and above all to increase his interest in the study and use of words.

I am sorry to say that, with all our efforts, we do not succeed in making good spellers of all, and it often happens that those who have the strongest characters, and on going out do the best work, are not the best spellers. Thus, while results are not always so favorable as we desire, we have great reason to be hopeful. Great improvement has been made, and the work is still going on.

#### Report on Practice Teaching, By E. Hyde, in charge.

I have had this year both Seniors and Middlers in Theory and Art of Teaching. The Seniors I have had all through the term, the Middlers only the last half.

Our present Seniors promise to make good primary teachers; they have done good work in the training school, showing, with each lesson, they give a better understanding of what teaching means. As a rule, the girls do better than the boys; they show more tact in managing the children, and their lessons show more thought and careful preparation. The boys are inclined to lecture and to be satisfied with merely hearing the recitations; the girls do more real teaching.

The removal of the training school from the Butler to the Stone Building, has been a great gain; much time hitherto wasted on the road has been saved, and the Seniors now look upon their work in the practice school as a part of their regular recitations. The Middlers have only methods this year, leaving the practice until they become Seniors. My work with both classes is necessarily oral. The students have their topic books, which are handed in from time to time for inspection, while frequent written examinations make it unsafe for the work to be done better work in the training school another year for having had methods the year before, and as many of them stay out and teach at the end of the middle term, it will be a gain for them to have some knowledge of teaching beforehand. I only wish it were possible to turn out the whole Middle class to teach a year before entering the Senior class. After a year's teaching, they know so much better what they need and are so much more earnest and willing to work hard. Although it is true that the brightest scholars do not always make good teachers, equally true is it that the duller students can not make good teachers. Some are so poor in the primary branches, reading writing and spelling, that they should be encouraged to try some other occupation than that of teaching.

I regret that time and circumstances do not admit of more normal work throughout the whole course. It is somewhat of a surprise to many of our students to find them selves at the beginning of the Senior term brought face to face with the fact that they are soon to become teachers. Many of them assert that they do not intend to teach. I may be sure, however, to their credit, that it is a rare exception when one of our students does not teach for a while at least. A word in the beginning of the course to the effect that it will be for them to preserve their topic books in which are the carefully prepared topics and plans on history, grammar and geography; a hint once in a while calling their attention not only to the facts being taught but also to the teacher's method of dealing with these facts, all this would not take much time and the students could not help being much benefited by it.

I would say in closing that the applications for teachers this term have very far exceeded the supply. Since last June, I have had on hand many more applications than I could fill. One superintendent wrote "send me as many teachers as you can." I believe at the time I had not one to send. The wife of one of the county superintendents told me that many schools in their county had remained closed all through the year because they could not get good teachers, and that rather than engage inefficient ones, they preferred to keep their schools closed.

Report on Butler School,  
By E. Hyde, in charge.

We have enrolled at the Butler this year about 330 pupils—Number of teachers, six. Forty of the pupils, representing different rooms at the Butler, were afterwards sent up to a room in the Stone Building, which has been used this year as a training school for the Seniors. The average daily attendance has been remarkably good, the children making their appearance days when it would have been wiser for them to have remained at home. As it is, they have appeared drenched to the skin, but always smiling, and apparently quite happy. There was one day indeed, when the teachers, after trudging down to the school in a violent snowstorm,

found but two shivering little Butterflies to meet them, but even on that day others turned up later on, expecting to find the school open.

The interest on the part of parents has been very gratifying; they have visited the school, and when in cases of discipline, I have been obliged to send for them, they have never failed to report promptly.

At the beginning of the year, I called a meeting of the parents of the children. A hundred men and women responded, and we spent a very pleasant hour talking over the children and school matters in general.

We were disappointed to find that we were to have but five months of county school instead of seven as we had last year. We have no cause to complain of our pay school however, as we have on roll 230 children. Every third child in the family comes free; there are perhaps a half dozen children who pay for their schooling by working in and around the school building, but, with these few exceptions, our pupils appear Monday morning with their ten cents clasped tightly in their hands, tied up in the corner of their handkerchief or held in their mouths, as the case may be. Our terms are C. O. D. When our children pay for their schooling, they are more inclined to be prompt and regular in attendance. At the end of each month, a report stating number of times late and absent and a report on conduct are sent home. By this means there is no chance given the children to play truant and to spend their ten cents for any other than educational purposes. I regret that the loss of two of the teachers has prevented our carrying out the industrial plans for this year; we hope another year however to have both sewing and carpentering taught as a part of the regular course. The Kitchen Garden class has done well this year, having gone over more ground than the classes usually do.

We shall need another school room at the Butler next term. Our rooms have been so crowded that we could not do justice to the children; forty is a very fair number to have in one room; we have been obliged to double and in some cases to more than double the number. There is still room in the east wing of the building for a good sized school room besides leaving two smaller rooms which will do nicely for the sewing room and the carpenter shop.

(For account of teaching Political Economy, Civil Government, and general information, see report of the Chaplain, Rev. H. B. Frissell, Appendix E.)

#### INDIAN SCHOOL.

Isabel B. Everts, (Till Jan.) In charge.  
J. E. Richards, (Since Jan.) In charge.

During the past year, 18 Indians have returned to the West, and have died at school. In Sept. a party of 20 arrived from Dakota, largely from Lower Brule and Crow Creek Agencies, where the Agent is in full sympathy with Hampton and its work, and with a tendency to render efficient aid. In Oct., 2 Onondagas from New York arrived, and in Nov., one Pawnee from Indian Terr., and 6 Winnebagoes from Nebraska, the latter coming with a Hampton girl who had spent the summer at home. In April, 9 Sioux girls were brought from Crow Creek by the Rev. Mr. Gravit.

There are now 108 Indians here at school, 61 boys and 47 girls, besides 7 boys and 9 girls in Massachusetts.

With the exception of an epidemic of mumps, the health of the school, during the greater part of the year, has been very good.

Winona has continued to exert its healthful influence over the girls, in stimulating them to habits of neatness and industry, as they strive to keep their pleasant home fresh and sweet, and to make its sunny rooms as pretty and tasteful as possible. It was a happy thought of the teacher's last summer to appoint some of the older girls Captains over groups of little ones. They kept order in their corridors, superintended their young charges in the Laundry, taught them in Sunday school, and in various ways tried to be real "Winona," true "Elder sisters." The system has been continued in a measure throughout the year, and at the morning roll call, on returning from breakfast, each Captain answers for her company. The arrival of new girls at once lifts those who have been here longer to a higher plane, and nothing seems more quickly to develop in them a sweet womanliness than to have a feeling of responsibility and care over some shy, awkward new comer, who clings to the shelter of her bright shawl with almost as much tenacity as an Oriental to her veil, or one of the little girls who toll so cautiously, though by no means silently, up and down the long, strange stairways, in those instruments of torture called "shoes." If only a true Christ-like

spirit of loving helpfulness can take root in the hearts of these Indian girls, we may surely hope it will bear fruit when they return to their people.

Winona has been here during the latter part of the year of her most unwearied devotion and love to her Indian children had so taxed her strength as to render necessary a long rest, but the inspiration of her words and example remains with them still, and they look forward with hope of her return.

In the Wigwam, or Indian Cottage, the older boys have been thrown more than ever before upon their own responsibility, and in the main have stood up bravely under this test of their manliness. The quiet and order they have maintained, and the friendly interest they have shown in the new boys have been very encouraging. At night, after study hour is over, one of their own number calls the roll and conducts family prayers. A Debating Society is held Saturday evening, when even the strangers, whose English oratory consists of a brief sentence or two, painfully learned and recited, are encouraged to take part. Once a month the meeting of this Society is at Winona, when the girls share in the exercises by songs and recitations.

The little boys' home has been a favored spot in the Wigwam. These small braves are not unwarranted noisies, any more than their white brothers, but it has been pleasant to note their growing courtesy, thoughtfulness and earnestness.

An encouraging feature of the year has been the large number of Indian boys who have asked to become Work Students and attend the Night Classes, thus voluntarily assuming an amount of steady labor which seems to contribute the Omaha that the red man is too lazy to work.

The homes for the two Omaha families which have sprung up within a stone's throw of Winona, are, as first of school. These furnish an effective object lesson to the students, and teach them how comfortable and attractive a house can be put up at small expense. At the same time they also give such an insight, it is hoped, into true home-keeping, as cannot fail to do good.

Hampton's Massachusetts Annex has proved a valuable help. At the close of last summer, a party of ten boys and nine girls was left behind to remain through the winter, and for the most part the plan has worked very well. A winter in a thrifty New England farm house must be in strange contrast to life on a Western reservation, and such an atmosphere seems mentally, as well as physically, invigorating. The outlook for the future of the pupils has perceptibly brightened. Some former students, after standing fire at the West for one or more years, have returned to take up their work in the class room and the shop with fresh zeal and interest. New Industrial Schools are opening in Kansas, Nebraska, and elsewhere, which call loudly for Indian helpers, graduates of Hampton and Carlisle. Girls as well as boys, are needed, and the former can no longer think sadly—"Nothing for us to do."

Heavy shadows of ignorance and superstition still hang over the Western plains. Even in the East the question of Indian education, with its many puzzles and discouragements, may seem only in the twilight. Yet surely we may feel that the dawn of a Christian civilization is breaking for this people, so long in darkness.

#### REPORTS ON INDIAN CLASSES.

##### English.

By Cora M. Folsom, teacher.

The Indians' first lesson in English, though it may seem a simple thing, is in reality, a subject for much study and tact, especially if the teacher has no Indian words to aid her.

A class of boys and girls from eight to twenty-five years of age, ignorant of every rule of school or society, sits mute before you. The sad homesick faces do not look encouraging. Everything is new and strange to them. The boys' heads feel bare without the long braids and the few clothes are not easy and home-like. They do not understand one word of your language nor any of their perhaps, but they are watching your every motion and mood. You smile and say, "Good morning," they return the smile in a hopeless kind of way, but not the "good morning." By a series of home-made signs, which they are quick to interpret, they are made to understand that they are to repeat your greeting, and you are rewarded with a gruff or timid "Goon monik," and thus another gate is opened to the "White man's road."

They are soon taught to tell the action to the word and "stand up," "sit down," "walk softly," "speak louder" or "speak out." The next step is to teach them to pronounce and write their own names, usually by interpreting the name of the Indian, if that is unpronounceable. Then comes a long list of objects to be taught in or about the school room, cottage or dining room, and then a list not so long of every-day articles of food and the

proper manner of asking for it at table. When easily obtained objects, colors and motions are exhausted, the object teaching cards are brought into use and are a great help and delight to the pupil. He glories in being able to name every object with its appropriate adjective, from the blue sky above to the green grass beneath. He is amused to learn that rakes have teeth, that fingers have nails and that tables have legs, and not at all pleased with the English mode of spelling some very common and otherwise easy words. If he has previously learned to read and write his own language, as many have who come from the Mission Schools, it is a great help to him; and if the teacher is able to give the Indian for a new English word, it is of greater assistance still. From the first he is required to explain pictures, write sentences, tell stories, and in every way encouraged to use the English language as much as possible. Letter writing, too, is a thing that must claim his early attention both for his own sake, and for that of the friends at home who are always anxious to hear from their children and interested to mark their improvement.

From the newly arrived there are all grades of English pupils, to those who have been studying grammar one year, or are in the regular Normal Department.

##### First Division in English.

By Helen W. Ludlow, teacher.

I have found this class very interesting; bright, quick and of excellent spirit. The number being so small—only eight—it has been possible, and a great pleasure, to give special attention to each one. The two girls, being so small a minority, have been able to do rather harder to manage, but on the whole, all have done well and made good progress.

For the first two or three years, nothing like technical grammar is taught to the Indians. After that time, when they have become somewhat fluent in speaking and reading, and understand all that is usually said to them, it is a help to them to be made aware of us who learn a foreign language—to learn something of its construction. The verbs, in this as in other languages, are the most troublesome part and a drill in the verbs has been the principal work of the year in this division. If they enter the regular Junior class of the Normal School, as we hope they will next year, they will go over the ground a second time, which will not be too much, and with a degree of confidence which they will need in beginning to work with their English speaking associates.

To keep these restless, slightly disciplined pupils, some of them ten children, steadily at work upon anything so dry as a drill in verbs generally is, has required some device. By turning it into a sort of game, and not demanding very severe order, I have succeeded beyond my own expectations.

To the active imaginations of my Indian pupils, the English verb will ever hereafter appear, I suppose, under its military aspect. Its "principal parts" we know as "chiefs"; the different moods, as so many Reservations, in which each Chief has a certain number of Bands (tenses) that follow him. These Bands are numbered, and the English doing valiant service in support of the King's English—or the President's American. For many weeks, Company drill progressed with unflagging interest and industry. I shall a company on the black board for inspection, send it marching into the cars of the audience, and finally to set one or more of its members to work, building sentences, was fun enough for a long time. Battalion drill was proudly gone through at last, and after that height was attained in our system of tactics, to save time, each company is represented by its 1st Sergeant—in other words, each tense by its first person—and they are able to put a very neat synopsis of any verb upon the board, calling upon each other in turn for the tenses, and moods, in successive order or skipping about; writing all in sentences, and changing these into various forms, interrogative, passive, etc.

After having done this one day, one of the small boys looked at me rather reproachfully and said, "The Junior boys laugh at us, they say we shall have to learn different way next year. They don't say Chiefs—they say Principal Parts."

Before I could reply, Ashley a member of the class who after his first three years at Hampton had some experience in teaching in the mission school at Crow Creek, came to my rescue.

"That's all the same. In my country they call the Chiefs, 'Principal-men'—all the same."

"And they say mode—not reservation," persisted the aggrieved one.

"My champion was ready for him with—"

"That is to make it easy—to make us understand."

I told them that if they liked it any better they could always now say mode, and Principal Part—but they seldom avail themselves of the permission, and an assurance from Miss Sherman, teacher of the Junior grammar class, who was invited to inspect their

work, that none of her Juniors could do better, has made them more comfortable as to rival criticism.

They are now required to bring me every day a few sentences written in the form of a letter. These are read and criticised in the class with especial reference to the verbs. It is seldom that a mistake in one cannot be detected and corrected by some member of the class when the sentence is put upon the board. They are also encouraged to talk in the class, to tell me what they have seen, etc., and to correct their own mistakes if they make any.

The improvement both in writing and speaking has been sufficient to convince me that the drill has been labor well spent.

#### Arithmetic.

By Caroline K. Knowles, teacher.

The divisions in Arithmetic range all the way from those learning to count, to the classes in fractions.

They all show ambition and evidently enjoy mathematics as long as they are not required to give analysis, but that includes English, and they find it very hard to express themselves in our language. They work rapidly when they once get an insight into a method.

The new Indians, in October, had for their first lesson, one in Arithmetic, and soon learned to count, to recognize and to form figures.

We used for objects colored balls, shells, blocks, marbles and bright papers, and taught the combinations of number as far as 25 by distributing objects to the class and having the pupils give to each other until the required number was obtained.

The first really hard step for them was learning to reduce numbers to higher denominations. Much was taught by signs. They worked well and so better prepared themselves for the harder work of subtraction. Here we used little bundles of straws tied in clusters of ten each. They have made fair progress in multiplication. They also learned to tell time by black-board clocks and were much interested in so doing. It is all slow work, but when scholars are so good, the teacher's labor is greatly lessened.

The next higher divisions are working well in multiplication, division and analysis, and are very interesting classes. They are showing much pride in the neatness as well as correctness of their work.

Many of them are very quick and often vie with each other in the amount of class work they can accomplish.

The second division is composed of young men who are in earnest and are faithfully working their way in analysis, factors and fractions.

The highest class may well be proud of their record for the year. They are studying hard, hoping to enter Arithmetic classes in the Academic department next fall.

#### Geography.

By Elaine Goodale, teacher.

Earth knowledge, or the study of Geography, seems to have a particular fascination for the Indian girls, which of course after drawing maps located each his little country in the centre of the known world, so it is with these children. Unhappily they place "buffalo" among the fierce wild animals of India; decline to believe that an Arab steed is equal to an Indian pony; and after dutifully proclaiming that the Himalayas are the highest mountains in the world, instantly add—"But not so high as the Rocky mountains!" Indeed, while they seize so readily upon stories of strange things and new ways, and delight in what Herbert Spencer might call the "descriptive sociology" of Geography, it is not easy to give them clear ideas of the relative importance of places and people. I suppose that must come later.

The 2nd Division have this year taken up Swinton's "Geographical Reader," with intense satisfaction to themselves and some real benefit, although it has been largely supplemented by oral teaching. Such phrases in it as "These celebrated cities are said to have been more magnificent than any now in existence," while trying their powers of utterance, appear wonderfully to sustain their self-respect, and aid them in raising as one of their number has said, "Too much big words out of natural order."

In studying about the countries of Europe and touching on some of the older civilizations, it has been found almost impossible to give them an idea of great pictures and statues except as "graven images," and splendid architecture can be done scant justice to as "big houses." It is in descriptions of striking natural features, of unknown products, and above all of the appearance, characteristics, dress and customs of various peoples, that we meet with a delightful appreciation.

With the children of the 3rd Division, the lesson has been entirely oral, with vari-

ations in the shape of map studies, black-board exercises, and writing an occasional "composition" on the country last visited. Many of the devices resorted to, to hold the attention and fetter the memory; pictures are shown which they afterwards describe and stories told which they are required to repeat in their own words. "One day this child was addressed as 'our friend the German,' Frenchman, Chinaman, or what not, and expected to tell us as much as he could about the land of his adoption. 'What you be?' I enquired of one promising youth. 'Indian Savage,' was the concise reply. After the others had recited, I turned to the 'Savage' and requested an account of his Western home. 'Ugh,—the characteristic unspendable sound—'I no talk English!'"

#### History.

By Henrietta S. Lathrop, teacher.

The Indian studies throughout the year and have unconsciously been a most interesting study in themselves, as their characteristics were brought out in the discussion of various questions.

Beginning with the discovery of the New World, they have followed the story of the colonies through the Indian Wars and the struggle for independence, fighting every battle with the utmost zest; until it becomes a question how far it is wise to excite their too ready enthusiasm for war. The bright spots in the sad story of their race have been emphasized as far as possible, and all due credit carefully given them for their skill and artifice in warfare, with such success that the reason given for each defeat of the Americans came to be: "Oh, too much drill. They no fight behind trees like Indians."

They are great hero-worshippers, these Sioux boys and girls, and invariably the one is the bravest man, and the man who outwits his enemies. Even their favorite Ethan Allen was indignantly called "coward!" for sparing the life of an Englishman, and all argument on the subject failed to restore him to his former popularity.

Of course, even with these more advanced classes, the main difficulty in the teaching, in fact the only one, has been the imperfect knowledge of English; it being sometimes found that after a lesson has been very smoothly read, some simple word which seemed to need no explanation has proved a stumbling-block. For instance: Dorchester Heights was supposed to be a man, because it "commanded" the city of Boston. But with the aid of numerous pictures and anecdotes, and of the moulding-board, where battle-fields have been moulded and paste-board troops and paper flags manoeuvred, it may be hoped that this has not been a serious drawback in their faithful and persevering study.

#### Indian Sewing School.

By Mrs. Lucy A. Seymour, in charge.

Since the report of 1883 was issued, there have been several changes in our band of Indian girls, which of course after our sewing classes. Five in June returned to their Western homes, fourteen went to Massachusetts to learn house work, and one little Arizona girl, after weeks of suffering, left us for the "bright mansions above." The nineteen who remained were very busy during the summer months sewing for themselves, and preparing outfits for the twelve girls who were expected during the fall. Five who then came were girls who went home in June, but returned to graduate, one bringing with her five little Winnebago girls and a boy of seven. The other five were Sioux girls. Within the past week nineteen more have arrived, which makes our number 47, besides the two busy boys of two, and two and a half years who are prominent members of both the morning and afternoon classes. Their mothers show great improvement in making their clothes, and several "Mother Hubbard" dresses and aprons have been the result of waiting hours of some of the little white visitors were dressed. One of the little girls on being handed a new garment to make, remarked that when she first came, she thought as soon as that work was done we would stop, but it seems as though we kept sewing and there was no end. As the result of all these stitches, we have 648 articles. When we consider that nine of the girls are in the Normal School and only able to help themselves after school hours, and more than half of the remainder are quite young, we think a large amount has been done. More of the garments have been sent to the girls themselves than ever before. Last spring we received through the kindness of two Northern ladies, a good domestic machine, which has been a great help. Several of the girls have learned to use it. Since last October, two girls who returned with the party of six from Massachusetts, have assisted in the sewing

room, preparing themselves for positions in some school among their own people. Only one person outside the school has been employed to help and we have much to encourage us, by the great progress made, to hope that our efforts are not in vain.

#### The Girls' Housework.

By Lucy Mayo, in charge.

When the Indian girls moved into their new quarters last term, the school was undergoing so many changes that it was difficult to obtain everything necessary to keep the new building in good running order. In fact, we were so overwhelmed by the improvements then made that we scarcely knew what we really did want, or how to use what we already had. Besides, a large portion of the girls were not only strangers to us, but to the English language, the new building, and the efforts needed to be put forth for the good of the whole. In the face of all this we began our first year's work in Winona Lodge.

The present year began under much more favorable circumstances than the last. One of the greatest advantages connected with our Indian work is that there is no time when all the girls are perfectly new. When one returns to their homes and a new set comes, there are always some who have had a little experience in the management of affairs, and can lend a helping hand in working the new girls into the regular routine of business.

On the arrival of new girls, the old ones are required to give up their former room-mate and take new ones. They show their charges about the room work, and almost before they are aware of it, their work has had the effect to force the new comers to accept the rules observed by them.

At six o'clock every morning (except Sunday), the Indian girls fall in line in the hall on the first floor and, after answering their names, march in order to breakfast. Immediately after breakfast, they meet in the study room for a second roll call and to hear directions for their morning work. From here they go at once to their rooms, get their brooms, dust brushes and dust-pans, and report in the hall and different corridors to put them in order. After this is done, they return to their rooms and get them ready for inspection. At eight o'clock, the girls who have the care of the teachers' rooms, begin their work. By this time the school bells ring and they have to hurry over to the opening exercises of the school. So you see there is not much time for extra work.

The unusual prevalence of mumps this term has made the house work, in many respects, much harder than ever. There have been as many as seven girls in the hospital at one time. Of course their part of the work had to be done, so the well girls have been called upon continually to do what has been almost too much for them.

I think however, in spite of disadvantages, the work this term has been more effective than ever before.

#### Girls' Cooking Class.

By M. L. Dewey, in charge.

The cooking classes have been held either at Virginia Hall or Winona, whichever was more convenient at the time. There is a prospect of a room being arranged expressly for the lessons, which will be a decided improvement. The Indian girls have had an advantage over the colored girls in these lessons. They began before the others, and afterwards were excused from other duties to come in the morning, and being bright and fresh accomplished more real work. The lessons have included only a few of the simplest dishes, but each one has a thorough knowledge of these. All enter heartily even to the youngest, into the details and are delighted with the results.

#### Laundry.

By Georgie Washington, in charge.

The work in this department is very much improved to what it was last term. We have begun this year with the thought of getting the work done well, and in less time, and have no reason so far to be discouraged, yet there is plenty of room for improvement. These girls, besides spending most of their time at school, have to keep Winona in order, so have to be pushed very hard to get their washing and ironing done. One can't very well hurry a large Indian girl to advantage, because she will get stubborn and won't work well. It is generally according to a girl's nature when her turn comes to wash, whether or not she gets through early; if she feels like working, it will soon be done in order; if the opposite, she will take as long again as she can. We have quite a number of little girls this term and their work in the laundry is very much better than any children's I ever saw. Sometimes after getting these little girls suited with their washing, I leave them to finish alone; they like the idea very much of being trusted to work by themselves, and will hurry to get the laundry in order before my return.

When cleaning day comes, which is the latter part of the week, I often hear them say: "You always tell us to do everything; you never tell *big* girls to do anything." This is true in one way, because we haven't as many "big girls," as little ones; another reason is, the little girls work so much better and more willingly than the "big girls," and with less complaint of being tired. Three years at Hampton is short time to give these children the training they need, for I think the best missionary that will ever return to the West will be a girl who has spent six or seven terms at Hampton.

When a new set of girls comes they are put in the laundry to wash with some older girls that can speak the same language; in this way they soon learn to imitate, which they can do almost as well as the Chinese. The large girls that are well and strong, are called upon every week to wash for sick girls. This is not an easy thing to do, but they have responded very well. Every Friday after school, the girls report in the little chapel at Winona, with the week's washings. Here the clothes are inspected by our lady principal; if they are washed, ironed and mended well, the girls are marked five. It is very interesting to see each one coming in with a bundle of white clothes; still there are so to watch how anxious every little girl is to have five; what a disappointed expression if she fails. Looking back at the homes from which some of these girls have come, the length of time they have been with us, the improvements they have made, one can't help feeling encouraged to go on assisting them, hoping to reap in due season if we faint not.

#### Hospital and Diet Kitchen. "Memorial Rooms," at Winona.

By Ada J. Porter, Nurse.

The large sunny hospital room, with pretty engravings on the walls, three beds made up with snow white counterpane, nice soft feather pillows and other furniture in the room to correspond, makes a very pleasant picture, and is a convenient place for the girls when sick. They are very comfortable, seldom fretful, and always ready to do what is best for them.

The girls that are well, help about the care of the sick. It is surprising to see how many of them are ready to stay with them and help take care of them. When one is asked in the presence of a number of girls to sit with the sick, several will say: "Let me," "I want to," "you never let me help take care of the sick girls." They are ready to do for one another.

The health of the Indian girls has been excellent this year. Not a very serious illness has occurred excepting 6 cases of severe sore throat, 5 cases of measles, 19 cases of mumps, 1 of malarial fever. They all recovered and look back with pleasure on their hospital experience. At present two girls are ill with pneumonia and four have mumps.

[For further notice of the health of the Indians see Dr. Waldron's report.]

Closely connected with the Hospital and its work is the Diet Kitchen with its four communicating rooms. One large sunny room has three windows; these are filled with plants. A long table, which will seat twenty-two persons, stands in the centre of the room. When the table is set with pretty brown figured dishes, bright spoons and knives and forks, it looks very inviting.

This room is called the dining room. It is only used for the students who are sick but who are still able to go out of their rooms to their meals. They look very cheerful and happy while partaking of the food that is prepared especially for them.

A little room opening out of the dining room is used for preparing and sending out meals to those who are not able to leave their rooms.

Two rooms out of this are used for kitchen and store rooms. The four neatly kept rooms make a very pleasant and convenient place for preparing food for the sick. The average number of meals served a day has been 35.

#### Division A of the Wigwam.

By Mrs. Irene Slausbury, in charge.

Division A is the home of 11 little boys. The wisdom of the plan of placing the small boys under special care is still clearly demonstrated, by the improvement they continue to make in conduct and appearance. The excellent discipline of my predecessor and the good habits they formed under her training, has made them easy to control. Moral suasion is the only force I have found necessary to use, for they have a strong sense of justice, and when convinced they have done wrong, especially if it is pointed out to them by some Bible truth, they try not to commit the same fault again. Appealing to their honor has been successful. I have not known of one instance where a boy has been in his room for punishment, has left it, though the door was open, until he received permission.

In character and disposition they compare favorably with their civilized brothers; but unlike them they take very little pleasure in being read to, unless the story is founded on fact. "Is it true," is always the first question asked, and if the reply is in the negative, they seldom want to hear it. They enjoy most of all the "Story of the Bible," which their kind Sunday School teacher reads to them on Sunday evening,—especially that part which refers to the Old Testament.

With the exception of two cases of mumps, and one of threatened lung trouble (which soon disappeared under the skillful treatment it received), there has been no serious case of sickness among them.

There were three new arrivals in the Fall: two from Dakota (Sioux) and one Winnebago. The first mentioned have had much trouble with their eyes, and the fortitude with which they have borne severe treatment, would do credit to those of older years.

The little Winnebago (eight years old) knew not a word of English on his arrival, except "Yes sir," which he replied to every question asked him,—which afforded his small companions great amusement, when they asked him how old he was (which they did repeatedly). Though he has not been here six months, he understands what is said to him, and can say whole sentences in reply. The little band will be broken for the first time this summer when two return home, one to Arizona, and the other to Dakota. As they are both bright boys, and give much promise of future usefulness, let us hope they will come back to receive further instruction in the right way, so that they may be a light unto their people, and not only "point to a better world, but lead the way."

To the regret of all, Mr. Audley Talbot, who had charge of the other Divisions of the Wigwam, was compelled, on account of ill health, to relinquish his work early in the winter.

For further particulars concerning the Indian boys, see Reports of Capt. Brown, and Dr. Waldron.

#### Indian Boys on the Farm.

By Geo. J. Davis, in charge.

It is surprising how well the Indian boys have gotten along on the farm this year. The anxiety as to what kind of farm work they should do, seems to have worn away, or has disappeared in some way or other. They have got to a point where they are willing, and see that it is right for them to do whatever is given them to do. When they are given a hoe, shovel or spade, it is taken, and the work, when it is done, shows that they have tried to do it as they were told. Not one of them has said this year, when they were told to take hold of a plow, "I don't want to plow." They have taken the plow and have done very well. No fault can be found about their turning out for work.

There has not been any year in which the boys have worked with so little dissatisfaction as this; both among themselves and those who have the care of them. Strict discipline has not been resorted to at all. I have been asked often by outsiders how the Indians worked, and if they were not hard to manage. I have said in both cases that they worked very well as Indians, and were not very hard to manage. Some of them work as well as any boys. I am glad to say that this year the boys have shown a better spirit about work than I have ever known, and have been obedient. Of the ten boys on the farm, only four are large enough to plough. They have gotten quite a drill in that. The little boys in winter stay in the barn and help to take care of the cattle. They have done very well at that.

#### Religious Work among the Indians from Episcopal Agencies.

By Rev. J. J. Gravel, Rector St. John's Episcopal Church, Hampton, in charge.

I am glad to make a hopeful report of the religious work with the Indians. They attend services as usual in St. John's Church Hampton, where, it may be, their forefathers worshipped. I have held regular services for them at the School, Sunday-afternoons, and Thursday evenings. I gratefully acknowledge the valuable assistance of the teachers at the Sunday afternoon exercises. It is a great comfort to me, and an incalculable help to the Indians.

The spirit has been good throughout the year. Three were confirmed by Bishop Randolph in February last, and three have joined the School Chapel.

We have abundant cause for thanksgiving to God for his blessings, and can only say "Not unto us, O Lord, not unto us, but unto thy name give glory."

[See also Report of Rev. Mr. Friswell, Chaplain of the School.]

#### Report on Returned Indians.

By Rev. J. J. Gravel.

Since my visit to Dakota, last March, I feel greatly encouraged about the Indian work. Many of them are more advanced in civilization than I had supposed. They are

ploughing the land and sowing seed; they are raising cattle and poultry. I found more houses and fewer igras than I expected to see. Some of the children at Hampton have good homes to return to. We held three services on Sunday with large congregations.

The Hampton children, as a rule, are doing very well. Lezede Rencontre has married, an educated Indian woman and both are employed at the Agency School. All persons speak well of them. Samuel Fourstar, who was here for a short time only, has made a good record. Samuel Brown is doing well at his trade (shoemaker), and is teaching it to others at St. Paul's School, Yankton Agency. David Simmons has worked steadily and faithfully at the issue house, as clerk. He is commended by all. Maggie Goulet is employed by a white family at the Agency and is doing well. She wanted to return to Hampton.

Frank Yellowbird has married a bright, nice-looking Indian woman, and brought her to see me. Frank conducted religious services at the Agency during the absence of the Missionary.

George Deloria, who was here about two years, and who was sent home on account of ill health, had returned to Indian ways. He came to see me in company with other Hampton boys, but before coming removed his blanket, put on citizen's clothes, and tucked his long hair under his coat collar. After an earnest talk with him in the presence of the Missionary and one of the Hampton boys, he promised to have his hair cut, and to start afresh on the "White man's road."

Several have lapsed, but I am sure it is not permanent. No good work is lost; we have a hold upon them and can influence them for better things by following them up.

#### NIGHT SCHOOL.

By Anna G. Baldwin, in charge.

The night school seems to have been originally an experiment, growing out of the necessity of providing something to occupy the work students during the evening. It is no longer an experiment, but an established feature of the school, which meets the wants of a large number of students who are unable to enter the Junior or first year of the regular school, as well as those who must spend from two to three years under his coat collar. After an earnest talk with him in the presence of the Missionary and one of the Hampton boys, he promised to have his hair cut, and to start afresh on the "White man's road."

Several have lapsed, but I am sure it is not permanent. No good work is lost; we have a hold upon them and can influence them for better things by following them up.

A large proportion of these students are full-grown men and women, dull, many of them, from beginning study so late in life, and yet, on this very account, earnest and persevering. The school opened with 162, exclusive of those whose examinations were below the standard fixed for entering the lowest class. This standard requires a candidate to be able to read and write and work examples in simple addition. The number of students has been increased during the term to 212, with an average attendance of 170—60 girls and 150 boys, in addition to the regular day Farm. These have been divided into eight classes, three preparing for the middle class of the Day school, and five for the Junior class. Perhaps 100 of these scholars were in the night school last year and not more than six in the day school. With these exceptions, the school is entirely new material. In connection with the advanced classes, numbering fifty, it should be mentioned that these scholars, in the two hours that they have for school in the evening, with no time for outside study, accomplish the work of the entire Junior year the same as is done by the Junior class. The lowest classes simply prepare for this year.

The term continues through the months of July and August, making eleven months of study, but during the summer, the period is shortened to an hour and a half each evening. The classes were graded as accurately as possible from the entrance examinations, but a number of changes have been necessary, owing to the fact that some have developed wonderfully, while others had evidently "cramped" for the occasion and consequently did not keep pace with the class. The latter, however, formed a much smaller proportion than the former.

The sixteen Indians belonging to the Night school, as a rule, are doing well. They are fit, however, is all on their side, as their knowledge of English is so limited that they are necessarily slow. Yet the other students have never manifested any impatience, and perhaps the lesson of forbearance thus learned compensates for the temporary discomfort.

The school has been characterized through out by a spirit of earnestness and anxiety to

learn. Indeed, in their desire for an education, they are blind to the necessity of the thoroughness in the fundamental branches, which, with these pupils, is of vital importance.

The favorite studies are arithmetic and grammar, and in neither of these do the pupils need pushing; but it is hard to make them realize that the details of letter-writing, correct spelling and punctuation are as important as the conjugation of a verb. History is also a favorite study with the advanced classes.

Much attention has been given in all the classes to writing and spelling. Each class has had one lesson weekly which was strictly a writing lesson, special attention being given to correct movement and position. This is all the time that could really be spared for drill in this work; the other evenings, the writing has been left to the teacher of the class, and has generally been conducted in connection with spelling. The three advanced classes have written from dictation and were marked for neatness, arrangement of work, punctuation and capitals, as well as for spelling. In the other classes, the exercise has been to copy from the blackboard, or in others, a reproduction of a geography lesson, or a story which had previously been read to them.

The opening exercises of the school are necessarily short, as the assembly room is used for that purpose and must be vacated before study hour. One evening in the week is given to a drill in singing, two evenings to current news, and one to a ten minutes' talk on some subject of interest. A course of talks on "Manners and Morals," has also been given at this time, and a great demand for copies of "Don't" has resulted.

The individual reports given below, from the teachers of the two highest and two lowest classes will give some idea of the work in detail. The question of what to do with pupils who have already finished the course of study practicable in the night school and who must spend two or three years more at their trade, is a very serious one. The suggestion proposed by the teacher who has had charge of such a class this year, is a possible solution of the problem.

A tendency to sleepiness is the exception, and vocal exercises, or free hand gymnastics at the discretion of the teacher, are necessary in some cases fewer still. In all probability if the closing hour were ten, instead of nine, the scholars would work with the same will.

In order to give a complete outline of the life of these students here, it is necessary to make a few suggestive statements with regard to their work which is not by any means an unimportant phase of their education. The boys are employed in the carpenter shop, the lumber yard, printing office, shoe shop &c., while the girls are principally employed in doing the housework, and mending and sewing in the tailoring department. They are all taken on three months' probation. If during this time they have proved themselves capable and their conduct has been satisfactory, they are retained. The detailed reports of work are given by the heads of the various departments, but the following quotations will serve as examples in this connection. Mr. Westwood, in charge of the lumber yard, says: "The nineteen I have this year compare very favorably with those of previous years. One boy who came last October to test to measure and inspect lumber, and I feel sure he can do it as well as I can myself, although of course not so rapidly."

Mr. Brinson, in charge of the mill, reports: "The colored students who have served two years in this department are a great credit to the institution. Of four who have served two years, one as a turner compares favorably with any outside Journeyman and the other three as joiners do equally well, being competent to be trusted with any work of the kind." Mr. Goff has one boy who has served two years in the engineering department, and who promises to make a first class engineer, while Mr. Betts says of those in the printing office: "Considering their previous disadvantages, they compare favorably with white apprentices." Mr. Howe has thirteen at work on the farm and six in the blacksmith and wheelwright shops; all of whom are doing creditable work.

Most of the girls room in Virginia Hall, while the boys are distributed in the various domestic departments. The boys as well as the girls take entire charge of their rooms, which are always subject to inspection by teachers appointed for the purpose. The inspectors report but few cases in which there is any tendency to disorder or untidiness.

In closing, I would add that a large part of the interest in the school is due to the teachers, of whom many are women, and whose efforts to make the most of the time given for study, have resulted so advantageously.

#### First advanced Class

By Harriet B. Waterman, teacher.

My class has been the most advanced of the three fitting for the middle class.

They have been eager learners and intelligent students; at the same time the most unsatisfactory and altogether the most perplexing part of my work has been due to the number in the class who in scholarship are in advance of their grade in school.

While it is not wise to fit pupils in the night school for more than the middle class, those who have already passed the entrance examinations and are obliged to stay out to earn money, those who are learning trades and know that the work of this year must be repeated next, naturally fall into the habit of slightly doing that which in any case must be done again.

For such I think special provision might be made, that having once completed the course they could interest and improve themselves by supplementary reading and composition work and so correct many deficiencies.

For the rest, a colored man who is trying to learn as much as he can is certainly as easily instructed as the average college boy who is exactly reversing the process. These higher grade scholars suffer from irregular and defective training in the fundamental branches. They are liable to understand square root and be doubtful in multiplication.

They have no inherited or imbibed knowledge; they have consciously learned all that they know. Small wonder then, that their tendency for those who have begun the ordinary school course, and the more need that they should be taught until they are impressed rather by the vastness of the to-be-learned than by their own acquired knowledge. They certainly have a well developed appetite for the fruit of knowledge, immense respect for wisdom, and a full appreciation of the advantage that it brings.

#### Second advanced Class

By Caroline Alfred, teacher.

The educational work among the Night students is to me far more interesting than labor for those who have begun the ordinary school course, and in every respect my experience of the past year has been encouraging.

Excellent discipline has been maintained, not so much from outside pressure as from the feeling among the students, that for them to become true men and women, the first requisite is self government.

Reading has been confined to history and geography lessons, and the latter have been especially interesting from the constant way in which the thought of the pupils turns to some other kind than this, as a future home. This feeling leads them to wish to know all about the products, the government and the labor system of all warm countries.

Of course the race question is always one of profound interest and sometimes an extremely puzzling matter. Russian serfdom has excited considerable attention, and great astonishment was expressed at the idea of the degradation of their own race by the nobles.

Africa, and its present condition, elicits the greatest interest, and El Mahdi's course is followed with eagerness. My weekly distribution of papers has awakened much thought, and the topics studied in class, and the articles read, are frequent subjects of discussion at their work.

Writing from dictation seems to me of great value, not for its immediate result (which is generally very poor), but for the training it gives their ears, teaching them to listen, and understand clearly what is said to them. The Northern or Yankee vocabulary is so extensive, their own so small, that greater care in teaching the meaning of words is required than in the ordinary school-room.

The reasoning from cause to effect in matters of history, is very often amusing, and I have been agreeably surprised at the curiosity evinced in regard to the causes of the Revolutionary war. The behavior of the Boston boys of that early period, has filled them with a delight, which augurs a like spirit in a similar situation. The growth of the American people in self government and the manner in which they were fitted for freedom have been frequent subjects of discussion.

Most agreeable to me has been the feeling of confidence which my girls and boys have in me, and this spirit will, I trust, be always evinced to those who may in the future have them in charge. I cannot but look forward to their future, and hope that their lives may be made as sunny as my work has been by this constant cheerfulness.

#### Fourth Preparatory Class.

By O. M. McAdoo, teacher.

Another year's experience as teacher in the night school only assures me of the real earnestness of the Negroes to obtain an education at almost any sacrifice on their part. It is very evident the night class is suited to the needs of a great mass of young men and women who would be deprived of the chance of getting an education if such a chance were not given by this institution.

The school is much larger now than in any previous year, and the material is equal in every respect to that of former classes. In my opinion, the earnestness shown by the majority of the scholars, who struggle over their lessons from seven until nine in the evening after a hard day's work, is seldom equaled by any other class of students. In their present position, any attention given their studies outside of the classroom is impossible. Therefore, if they would improve at all, they must give their entire attention during this period. It is strange, and yet very pleasant, to say that I have not seen a night scholar asleep in my class during the term. I find it requires a great deal of energy on my part to prevent my class from becoming stupid. Gymnastics can be used to great advantage several times during the evening to arouse them.

My grade is somewhat lower this year than it was last. As soon as a scholar shows himself capable, he is promoted. I have sent ten into higher rooms during the term, who are doing well. We began with the rudiments of arithmetic, reading, geography, language and spelling, have almost completed the fundamental rules in arithmetic, and do equally well in the other studies. I find their greatest difficulty is in improper pronunciation and use of language. They invariably say, walkin', comin', el, kin', &c., paying but little attention to their g's and d's. These young people, having only heard the English language improperly, are not wholly responsible. This difficulty can, by constant drill, be overcome. I am sure the other teachers who are engaged in this work will echo my statement when I say we have great reason to be proud of this year's work in every respect.

#### Fifth Preparatory Class.

By Mary Argill, teacher.

This division is the lowest in the Night School. Of these students, three never attended school before coming here, and the remainder have attended school for periods varying from six months to two weeks. For this reason the work has been very elementary, and the same programme carried out each night. The programme was this: 707, 15, 5, 2, 7, 15 to 8, reading; 8 to 8.30 arithmetic, 8.30 to 9 spelling and writing. From this may be seen that more time has been given to reading than any other subject, but for these students who have so short a time to prepare for the Junior class, it is a most important subject. Students upon entering the Junior class must study history and geography, two subjects from which they can gain very little without a knowledge of reading. As most of the students, upon entering this class, were able to read a little, it was not necessary to begin with the sentence-method, but I used a modification of the word-method adapted to their ability. After a review of the preceding lesson, followed by a talk upon the subject of the advance lesson, the difficult words were drilled upon for pronunciation, meaning and use in sentences. This was followed by a vocal drill in which, as far as possible, words and sounds were given which would help the students to overcome their faults, the chief of which, I think, is a failure in distinct articulation. Phonic spelling has helped this fault very much. After this, the students read, each one reading a little, in order to allow all the members of the class to take part.

The Junior class seems to be the one thing to be gained by many of these students, and the question: "Do you think I will make any kind of a Junior?" has often to be answered.

The work in this class has been characterized by a spirit of earnest endeavor, and it has been a pleasure to teach those who are so anxious to learn.

#### Report of Night Class at Hemeway Farm.

By Mrs. Chas. H. Vanison, in charge.

The night class on Hemeway Farm this year consists of ten boys and two girls; two of the boys are small and will not be able to enter day school next October, but will have to stay a year or two longer. The others, with the exception of one Indian, are studying for the Junior class.

The pupils have but little time to study outside of recitation hours, but all the spare time they have is well spent on their lessons; they seem anxious, and study hard as well as work hard. When the weather is favorable, the boys go to their work a little after six A. M.; but when it is too disagreeable for out-door work, they have the spare time for study.

The class is younger than any I have had before, but not as bright as some of the former classes, although on the whole I think they do well.

I have two. My first class studies arithmetic, reading, spelling and geography, and sometimes I give them a lesson in grammar. I had, more time for grammar the first of the term than I have now, because I had but one class.

Although the work is hard here, the students seem cheerful, and go about their duties with a will. They enjoy the books that have been given to Hemeway Farm Library for them, and when Sunday comes, they show that they are glad by singing and reading.

#### REPORT ON GRADUATES.

By A. E. Cleveland, Correspondent.

Since October 1st, circulars or letters have been sent to not less than five hundred Hampton graduates and ex-students. I have heard directly from one hundred and sixty-five of this number—a larger proportion of respondents than last year, but still falling very far short of what might reasonably be expected. Great care was taken to ascertain the right addresses; a difficult matter, in view of the nomadic life that some of our teachers lead. I therefore think that in most cases my letters must have been received.

Many of my correspondents have shown sufficient interest to write me several times during the year; and I cannot but hope that some good has been accomplished, some lonely worker cheered, perhaps, by means of this interchange of letters.

They have been encouraged to state the wants of their schools; and, through the kind help of friends, I have been able, in some cases, to supply these wants. The need of maps and reading charts was so much felt, that an effort has been made in that direction this last winter, and I am happy to say, that through the very liberal discount offered by certain publishers, the assistance of friends, and, last but not least, the efforts of scholars and teachers themselves, the teachers have received either a map or a reading chart. It was thought better to require, where it was possible, that some part of the amount should be raised by the scholars themselves; and, in one or two instances, the full sum required for the purchase has been sent to me.

One teacher writes, "If Barnum had been coming, there could not have been more interest and curiosity than was shown the day the map was brought into school."

Of the one hundred and sixty-five, of whom I can give direct information, all but thirty-nine have been teaching.

Three of my correspondents are in the ministry: one settled over a struggling little church in Baltimore, one a missionary in West Virginia, and another a member of the Faculty of St. Augustine's school, Raleigh. This young man, who is in deacon's orders, is very anxious to pursue his studies at the General Theological Seminary, N. Y.

One has just graduated from the Dental Department of the University of Pennsylvania. Two are preparing for mission work in Africa.

The last class, numbering thirty graduates, of late three, died members by death. So far as I have been able to learn, all the remaining members of this class have been teaching, with the exception of two young men, one of whom has charge of the farm, and another of a carpenter's shop at the Tuskegee Normal School; the other one is at the head of the training shop in connection with Miss Austin's work in Knoxville. The one Indian, who belonged to this class of '83, is now among his own people, teaching, and laboring intelligently for their best interests, as will be seen by the interesting letters from him, published in this and the last number of the *Southern Workman*.

The letters which I have had, have been, of the whole, of an encouraging kind. The same hopeful, brave spirit which has characterized our students in the past, is still evinced by them.

The reports from Virginia, especially, show a general improvement in their school houses. Many have been teaching this year in new buildings, or in the old ones improved.

I think but one writes of a log hut with no windows—generous cracks letting in the light of day.

The school terms have been longer in many districts; more scholars have been under instruction; more teachers employed in certain counties.

In Petersburg, for instance, over one thousand colored children are going to school; and twenty-one colored teachers are employed; three of whom are Hampton graduates.

In Danville, there were four hundred scholars and eight teachers last year; this year, five hundred scholars and ten teachers, of whom five are graduates. So writes one who is spending his third year in Danville, and sees "many signs of improvement."

Another change which works for the good of our graduates, is the substitution of colored white teachers in many of the schools. In Staunton, all the colored schools have

been taught this year by colored teachers. There was some opposition at first on the part of both parents and scholars—"didn't want Negroes to teach them"—but that soon passed away.

Besides their daily work in the school-room, many find or make time for a night class, temperance work, a debating society, or Christian association; and there are put few who do not, on Sundays, gather around them, both old and young, to listen to the *Word of Life*.

Here is a specimen of the busy life some of these young people lead: "I am in school six and a half hours; have a daily walk of from four and a half to five miles, and teach from three to three and a half hours at night, besides Sunday school two Sundays in the month."

From New Hampshire to Texas is a long step, but one of our young men, who graduated at Dartmouth College last summer, is now teaching in Galveston. He says he received the highest grade certificate that could be given; a fact upon which the *Galveston News* and other papers commented. He has had "very courteous treatment from all the prominent men in town."

Another young man, who, after leaving Hampton, spent some time at Oberlin, has taken hold of school work in North Carolina with great energy and spirit. He writes that he is anxious to make his school "a centre of educational advantages for this section. Thirty counties ought to be stocked with teachers."

Before closing, I must report the material progress that some are making.

An under-graduate, who left school in '80, writes that he has taught ever since, with the exception of two summer months each year; that he has "bought and paid for a large tract of land, containing about one hundred acres," has "also bought two young and good horses and a wagon and buggy; all paid for."

Another, who found that he could not earn a living and support a family by teaching, has succeeded so well in farming, that he has bought a lot and built a small house, purchased two cows, and sent his wife to Hampton to school. A graduate of the class of '82, who has gone into business in Louisiana, is "getting on very well in the money line." He and his brother have put up a large store, costing about \$4,500, and intend to employ colored clerks entirely.

Another of that class, whose husband, an under-graduate, is an industrious young painter, writes of a beautiful little home, into which they had just moved—a home, I am glad to say, where the family altar has been set up. One young man who thinks it was "not intended that all Hampton's sons and daughters should do nothing else but teach," but who has, nevertheless, taught four years since graduating, has bought three houses and lots since leaving Hampton, and last year raised 845 lbs. of pork and 3,200 quarts of strawberries. These few statements will give you a little idea as to what some of Hampton's sons and daughters have been doing since leaving the old home.

On the side of the three already mentioned, I have during the year, I have to record the death of four other graduates, and of seven under-graduates. Ten of the young people have been married since last May. My report is already too long, I know, but, in closing, may I suggest just two or three ways in which friends can help these teachers? Please, then, dear friends, send off, once in a while, a barrel of children's clothing for the poor little ones who cannot go bare-footed and half-naked in mid-winter to school, often two or three miles away; and please put into the barrel some needles and thread, and a few thimbles, for some of our young women teachers are instructing their children in sewing.

They will also be very glad of a few pictures to brighten up their school-rooms, and I do believe in Christmas trees as "a means of grace" to these people; so if you can help our teachers in that respect, you will be doing a good work, and will receive our hearty thanks.

#### Distribution of Reading Matter.

By Ruth E. Tilton, in charge.

The appeal to our Northern friends for reading matter to distribute among the graduates who are teaching in the South, has been generally responded to this year.

Many barrels and boxes of old but valuable papers and magazines have found their way to the "Bureau of Correspondence for Reading Matter," and from there have been sent in any direction the record book may indicate, bringing back many letters of gratitude from teachers in some thinly settled "country" where papers are a rare treat. The requirements of some of these teachers are for the simplest child's papers—as the work of many of them is among those who are just beginning to learn. We have been able to meet this need better this year than last, and are sure that many nursery closets and garret corners have been looked

into, and their contents examined for the sake of the little bright-eyed, dark-skinned brothers and sisters down in this part of our great country. In looking over a large package of children's papers, we were interested and amused to find some more than forty years old. Perhaps the now grown children who enjoyed them once, will be glad to know that they have been sent out on their second mission, after many years of rest, and will bring pleasure again to some little child's heart—truly, "They also serve who only stand and wait."

The rolls of papers, which are sent out as often as possible, are made up with as great a variety as the shelves of the department will allow. The contents of one such bundle will give the best idea of what matter is used:

Some copies of the *Sunday School Times* and quarterlies; two or three religious papers, and some tracts; any fresh daily or weekly; an educational paper, if possible, any additional monthly magazine, old or new, &c. These are for the teachers's own use. For the school-room are added—Sunday school picture papers of all kinds—as nearly all the graduates have a Sunday school connected with their work—such as *Youth's Companion*, children's magazines, little papers for presents, fancy cards, texts, and any picture papers, such as *The Graphic*, *Harper's Weekly*, and *Bazaar*, which are so useful for covering the bare walls of a school room, and serving as object-lessons for the little ones.

We often have to be careful in the distributing and arranging of these, and, perhaps, not send so many at once as we would like, as our supply is not boundless. And each year adds to the demand—last year's graduating class adding thirty new names to the record, and this year's more will be extracted from some of the letters of thanks will show whether the papers are appreciated: "At times when I needed reading matter most, the papers would come, just in time. I have never had other good blessing which comes from God."

"Please send me something to read; also, if you have anything for children, please send any reading matter, for I try to spread it all my, and encourage them to read it by marking different pieces." "I would be very glad if you could send me anything to use in Sunday school."

"When I finished reading the papers, I give them to the children; some of them read them with interest."

"I shall give the papers to the children. I wish you could see how pleased they are to get a paper, and how their eyes sparkle; it would do you good."

One teacher writes that he has used the papers as rewards for good conduct; another has a little table where she spreads them out, and allows the children to look at them during recess. We have also sent off a number of express boxes containing Bibles, singing books and school books, which have been sent to distribute. The Greek and Latin books which have come in one barrel are still uncalled for—their mission does not appear to be extensive in the South yet.

We have had off three or four postal cards to all Northern friends who have been corresponding with graduates and sending reading matter directly, but are sorry to state that the replies on the whole have not been satisfactory, and where graduates have changed their addresses, they have often failed to send word to these friends. They have yet to learn that their Alma Mater is not their only benefactor.

The postal expense for sending the rolls of papers has amounted this year to nearly \$75, more papers having been sent than in any of the previous years. This does not include expressage on packages also sent.

This plan of sending reading matter out to graduates, while it is quite an expense to the Institute, has proved a very good one, as it not only helps them in their work, but keeps us well informed of their whereabouts, and the use they are trying to make of their education.

#### II.

#### GENERAL REPORTS.

REPORT OF THE CHAPLAIN,

Rev. H. B. Frisell.

With the growth of the school grows the importance of the work of building up the right sort of moral and religious character in the student. This is the aim of the school. Every year we have impressed upon the slight value of mere book knowledge without moral earnestness. A visit to the schools of the neighboring counties reveals the fact that very frequently the dull plodder at Hampton is the real leader of his people toward better things, while the bright scholar who was our pride and delight at school because of his mental acuteness, either yields to temptation or leaves school work for the more tempting and less exacting ships or political appointments. In the training of mind or of body, the school-room or the work-shop is valuable to these people

only so far as they help to build up character and give these youth a love for God and their fellow-men. The problem at Hampton is not to make scholars, but to make Christian men and women. Dr. Samuel Elliot, of Boston, did valuable service to the school in the report which he rendered to the trustees and instructors at the close of the last term, by pressing upon them the paramount importance of this part of the work. There must always be here a double standard of judging of students, by which their moral worth is taken into account even more than their intellectual advancement. What will this student do for the upbuilding of his race? is the question we are obliged to ask of every one placed under our care. This year, more than ever before, the thought has been urged upon us that we have no right to ask help from the public for the support of students who have no moral purpose. During the past year, students have been asked to leave the school, whose scholarship was of the best, because it was felt that they lacked in moral earnestness. Where such multitudes are pressing in upon us, it seems only right that trifling men should give way to earnest ones. At the last anniversary exercises, a young man spoke as the valedictorian of his class who by no means led his fellows in scholarship, but had notably taken the lead in Christian manhood.

And at the same time that these students are taught the value of moral character, they need to learn the worthlessness of mere cant. Students who have not lived the right sort of lives have been suppressed in the prayer meeting. They have been inclined to think that the mere externals of religion were all sufficient, and we have striven to impress upon them the insufficiency of a mere pretense of piety.

It seems almost invidious to speak of any part of our work as being the religious work. It is all religious work. I think there is no teacher or head of a department who does not feel this. A boy is taught to make a shoe or to knit a mitten, not only that he may learn a useful trade, but because of the effect of the learning of that trade upon his character, upon his will power.

It is no easy task that is given us to perform at Hampton. We have the same ignorance, the same superstition, the same divorce of religion and morality with which other colored schools have to contend. Our large numbers, their short stay at school, and the advanced age of many that we receive, add to the difficulties under which we labor in our endeavor to send out the right sort of men and women. Our industrial system makes it necessary that we have in the school a large number of grown men and women, who come to us with habits formed in many cases, under unfortunate surroundings. These cannot be treated like children, for they are not; they know more of life than some of their teachers. More freedom must be allowed them than could be given to younger students. They must be allowed to choose for themselves in some cases between good and evil. They are not always able to rid themselves of their bad habits when they arrive here. There came into our night class last year over 200 students, most of them of the sort of which I have spoken. How to make them into Christian men and women is an important part of our problem, and our manner of dealing with them must, effect something like the work with all the rest of the school.

Then there is the work among the regular classes, many of them younger, all of them more advanced in their studies than the night class. There is more forgetfulness of the end and aim of all this school life with these. They are more correct in their morals, but in the higher classes, especially, possessed of a good opinion of themselves, and unless directed with care, heady and impatient, impatient to get at the bottom of things, being more rapid than their moral. The suggestion of the Lady Principal that at the close of the middle year students be sent to teach for a session, seems to me an admirable one. These men do not feel sufficiently the responsibility of their position. They have not quite digested the food they have taken in. They need to give out that which they have received. The mission work in the outlying country has been helpful in interesting them in others, giving them a taste of the pleasure of helping them, and a glimpse of the work they will have to do when they go out.

In the training of these youth, the military organization of the school is of the greatest help, making the students in their officers' coat the judges of the actions of their fellows, thus causing them to respect themselves and others.

With the Indians the problem is not essentially different from that in the case of the night students. They are ignorant, they have bad habits, they are more exposed than the others, because they have seen less of the world. They are more readily led into evil. It is hard to get at them at first, to gain their confidence, or to make the teaching of truth intelligible, but they are anxious

to know the Bible, and many of them try to walk the good way.

The past year has been one of progress in some departments of our work. There has been a higher standard among the students. The mission work in the outlying districts has been increased. I believe that the moral condition of the school is an advance on previous years.

Rev. Mr. Gravatt, rector of St. John's Church, Hampton, occupied the pulpit during my absence in the summer, and thus the Sabbath services were kept up the year round, and the religious tone of the school maintained.

#### Sabbath Services.

In order to give the teachers more rest on the Sabbath, the regular preaching service has been changed to the afternoon, and the Sabbath school placed at 11 A. M. The results have been most happy. Better work has been done in the school, and the evening services at the close of the day in the Eucharistic chapel, in the cemetery grounds, has been very pleasant. Their occurrence at this time of the day has acted as a good police measure in preventing the students from wandering from the grounds.

The services have been largely attended by visitors from the hotel, and the choir has remained at the close to sing plantation melodies instead of in the evening, as formerly. The effect has been to give a more serious tone to the service of song, and has been helpful in many ways. The building has been crowded to its utmost capacity. It is to be hoped that the old frame building which was used by the soldiers during the war, before many years, give way to a larger and more durable structure.

#### Sunday School.

Almost every teacher in the Institute is also a teacher in the Sunday school; those who teach colored classes during the week, meeting with the colored school on the Sabbath, and the Indian teachers with the Indians. The pastor acts as superintendent of the colored Sunday school, and Rev. Mr. Gravatt as superintendent of the Indian school. In order to give unity to the religious teachings of the week, the subject for study in the International series of Sunday school lessons has been made the subject of the prayer meeting during the week; still, other aspects of the same subject have been presented in the daily readings, which have been used at morning prayers and in the Sunday morning meeting, the afternoon sermon, taking up the same subject. In this way one subject has been pressed home upon the minds of the students during the whole week, and more of permanent good gained than though the shot had been more scattering.

The Sunday school is the centre of the religious work of the school, and the teachers, representing five different denominations, become responsible for the religious training of the students, a large portion of whom are Baptists and Methodists.

The evening services have been more than ever given up to the students for the meetings of the different societies into which they have been formed for religious work. Reports have been made from the country, and most of the poor help at the Sunday schools established, the cottages visited. All these meetings have been under the general care of the

#### Young People's Christian Association.

of which Mr. W. H. Dages, one of the graduates, is President, and Mr. R. H. Hamilton, its general care, this association has under its general care the mission work in the country around the school. This year several workers have gone forth on the Sabbath to read the Bible in the cottages, to carry food to the hungry, and clothing to those in need. In some cases the boys have patched up the poor cabins. There are many cases of deserving old people in this region, who have experienced few of the joys of freedom and many of its hardships. A regular committee make a careful examination before relief is rendered. On Sunday morning, the students may be seen starting out in every direction to help in the Sunday schools of the place, and in the afternoon, wagons or boats are brought into requisition; the different squadrons start for the poor, the jail, Little England, Slabtown, and the different parts of Hampton. Christmas and Thanksgiving have been celebrated by the students by carrying dinner to the poor in the vicinity. In all this work the teachers and resident graduates have borne an important part, going with the students and directing their labor. Two new Sunday schools have been started this year, and old further into the country another year, and have a training class for workers.

#### The Temperance Society.

Under the general care of the Association is the temperance society, with officers of its own, and a committee of

the teachers to assist in working up the meetings. These meetings have been especially interesting this year, and the students kept informed as to the progress of temperance reform and the evils of intemperance. The effect of this work will be seen by referring to the report on the graduates, which shows how they start like societies in the place where they go. We hope very soon to begin aggressive temperance work in the country round.

#### Band of Mercy.

In connection with our association, we have organized a Band of Mercy, in order to call the attention of the students to the treatment of dumb animals. Each of the members signs the following pledge: "I will try to be kind to all harmless living creatures, and try to protect them from all harm." In the meeting of this society we have not confined ourselves to our duties to the lower animals, but have considered our relations to one another, to prisoners and the despised classes. Regular committees of the students have been formed for the care of the prisoners-meetings, and the religious interest of the place. I think the students have felt a responsibility as never before in regard to the morals of the school. Each building has been given to certain boys, and they have been made to feel that they were in a sense responsible for the moral and religious well-being of its occupants. The same has been done in the case of the girls.

#### The Pastor's Class.

In my travels through tide-water Virginia, I became convinced that there was a number of colored ministers in this part of the country who would like to give themselves an opportunity to pursue their studies further, and prepare themselves more fully for the duties of the Christian ministry. With the advice of the trustees, a class for colored pastors was started in October last. The six colored pastors of Hampton immediately availed themselves of it, and through all the year, in rainy weather as well as in fair, they have come over to the recitations. The class was started on an entirely undenominational basis. Rev. Mr. Boston, the white Baptist clergyman of Hampton, assisted in the instruction during three lectures a week. The same was done by Rev. Mr. Gravatt, the Episcopal rector. Rev. Mr. Tolman, the former pastor of the school, and Miss Alice Bacon, of the Institute, have had regular classes. Regular instruction has been given in ethics, in the study of the New Testament, in practical theology, and in the writing of sermons.

There have been sixteen regular students in attendance upon the class. Of these, six were pastors in Hampton, and the rest licensed preachers and candidates for the ministry from the country about. A part of the members remained on the place worked on the farm, in the knitting room, and in the saw-mill. The class was held for three periods in the afternoon, so that the morning could be given to the instruction, giving members a chance to earn their bread by their work, their tuition being provided by \$70 scholarships, as in the case of the other students of the school. This school has had sufficient of the school, to carry them through into the regular classes, and were taught the common English branches, while the others, who worked during the morning, went into the night class. No more earnest students could be found on the school grounds than these members of the pastors' class. Said one of the teachers, speaking of the interest of these students, "It seems as if they would swallow me, so eager are they to drink in every word." This class reaches men who never could have any chance in any other way. Two of these pastors have each a membership in their churches of 1,500. They are real leaders among their people, shrewd, practical men, with knowledge of their fellows, though but little of books. "This is what I have prayed for, Lord, for all my life, and now it's come," said one of them. Said another: "I can read better, I can write better, I can think better, than I could before this class commenced." Among the good results that have come from this class is the kindly feeling that has grown up between the colored ministers themselves and between them and the school and the white ministers, who act as their teachers. Many of the colored preachers had a prejudice against the school because of a misunderstanding of the work that it is doing, but this pastors' class has brought them into most pleasant relations with it. They now have the active co-operation of these men in all our mission work in the neighborhood. We send squads of workers to report to the pastors for labor in their churches, and in connection with their Sunday school. Not less important is the kindly feeling which the class has brought about between the white and colored pastors of the place. The school has afforded them an opportunity of finding out what of good there

was in one another. One of the misfortunes of the work among the colored people is the almost utter separation of the white and colored in their churches, the white clergymen often being in entire ignorance as to the work done by the colored brethren. The white clergymen of the place have become intensely interested in their work. Said one of them, who was called to another field of labor: "There is no part of my duties that I more regret to leave than the teaching of this class." I think it has been a matter of surprise to these ministers to find their colored brethren so willing to learn and so capable of receiving the truths of God's word.

The colored ministers, on the other hand, have found real friends in their instructors, and have been surprised to find how much they had in common with them. Not the least of the happy effects which this school has brought about is the establishing pleasant relations between the colored ministers of the different denominations in the place. As they have walked amicably together, and from the class, they have found their petty differences were of small account, and they are in better position than ever before to unite in the reconstruction of the colored people of the place.

This class has affected the school itself in giving the students more confidence in their religious instruction. They were accustomed to speak of the sort of religion taught here as the "new religion," as being quite different in kind from that which they had been taught at home. They have more confidence in it now than their own preachers are being instructed here.

#### News Items and Political Economy.

In order to give some direction to the thought of the students on the great questions of the day, I have met the whole school for twenty minutes every morning for a short discussion of news items. We have talked over the bills that have been before Congress the last session—the Blair bill, the Morrison bill. We have discussed the Civil Rights bill and the politics of Virginia. With the use of maps we have kept up our knowledge of the war in the Sudan and in Tonquin.

In order to a more thorough knowledge of the laws and government of our country, Miss Alice Bacon has taken the Senior class through "North's Politics for Young Americans," and I have given them talks on "Political Economy." A carefully written bulletin board has been prepared each morning by one of the teachers, and placed where all of the students could have access to it. News items have been given to the night school, sometimes by the teacher in charge, and sometimes by myself.

I am inclined to think that there are few white schools where there is more general intelligence on the part of the students as to the news of the day.

#### Visiting the Graduates.

Through the kind aid of two ladies of Boston, who bore all my traveling expenses, I have been enabled to make quite an extensive trip through Virginia, in order to study the condition of these people upon whom we are working, and to gain some idea of what our graduates are accomplishing. I have visited their jails, schools, churches and homes. I have talked with white and colored men and women, and have seen 170 teachers at work in Virginia alone. These young men and women are not scholars, but for the work of civilizing and Christianizing the country districts (for it is from these districts that most of our graduates come, and to these they usually return), I believe that the training at Hampton is well adapted. As a rule, I found the morals better, the houses cleaner, the children's faces brighter, where they had been. I found them not merely working five days in the week in their school, but teaching in Sunday school, starting temperance societies, and young people's Christian associations, making themselves felt in the homes of the people among whom they labored.

#### MEDICAL REPORT.

By Dr. Martha M. Waldron, Resident Physician.

There has been an unusual amount of sickness in the school during the present year. This has been due in part to local causes, which have been exaggerated and as far as possible removed, and in part, no doubt, to general atmospheric conditions which have shown their influence also in the surrounding country.

The most serious cases have been those of fever, which have occurred at intervals during the entire year. The fever has been of malarial character. Sixteen cases have occurred. Five of these have been simple intermittent; eleven have been remittent, with more or less serious typhoid symptoms. Only one case of typhoid fever was encountered. This case could be traced directly to its origin in the patient's home, where she had been during a similar illness of two members of her family.

There have been five cases of tonsillitis and twenty-six cases of very severe sore throat. These cases occurred during two successive weeks. In the greater part of them, the local trouble was accompanied by unusually serious constitutional disturbance, presenting a character quite distinct from cases of common sore throat with fever, of which there have been the usual number during the year. There have also occurred seven cases of measles, two cases of facial erysipelas, four cases of pleurisy, one hundred and thirty cases of mumps, one case of acute bronchitis, seven of pneumonia, two cases of gastric ulcer. Three colored students have been sent home with phthisis. Two of these have died. Both were new students and were sent home soon after the opening of school in October.

Of accident cases, but two have been serious; one a fracture of the patella, the other, a fracture of the external condyle of the humerus with dislocation of the radius. Considering the entire number of students (640) that have been here during the year, and the poor conditions of life by which most of them are surrounded in their own homes, the amount of sickness is not to be considered remarkable. Only one death among the colored students, has occurred at the school during the year. This was that of a colored girl who died early in October, of malaria and fever, complicated by pulmonary disease of long standing. Cases of pneumonia and other pulmonary diseases among the colored students have done uniformly well.

The average health of the Indians has been somewhat higher this year than usual. Although the winter has been unusually trying, there has been comparative freedom from pulmonary trouble. None of the young Indian boys have been seriously ill. Three of them have suffered from phlyctenular ophthalmia; one having had three, another five separate attacks.

Two deaths from phthisis have occurred among the older Indian boys. The Indian girls have shared in the epidemics of sore throat and mumps, but in this exception, their general health has been good. Only one case of fever has occurred among them. Three have suffered from serious enlargement and inflammation of the cervical lymphatic glands. Two have had phlyctenular ophthalmia, and one of the cases of gastric ulcer occurred among them.

In considering the health of this school as compared with others, it is fair to say that the industrial system involves necessarily, exposure of the students in all weathers, and while in the main it is an advantage, increasing the physical stamina of the mass of the students, in individual cases, it no doubt makes way for sickness. There have been, however, very few cases which could be traced directly to any unusual exposure.

Fever has occurred about equally among boys and girls, and in every building on the place used for students' dormitories; even the mill tower, which has every advantage of sunlight and fresh air on all sides, has not been exempt.

**Instruction in Physiology and Hygiene.**  
The middle class (numbering 103), has been instructed in Physiology and Hygiene. For this study the class has been divided into nearly equal sections, reciting at various periods; members of the class have been without exception earnest in their study, and especially interested in its application to the hygiene of their daily life. The work of the class would compare favorably with that of any class of similar grade in northern schools. The course of lectures on First Aid to the Injured, begun before Commencement, will be completed during the school year by the same class.

REPORT ON LIBRARY.

By Alice M. Bacon, Librarian.

There have been added to the library from Oct. 1st to Apr. 1st, between four and five hundred volumes. Of these a few have been purchased, but the larger part have been given. The library now contains about 3,000 volumes, many of them good standard books of history, science and travels. There are nearly four hundred works of fiction which are in great demand, particularly among the girls. The works of fiction which we now possess are almost all of the light and trashy order known as Sunday School literature. I would suggest that these books be carefully looked over, during the coming year, the worthless ones taken off of the shelves and catalogue, and their places supplied as rapidly as possible by the works of the great novelists who are now but poorly represented. The needs of the library for good historical and scientific works are so noticeable that the advisability of raising the standard of our fiction has been somewhat overlooked. Still so long as the demand on the part of the students for fiction is so continual and pressing, it seems to me that we should try to meet that demand by a supply that will not unfit the mind for good reading in other directions.

There seems to be among the students a growing desire to use the books which the library affords intelligently in connection with their studies. The popular Encyclopedia has been placed in the revolving book-case in the reading room, where the students can learn to look up subjects in it for themselves, and there is hardly ever a time during library hours when one or more of the volumes is not in use. From Oct. 1st to Apr. 1st there have been drawn from the library and returned to it again 1014 books; 120 boys, 429 books, and 83 girls, 254 books. Of the 254 books drawn by girls, 141 have been fiction, the remaining 113 mainly biographies and histories. This is, I believe, an improvement on the girls' record for last year, both in the number and character of the books read. The increased interest in the library this year on the part of both boys and girls is due largely, I think, to the fact that some of the teachers have taken pains to post up in conspicuous places in the reading room, lists of books on particular subjects which they wish to have their classes read.

In addition to books drawn out and taken away from the library, there has been much reading done in the room. Reference books have been placed on the tables where students could pick them out and read them when they had a few spare moments, and they have made good use of them. The reading room table is well supplied with periodicals; 83 weeklies, 40 monthlies and 5 dailies, coming regularly to the room, many of them in exchange for the Southern Workman. The papers seem to be thoroughly enjoyed by the students, and when they have served their time on the reading room table, are sent to graduates who are teaching on the duties of the school. On Sundays, particularly, the reading room is crowded with eager, earnest boys, reading the papers, drawing books, or looking at the bound volumes of illustrated periodicals.

Access to the library has been difficult and inconvenient because of the incomplete system of cataloguing. A card catalogue is now nearly finished, by means of which any book in the library may be found by its subject or author. When this is finished, it is hoped that the library will reach a larger usefulness than ever before.

REPORT OF COMMANDANT.

Lieut. Geo. Le Roy Brown.

I have the honor to submit, for your consideration and for information of the Board of Trustees, the following report upon the military department of the Institute, and upon the duties performed by myself in charge of same, for the scholastic session ending June 30th, 1884.

A battalion of three companies was duly organized on the 14th day of June 1883, and placed under the command of Arthur Boykin, of the class of '83, as acting commandant, during the summer.

On the 18th day of June, '83, in compliance with the instructions of the Principal, I left Hampton in charge of a party of twelve Indian youth, who were to be returned to their homes in Dakota Territory. Having performed this duty, I was directed to call upon ex-students, visit the parents of students, and to return to Hampton about the last of September with a party of twenty Indian youth.

On arriving at their homes, the boys had no difficulty in obtaining remunerative employment. Revisiting one of the Agencies in September, I was informed that one of the physical disabilities of his father, (who had been badly frozen the previous winter) had been cured during the summer several hundred dollars furnishing hay to freighters to the Black Hills. This is an exceptional case; but I was agreeably surprised to find that all the boys who had been returned home from Hampton, had done better than I had expected. The majority had decidedly improved and not one gone back to Indian habits. They have shown a strong inclination to work, earn money, and improve, time to accomplish the best results. A number of the leading Indians are recognizing this and requested me to keep their children as long as I thought best. I brought back to Hampton three of the boys who had been returned home two years previous, after a three-years' course; one had assisted in teaching at the Agency school for a year and was employed at twenty dollars a month as a laborer at the Agency at the time of my visit, another had been employed for nearly two years as assistant teacher at the Agency school, and the third had been employed, they were at different Agencies, all had improved since leaving Hampton, but were anxious to receive a better training. Altogether, the outlook for the boys was very encouraging.

The Indians readily acquiesce in the new departure taken and independent spirit shown by returned Indian boys.

Only one of the girls who returned home last year received employment, and two were in the state of society at an Indian Agency in the West, there is little chance for the educated Indian girls to obtain remunerative employment, and the matrimonial intrigues of grandmothers, mothers and aunts, is apt to seriously interfere with the further advancement of returned Indian girls.

The Indian agent, one of the Indians call him "the Father," will be found an indispensable factor in the solution of the problem of how to insure the complete development of the returned Indian girls into useful women. The returned Indian girls into useful women may be advantageously used as retreats for the girls until suitable employment or acceptable suitors be found. Burdened with a savage and cruel husband, further development and civilized ways must necessarily be painfully slow, if not impossible. Of course there is an ultimate gain; but the cost is great.

I was deeply impressed with this thought last summer while visiting an Indian camp. On approaching the camp, I noticed a young woman with a child in her arms steal swiftly away among the bushes, evidently desiring to avoid notice. I thought little of it at the time; but before leaving the camp I saw her again, and in spite of her torn and soiled dress, disheveled hair and haggard face, I recognized in her a young girl who had returned to her home from a school in the States three years before. At the time of her return she was a bright and interesting girl, about sixteen years old, could read, write, and speak English very well, and appeared to be well versed in house work. I remember that she helped in the Agency school for several months after her return home; she married badly.

I know an Indian Agent, a sterling good man, who required young men who desired to marry Indian school girls, to have a comfortable house, five acres of land under cultivation, a yoke of cattle, a cow, and a good character for industry and sobriety, before he would consent to the girls leaving school to become wives. This may be considered a somewhat arbitrary course; but the results fully justified it. The Indian is accustomed to the idea of purchasing a wife, and the quirkiness of the school is unreasonable; besides, as the Agent wisely aided the young couples after marriage, this method of obtaining a wife became fashionable among the better class of young men.

The ultimate success of the work of Eastern schools in the education of Indian youth, appears to me, to hinge upon Indian Agents, to whose care said youth must be returned after their school life is over, and upon the concentration of the work. Each student should be carefully followed up after his or her return home, helped, encouraged and stimulated to do good work.

I am indebted to Agents Gasmann and Swan for courteous reception and kindly aid and encouragement in performing the duties required of me. I trust they will meet success in their work, and wish I might be able to return their kindness. Having collected twenty-one Indian youth for Hampton, I started East, arriving at Hampton on the 22nd day of September, 1883. I found the battalion in good shape. From the records on file in the Commandant's office and the verbal statement of the instructors, who remained at the Institute during the vacation, I judge that Captain Boykin performed the duties required of him in a very satisfactory manner.

On the 29th day of September, 1883, a four company battalion was duly organized and regular drills commenced on the 3rd day of October, 1883. Companies "A" and "D" were drilled on Tuesdays, Company "B" on Wednesdays, Company "C" on Thursdays, police duty on Fridays and general inspections were held between four and five P. M. Morning inspection and parade between eight and eight-thirty A. M., every week day, except Monday which was the school holiday during last session. Sunday duties were regularly performed by the members of the battalion during last session. The discipline and maintaining discipline and the morale of the organization, much importance must attach to the proper performance of the two duties mentioned. As a rule, the duties have been well done. As a rule, the spirit of true Court Martial duty. A spirit of fairness and thoroughness has been apparent in the proceedings of the court, and I have been left for the reviewing officer, little has been left for the reviewing officer, except to approve and execute the sentences, which, with a single exception, have been accepted by the offender tried without protest or complaint.

The compilation is strong to copy report of last year. A change of dates would leave little more to be done.

The keeping of a detailed record of each student's conduct in the various departments would entail a certain amount of unavoidable

able drudgery; but the advantage of having such a record in black and white would, I believe, fully repay the cost.

The battalion has received instruction in "Infantry Tactics," including battalion maneuvers (without arms) and in "Artillery Tactics," including the "Manual of the piece."

Attendance, interest and progress during the term have been satisfactory. Not a single serious case of quarrelling between Indian and colored students has come to my knowledge during the session, and the general feeling has been friendly. The experiment of introducing self government among the Indian boys in their cottages has shown favorable results. It has been somewhat of a struggle; but they are better for it, and I think the idea might be expanded gradually. Many of the older boys have been perceptibly improved through their efforts to help the new boys. An annual influx of new Indian students is very desirable for it and a number of other reasons. A closer connection would be formed between the people and the school, and an opportunity of sending home doubtful material would be afforded, thus relieving the school from unprofitable expenditure of vitality and funds.

The number of applicants for admission is greatly in excess of the number that can be accommodated. The best material for the work to be done by the school can be obtained, and it is a question how far it is wise to encroach upon the domain of the reformatory institutions. A large majority of the colored students are earnest, ambitious fellows, appealing strongly to one's sympathies and compelling respect and admiration by their manly conduct, yet there is an element of trifling and vicious tendencies, often in the intellectually bright and capable. In a very short time this element is felt, though the individuals may escape detection during the entire session, in a misdeed or sufficiently grave to warrant suspension or expulsion under the rules.

A carefully kept record of slight delinquencies would be of great value at the close of the session, afford a convenient proof of their general character, and justify weeding out. I am under obligations to the Faculty and instructors for kindly courtesy and service, which have made my service here pleasant to myself and I hope profitable to the government.

The following named members of the Senior class deserve special mention for earnest and faithful conduct throughout the session.

- Cadet Captain John R. Dungey, Co. A.
- " Captain Edward Stewart, Co. B.
- " Captain Willis Holland,
- " Captain Geo. W. Edwards, Co. A.
- " and Lieut. J. B. Tynes, Co. A.
- Sergt. Major Robert Evans.
- Color Sergeant, W. S. Reid, Co. C.

It affords me pleasure to state that the graduates receiving special mention in my previous reports have made very good record since graduation; several have done excellent work. I feel confident that those mentioned this year will not fall behind the others in good, earnest work.

I remain, Sir, very respectfully, your obedient servant,

Geo. L. ROY BROWN,

1st Lieut. 11th U. S. Infantry.

RABY LODGE.

FOR SALE BY PRIVATE CONTRACT.

This pleasant residence, adjoining the Normal and Agricultural Institute grounds at Hampton Va., comprises seven rooms on the ground floor, three of them with open fire places; six rooms on the second floor with commodious bath-room. The rooms are well closeted; large dry cellar and kitchen, large ground cistern, with pump, for rain water; a well of excellent spring water with pump; also well and force pump in cellar.

A two stabled stall and coach house with granary and hay loft above. Ornamental and fruit trees, shrubs and vines on the grounds, a good boat landing opposite the house, with unobstructed view of Hampton Roads.

For further particulars, apply to George Dixon, Raby Lodge, Hampton Va.

## The Colored Conference.

By Mrs. Orva Langhorne.

The Washington Conference of the Colored Methodist Episcopal church met in Lynchburg on the 18th of March, at the Jackson Street church, and continued its sessions for five days.

When the roll was called, out of 136 members, 115 answered to their names, 21 were absent and 6 were dead. Bishop Andrews of Washington was the presiding officer, and the Conference, a highly respectable looking and very orderly body, represented the states of Maryland, Virginia, West Virginia and the District of Columbia.

The members of the Conference were of every shade of complexion, from jetty black to such fairness that it was difficult to understand why the owner should not be called a white man. There were very old men and very young men, but the majority were of middle age and vigorous frame. The ministers represented many ranks and aspects of life, from the old slave, who could only indifferently read the Bible, and bore the marks of toil and hardship, to the youth who has come up in the new regime, to whom slavery is a thing of hearsay and not of remembrance, who has had all the advantages of education, untrammelled by any restraints upon "Life, liberty and the pursuit of happiness." There were in the body, farmers, mechanics, "jobbers," merchants, editors, teachers, and a few whose position enabled them to give themselves wholly to the ministry.

Some of the presiding elders and pastors of city churches, were men of striking appearance and polished manners, while some of the old members of the conference, coming from the rural districts, were very plain, sometimes rather rough-looking, but these latter were mostly quiet, leaving the discussion of affairs to the brethren who had had better chances in life. On the whole, the Conference compared quite well with similar gatherings of white Methodist and Baptist preachers I have visited from the same districts of the country.

They all looked happy and cheerful and were evidently enjoying the occasion highly. The members of the Conference were entertained by the colored people of the community, those who had sufficiently housed giving them lodging, those who had not, willingly contributing to the general fund collected to pay the boarding house keeper who provided for them.

By accident I entered the house of one of the colored Methodist families of the town who were entertaining members of the conference, and chancing upon the dinner hour, found such a bountifully spread table set before the guests, that I was not at all surprised at the cordiality with which the Conference at its last meeting, tendered a vote of thanks to the citizens for their exceeding hospitality during the session.

I was not aware, until I attended the Conference, that the presiding Bishop was a white man, and found him a venerable and distinguished looking person. The old man with his silvery hair, beautiful smile and fatherly manner, made such a striking picture, seated before the altar in the church, surrounded by his kinsmen, brethren, and considerate of their feelings, yet so wise and firm in guiding their deliberations that one might have fancied it was St. John himself taking the Master's place, and fulfilling his last request "to feed his lambs," among this simple-hearted and affectionate people.

"Is your Bishop always so gentle and mild as he seems now?" I inquired of one of the older preachers. "Just like you see him, that's the way he always is," was the reply. "I have known him for many years, and never saw any difference in him."

At one side of the chancel, at a small table covered with writing materials, three of the younger members of the Conference were acting as secretaries, and a neat looking and carefully prepared copy of the minutes now lying on my desk printed in Baltimore by Clay & Co., testified to the efficient manner in which their work was performed. I learned that one of these young men had received the early religious instructions which laid the foundation for his work as a minister when a slave boy, in a Sunday school class taught by Gen. Stonewall Jackson in Lexington, when that famous commander was only known as a Professor of the Virginia Military Institute, and the colored Sunday school was an object of special interest with him.

At every meeting I attended, the Conference was closely occupied with business, which, thanks to the Bishop's careful supervision, was usually despatched with promptness. At one session, the roll of the regular pastors was called, and the character of each passed upon by his co-laborers. To most of the names, the cheerful response "Nothing against him" was made, and the brothers were continued in active service; but in one case grave charges were preferred, and being duly examined and fully proved, the "wolf in sheep's clothing" was

at once ignominiously expelled from the fold.

In another instance, a minister and his wife were reported to have lived unhappily; with advice called before the conference, explanations made, and reconciliation effected, after which the brother was assigned to his sphere of duty with exhortation to preserve peace in his family.

It was amusing during the roll call to hear the names of the leading families of the districts represented, answered to by the ex-slaves, who in many cases cling affectionately to their old master's names and cherish the associations of their early lives.

Calloway and Steptoe, among the first white settlers of this region; the latter, clerk of Bedford county under colonial government; Washington, Jefferson, Lewis, and other familiar Virginia names, were called, while Pinkney, Carroll and Boothe represented Maryland.

When this business was ended, the young candidates for the ministry came forward and were questioned as to character ability, education, etc. It was gratifying to see from the report of the committee on Theological studies, that much more was now demanded of candidates in the way of education, than formerly. In one case the record as to general usefulness was very good indeed, but the young applicant for orders was deficient in some of the studies he was expected to have prepared himself for.

He had a very sensible appearance, and according to the witnesses, had accomplished a great deal in the previous year. He was teaching a public school in one of our back counties, had preached regularly and performed much ministerial duty out of school hours. He had built a church for his people in the village where he was teaching, but he had passed a poor examination in some studies, especially in ancient history. The Bishop spoke very strongly to him, and he always seemed to do better, and against the candidate's attempting too much at once and dwell earnestly on the advantage of "hastening slowly." Most of the applicants of this class passed without question from one grade to the next higher, but in one instance there were for a moment alarming symptoms of a candidate's being accused of heresy. An elderly brother somewhat officious and opinionated, called a halt as the name of the young man was about to be passed, and stated solemnly that he was a friend of Brother Johnson, but he felt it his duty to guard the church, and he wished at this point to ask one question. Silence fell upon the Conference, which had been rather inattentive to the proceedings just then, the Bishop looked enquiringly at the speaker, and the old man, evidently pleased at the notice he had attracted, continued impressively, "Bishop, I want to ask *where fallen Angels in Heaven?*"

Some of the brethren laughed, others who had probably heard the point discussed, seemed vexed and made whispered comments on the contentious character of the speaker, and the Bishop with a keen glance at him, said gravely, "This is not the time and place for such questions to be considered." Nothing daunted, the advocate of orthodoxy requested solemnly, "I only want to ask one question Bishop, *where fallen Angels in Heaven?*" "I can't tell," responded the Bishop, with his pleasant smile, "I wasn't there," and without looking at the friend of "fallen angels" who sat down disappointed, the Bishop passed rapidly on to the next case.

The Conference considered many important subjects, special attention being given to education, temperance, and the support of ministers. The Rev. A. B. Wilson, one of the secretaries of the Conference, had published during the year, a little book called "The People's Pledge, or Alcohol: what it is, what it has done, what shall be done with it." Mr. Wilson made an interesting and encouraging report on this subject.

While regarding with interest the orderly and intelligent proceedings of the Conference, and the very systematic way in which business was despatched, I wondered why the political meetings of the colored people could not also be conducted in this manner. Why is it that meetings of the latter kind are such scenes of riot and confusion that respectable white men shrink from going into them? Was the merit here all in the presiding officer, or is the difference in the fact as suggested by John Randolph, that "electioneering would corrupt the Angels in Heaven, and all the evil passions of men are brought out in a political canvass."

The last meeting of the Conference was chiefly devoted to eulogizing the members, who had died in the year previous, and the Bishop, who, in the discussion of every other question, had been so prompt on the alert, for the first time relaxed his vigilance. Probably he deemed the dead were safe from injury at the hands of the living, and he took little naps during the speeches in praise of the departed, and slumbered peacefully during the singing of a hymn which followed each eulogy. The panegyrist told at length

of the virtues of the brethren who had left the scene of earthly labor and entered into rest. Of one venerable and faithful saint it was eloquently stated that "the garment of holiness with which he was adorned shined with the light of glory." Some of the speakers grew fervid in eulogy and one of them made the astonishing assertion, that "the departed one might be discerned by the faithful, scudding the river of God and circumnavigating the shore of divine love."

The Bishop roused himself at the end of the funeral orations in time to deliver a very interesting and earnest address to the brethren upon their duties and responsibilities as citizens and Christians, and then, after prayer and singing a hymn of thanksgiving, the Conference, having held a meeting full of interest and instruction, adjourned.

## From A Returned Indian Student

The following very interesting letter is from Thomas Wildcat Alford, a young chief of the Absentee Shawnee tribe, who graduated at Hampton Institute two years ago, and has since been faithfully working for his people by example and influence, teaching first among the Pottawatomies, a neighboring tribe, and now—ever since he was able last year to get the school—among his own people. He writes to his friend, first chief elect of their tribe, who graduates in the present class, many words which contrast well with some politicians' sweeping and incredulous denial of the possibility of civilizing Indians.

SHAWNEETOWN, INDIAN TER.

April 25th, 1884.

MY DEAR KIND FRIEND:

Your letter of 16 inst. is at hand. You have been so kind to write me letters so often. I had written to you lately and urged you to write to the U. S. Indian Agent and let him know that you are soon to come home to your people and that you desire to lead a different life from theirs, and in order to succeed you must have a work to do with which to make you a start. You must not forget to say that you are willing to do any kind of honest labor that he may be able to provide for you. You can then wait for something better while having something to do. We have spoken to him about you, but he will feel better if you write to him personally. I think if you consult with Gen. Armstrong or Capt. Brown, they would both be willing to give you advice. They will be more than happy to help you. I think, and their advice will be very valuable.

John, if you are to be man at all, you must expect a good deal of opposition from your own relatives as well as from others. They will say all sorts of things against you for leaving the reservation, and if you do not mean fully to stand firm by the principles you have learned at Hampton, if you are in any way weak—easily led—they would soon find you out; they would soon drag you down to their level and make you an "Indian" of your own, and then the training you received at Hampton would be nothing to you; those four years you spent there to better yourself would be nothing to you—only so much time wasted. On the other hand, you can do good and lead them to a better life by simply doing your duty faithfully, whatever that may be; by standing firm by your principles and by keeping in mind all that you have learned at Hampton; in other words, by being continually civilized. They cannot help but respect you in your truthfulness of purpose. They will soon learn to believe that you are going to do what you think is right, and that which you set your mind to do means perseverance. They cannot help but believe that you will accomplish it whether they like it or not. You will be obliged to associate with them sometimes, that you cannot help, but be careful not to encourage them in their old ways or to make them think that you approve their doing in any way, because it would injure you. If you yield to them in any way they would soon learn to point you out and say, "There is a young man who tried hard to get an education and to lead a different life, now he is back here in the reservation, and he is the biggest Indian you ever met! He is not able to do that which he thinks is right! He is weak! avoid him!" Thus you see you would injure your character as well as weaken their respect for you and their interest for education and progress.

The best way to deal with any people is by kindness, therefore you can deal with your people by this manner, and help them in every way you can, but keep in mind all I have written you—you will conquer. I am writing you, from experience—I have gone through this all myself—so you must be indifferent to what I write but rather think this matter over and over and seriously too. Regard all as from a brother

who is older in practice and who can sympathize with you in all.

Remember me to the General.

Ever yours truly,

T. W. ALFORD.

## Monument Park.

In passing from Denver to Colorado Springs, Col., on the Denver and Rio Grande Railroad, with the Rocky Mountains on the right rising 14,000 feet above sea level, and the vast plain on the left spreading away 500 miles to the Missouri River, you run near Monument Park, a few miles north of Colorado Springs. This is a park, not only of trees and flowers, but filled with stone pillars and statues of all forms, as if wrought by some gigantic artists of pre-historic age.

The Report of the United States Geological and Geographical Survey of 1874 describes somewhat minutely the appearance of Monument Park, so called from the great number of columns standing thickly over the surface, each one surmounted with a cap of harder material than the body of the column. These columns, thick at the base, rise from 10 to 20 feet, tapering to the top. The cap is deep rust color, composed of sand cemented with oxide of iron, and by its greater hardness it has resisted the eroding agencies which have worn away the looser materials in the pillar itself. A walk through the park by moonlight, with long ranges of columns on either side, fantastic shapes and varied forms, reminds one of like scenery, with a difference, as found in ruined and deserted cities of the Old World where the work of men long since returned to dust, here the work of nature's great agents, the summer rains, the winter frosts, and the mountain torrents.—N. Y. Illustrated Christian Weekly.

## Horsford's Acid Phosphate.

ADMIRABLE RESULTS IN FEVERS.

Dr. J. R. RYAN, St. Louis, Mo., says, "I invariably prescribe it in fevers also in convalescence from wasting and debilitating diseases, with admirable results. I also find it a tonic to an enfeebled condition of the genital organs."

## Frank Leslie's Sunday Magazine.

The brilliant number of the fifteenth volume, and the claim of this periodical to public appreciation must, we think, be universally recognized. It is admirably conducted and popular editor, Dr. W. D. T. Talbot, O. O., who has in this number the most interesting articles, "The Scourge and 'Hard on Others,' and also a sermon 'The Sword' by Rev. George A. Fisher, D. D., of New York. Many excellent poems are contributed by Rev. O. Waddell, Amanda E. Donahoe and others; the miscellaneous articles are entertaining and instructive, and the illustrations are profuse and in the best style of art. The price is 25 cents a number, or \$2.50 a year, postpaid. Mrs. FRANK LESLIE, Publisher, 35, 55 & 57 Park Place, New York.

## Horsford's Acid Phosphate.

WELL PLEASED.

Dr. C. ROBERTS, Winchester, Ill., says, "I have used it with entire satisfaction in cases of debility from age or overwork, and in inebriates and dyspeptics, and am well pleased with its effects."

## EVERY LADY

Interested in Art Needlework, Fancy Work, and every branch of amateur Art Floriculture, Fashion, Cookery, Music, should send 15 cents for the current number, *Strettonbridge & Clothier's Quarterly*, 39 pages, 4 pages more music and over 1,000 engravings each number. Address

STRETTONBRIDGE &amp; CLOTHIER.

Eighty and Market Sts., Philadelphia.

ADDRESS

The ex thus to family, rich or poor could be without... was fitting, ate teachers

told by one who has been, since she "left these walls, teacher, local preacher, and general adviser," brought down the house more than once. The native African account of his home in the Dark Continent interested all who heard it. A very attractive variety in the programme was the recitation of the following pretty verses written for the occasion by Miss Elaine Goodale, who is a teacher at Hampton, by four little Indian girls, dressed in appropriate costume. The school museum supplied the pretty island dress of bark cloth fringed with grasses, and the western Indian dress of deer-skin was brought from her home by one of the little dusky maidens; the Eskimo robes of fur were an effective improvisation, and the shy little child of the springtime brought her native garb to add a charm to the garments of civilization.

Urgent requests for a photograph of the group have been made, and we hope a good one may be taken.

## THE CHILDREN OF THE YEAR.

ELAINE GOODALE.

*SUMMER. Merry Congo.*  
The child of the Summer, I lived in the South,  
I never was hungry, I never was cold,  
The fruit of the tree I could put in my mouth,  
Its bark was for fire, and its leaves were for shade.  
Look! I a great white bird on its broad wings flew,  
"Tis the white man's canoe is on the water here,  
I thought that the white man came down from the skies  
To my happy island and me.

*AUTUMN. Mary Thacker.*  
The child of the Autumn, I lived in the West,  
In the free wild West I lived to roam,  
Sometimes the prairie I found a new scene,  
Sometimes in the mountains I made my home.  
With meadowed for me, and a whole lot of deer,  
As well and glad as the forest deer,  
Like the notes of birds, were the simple words  
Of the tongue I loved to hear.

*WINTER. Santa Fe.*  
The child of the Winter, I lived in the North,  
In a field of ice, in a land of snow,  
In my dress of fur, I walked boldly forth,  
Where the great cold winds and the strong winds blow.  
With a surfer of fish and a whole lot of deer,  
I welcomed the long dark winter's night,  
And glad was I when the sun came,  
The wonderful Northern light.

*SOUTH. Aditi Stevens.*  
Mine, mine is the Springtime, I live in the East—  
The land of morning, the land of Spring,  
With wealth for the poor, and a whole lot of deer,  
And bread of goodness all good things.  
On these fair pages I learn to look,  
By the growing light of the rising sun,  
And life unfolds like a beautiful book—  
A life that is well worth living.

The music by the student choir and band was very good, as usual. The male and the female quartettes were in excellent voice, and sang delightfully. A new feature was a class song, the words by one of the teachers and the music by Mr. R. H. Hamilton, graduate and leader of the choir.

Diplomas were presented to thirty-two of the graduating class, and one young man who, conditioned some years ago, has amply won this recognition by his excellent character and work ever since. As usual, the diplomas were presented by Rev. Dr. Strieby, President of the Board of Trustees, with a few felicitous words of advice and encouragement, as follows:

"Young ladies and gentlemen of the graduating class: By vote of the Faculty of this Institution, the Board of Trustees have granted to you these diplomas. If you have ever looked on boards on which fireworks were to be exhibited, you have seen only rough, uninteresting boards; nothing to be seen but some strange trace and outlines of no great meaning or grace. But the moment the fire is applied, and then what a sudden, instantaneous illumination and grace and glory! A little while ago, this paper programme which I hold in my hand, seemed of no special interest or meaning; but you have touched it with the fire of thought and feeling, and how full to us all has it been of inspiration and interest. How it has kindled us all to that ardent sympathy and enthusiasm which we are sure to feel on these occasions.

"And now, my young friends, you have, for your background, life; and on it a tracing all marked out for you, one of the greatest of preachers—Horace Bushnell—said in one of his greatest sermons, that every man's life is a plan of God. That is most true. You know that for each one of you there is God's word, in the lessons you have been learning in school; and, as you have every one freely acknowledged, in the example set before you here. And now it is for you to put the fire into the plan, and make it shine and glow with earnest living. It is with the hope that every one of you will do this that we give you these diplomas. We are rejoiced to see some coming back from the field of work bringing sheaves with them. May every one of you, not only when you come back to these scenes, but in the great day of the Lord, be found to have done what he could, and with these words, I present you with these diplomas.

ADDRESS BY THE STATE SUPERINTENDENT OF EDUCATION.

The exercises on the programme having thus ended, the Principal remarking that it was fitting that the one to whom our graduates teachers will chiefly look after leaving

here, should say a few words on this occasion, introduced Hon. R. R. Farr, State Sup't of Education in Virginia, who cordially responded as follows:

"Members of the graduating class, ladies and gentlemen: I had no idea that I would be called on for a speech, but I recognize the honor of the invitation and the privilege of meeting here those whom I hope soon to meet in the active work of education. I know, my friends, you will excuse me if I address myself especially to these, after having listened to their eloquent addresses, equal I will say to any that could be heard in any school in the State. As its chief school officer I am here to honor this Institution. I am here to say that Hampton furnishes—not as good as any—but the best teachers in the State. I welcome this as the harbinger of the brightest day for our whole people. We are but one people, divided by the color of our skin, and the only question of success for any of us is the question of merit. The day is just when anyone, whatever his race, can demand anything on account of the color of his skin. You stand on the same platform as I do—that is, the platform of merit. If we deserve success we shall receive success. If we fail, we shall fail because we deserve to. Stand on the platform laid down here to-day by your graduates when they say, 'I stand only as you merit,' and you will never be put down. In the name of your people and in the name of our people, in the name of Hampton, don't go seeking work elsewhere. Stay in your own State. Seventeen hundred schools here and only twelve hundred teachers! I could get the best white teachers for colored schools, and they were the best we have the best. If you know, as I know, that the best white teachers do not—I will not say they cannot—take the care of colored schools. You know that those who do are not the best. They are not teachers at all—only keeping school. So, I want to see thoroughly drilled Hampton graduates in every colored school in the State. I want to see it because I want to see your race elevated and you are the people who can do this work.

You must excuse me, but I must electioneer a little. I say, let every one of you seek no, there is no seeking about it, the places are waiting for you—let every one of you take a position as teacher in this State.

Expressing, once more, my gratification with all I have seen and heard, I will say, 'good-bye.' The time for departure for trains and boats having arrived, no further speaking could be done, though some were present from whom it would have been pleasant to learn their benediction was pronounced by Rev. Wm. Thornton, of Hampton; and thus, one of Hampton's "most interesting days" pleasantly closed.

## Alumni Triennial.

The third triennial meeting of the Alumni Association of Hampton Institute, organized in 1878, was held this year, and made a very pleasant addition to the Anniversary exercises. Ninety-seven were present: fifty-four alumni and forty-three graduates from Virginia, the rest from N. C., D. C., Penn., Mass., N. Y., Ala., Md., S. C., and Tenn.; and eleven of the 13 classes which, besides the present one, have been graduated from the Institution. All arrived in time to attend the anniversary exercises, in which five of their number had part as speakers. They lunched together at Virginia Hall as guests of the school, and were received in the evening by the Principal, meeting also their friends among the officers and teachers but saddened by the fact, which some learned for the first time, that would be their last greeting in his official capacity from the friend who had given his Godspeed to every class, the honored Treasurer of the school, Gen. J. F. B. Marshall.

The morning of the 2d was occupied by the business meeting of the Association. In the afternoon, a public meeting was held in Whiting chapel, Virginia Hall, and largely attended by the officers and teachers, the class just graduated, and others. The President of the Association, Mr. B. T. Washington, made a feeling and eloquent speech. What does this coming together every three years of Hampton's sons and daughters mean? That we love our mother; that we want to bear our share of her burdens, drink fresh of her spirit, keep pace with her progress, keep up our friendship with each other, and accomplish better and better work. From whatever distant post we come, from success or disappointment, joy or sorrow—to some the sound of marriage bells, to some the funeral knell since we last met—we know that the arms of our Alma Mater are ever-ready to give cheer and comfort to us; as when we first came to her, some with no capitals but stout hearts and brawny muscles and untutored brains, she gave us a chance,

As we see how building after building has gone up here, what does it all mean? That Hampton's work has just begun. I know I express the feeling of every graduate when I say to you, my friends, that in the absence of failing with ignorance, you have our honor and our love.

And I cannot close without saying to him whom, as we learn with sorrow, we meet here for the last time as our honored Treasurer; if in your retirement it will be in any degree a comfort and satisfaction, remember that you have a place down deep in the hearts of every graduate of Hampton, and now I know every one of us will leave here to go to our places of work, determined to work harder to carry out the Hampton idea, which is education of hand, head and heart."

The orator of the day, Mr. B. T. McNeill, class of '80, repeated the expression of the feeling that binds all Hampton graduates together as children of one family, and the sympathy for those bereaved by the angel of death; and welcomed the new recruits.

"Class of '84, we welcome you into our lines—to win your spurs. It is our purpose to join forces against the enemies, immorality, prejudice, ignorance and oppression, and fight till the warfare is ended. It is our purpose to avoid writing Strut and Precension over our doors; we recognize the fact that respectability and common sense better become our sign-boards. Sympathizing friends cannot lift us by force to our feet to join forces against more powerful foes; we must gain our own footing by those powerful levers, intelligence and wealth, or we shall fall back to the mortification of our friends who have given, and are giving, us the best possible aid. They have showed us the *canon*, Education, and by its help we are fast getting the *crutch*, Wealth, and with their united aid and our own energy we propose to rise to fall no more. The sons of the South are better guarantee to Civil Rights than any legislation state or national; and, since Civil Rights are to be thus obtained, in the course of time they will be the hatches of race discord must be buried, and it is our purpose, with the spade of intelligence and moral and social advancement, to bury it so deep and securely, that it shall never be disinterred. The sons of daughters of Hampton, with few exceptions, are exponents of the fact that we are rising. Yes, we are rising, and as fast as we rise in the social, moral, and intellectual scale, just as fast, rises the sun whose rays we laden with healing and hope, and soon will be seen coming arduous over the last shabbing walls of prejudice and ignorance, the door bearing the olive-branch of peace, peace and happiness."

Rev. F. M. Stewart, professor of history and belles lettres in the College of Liberia, visiting the school to study and deliver, for the benefit of that college, delivered, at the invitation, an address before the Alumni. Its subject was The Condition, the Measures of Success. It was full of good sense and eloquence, and we would regret that we have space for but two or three of its striking passages, were it not that it will be published by the Association in pamphlet form, and can be obtained on application to Mr. W. M. B. editor of *Alumni Journal*, Hampton, Institute.

Mr. Stewart held that it is not color that embarrases the race, but condition. Other races have been enslaved and oppressed: the Hebrews in Sparta, the serfs in Russia, the Britons in Rome, the Chinese here, the Irish, the Jews in England, till the wealth of Rothschild and the intellect of Disraeli threw around the latter the marks of respectability. That is the secret: "to receive recognition, we must represent something. Go, some thing that men want, and you break down all barriers. When our representatives stand as members in the stock and produce exchanges, the clouds of prejudice will flee away. In the effort to change our condition, we should first of all strive for good and upright character, and recognize with all our heart, mind and strength the dignity of labor. Some of our young people complain, 'We are crowded out—pushed and jostled.' True, the white race push along the colored race because they push. They push over mountains with their wonderful tunnels, and span rivers with their marvelous bridges; they make hills to fall and valleys to rise. They see the lightning flash and make it speak their words; and do their bidding. They see the steam in the tea-ket le, and they bid it go it goeth, come and it comes, and all this they do more, because they push. They seem to be inspired with the sentiment of the unlettered farmer who turned his pigs into a field of frost turnips, with the remark, 'Root-better die.' They seem to echo and re-echo the strong declaration of Napoleon Bonaparte, 'Impossible, is the language of fools.' Let us catch this spirit of push."

The speaker closed with an earnest appeal for Africa.

The Principal and Treasurer were called

on for speeches, but preferred not to divert the thoughts of the audience from the good words already spoken, by more than a brief tribute to the interest of the occasion. An unexpected addition to its interest was then made by the presentation of a beautiful ebony gold-headed cane from graduates to General Marshall, with a few grateful words from the President of the Alumni, Mr. B. T. Washington: "General Marshall, that you the graduates of this Institution love you, you are perfectly aware; that we shall never forget you, we need not say, but we wish to do our part as graduates, to express the esteem in which you are held, and our recognition of your long and valuable services to our Alma Mater, and your kindness to all her sons and daughters, by presenting you with this token, hoping that it may be, with our love, some support in your future years."

On the head of the cane was the inscription: Presented to Gen. J. F. B. Marshall by the Alumni of the Hampton Normal and Agricultural Institute, as a token of their appreciation of his valuable services as Treasurer of said Institute, May 21, 1884.

The Treasurer, taken quite by surprise, found few words most expressive: "That I appreciate this gift, you know, and if before receiving it, I was unable to express adequately my feelings on this occasion, you must know that words fail me now. I can but thank you, and assure you that I shall cherish your beautiful gift and the feelings which prompted it, in the future, as I have in the past, feel constant and affectionate interest in Hampton and its graduates."

The pleasant re-union was agreeably closed that evening by the Alumni dinner, at which the Association and their invited guests, their old friends among the officers and teachers, and some others sat down to one long table, stretching the length of the large dining-room, in Virginia Hall, and spread with a bountiful feast, ending in the orthodox way, with appropriate sentiments and speeches.

The next day they began to scatter again to their various fields of labor, carrying with them Hampton's Good Speed. We hope it may always be true, as their president, Mr. Washington says, that Hampton graduates are distinguished for their love for each other and their Alma Mater. The results of her work make its inspiration and cheer; her sons and daughters growing in true manliness and womanliness, fulfilling the trust she has committed to their hands, are her glory and crown of rejoicing."

## OTHER PLEASANT INCIDENTS OF THE ANNIVERSARY.

Testimonials are the order of the day. Capt. George LeRoy Brown, for three years Commandant of Cadets at Hampton Institute, was not allowed to leave without tokens of loyalty and affection. A handsome hat, in the form of a handsome cake basket, presented, with an appropriate speech, by their elected representative.

The graduating class planted their ivy by the walls of Academic Hall with becoming ceremonies; an ivy ode and song, contributed by teachers present and absent and a speech by the class orator of the occasion, Jos. Tynes.

The Alumni of the class of '80, which glories in being the largest class ever graduated, and had the largest representation at the recent Triennial meeting, gave the most interesting and appropriate rejoicings. They could not quite get

"Hail, above the top of a pine,  
In the shadow of a tree!"

but, it has made, like the class, a good start in the right direction.

## COURTESIES FROM HAMPTON.

A very pleasant incident occurring as we go to press is the visit to the school of a committee deputed by the citizens of Hampton to present their acknowledgments for aid rendered to the town by the Normal School fire-brigade in the great fire of last April. Arthur S. Segar, Esq., chairman of the committee, with a handsome speech, made the presentation to Mr. J. B. Goff, engineer and chief of the Fire department of the school, an elegant gold watch with complimentary inscription to twelve students selected to represent the brigade, handsome silver badges—shields inscribed H. N. & A. Institute. Fire Department—and to the Principal for the school, a framed copy of the resolutions passed by the citizens.

Similar testimonials have been presented, we understand, to Capt. Woodin and his gallant veterans of the Soldiers' Home Brigade.

This is another instance of the friendly relations which have always existed between the town and the school. We trust that they may ever exist, but never again have such an occasion for demonstration.

## RABY LODGE FOR SALE.

We call attention to the advertisement of General Lodge, offering for sale his pleasant cottage on the banks of Hampton Creek adjoining the Normal School Grounds. This is a rare opportunity for any person wanting a pleasant home in this vicinity.

Subscribers are reminded that the "Workman" is reduced to eight pages during the next four months, resuming, in November, the twelve page form.

One of the most interesting problems unfolding at Hampton is the varied bearing of industrial training upon education in general. The manual labor system was made fundamental here from the first for its own sake, with full conviction of its value in the symmetrical development of the individual or the race, and with readiness to sacrifice to this the necessary per cent. of mere mental culture. Experience for sixteen years not only confirms this conviction but is proving that industrial training tends on the whole and in the long run, not against but to favor mental progress.

The poverty of the most of the students and the urgent demand for teachers for primary scholars in the South limit the regular course at Hampton to three years. It is of the first importance therefore that this short course should be sound in foundation and thorough in essentials, and then that it should be as full and varied as it can be consistently with such thoroughness. The very most that can be made of these three years should be made of them. With this in mind, the students are watched and the schedule of study is reviewed from year to year. It has not changed in much variation from the individual plan, but in its fuller carrying out, with a higher quality of text books and the addition, not of the coveted classics but of more instruction in teaching, and a few English studies such as Literature, Political Economy, Pres. Hopkin's "Outline Study of Man," some elementary or fragmentary knowledge of which may furnish principles, and awaken thought and tastes of practical benefit to character and life. At this year's discussion of the course, a professor of pedagogies present by invitation, an expert of Northern and Southern schools without the industrial system, expressed incredulity that the course laid down could be gone through with in the three years, especially in a school hampered with this system. It could not of course

with the elaboration in all points required and desirable in a twelve years' course in a Northern school.

But in the discussion, the striking fact was brought out that the industrial system, so far from impeding school work, enables Hampton to give its students a full hour more of study per day outside of school hours, than the institutions with which it was compared can give, excepting only the one other which has like it an organized labor system. And this is simply because it takes a work bell to turn people out in the morning early enough to secure the fresh morning study hour which the Hampton student thinks the best of the day, and which will be increased for him next year to an hour and twenty minutes. Another advantage, one which would not be fully appreciated in less than a year's residence at Hampton perhaps, but which is watched here with great interest from year to year, is the moral stimulus of the work idea and habit, the earnestness it gives to character, the quickening and strengthening to intellect. The weekly work day breaks in upon the study, but it wakes up the mind. More actual progress can be accomplished with it than without it, especially by these people who are not accustomed to long consecutive study and who, as one of their representative young men, Prof. Stewart of Liberia College, well put it recently to the Alumni Association of Hampton, "need to catch the Anglo Saxon spirit of Push."

The record of Hampton graduates is the test of Hampton's success. It is of interest also to notice the fact that while leading colored men themselves at first looked upon the Hampton industrial system with general disfavor, they now as generally approve it, having seen its striking advantages.

By vote of the Trustees on the recommendation of the Principal, one important change is to be tried in the course of study at Hampton. Beginning with the class that entered as juniors last term, each class will be sent out for one year of teaching or other practical work between its Middle and Senior year. In '86 there will be a Senior class made up from such as are already out or stay out next term by choice or advice as some do every year. As there after there will be of course always a Senior class, there will be room in it for any such exceptional cases, at the discretion of the Faculty. Instruction in the art of teaching being now carried through the Middle as well as through the Senior year, the students will not go out unprepared for that work. This is a new departure which will naturally not strike all favorably at first consideration, and it is an experiment which time must test. It is however the outgrowth of many years of observation of the great practical benefit of just such an experience to many who have taken it from pecuniary necessity or otherwise, willingly or unwillingly, and then returned to graduate. A common remark concerning such a student is: He is twice the man he would have been if he had gone straight through his course. After a year of real life work, the student comes back to his last year in school with a new purpose. If there is good stuff in him it is brought out. He knows what he needs, appreciates his chances and knows how to use them as he did not before. This is simply a fact of human nature which has been demonstrated thousands of times in schools and colleges everywhere, and was acted upon in the "wander year" required of the German apprentice before he became a journeyman. Discounting exceptions, we believe that it is worth the effort thus to annex the school of life to a regular academic course.

The difference between the mathematical and the unmathematical mind and the unfairness of insisting on one standard for both, is apparent at Hampton as in schools for the white race. On the other hand, the convenience of

taking an exact science to grade by is especially felt with a class of pupils whose preparation has been so irregular and uneven as theirs. A Boston teacher looking through the night school remarked of a preparatory class, that it would be impossible to grade it by Boston grades; it would be seven year old reading and twelve year old arithmetic. As a rule, the preparation of candidates for admission is better in arithmetic than in English, partly no doubt because that has been supposed to be the chief requisite, partly because it has been easier to teach it—at least, counting in home surroundings,—and partly perhaps because the colored pupil takes more to arithmetic than to English, such is our experience, at least so far as its mechanical operations are concerned. When it comes to the careful explanation of its processes, constantly insisted upon at Hampton, power of expression tells as well as power of thought and is by no means always even with it.

Indeed, the maturity of mind in certain directions gained by years, and actual experience of life and responsibility, which we notice at Hampton continually in contrast with a childish lack of development in other directions, notably in the power of clear expression, makes one of the most interesting features of the problem here, and which must never be ignored in its consideration. This same maturity makes it possible for the pupil often to catch up with himself—so to speak—and bring his attainments to a more even grade than when he entered; as a child could not do. This is one pleasant peculiarity of the condition.

To bring up the standard in English has been decided to require for the entering examination, hereafter, besides the usual knowledge of the first four rules of arithmetic, the ability to recognize and write a complete sentence correct in construction and punctuation and capitals, and to frame a short letter fairly well. They may not in a year or two be brought up to this requirement but this will be the aim.

VACATION at Hampton never means cessation. The shops and farms with their contract work or other industries go on through the year, with the night school for work students and the varied labor required to take care of all who stay. Two hundred and seventy students thus remain in the summer months, more than the whole school numbered eight years ago, and to be increased before we go to press by the coming of about thirty new Indian students. Of the two hundred and seventy, two hundred and ten are colored students: one hundred and twenty eight boys and eighty two girls; sixty are Indians: thirty four boys and twenty six girls. One hundred and seventy—forty eight of these girls—are night school students who have been for a year or more preparing by work and study to enter the Junior or Middle class perhaps next fall. The rest fall quietly into the line of work, and the change from the winter to the summer organization is effected with less and less friction from year to year. Those who are not in the night school have their evenings to themselves with some limitations. The girls are required to come in doors at eight. The weekly prayer meetings are kept up, and the Sunday Bible classes, and church services, the school Chaplain remaining till August, and Rev. Mr. Gravatt of Hampton then supplying the place. The reading room is kept open as usual. The Indian students, most of whom are younger and less robust, have two hours rest from work at noon, in which they will have some drawing lessons and other light lessons. Some of the older ones take the full work day by preference. They also work part of the season at Shellbanks for the benefit of change. The summer work is varied for all by an occasional holiday or picnic. The weather is seldom oppressively warm for long, and vacation life of Hampton is not only busy but pleasant.

John F. Slater.

Our June editorial pages having been devoted as usual to the annual reports of the Hampton Institute, we have been unable until now to add our tribute to the memory of this good and noble man to whom the whole country, and above all its colored citizens, owe a debt of lasting love and gratitude.

The terrible succession of financial failures and disgraces which have occupied the columns of our daily papers since this good man's death was recorded there, put in the strongest light the truth that even earthly success is not in heaping up riches. It is not what we gain but what we keep that makes us rich. And the only way to keep, to enter into full possession of property, even in this world, is to use it rightly, in God's service, for the good of others. Looking further, the quaint old epiphany tells the story "what I hoarded I have lost; what I spent, I had; what I gave, I keep."

Mr Slater's life illustrates, like that of many of our successful men, the advantage of early training to industry and business habits, the happy combination of business ability with courteous manners and a genial spirit, the value of sturdy honesty and purity of life, the power of Christian principle to preserve integrity and consecrate all to the highest objects. Giving loyally and liberally to the support of the Union in the war, and always warmly interested in the cause of the colored race and in the prosperity of our undivided country, he crowned the generalities of his life by the royal gift of \$1,000,000, in 1880, the interest to be used for the education of the Freedmen.

In the hands of such men as ex-President Hayes, Chief Justice Waite, the Rev. Phillips Brooks, Morris K. Jesup, and their associates, who work without pecuniary reward on its board of trustees, and their efficient agent Rev. A. G. Haygood, the blessing wrought by the Slater Fund will be a lasting monument and an unperishing possession of John F. Slater.

## Singing For Tuskegee.

When the growth of Hampton Institute necessitated the erection of Virginia Hall, the school sent its student singers out into the North and West, as our readers know, to do what would be done to further the work. Though the great financial panic of '74 so interfered with their success that the first year, when they cleared \$10000 that losses balanced profits, yet, considering the indirect benefits of the interest thus excited in the school, and the moral strengthening there is in doing all that one's self, it is not too much to say that Virginia Hall would not have gone up without the Hampton Singers.

The young Hampton at Tuskegee is following its parent's example in this as in other applications of the principle of self help. Our readers must almost without exception know the story of the Tuskegee Normal and Industrial School in Alabama, whose Principal and assistant Principal and four out of six teachers are Hampton graduates, who are making industrial education a success there as it is here, and winning the respect of Northern friends and Southern neighbors, by their enterprise and good sense. Having bought a farm of 480 acres and erected a school building costing \$6000 all free from debt, they are now about erecting their second building, Alabama Hall, for girls' and teachers' quarters dining room, etc., to cost \$10,000, \$6000 of which have been already collected. To help raise the balance needed and bring the school before the public, Tuskegee sends out this month a male quartette, three of the young men being students, and one a teacher, a graduate of Hampton, under the direction of Mr. R. H. Hamilton, one of the original Hampton Student band who has been ever since connected with Hampton Institute, and leader of its choir. The voices are good, the repertory of plantation melodies entirely new, and the expenses of a quartette being so much less than for a full chorus, we trust the direct results may be profitable as well as the indirect benefits. The quartette expects to spend the season chiefly among the summer resorts of Massachusetts. We bespeak for them, wherever they may go, the special interest of friends of Hampton.

### The Southern Press. Both Sides.

The event of the month has been the nomination of Jas. G. Blaine for President and John A. Logan for Vice President. The *Southern Workman* being of necessity a non-partisan journal, can do little more than offer to its readers such selections from the editorials of the Southern press as seem fairly to represent the opinions of both parties and both races. The marked feature in these expressions of opinion seems as yet to be a certain indecision among the members of the Republican party, which, while it has not arrived at open dissatisfaction or rebellion, has a flavor of both, and is possibly prophetic. It is indicated in such half-way endorsements as this of the *People's Advocate* (colored).

"That the majority must rule is one of the fundamental principles of our governmental and party system. James G. Blaine, in a convention in which the people were more directly represented than ever before, now to say what might have been or to declare how personal preferences, if accepted, would have occasioned less hazard."

James G. Blaine is the choice of the majority of the republican party, and for this reason alone he merits hearty support. While Blaine was nominated independently of colored votes, he cannot be elected without their aid, that is certain. It is absurd to think that he can carry New York, hotly contested as it will be, without the aid of their vote in that State, which numbers some twenty five thousand; then in Indiana, New Jersey and West Virginia, which will be battle ground, the colored vote is equally essential to Republican success.

Four weeks hence, when the National Committee confers with Mr. Blaine and Gen. Logan, it will be the time for our prominent colored politicians to have a plain understanding from the nominees as to what we must expect from them. The time is before, not after the election. The example of the colored delegation at Mentor must not be repeated."

The *New York Globe*, probably the strongest colored journal in the country, while announcing its intention of standing by the Republican party, is somewhat more out-spoken in its warning.

"The men who placed in nomination Blaine and Logan were not children, nor were they ignoramus. On the contrary, they were men who have in past times led the party to glorious victory—men who, amid all the varying revolutions of party methods and public opinion, have held on high the banner under which the mighty champions of the party have marshaled. These men have placed this ticket in nomination, knowing well that it was like throwing a fire-bomb into a powder magazine. Yet they passed not; constituting, as they did, the sentiment and the wishes of the party in every State and Territory of the Union, and being conscious that the destiny of the party would hang upon the result of their choice, they deliberately placed in nomination the men who have split the party in every direction. The Republican party has very evidently struck a very large rock—a sort of submerged island in the vast ocean of politics. The grand old ship, around which so many and furious storms have spent their fury in vain, appears to have sprung a leak, not unlike the one which carried down the parties out of which it was carved in 1856. The solemn fact is not to be suppressed that the outcome of the Chicago Convention has produced a solemn pause in the career of the Republican party's lease upon popular favor; has produced widespread dissatisfaction in the ranks—has precipitated a split which cannot be healed by the stereotyped prescription of the small statesmen. There is something radically defective in the party machinery when the nomination of standard bearers is greeted all along the line by hisses and wholesale revolt of strong papers which are moss-covered with age and service in the cause of the Republican party."

The *Virginia Star* (colored,) though not yet enthusiastic, is hopeful. "While Mr. Blaine's nomination may have been and we presume was a great surprise to many, it was not a disappointment to any but the enemies of republican government. Republicans of all shades will heartily unite upon the nominees of the Chicago Convention. And while it is better still, they will elect them. We are glad of Blaine's nomination for many reasons, but the two cardinal ones are that he will unite the two

wings of the national Republican party—the Stalwarts and the Half-Breeds, and that there be any virtue, any trustworthiness in what was known as the Straightout Republicans of Virginia, they will now unite to a man with the Liberal Republicans, and carry Virginia for Blaine and Logan. Will they do it? We shall see. They, the Straightouts, profess that Blaine was always their choice; if that be so, then there is no longer any reason for their estrangement from the rest of their brother Republicans of the State. Let there be one united and determined effort to carry this State for the chosen Republican standard bearer. They will be elected anyhow, whether Virginia be carried for them or not, but in that case the Old Dominion will share none of a glorious victory."

The white Republicans of the South do not confess to serious discouragement, but Democratic editorials throw some pretty strong lights on the situation. The *Richmond Whig* says:

"Every Republican paper in Virginia printed since the nomination of the National ticket has run up the names of the bold standard-bearers of our party. That is the proper thing to do."

And the *Baltimore American* gives no uncertain sound:

"Blaine is the choice of the people. His nomination is a victory of the people over the politicians. A great enthusiasm formed itself spontaneously in the hearts of Republicans, and burst like a huge wave over the petty dykes that hostile factions and official discipline had built up against it. Blaine presents the object of the attack of enemies without and within the party. He has had for years to meet calumny and detraction, and to see his good spoken evil of. Bad moves have been ascribed by a rascal to his noblest actions; his genius has been underrated, his popularity underestimated, and yet there is something about the man that makes the people love him. Twice has his popular voice called him to the nomination, and twice had the politicians thwarted its will. But now the voters rose with a power not to be withstood, and made him their candidate."

His nomination unites the party as none other could. There now need be no longer any two wings. The third term party defeated four years ago now disappears. Its leaders are now Blaine men. Not since Grant's first term has the Republican party been so united as now; not since Lincoln's second term has any leader been so beloved."

But over against these must be set such opinions of the effect of the nomination as we find in the following:

"When it was a doubtful and desperate chance, we can see how Mr. Tilden was a name to conjure with—any port in a storm—any driftwood in the raging sea. But if we are to credit the bulk of Democratic and the most respectable element of Republican and Independent opinion, the Lord has delivered the once 'grand old party' into our hands, and, in spite of a providence, Mr. Tilden is not the one man necessary and the only available and imperative candidate."—*Constitutionalist*, Augusta, Ga.

"The picture in *Puck* which drew attention to Mr. Blaine's record, represents not only the bitter humor of that publication, but the feeling of the Puritans of the Republican party; and there is every reason to believe that these will make their disapproval felt in a practical manner. In evidence of this we have open expressions of hostility from such papers as the *Times*, the *Evening Post*, the *Herald*, and still more significant, the talk of an independent ticket to represent the Putnam element of the Republican Party. But without counting on this we believe that there is a very widespread feeling at the North that it is time to make a change in the management of public affairs; and with a good ticket the Democrats seem bound to win next November."—*The Landmark*, Norfolk.

"Mr. Blaine's nomination was the result of thoughtless excitement, and the error committed by the Convention is now fully felt as it is bitterly lamented by thousands of Republicans. The great independent vote of New York, New Jersey, Connecticut, Massachusetts and Indiana will be cast against the man from Maine and not a few of the most prominent members and most influential journals of the Republican party refuse to support him."

Among the leading Republican journals that refuse to give aid to Blaine are the *New York Times*, the *New York Evening Post*, the *Boston Transcript*, the *Springfield Republican*, and the *Boston Advertiser*, and among the independent papers that pursue the same course are the *New York Herald* and the *Boston Herald*, which has a far larger circulation in New England than any of its rivals. Republican civil-service reformers denounce the nominee as the enemy of a pure and well conducted Government. Republicans who are conscious of the weakness and

bad record of the once respected Republican party, feel that in failing to choose Edmunds, Lincoln or Hawley, either of whom might have been claimed to be better than his party, they have lost their best chance of success. For the corruption of the party and the corrupt and even of this man or that, but instead always of the average strength and average honor of the men and women who make the nation.

The encouragement of the present conflict lies in the indications that the old semi-superstitious notions as to party loyalty are losing their power. Such an article as the following is illustration of a decided and hopeful change:

"It is becoming every day more and more clear to thoughtful observers that the United States do not embrace a nation of self-governing people. The nation is governed by parties; the parties are controlled by machines, the machines are engineered by demagogues and capitalists in combination. In other words, the work of legislation and administration has been practically abandoned to an exceedingly small minority. This proposition is easily demonstrable, and the facts that constitute its proof are matters of notoriety."

It is no answer to say that under our constitution the authority of the people is delegated, and that the number of office holders must and ought always to be small in comparison with the whole number of voters. The objection is not that that the number of office holders is small, but that the number from which they are selected is small. It might be urged with more apparent, but scarcely with more real, force that the offices at the disposal of the President involve for the most part the discharge of ministerial or clerical duties, and that no actual governing power is lodged in them. The office holder is committed to his patron, and whatever influence he has will be exerted to prevent a change in the course of patronage. The President who aspires to re-nomination has always the advantage of ready-made and devoted followers.

The case is plain enough so far; but the more radical evils of the situation lie far beneath these comparatively superficial considerations. To get at the bottom facts of party management we must study the interior organization of parties, not as they are represented by Washington City, but as they are moulded under the style of "We, the people." We have seen, however, that while the people voted occasionally, they never nominated. The nominating machinery is the property of a close corporation—the perpetual monopoly of a few. The ward club, the precinct, the nominating convention, the caucus, are successive links in the chain which has not a break or a weak place anywhere. An attempt to work outside of the party machinery is denounced as an attempt to disrupt the party itself. The effort to place the machinery in better hands has usually ended in failure, and in some places it appears to be in a state without bloodshed. Reduced to its bare analysis, the party is run by its "bosses." Buy the bosses and you buy the party. Great capitalists who have objects to secure through legislation, and who are familiar with this rule. The boss of course must have a personal following—an effective working force. He secures his lieutenants by the gift of the misident character, rank and file by favors of another character.

We may now sum up: The country is governed by a party; the party is governed by a part of itself; the governing part of the party is the creature of an organization whose roots are in the coffers of monopolies, in the gutter and in the tap-room. The party as a whole is never in earnest as to the expression of the popular will, and the man who would reach the practical leadership of the party must begin at the bottom, that is to say, in the filth.

It is not our purpose to preach pessimism; but only to protest against party slavery. Although we have lost our illusions, we have not abandoned our ideals. Self-government will become an assured fact when men cease to belong to parties."—*N. O. Picayune*.

The question of Tariff Reform is of course complicating the situation and is helping to create a somewhat unusual amount of personal feeling. The *Richmond Whig* comes out for Blaine and Logan, since it could not get Arthur. It shouts "Hurrah for Blaine," with a cracked voice. It eats the crow that the *New York Times* and the *New York Post* couldn't stomach and calls it good, but evidently don't relish it."—*Danville Register*.

The *New York Times* and *Post* are Free-Trade organs. They like Blaine well enough, but the Protection features of the platform on which Mr. Blaine goes before the country is what is so objectionable to the journals named.

The *Register* will please observe how quickly these papers will fall into line when the nominee of the Democratic party is made known.—*Whig*.

There is no lack of vituperation on either side, but as yet nothing especially spicy has been produced. In the midst of the turmoil there is occasionally to be heard a cooler voice, and proof is not wanting that under all the froth and scum of superficial politics, lies the great common sense

of the people, tending always strongly though very slowly in the direction of a sturdy reform. More and more the people are beginning to find out that it is not a question of this party or that, or even of this man or that, but, instead always, of the average strength and average honor of the men and women who make the nation.

The encouragement of the present conflict lies in the indications that the old semi-superstitious notions as to party loyalty are losing their power. Such an article as the following is illustration of a decided and hopeful change:

This proposition is easily demonstrable, and the facts that constitute its proof are matters of notoriety."

It is no answer to say that under our constitution the authority of the people is delegated, and that the number of office holders must and ought always to be small in comparison with the whole number of voters. The objection is not that that the number of office holders is small, but that the number from which they are selected is small. It might be urged with more apparent, but scarcely with more real, force that the offices at the disposal of the President involve for the most part the discharge of ministerial or clerical duties, and that no actual governing power is lodged in them. The office holder is committed to his patron, and whatever influence he has will be exerted to prevent a change in the course of patronage. The President who aspires to re-nomination has always the advantage of ready-made and devoted followers.

The case is plain enough so far; but the more radical evils of the situation lie far beneath these comparatively superficial considerations. To get at the bottom facts of party management we must study the interior organization of parties, not as they are represented by Washington City, but as they are moulded under the style of "We, the people." We have seen, however, that while the people voted occasionally, they never nominated. The nominating machinery is the property of a close corporation—the perpetual monopoly of a few. The ward club, the precinct, the nominating convention, the caucus, are successive links in the chain which has not a break or a weak place anywhere. An attempt to work outside of the party machinery is denounced as an attempt to disrupt the party itself. The effort to place the machinery in better hands has usually ended in failure, and in some places it appears to be in a state without bloodshed. Reduced to its bare analysis, the party is run by its "bosses." Buy the bosses and you buy the party. Great capitalists who have objects to secure through legislation, and who are familiar with this rule. The boss of course must have a personal following—an effective working force. He secures his lieutenants by the gift of the misident character, rank and file by favors of another character.

We may now sum up: The country is governed by a party; the party is governed by a part of itself; the governing part of the party is the creature of an organization whose roots are in the coffers of monopolies, in the gutter and in the tap-room. The party as a whole is never in earnest as to the expression of the popular will, and the man who would reach the practical leadership of the party must begin at the bottom, that is to say, in the filth.

It is not our purpose to preach pessimism; but only to protest against party slavery. Although we have lost our illusions, we have not abandoned our ideals. Self-government will become an assured fact when men cease to belong to parties."—*N. O. Picayune*.

The question of Tariff Reform is of course complicating the situation and is helping to create a somewhat unusual amount of personal feeling. The *Richmond Whig* comes out for Blaine and Logan, since it could not get Arthur. It shouts "Hurrah for Blaine," with a cracked voice. It eats the crow that the *New York Times* and the *New York Post* couldn't stomach and calls it good, but evidently don't relish it."—*Danville Register*.

The *New York Times* and *Post* are Free-Trade organs. They like Blaine well enough, but the Protection features of the platform on which Mr. Blaine goes before the country is what is so objectionable to the journals named.

The *Register* will please observe how quickly these papers will fall into line when the nominee of the Democratic party is made known.—*Whig*.

There is no lack of vituperation on either side, but as yet nothing especially spicy has been produced. In the midst of the turmoil there is occasionally to be heard a cooler voice, and proof is not wanting that under all the froth and scum of superficial politics, lies the great common sense

of the people, tending always strongly though very slowly in the direction of a sturdy reform. More and more the people are beginning to find out that it is not a question of this party or that, or even of this man or that, but, instead always, of the average strength and average honor of the men and women who make the nation.

The encouragement of the present conflict lies in the indications that the old semi-superstitious notions as to party loyalty are losing their power. Such an article as the following is illustration of a decided and hopeful change:

"It is becoming every day more and more clear to thoughtful observers that the United States do not embrace a nation of self-governing people. The nation is governed by parties; the parties are controlled by machines, the machines are engineered by demagogues and capitalists in combination. In other words, the work of legislation and administration has been practically abandoned to an exceedingly small minority. This proposition is easily demonstrable, and the facts that constitute its proof are matters of notoriety."

It is no answer to say that under our constitution the authority of the people is delegated, and that the number of office holders must and ought always to be small in comparison with the whole number of voters. The objection is not that that the number of office holders is small, but that the number from which they are selected is small. It might be urged with more apparent, but scarcely with more real, force that the offices at the disposal of the President involve for the most part the discharge of ministerial or clerical duties, and that no actual governing power is lodged in them. The office holder is committed to his patron, and whatever influence he has will be exerted to prevent a change in the course of patronage. The President who aspires to re-nomination has always the advantage of ready-made and devoted followers.

The case is plain enough so far; but the more radical evils of the situation lie far beneath these comparatively superficial considerations. To get at the bottom facts of party management we must study the interior organization of parties, not as they are represented by Washington City, but as they are moulded under the style of "We, the people." We have seen, however, that while the people voted occasionally, they never nominated. The nominating machinery is the property of a close corporation—the perpetual monopoly of a few. The ward club, the precinct, the nominating convention, the caucus, are successive links in the chain which has not a break or a weak place anywhere. An attempt to work outside of the party machinery is denounced as an attempt to disrupt the party itself. The effort to place the machinery in better hands has usually ended in failure, and in some places it appears to be in a state without bloodshed. Incidents of Indian Life at Hampton.

RETURNING HOME FROM HAMPTON.

The last days of our "merry month of May" have been saddened by the going forth of 32 of our number into the new life for which many have been so long preparing. I say saddened, though it would seem that sending children home to loving friends ought not to be considered in quite that light, even when they have held firm places in our hearts for many years, but it cannot be otherwise. It is like saying to ourselves what we dare not say to them, "You have been snatched for one, two, three or four years from the influences which were dragging you downward; we have tried to teach you better things, to lead your thoughts and lives into higher channels,—how imperfectly only we ourselves can know—to strengthen you against temptations such as we know nothing about, and now the time has come and you are to go forth into your world under the eye of thousands of critics, whether to stand or fall only the Father of all can tell. Those whom you love, may be your greatest stumbling blocks. We would hardly feel ready for the test ourselves, yet we expect you to stand firm. Childhood land play are over, henceforth you are men and women and must put away childish things in the real struggle and work of life."

This is the dark side, but like every other event in life it has its brighter one. We believe these boys and girls to be, with few exceptions, earnest Christians, realizing in part the importance of the work they have to do, and going to it with a spirit of unselfish devotion. Many have learned the great lesson that they "know very little" and are anxious to return another year for more "light" to bear to their people.

As we watched the intelligent and even refined faces of many of these recently clad boys and girls as they waved a last farewell from the deck of the steamer, our thoughts went back, not many years, to a very different picture of strange, dull, half-frightened faces, long unkempt hair and shabby blankets covering garments which never afterwards saw the light of day. Then it was that we realized what education is doing for these children, and hope for greater things.

In the morning of the day the party was to start, the boys asked permission to hold a farewell meeting with teachers and girls at Winona. In spite of Indian control, many were the tearful eyes and sad hearts as some said a last farewell to schoolmates and friends, and others bade God-speed to departing friends. The speeches, some in Indian, but more in English, were full of gratitude for the privileges enjoyed and of determination to profit by what they had learned and extend it to others, while on the other hand fell strong words of sympathy and encouragement from those who were yet to wait awhile, all ending with a touching and earnest prayer in English by which each and all were consigned to the Father's watchful care. Some were going much against their will, because parents required it or because the body was not strong enough to stand the work demanded by heart and head. Three of these young men wished to stay and risk all rather than lose their chance for an education, and were only comforted when promised they might return if a change to their native air should render it advisable later.

The following is a list of the names and Agencies, with ages as nearly as possible:

Fort Berthold Dakota.			
Name.	Present Age.	Arrived	
*Sarah Walker	18	Nov. '78	
*Mary Walker	15	Oct. '81	
Henry Karunach,	23	May '82	
Stirling Rock.			
Rosa Bear Face,	19	Oct. '81	
Frances White Cow,	19	" "	
Fidella Walking Medicine,	19	" "	
Josie McCarthy,	15	" "	
Chayenne River.			
William Larrabee,	21	Oct. '81	
Baptiste Gabe,	20	" "	
Lower Brule.			
*Sam'l Medicine Bull,	23	Oct. '81	
*Baptiste Bear Bird,	23	" "	
Peter Brazuca,	21	" "	
Philip Councillor,	26	Dec. '82	
Katie Councillor,	20	" "	
Charlie Councillor,	24	" "	
Maggie Bullhead,	15	" "	
Jamie Rencontre,	12	" "	
Sarah White Cow,	19	Sept. '83	
Andrew Roberts,	23	" "	
Looking Eagle,	20	" "	
Crow Creek.			
*Santee Single Feather,	18	Sept. '83	
John Archambeau,	19	Oct. '81	
Yankton.			
Mary Goulet,	20	Dec. '79	
*Charles Picotte,	21	" "	

Sac and Fox, Indian Territory.

Nellie Keokuk,	18	June '82
Hattie Miles,	18	" "
Mary King,	17	" "
Shawnee I. T.		
John King,	23	Oct. '79
San Carlos, Arizona.		
Rob't McIntosh,	27	Feb. '81
Benj. Stago,	16	" "
William Roberts,	25	" "
Pima.		
Juan Garfield,	25	July '81
Harry Azul,	12	Feb. '81

\*Expecting to return.

Fort Berthold is the most northern outpost of our work at Hampton. Not a little that is interesting and curious has been told of this village where Mandans, Gros Ventres and Rees have lived together, it is said, more than a hundred years and yet have kept their language perfectly distinct up to the present time. One of these girls came to Hampton nearly five years ago—a shy little stranger, speaking hardly a word of English. It is hoped she will return next Fall to take her place in the Middle Class of the Normal School, still further to fit herself for the position of teacher in the Fort. Stephenson school, lately opened among her people.

Not so far to the north is Standing Rock, under the care of the Roman Catholic church, and an Agent whose whole heart is in his work. To him go the four bright, winsome girls, who have made themselves so valuable in the more practical department of Winona lodge, to help him, we hope, in his work among their people.

To Cheyenne River we returned but two of the seven who came nearly three years ago, trusting they will make it in influence what they lack in number. Of the seven, one has died and the others voluntarily remain for further instruction.

Lower Brule and Crow Creek are now united under one Agency, a man willing and capable of helping the large number we send to his care. Among them are too many whose physical condition would not permit them to remain, yet they are strong in spirit, and may not that be the greater power in the end?
